Gentlemen, I want to introduce one of our most distinguished Members of the Congress of the United States, a man who is chairman of one of the most important committees in the House of Representatives, the Appropriations Committee, CLARENCE CANNON, from the wonderful State of Missouri, which attracted me enough so I went down there and found a bride almost 58 years ago. She and I will have been together 58 years on the 15th of the coming May, if we are both alive at that time.

There is a strange thing about Missourians. They never forget each other. If you once know them, you will always like them.

So, CLARENCE CANNON, I am going to ask you if you would like to say something about our fine imperial potentate, and the wonderful shrine which has contributed so much to the welfare of those who are afflicted. Mr. CANNON. [Applause.]

VOICES. Our chairman. [Laughter.]

Hon. CLARENCE CANNON. Mr. Toastmaster, and if I may paraphrase Senator MUNDT'S salutation, my lightheaded and lighthearted friends:

It is always a pleasure to salute the nobility. And it is a special privilege tonight on this happy occasion as the guest of Noble Hawkes and in honor of the imperial potentate of the mystic shrine. He is not only the imperial potentate of the mystic shrine, but he is one of the profound philosophers and one of the greatest philanthropists of our times.

Among the many notable and extraordinary things about our host is that he became a Mason when he was 71 years old. I think he is the only man I have ever known in my life who has that distinction. I trust every member here tonight will be present when we award him his 50-year pin.

You know, Al, Mr. Toastmaster, the shrine is the playground of masonry, but even the shrine has its serious side and its inalienable responsibilities. Just now we are at a critical period in national affairs, a critical time in world affairs, requiring the thoughtful attention of noble and brother.

For there is one thing about freemasonry, freemasonry never dodges an issue. You always know where freemasonry stands. In time of greatest stress its lights burn brightest. There can be no doubt as to where freemasonry stands on world issues at this crit-

ical time—a time at which we may expect every man to stand up and be counted.

Every dictator who has sought to establish a despotism has initiated his campaign by destroying all local units of Freemasonry. Hitler drove Freemasonry from Germany and Mussolini exterminated every Freemason he could lay hands upon. Hitler and Mussolini have passed on—and with them the tyrannical dynasties which they created. But Freemasonry still stands a power and an influence for democracy and freedom.

Washington enlisted the benovelent and majestic influence of Freemasonry and established the greatest Nation and most enduring civilization of all time.

You will be interested to know that at the Capitol today we uncovered the cornerstone of the Capitol laid by Brother George Washington with Masonic ceremonies. You may be certain, Brother Toastmaster, that we depend on you and our imperial potentate as sentinels and guardians on the watchtowers of Freemasonry, who like the keepers of Israel neither slumber nor sleep.

Whether through the vicissitudes of the day or across the burning sands of the desert, we know we may follow you safely and securely. [Applause.]

Hon. ALBERT W. HAWKES. We appreciate your very fine remarks, and I am very happy that you have emphasized what would happen to Freemasonry and the Shrine if dictators and slavedrivers are ever allowed to take over the control of world affairs. Our deep thanks to you for giving up this evening to be with us. CLARENCE CANNON.

We have at this table a man whom I have known for many years, and with whom I served in the U.S. Senate for 6 years. I think he exemplifies America at its best. I am one of those who believes an American who is conservative enough to try and save his country as an example to the rest of the world of what freedom under God can do, is a liberal. We call a lot of people liberals but I think of true Americans as liberals in the interest of the freedom of man.

STYLES BRIDGES is the senior Republican Senator in the U.S. Senate at the present time. He is a very dear friend of mine, and I am one of the fellows who is only 80 years old, but is going to work as hard as I can to keep him where he is as long as he is willing to serve and sacrifice, as he is doing. [Applause.]

I would like my dear friend, STYLES BRIDGES, to say a few words about our imperial potentate. [Applause.]

Hon. STYLES BRIDGES. Mr. Toastmaster, it is a pleasure for me to be here this evening to say a few words on this occasion, not only in tribute to our imperial potentate, but also to our host of the evening.

Our host, Al Hawkes, is one of the men who was wise enough to retire from public life to spend some time enjoying himself, after devoting years of service to his country in the U.S. Senate. He has continued, however, to work for his country which he loves so much. Most Senators, as you know, stay in the Senate until they are either defeated or have to be carried out. He is one of the rare exceptions to the rule. Al is a great patriot. He is one of the great patriots of our time.

Now, as to our imperial potentate, Sir George Stringfellow, he is a man who has been successful in business. In recent years, he has devoted more and more of his time to civic and fraternal affairs, and he has made gerat contributions to Masonry.

You and I know the most important thing to every American today is the survival of this Nation. Freemasonry had a great deal to do with the building of this Nation in the early days. George Stringfellow is the type of leader in Masonry and in the Shrine who is attempting to continue the same patriotic spirit established by our early brothers and built upon a sturdy foundation.

I think it is fitting for the Members of Congress of the United States, of both political parties, of both Houses of Congress, to come here this evening to pay tribute to this great Masonic leader, the Imperial Potentate of the Shrine, and to one of the most beloved patriots of America, our host, Al Hawkes. [Applause.]

Hon. ALBERT W. HAWKES. STYLES, I thank you very much. You know, it isn't too often that a fellow, who can't help standing for what he believes in, gets any plaudits or accolades from anybody, so I deeply appreciate those kind remarks and I am sure the Imperial Potentate, George Stringfellow, appreciates them also.

We have with us tonight Justice Tom C. Clark, of the Supreme Court of the United States, whom I considered one of my good friends when I was serving here in the U.S. Senate, for he was trying to keep corporations functioning in line with legal requirements and fair American practice. We are highly honored that he would give up an evening in a busy life to pay his respects to the Imperial Potentate, and as an old friend of mine, I am going to call upon him to make a few remarks relative to Shrinedom and our Imperial Potentate. Hon. Mr. Justice Tom C. Clark. [Applause.]

Mr. Justice TOM C. CLARK. Senator Hawkes, my good friend and brother Shriner, George Stringfellow, and fellow Masons. Unaccustomed to public speaking as I am after a decade on the Court, I cannot forego this opportunity afforded by our genial host to say a few words concerning our guest of honor. In so doing, I break a long precedent started when I went on the Bench; namely, to be a good listener. The Lord gave us two ears and but one tongue so we might listen twice while talking once. Perhaps the world would be happier if each of us had the same capacity for silence as we have for speech. Thomas Vaux put it clearly when he said, "He speaks best that hath the skill when for to hold his peace."

In fact, our honored guest, our Imperial Potentate, was reared in that school. Taught by the great inventor, Thomas A. Edison, with whom he was associated at Menlo Park, he has practiced the true virtues. Edison, Brother Stringfellow tells me, was a man of few words devoting some 18 to 20 hours of each day to the development of discoveries that brought much to his fellow man. He instilled in our honored guest this indefatigability for work and so today he devotes long and ardous hours to the betterment of our democratic system. In this he is but the chosen instrument of the thousands of us brothers who have crossed the sands and entered the mystic order. It is said that we are but the playground of Masonry, but if that be so, our answer is that it is there that most of life's lessons are learned. The rules of the playground soon become the laws of men, and if we have learned our lesson well in the first, it follows—as the night the day—that we will obey those of the latter. Our distinguished guest well knows this for today he tours the country as a crusader for our democratic form of government as contrasted with that of the totalitarian Soviet. His message has been one of devotion to our principles, or understanding of the realities of life today and the use of a firm hand and determined mind in protecting ourselves from such destructive forces.

Personally, I have learned much from Masonry. In its deep reverence for those spiritual values that weave the tapestry of our life together it places the strong cord of respect for constituted authority so necessary in the attainment of that ordered liberty to which we aspire. In the inner sanctum of my being it has placed a seed, that of understanding—understanding for human souls—and in so doing, it has taught me how we may obtain for each of them that freedom and justice the attainment of which brought our country into being. It is in this effort that I am happiest and in it that I am most serviceable.

And so to the success of your crusade, Imperial Potentate, Sir George Stringfellow, we drink; to your continued good health each of us bring our prayers; and to that ordered liberty which you support we lend our arms in firm salute. So mote it always be. [Applause.]

Hon. ALBERT W. HAWKES. Thank you for your fine remarks, Mr. Justice Clark. I don't know very much about Washington any more, but I heard from a lady, who knew you were going to be here tonight, that you were doing a great and effective work in connection with the Patrick Henry Clubs. I congratulate you on this work.

Now, I am going to call on Senator EVERETT MCKINLEY DIRKSEN to say a few words. He is from Illinois, the State of my birth, you know. EVERETT, come up here where we can see and hear you. [Applause.]

Hon. EVERETT M. DIRKSEN. My old friend, Al Hawkes, fellow Democrats—and I should make special reference to my old friends, CLARENCE CANNON and JOHN SPARKMAN—I am delighted to be here as your guest. I just asked Eddie Rickenbacker how long you might want to be here, before I rose to my feet, and he siad, "Not too long, why?" I replied, "Because I thought I might make a speech on housing or some other appropriate subject."

Al—and I like to call you Al, it is truly a delight to be here as your guest. I was a sort of freshman tenderfoot when I came to the Senate and you were still here. As a pupil I used to sit at the feet of the master—meaning you—and imbibe wisdom and understanding in the hope that I would follow a proper and durable path.

I used to sit at the feet of my old friend, STYLES BRIDGES also, who is here tonight. He is our senior Republican in the Senate and a great citizen. I probably have been in the Congress a little longer but STYLES is our ranking Republican. He is such a two-fisted American that he deserves a big hand. [Applause.]

I could wax quite philosophical tonight and especially so when Dr. Harris, the Senate Chaplain, is here. What an inspiration it is to hear his invocational prayers when the Senate session opens each day. On occasions some people become cynical about the opening prayer, as indicated by the old story of a father and his young son in the Gallery. The son inquired of the father who the man was standing up before the Senate and his father said, "That is the Chaplain," and then added, "He takes a look at the Senate and then prays for the country."

Such are the moods of cynicism that sometimes engulf us, and over and oyer we must search for apropriate and durable answers. I find much of the answer in what I have received from Masonic teachings. In a way, I am not too good a Mason in the sense that I have not attended Blue Lodge for a long time. Manifestly, long sessions in Washington make it difficult to attend lodge back home. I try to make up for it by going to the Grand Masters' meetings which are held here and to neighboring Blue Lodges in the hope that I can expiate and wash out the sins of neglect.

When I reflect on what I have gotten out of the Masonic Order it goes back to one fundamental principle, and that is that the hope of the universe and the hope of society reposes in the individual, in his integrity, his dignity, his peace of mind and the power that he can wield in the area where he lives and serves.

A great many years ago a visiting chaplain came to open a session of the House of Representatives. His prayer impressed me. I made inquiries about him. They said his name was Joshua Liebman, a Jewish rabbi from Boston. He was then only 43. I visited

with him. About 10 days later while in Chicago my eye caught the title of a book in a bookshop by Joshua Liebman. The title was "Peace of Mind." In the very first pages of the first chapter Rabbi Liebman spoke of an old, distinguished rabbi who had been sought out by a younger man who was so ill at ease and uneasy about the world. He had certain objectives in life. The good rabbi told him to make out a list, which he did. Together they examined the list and after a time the old rabbi struck out every item, such as fame, security, acquisition, glory, and at the bottom he wrote one great, golden and glorious objective, and that was peace of mind.

How does one achieve peace of mind? I believe one gets it best through service to his fellow men. That goes right back to the individual. What else is there when all is said and done? The individual in his community from the days of his youth, the radiance and influence which he can shed, his exemplification of the teachings of our craft, becomes a massive radiating force that goes out into the community even as common coronary attacks quickly race into the arms and legs of one who suffers this distress.

Every day we read of someone, especially people close to us, who have had a heart attack. Just what does happen? It is rather simple. Something touches that life-giving pump and pains begin to radiate into the members of the body. There is pain and agony, and it is this little difference, this little affliction to the pump, to the auricles and ventricles that spells the difference between life and death.

The individual in his relation to the social system and for that matter to the whole country and the whole world is like that. One person radiating and exemplifying in the community-where he lives the things he absorbed in the lodge room and the amplification of the teachings which he gathers as he goes along life's course does become the last and best and noblest hope of mankind.

Think of the things that men have tried to reduce to paper in the form of treaties and agreements and sanctions and codes of conduct and ethical standards in the hope that leaders in their thoughts and actions everywhere would respond to this kind of discipline.

The arch leader of the Soviet Union, Nikita Khrushchev, is a case in point. Only late this afternoon the press called me for comment on the fact that Khrushchev has changed his mind again. His latest fulmination seems to be that he was willing to guarantee the security of Berlin either through the troops of neutral nations or the troops of major nations acting in concert. It was the seventh or eighth time that he has changed his mind in recent weeks.

Somehow in our search for peace in the world we constantly go back to a personality in whose actions and words there reposes not only much of peace for mankind, but whether there will be a thaw in the cold war.

This in itself should be a great lesson for us who are identified with a craft that goes back to Hiram Abiff. Each of us in one dimension or another, and in one degree or another, can by exerting the power of influence and personality, condition the communities where he livies and radiate a degree of integrity and confidence which must manifest itself upon his fellow beings.

At the convention in Chicago in 1952 a thought came into my mind. It was from Solomon. He was supplicating the Lord and the greatest thing he asked was this. He said, "Give them Thy servants an understanding heart." The understanding heart is but a part of individual equipment. In proportion as we understand and reflect that understanding, we become tremendously influential in the reconstruction of society and the reconstruction of the world.

In our search for words to put on pieces of parchment in the hope that the desirable objectives so uttered may not be ephemeral and a vain thing, we must never forget that salvation in every facet of human experience goest back to the simple fundamentals of our craft because all of the emphasis is on the individual and his constant efforts at perfection.

Illustrious Imperial Potentate, that is what I got in the simplest unit of our craft; namely, the Blue Lodge. I came to Washington 25 years ago with several suitcases full of clothes and a suitcase full of ideals. The clothes have long disappeared and changed and been replaced. I feel pretty sure that the ideals are still intact, and among the ideals is this abiding and constant conviction that the salvation of the universe leads to the door of the individual. How else shall we regenerate society, except to start with a nucleus, and that nucleus is the individual? There is in him a spiritual nuclear power of undreamed influence and effect.

At the grand masters' breakfast meeting one morning recently, I mentioned that 19 centuries ago there was a great light in the sky as a star directed humbled people. It was early in the morning, when there was a touch of darkness. That light directed the sheperds to the manger where that great event, the birth of Christ, took place. Ever since then He has, through His teachings, His disciples, and His followers, shed light and hope and dissipated the darkness in every corner of the earth.

It took 19 centuries for another light to illuminate the sky in the semidark of early morning in July of 1945. It was in that dreary desert area of New Mexico and the light that illuminated the countryside that morning ushered in the nuclear age and the age of fission. Through it there quickly developed an instrument of destruction that destroyed an estimated 80,000 people in Hiroshima and Nagasaki, and brought to an end one of the most terrible conflicts ever visited upon mankind.

In this concatenation of events there should be another light. Nineteen centuries ago came the light to generate hope. Then came the nuclear light to bring end to conflict. What we need now is another light in the field of spiritual fission to carry on and through the individual and the fission of that power which lights in the individual spirit to bring reconstruction and good will. It is impossible to believe that the mind which created such a destructive force in 1945 cannot also generate a spiritual force in accord with all Masonic doctrine, which will bring new hope and peace and understanding and brotherhood.

I pray for the day when these things which constitute the living force in the human heart and the human mind can be directed to resolving the problems which beset us today. It will eclipse everything ever achieved at Alamogordo and ever since by the expenditure of billions to perfect and make even more powerful this nuclear force, and that spiritual fission is the very essence of our craft and of the things that I learned in the Blue Lodge long ago.

So, Illustrious Potentate, no matter what the degrees to which we address ourselves, all of us must go back to the foundation truths which we learned in the simplest foundation unit of the fraternity. That is where we get our philosophy. That is where we secure the real drama of truth and that is where these truths are so deeply imbedded in our consciousness to make us proof against all frustrations and disappointments. It will come as it must come in proportion as these basic truths are applied.

You, Illustrious Potentate, have a great responsibility, and I know you will discharge it well. As a humble member of our craft, I shall try to help in my modest way. I thank you. [Applause.]

Hon. ALBERT W. HAWKES. Thank you very much, Senator DIRKSEN, for those wonderful remarks which will long remain in our minds as coming from one of the most loved and respected men in our Congress.

Now we have with us tonight one of the great Americans, I think, of my generation; I am a little beyond him in years, but I always think of him as being a great American World War I veteran. He has since been a captain of industry. He has served well in whatever he has done and in accord with American tradition. I refer to Captain Eddie Rickenbacker. [Applause.]

Eddie, if you would like to come here and say just a few words, we would be happy to have you. [Applause.]

Capt. EDDIE RICKENBACKER. I think you are wonderful, Al. I think you are wonderful too. [Patted Imperial Potentate Stringfellow on the shoulder.] I never had the privilege of being associated with so many Communists at one time in all my life. [Laughter.] All I have heard tonight is communism being preached. I am amazed that my good friend—what is his name? He is from Illinois—would think such thoughts. All right, EVERETT.

I am grateful for the privilege, seriously, of being present. I have known George and I have known Al for a great many years. I hope the good Lord will permit me to know them for many more. I am sure that all of us in these trying times, when the fate of our Nation is in balance—regardless of how you may think, it is, and it can go in either direction in the not too distant future—we realize it will depend upon men like you, men that you individually have expressed yourselves about here this evening and your convictions and your courage to follow them, whether we go the right way or whether we go the wrong way.

All of you in my opinion, regardless of your party, are Americans. You are Patrick Henrys, give me liberty or give me death, and that is Americanism. It is the American way of life and I hope when the candle of my life dwindles to the flickering stage that I will be blessed, George, as you are being blessed tonight, with the presence of a group of friends that have no equal. Thank you. [Applause.]

Hon. ALBERT W. HAWKES. Thank you, Eddie, for your very fine remarks. We all love and respect you.

I was expected to say a few serious things about Masonry and our beloved country.

The essence of Masonry and the Shrine and their purpose and objective is to help good prevail over evil in our actions to exemplify and prove the fatherhood of God and the brotherhood of man. That is all the people of the United States have been trying to do in spending their material resources and sacrificing the finest blood of the Nation the greater part of this century. How wonderful it is that we have men in public office who may have tremendous differences of opinion in connection with the domestic issues, who belong to different political parties, and yet are big enough to realize that the international situation and cold war confronting us requires our complete and undivided attention, and so they are willing to put all these domestic differences in second place and be a harmonious united people in resisting all outside forces that would destroy us and our Government of freemen.

When the men at Valley Forge were deserting, and George Washington was about as blue as he ever was in his life, Tom Paine went to him and said, "General, may I talk to these men about their desertions?" George Washington said, "Yes, Colonel. If you can say anything to them to stop their desertions, it will be wonderful." Colonel Paine went to them. We could go into great

detail. He went to these men who had deserted, and some of whom had come back, and to the ones contemplating desertion because they had empty bellies, ragged clothes, were not being paid, and were in misery. He said this one thing, and I say it to you. He said, "If you desert this great cause and we lose our fight for freedom, I want to ask you, where are you going from there?" Most of the men came back and won our liberty.

And I say to every American that if there ever was a time it is now when a psychiatrist is needed for the well intentioned American people who can't recognize the difference between our great God-given liberty and the misery and suffering of living under a tyrant and a thing like communism. I just can't understand any people not realizing that we have to give our lives, our fortunes and our sacred honor; and everything to preserve our system of human freedom for mankind. Remember, gentlemen, you can't be sorry afterward. It will do no good. You have to take the right action now on time.

I take my hat off to the distinguished majority leader, LYNDON JOHNSON, in the U.S. Senate, and the distinguished Speaker of the House of Representatives, SAM RAYBURN, who both immediately and without delay, publicly announced that we are a united nation on the Berlin crisis and that they support the stand of our Republican President and his advisers in this crisis. [Applause.] Gentlemen, we must stand together. There is no hope for us if we don't stand together. I know we have differences that are tremendous, but we can solve them if we keep our liberties. If we can't solve them, then our way of life, that I have always loved, is not as strong as I thought it was. But with intelligence, time and cooperation we will find a solution, because time is the balm in Gilead that heals all wounds.

We must find leaders not only with intelligence, but with courage and leaders who realize that we all get our true source of power from God Almighty, as Abraham Lincoln did. That reminds me of a little story about him. When he was about to sign the Emancipation Proclamation, a group of powerful clergymen called on him and told him he was making a serious mistake. The reason they were sure was that they were men of the cloth and on their knees asking guidance from God. Lincoln replied, "I have no doubt about your sincerity in asking me not to sign the Emancipation Proclamation but, gentlemen, I am likewise on my knees several times each day asking God for guidance. If there is a God, and I certainly believe there is one, then He knows I am President of the United States and you are not, and if He has any guidance to give, He will give it to me and not to you. Thank you, gentlemen. [Applause.]

Few people have ever expressed more succinctly and clearly the danger surrounding a government or state of free people in this world than did Lord Byron when he said, "A thousand years scarce serve to form a state; and hour may lay it in the dust." I think it is one of the choice statements of all time. How true this is and how certainly history records nation after nation where people toiled for centuries to create a state, and then a single mistake laid it in the dust. Let us not make that mistake. There is no use in our discussing for the moment what mistakes we have made by overplaying the hand of charity, consideration, and generosity, because right now the big things before us is to win the cold war without spending the Nation into bankruptcy. I repeat that. To win the cold war without spending the Nation into bankruptcy. We can do it if we will to do it, and if we are willing to pay the price to preserve liberty and opportunity—the most precious things in life. I say we can do it if we will to do it; by that I mean if we have faith in ourselves.

Here I give you John Freeman Clark's classic definition of faith, and I think it is one of the choice definitions of all time.

"All the strength and force of man comes from his faith in things unseen. He who believes is strong. He who doubts is weak. Strong convictions precede great actions. The man strongly possessed of an idea is the master of all who are uncertain or waivering. Clear, deep, living convictions rule the world."

Masonry means to me the resolution to observe, so far as possible, the Commandments of God in our dealings with our fellow man. It means the recognition of the brotherhood of man. It means the reaching out of a helping hand when one is down and needs our help and one is in a position to give that help. It does not mean the carrying of one's burdens who is able to carry his own, but in the case of the Masons it means help to those in distress, and in the case of the Shriners it means to supply aid to the crippled children in the hope that it will bring to them some of the enjoyments of life. It means the invoking of the Golden Rule which is the foundation of all equity. Take any rule of equity and you will find it in the Golden Rule.

After watching for 65 years of my 80 years of life, and noting the trends of people's efforts, I believe unless we can put back into first place in our lives as a free people the building of character and maintenance of moral standards, and take the mad race for money, place, and power out of first place, and put it in second place where it belongs regardless of its importance, then, in my opinion, we are doomed to follow the course of other great nations which have become leaders of the world only to lose their power and disappear on the horizon of history. The time of life is brief at best. The objective should be to help good predominate over and destroy evil, thus adding to the improvement of the quality of man and civilization.

I salute you chosen representatives of the people and our public officials and the imperial potentate and the members of our Masonic order and Shrine, and I hope, in the words of George Washington, the Father of our country, that inasmuch as you are on guard in a critical situation facing our beloved country you will, none of you, be found wanting in the wisdom, fidelity, and courage which may be necessary to do your duty at this difficult time. One of the finest things Robert E. Lee ever said is in nine words, "Duty is the sublimest word in the English language." Let that sublimest word be emblazoned in the hearts and minds and souls of all Americans. Let us remember when bad men join hands to destroy the inalienable rights of men under God those of good intent and purpose must unite and pledge their lives, their fortunes, and their sacred honor in support of good and the destruction of evil. Unless we do that, the lamp of liberty and opportunity will be temporarily extinguished. Let us all answer that evil shall not prevail. [Applause.]

After all—I would leave this admonition with this group and every American group—our national character can be no greater than the composite of the individual character of our citizens. This leads to the conclusion that our biggest job is to get hold of ourselves and see that we each are doing our duty; that we each are making our contribution in such a way as not only to save all the fundamentals in the American system and way of life, but to improve those things which need improvement, at a rate of speed which will not destroy the house while we are making the repairs.

This is the need of the Nation; this is your need; this is the need of your family; and this, if carried into effect, will write a page on history which you will be proud to have posterity read.

In closing, let us ask God to give us the patience to accept those things which we cannot change; the courage to change, when we can, those things requiring change; and the wisdom to know the difference.

Now, gentlemen, I have the honor and privilege to introduce to you the potentate of Crescent Temple at Trenton, N.J. I was amazed to find that a man who has accomplished as much as he has is still under 40 years of age. He is a man worthy of the best there is in Masonry and the Shrine. He served his country in the war. He came out with honors and the oak-leaf cluster and a Bronze Star. He is at the head of many organizations, and the thing I like best about him is that his biography shows as fine advancement of a young man as I have ever seen, and yet he sent it to me and said: "Dear Senator: These are some of the things in my biography. Use them all or none. Either way will be perfectly agreeable to me." That is why he has done a job, gentlemen, because he hasn't wasted his time looking for praise.

I want to tell you that this young man has been elevated to the honor of 33d-degree Mason. Without more adieu, Lee, I am proud to introduce you. [Applause.]

Noble LEE WILEY. Thank you, Senator Hawkes and imperial sir,

It seems almost like carrying coals to Newcastle for me to speak after so many fine and distinguished speakers, but I do want to say a few words about a very good friend of ours. It is a great honor for me, as potentate of Crescent Temple, the 10th-largest temple in Shrinedom, to greet you and to extend to you the best wishes of our temple. With over 11,400 members, including such dignitaries as our good friend Senator Hawkes here, Norman Vincent Peale, and our imperial chaplain, Dan Poling, we feel that we enjoy a very enviable position.

But lately we have had one more jewel added to our crown. A member of Crescent Temple is our imperial potentate. We are proud that we can number among our nobility a person such as George Edward Stringfellow. That he is imperial potentate is only part of the story. You know many aspire and reach high positions, but most of the time they are done with cruelty and selfishness and they add little but tarnish to the world in which they live. Fortunately, there are men, like George Stringfellow, who are lifted up by the willing hands of their friends to high positions who remove the tarnish and add new luster.

There are many things about our genial Virginia gentleman that cause men to look up to him and respect him. I heard someone talking about our Virginia man here but actually we consider him a New Jerseyite and we have adopted him as such and I hope he has adopted us.

I think the things you think of when you refer to George can be best summed up in two little words, "He cares." He cares about others. In the Shrine we all know his extraordinary interest in our Shrine hospitals but beyond that his care for disabled veterans in the New Jersey Home for Disabled Veterans is also well known. He has cared that Protestants, Catholics, and Jews should know, understand, and respect one another. He has cared that there be better understanding between labor and management. He has cared for the health of others with his great work in the American Cancer Society. And he cares that this great country of ours should maintain its wonderful way of life. In any and every field of endeavor he has and is showing that he cares. Moreover and most important, he backs his care and concern with positive action.

It so happens that I am a president of the Rotary Club of Trenton and unfortunately I have found one flaw in George's character. He is a Kiwanian. And shame of shames, he has even been president of the New York Kiwanis Club for two terms. One credit I

can give to Kiwanis, when they finally found a good man, they knew it.

But seriously, may I quote to you something written by Louis Austin in "This I Believe":

"Our Maker gave us two hands, one to hold to Him, the other to our fellow man. If our hands are full of—or struggling for—possessions, we can hold to neither God nor humanity. If, however, we hold fast to Him who gave us life, who is our ever present Partner, His loving Spirit will flow through us and out to our neighbor. That is the way of joy, love, achievment, and inner peace."

This then is the way of George Stringfellow, with one hand in God's hand and the other for his fellow man, he walks his quiet way, serving others unselfishly in countless ways because he cares. Thank you. [Applause.]

Hon. ALBERT W. HAWKES. Thank you, Potentate Lee Wiley, for those stimulating remarks.

Gentlemen, it looks as though we are going to get under the wire in the time I agreed upon. I want to introduce our distinguished guest in a few moments, but I do want to thank the quartet from Crescent Temple for the fine songs and music they have given us.

May I say to you that we are not going to have any benediction because the beloved Chaplain of the House, Dr. Bernard Braskamp, is in the hospital tonight, and so is our distinguished and beloved chaplain of the Shrine, Dr. Daniel A. Poling, in the hospital for a very major operation. We wish them both speedy and complete recovery. We are going to ask our quartet, which rendered such beautiful service tonight, to close the meeting after the Imperial Potentate speaks, with the song "I Believe," which is a benediction in itself.

Now we come to my very dear friend, George Stringfellow, who is a regular human being. He has virtues and faults like all of us, but his virtues strongly predominate. He has done a wonderful service in the world. I have watched George for a great many years. I could take your time by introducing him with the words in the biography I sent to all of you, but a man who has really done things for his fellow men to a great extent doesn't need much eulogy, even from a friend.

You know, George, when I think of you I think that you were born in a wonderful State, Virginia. My great friend, HARRY BYRD, has represented that State for many years, and he and I have had a relationship for many years that very few men have had in this world.

You gained your educational experience, as I did, in the school of hard knocks. You graduated from what my friends call "Knocks College." You have rendered great service to the free enterprise system. You have rendered great service to your fellow men, not only through the Shrine, but through every department in business and as a member of the Cancer Society, Tax Payers Association, on the board of trustees and directors of several colleges and churches, and other institutions of note.

I was thinking of you this afternoon, George, and the story they told me out in California about Sam Goldwyn. You went up to see Thomas Edison. Most everybody thought you wouldn't make much impression, but you did because you were honest and had the courage to criticize things, and he liked you because you had that honesty and courage and ability. Out in California this young fellow wanted to see Mr. Goldwyn, and tried to get to his office but never could. Finally he got a very influential man to make an appointment. This man took him down to the office and Sam said, "I will give the young man 10 minutes and that is all." Well, the young man went in and the older man stayed outside waiting for the boy. He waited more than an hour. Finally the door opened and the young man and Sam came out. Sam patted him on the back and said, "I hope to see you again." So the old gentleman and the young boy started down the walk. Sam had two or three vice presidents sitting on the porch. He said, "You see that young man going down there?" They said to him, "Yes, Mr. Goldwyn." He said, "That young man is a genius; and smart, too." [Laughter.] And that is what Edison said. You are a genius; and smart, too.

George, we love you for what you understand about humanity. We love you because you have that faculty that Henry Drummond spoke about in his wonderful sermon called The Greatest Thing in the World, Love. He said, "In my opinion, on the Resurrection Day, when all souls appear before their Maker for judgment, the great question will not be so much have you violated the Commandments, but what have you done to help your fellow man? When it has been your privilege to reach out a helping hand to someone who has fallen and needs help to stand on their own feet again, have you given that hand and given that help?" Sir George, this group knows you have.

Now with those few remarks, Mr. Imperial Potentate, and my very dear friend of many years, who bled and almost died with me when I ran for the Senate, I present you to this audience. [Standing applause.]

Imperial Potentate Sir GEORGE E. STRINGFELLOW. Senator Hawkes, Mr. Justice Clark, Senators, Congressmen, and other distinguished guests, I bring to you the greetings and the good wishes of the board of trustees of the Shriners Hospitals for Crippled Children, and I bring to you the good wishes and the greetings of the 830,000 Shriners of North America, which I have the privilege to represent.

I thank you sincerely for your most complimentary introduction and I certainly thank you for the warmth of your reception. You have made me feel at home in this Nation's Capital where I had the privilege of spending my childhood. I am deeply grateful to my good friend, the Honorable Albert W. Hawkes, who has served the people of this Republic in many ways, always effectively and always with integrity. It is through his generosity and it is through his desire to promote our way of life that he has assembled here tonight a great group of citizens who have, to a large extent, in the palm of their hand our way of life. I have yet to address a group of citizens who have a greater influence and, therefore, a greater responsibility than those of you who are assembled here tonight. For there is in your hands peace with honor, and there is in your hands the right to declare war to preserve our honor.

Our forefathers gave us our way of life, but it wasn't without cost that they labored and many of them gave their blood and their lives that we might live in liberty. The question that should be in the mind of every American is this: Are we worthy of our heritage? And if we are worthy of our heritage, we will all stand up and be counted. I know of no man who has ever taken the obligations of Masonry and who has implemented those obligations in his daily life who is not worthy of our heritage.

I should like to point out that I have felt for a long time that the 4 million Freemasons in the United States have a greater responsibility to keep America American than any other group of citizens, for the reason that our way of life to a large extent was born in the atmosphere of Masonic lodges. It is a historic fact that a majority of those who signed the Declaration of Independence, and a majority of those who signed the Constitution of the United States were Masons—more than any other group. Therefore, if we are worthy of our heritage, if we live up to our obligations, we will stand courageously for what is right and be counted. The time has arrived in America when we must stand for principle, or we will fall for everything.

Now, the Shrine is a great organization, for it incorporates into its membership only those men who have been thrice tested and approved by their fellowmen. First, they must pass the rigid requirements of honor, integrity and brotherhood of the Blue Lodge of Freemasonry. Then they must pass the additional tests to enter into the realm of either the Scottish or York rites of Freemasonry. And of course, finally, they must be accepted once again by those who already have passed the tests of the Shrine. And I say to you that nowhere in the world does the spirit of brotherly love, honor, integrity, charity, and freedom of man beat stronger than in this organization which it is my privilege to head this year.

Since I was elected to this office last July, I have traveled up and down and across this Nation, visiting the temples of this order. I have talked with the officers of the temples. I have talked with the nobility. I have talked with many of the Grand Masters and the heads of other Masonic orders. And wherever I have gone, there has come to me the plea that I speak forth in the name of the Shrine for a more militant Masonry, a militancy that in some manner must restore—or help to restore—those freedoms for which Masons sacrificed so dearly.

I cannot and do not, however, speak for Masonry or the Shrine in their attitude toward political philosophy. But I can speak to you as a Mason and as a Shriner on what I have learned to be their moral philosophy as it may be applied to the world we live in.

Freemasonry is the oldest secret fraternity in the world, and it is predicated on the fatherhood of God, the brotherhood of man and the dignity of the individual. Freemasonry is therefore outlawed whenever dictators seize control. The lamp of liberty burns low today throughout the world. Two out of every five of the citizens of the world are directly or indirectly under the heel of communism. And if communism in any form or by any other name should come to this Nation, you may be assured that the first group to know its venom will be the Free-masons, for the dearest tenet of Masonic thought is freedom. And by freedom, I mean the right to do what we want to do so long as what we do does no harm to the brotherhood of man. And we can lose that freedom, not only to an invading horde from the Kremlin, but also to Americans who may have succumbed to the mysterious drug of power, and through that power maintain control over their fellowmen.

Our brother Masons who helped to found this Nation foresaw such a calamity and they sought to protect the future liberty of the people against the machinations of such power-mad people. Our Constitution, as originally written and with the addition of the Bill of Rights, was, as Gladstone said, the greatest instrument ever conceived by the minds of men. And why? Because, my brethren, such men as Washington, Franklin, Revere, Hancock, Madison, Henry, the Lees, and hundreds of others, had learned at the altars of Masonry the holy tenet of freedom.

Washington once said that "the Masonic lessons I learned on my admission to Masonry and my contact in conversation with prominent Masons thereafter were of great encouragement in after years when I encountered and was under severe trials, especially those of the commencement and during the Revolution." He continued by saying that "There is no doubt in my mind that Masonry and its lessons were helpful throughout the Revolution both on the battlefield and in the legislative halls."

In further reference to Masonry, Washington, who became master of his lodge said: "Friendly counsel reached my ears that some of the men regarded me as an aristocrat. I decided to dispel such thoughts from my comrades' minds and on one occasion, I sat in a Masonic lodge in Cambridge in which an orderly sergeant was the master. I made it a point to meet upon the level"—and that means much to every Mason—"and part upon the square with all my comrades regardless of rank and regardless of position. My reward was the loyalty and friendship of all far beyond my expectations."

We citizens today, in my opinion, can do no better than to emulate our Founding Fathers, who did so much to bring us freedom. Freedom is our greatest asset, but freedom must be earned anew by each succeeding generation, if in fact it is to be retained. Freedom is not something that can be taken for granted. Freedom is not free. Freedom is costly, but slavery is more costly. Freedom can be crushed by treachery from within as well as from without. Freedom can be weakened and finally destroyed by apathy of the people; and many of you in public life have witnessed in the last few years apathy to a degree that has been serious.

Many of us today are confused by the complexities of life. We sometimes think that if we could get back to the simplicity of life as Jesus knew it in the quiet hill country and by the shores of Galilee, that life indeed would be easy, but I would remind you that life in Palestine 2,000 years ago was neither serene nor simple. Confusion and strife then, as now, was suffered by the people. Tyranny then, as now, existed.

Our Constitution in its wisdom specifically begins the Bill of Rights by saying "Congress shall make no laws respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances." There was a reason. The people had just fought a war for independence from one tyrannical government, and wanted no other from those among them who might wish to resort to tyranny. The Constitution also says that: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." And listen to the ninth amendment: "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

Despite these statements, and over the protests of many citizens of this land, ever so gradually, but nevertheless surely, the power of Government has been and is being transferred to an oligarchy, controlled from Washington, the extent of which no one knows.

Woodrow Wilson pointed out many years ago that freedom never comes from the Government, but rather from the subjects of Government. It is a fact that as Government grows larger, it grows away from the people. To preserve themselves in office, elective or appointive, some of our officials kneel down, bow their heads and do the will of those sections of our society which control the vote or have been organized by power-hungry individuals for their own aggrandizement.

Those of you who have studied the history of this Nation must be aware of the drift to socialism that began in the middle of the 19th century and is moving ever more rapidly as each year passes. You say this isn't true? That there is no such thing as socialism in America? Consider, my friends and brethren: The Government operates the biggest business in the world. It is in competition—direct competition—with taxpaying electric companies. It owns the nuclear program. It owns farms and forests. The Government forces participation for most of the citizens in various insurance programs. Is there freedom of the individual if he is forced to take insurance that may not be wanted or needed? Is it freedom that we are forced to collect taxes from our fellowmen so that the fuzzy minds may redistribute to less qualified but more expediently important voters, the rewards of our sweat?

My brethren, the great American experiment of 1787 has been almost lost because there are too few great American leaders like Washington and Randolph and Calhoun who will raise their voices to tell the truth that equalization is against all the laws of nature; leaders unfearful of the jibes and taunts of those who by political chicancery have reached positions of affluence; great leaders who put their intellectual integrity above the cries of those who seek and promise something for nothing. [Applause.]

Alexander Pope says, "Order is heaven's first law; and this confessed, some are and must be greater than the rest. More rich, more wise, but who infers from hence that such are happier shocks all commonsense. Condition—circumstance, is not the thing; bliss is the same in subject or in king." There is no socialism in God's plan for life.

The answers to all of these conflicts in my opinion, is the application of the principles of Freemasonry so ably set forth by the senior U.S. Senator DIRKSEN, of Illinois a few moments ago. The fatherhood of God and the brotherhood of man is what is needed in the world today. Spiritual light is needed today behind the Iron Curtain and in our own Nation. We must by our conduct and example create a moral climate which will sustain free institutions.

We were very fortunate in the early days of our history when we had a small group of leaders whose like had not been seen before, and I regret to say, not enough of them have been seen since. We who love our country are justly thrilled by the courage of our Founding Fathers. They had granite in their character, and they had iron in their background. Individual enterprise, courage, daring, and incentive were the order of the day. Individual freedom and dignity of the individual were uppermost in their minds. Patrick Henry's declaration that "I know not what course others may take, but as for me, give me liberty or give me death" represented the atmosphere in which our way of life was born. And if we are to be worthy of our heritage, and if we are to continue to enjoy our liberties, we must recreate that atmosphere. You know, there is something greater than life—our fathers told us what it was—and that is liberty. If we are to save our country and make our contribution to the peace of the world, we must emulate St. Paul, who, finding that the days were evil, labored to improve them. We must not follow Hamlet, who cried that the days were evil and cursed them. Nor should we forget William Penn's assertion, when in his wisdom he said, "People who are not governed by God, will be ruled by tyrants." Penn's statement has been true from Herod to Hitler. Our way of life and our fraternity are held together by a spiritual thread the Communists would sever. I believe in the traditions of America established by Washington, the Master Mason. I believe that unless and until we return to the principles of Washington and those other great men who gave us our heritage, we will lose it and will be unable to perform our duty to pass it on to our children.

More than 2,000 years ago, Confucius said, "With righteousness in the heart, there will be beauty in the character. With beauty in the character, there will be harmony in the home. With harmony in the home, there will be order in the Nation. With order in the Nation, there will be peace in the world." [Applause.]

Every Shriner, whether he knows it or not, subscribes to that proverb. I submit there is no group of men in the world which is more interested in producing a righteous peace—a peace with honor—than the Free Masons and the Shriners. They are interested in freedom, justice, and happiness, for all men and women, regardless of color, race, or creed.

We cannot compromise with principle, for whenever we compromise with principle, we lose honor and liberty. Often the temptation to compromise is great, but the reward is always the same—heartaches and tears.

Alexander Pope, in his "Essay on Man," said these few meaningful words regarding compromise with principle—"What then is the reward of virtue—bread? What nothing earthly gives or can bestow, the soul's calm sunshine and the heartfelt joy—is virtue's prize."

I am sure if we keep faith with the vows we took in Masonry and and in the Shrine, our conduct will be helpful in building a better world for all. "So mote it be." Thank you. [Applause.]

(The quartet of Crescent Temple sang "I Believe" as the benediction.)

Hon. ALBERT W. HAWKES. Gentlemen, I want to thank all of you for coming here. I hope that some good has come from this meeting. It is fine for me to be back here with so many of my friends and meet some new friends. I am going to try to bring together once a year as many of the Masons and Shriners in Congress and the executive and judicial branches of the Government as care to join together in the hope it may be beneficial for us all. "So mote it be." [Applause.]

(Adjournment at 10:40 p.m.)

Human Carnage on the Racetracks

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 21, 1959

Mr. NEUBERGER. Mr. President, in past years I have occasionally mentioned the unnecessary fatalities which result from automobile racing on the Nation's speedways. Sometime my comment about this needless waste of human life have met with criticism by so-called sports fans, who claim that automobile racing is a valuable competitive outlet.

I was pleased to note that the outstanding sports editor of the Washington Post and Times Herald, Mr. Shirley Povich, in his column, "This Morning," of May 21, 1959, has expressed a viewpoint which parallels my own. Mr. Povich points out that the 50th driver has been killed at the Indianapolis Motor Speedway, and this fatality occurred in the preliminaries of the annual Memorial Day racing event.

I ask consent, Mr. President, that Mr. Povich's column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, May 21, 1959]

THIS MORNING WITH SHIRLEY POVICH

Now the number is 50 for that senseless purge the motor speedway people have been conducting for too many years in their brick abattoir at Indianapolis. Bob Cortner got it on Tuesday during the preliminaries for the annual Decoration Day speed carnival.

He crashed into a concrete retaining wall at high speed and that was the end of Bob Cortner. Back on May 2, Jerry Unser was banged up in a practice spin and died last Sunday. He was number 49 in the history of the speedway. That takes into account drivers only. Dead spectators hit by flying automotive parts are in a different category.

This has been going on for 50 years now, with driver deaths averaging one a year, and the big race on May 30 yet to come. At this time of year, the sports pages are too often difficult to distinguish from the obituary pages. Americans outraged by the barbarism of bullfighting can heed the inhuman carnage in their own backyard.

The big race on Decoration Day will draw upwards of 200,000 people. Two deaths in the preliminaries won't hurt the attendance. Such things never do. With speedway crowds, the pull of morbidity is always a factor. Most remembered are those races in which death takes no holiday.

There used to be valid reason, perhaps, for the pioneer speedway races at Indianapolis and the multitude of other tracks that now are promoting the American craze for speed. That was when the automotive people could honestly point out that the speedway was a crucible for the testing of motor performance, brakes, tires, carburetors, fuel, and the other components in the infant automobile industry.

That doesn't hold now. The big auto manufacturers have training tracks of their own better engineered than the speedway for proving out all that they seek about their products. The speedways now are merely high carnival for the heavy-footed drivers and the lightheaded spectators.

The hazards of speedway racing have been proven the greater for the fact that these aren't the Sunday drivers or the amateurs who are getting killed. They are the pros, hardened, icy-nerved and with best command of their monster hardware, who are losing too many bouts with death on the tracks.

They are at the mercy not only of the high speeds and the brick walls, of tire and mechanical failure, but also of the poor devil among them who might lapse into foolhardy tactics. Last year there was a 15-car pileup at Indianapolis, causing one death and a grist of injuries. It was scant comfort to the next of kin that an errant driver was later suspended.

Bill Vukovich, a great driver who won two speedway classics in a row, got it in 1955 while trying for his third straight. It wasn't his fault except for the fact that he entered the race. He couldn't skirt a pileup caused by a less efficient driver and became the fourth car in it. He was killed. All of his driving skill couldn't get him past a cluttered track.

There has to be admiration for the courage of the drivers and their skill as well. The track and the money they can earn have to be a powerful challenge. One of them asked why he was so intent on going for a new record on the Indianapolis track, explained simply, "Why do they try to climb Mount Everest? Because it's there, that's why."

For the spectators, there is less excuse for being at Indianapolis. They aren't trying to climb Mount Everest or challenge anything. They simply want the roar of speed in their ears and the close calls in their sights. They may not be asking for crashes but neither do they turn their heads away.

The automobile industry has pandered to the craze for speed to the point that it is giving American drivers more horsepower than ever has been useful on the highways. They have promoted it as a selling point for new cars, nurturing the small-boy complex of the auto buyer that enables him, like the lad with the all-day sucker, to boast "mine is bigger than yours."

At Indianapolis on May 30, the big sloping track and all that speed under the hood will again be sniping at the brave guys behind the wheel. They can set new records but they can't always outrun those hidden bullets that are triggered by so many things that can happen to men and machinery, at those speeds.

Gallaudet: Only College for Deaf Offers Ultimate in Education Fields

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. THORNBERRY. Mr. Speaker, I am sure that the Members of Congress will be keenly interested in the excellent story about Gallaudet College, the only senior college for the deaf in the world, which appeared in the May 11 issue of the Houston Post, Houston, Tex., a well-known and important daily newspaper of our Nation.

As you know, the Houston Post is owned and published by our distinguished and beloved friends, Gov. and Mrs. William P. Hobby. While Mrs. Hobby served as Secretary of Health, Education, and Welfare, she took an unusual, personal interest in Gallaudet. While she served in the President's Cabinet, Mrs. Hobby took time from her very busy schedule to visit the campus of Gallaudet and to talk to the students. Because of her great interest in an adequate program of higher education for the deaf, as Secretary of the Department of Health, Education, and Welfare, she urged legislation which the Congress passed, the effect of which has been to bring Gallaudet College accreditation and a modern building program. The deaf will always owe a great debt of gratitude to Mrs. Hobby.

This splendid article about Gallaudet College was written by Mr. Jim Mathis, the able chief of the Houston Post Washington bureau. Mr. Mathis spent several days on the campus of this great college talking to officials, teachers, and students, and has written a moving and graphic story about what Gallaudet College is accomplishing for a wonderful group of students.

It is a privilege for me to insert this article in the CONGRESSIONAL RECORD.

It is as follows:

GALLAUDET: ONLY COLLEGE FOR DEAF OFFERS ULTIMATE IN EDUCATION FIELDS

(By Jim Mathis)

WASHINGTON.—In the vaulted chapel, stained with age and creaky floored, are gathered 23 students.

To the right of the entrance a varicolored jukebox glares with light and pulsates with dominating sound.

A sweatered young man sits beside the machine, his arm and hand resting upon the glass top.

On the lower level of the stage, across and to the left, a clump of youngsters freeze from gesticulating happiness into the rigidity of a posed Othello scene.

A photographer's bulb flashes. Feet shuffle. The floor complains. Old portraits of past professors look down from the wall.

But in the ocean of sound sprayed out by the music box, not one voice is heard. Only here and there a thin, false-toned laugh.

LUNCH BEING SERVED

In the next door dining room, lunch is being served. There are no voices here, either. Only the clink and clank of dinnerware.

This is high noon at Gallaudet College, the only college in the world for the deaf.

Not one of those 23 in the chapel could hear a voice without artificial aid. Many are totally deaf, and have been so since birth. Most of them are unable to speak recognizable words. Their basic communication is the sweeping gracefulnes of their sign language.

On this curious campus—called Kendall Green after its founder—there are 409 youngsters in the process of education, moving from the 5-year-old just learning to speak to polished seniors with fully accredited degrees.

Gallaudet College was officially founded in 1864 on a charter signed by President Abraham Lincoln. It is one of five higher education institutions operated by the Federal Government. Others include the three Military Academies and Howard University here.

On 92 acres, and in the midst of a changing plant now halfway between the traditional and the functional modern, Gallaudet provides the ultimate in educational opportunities for the Nation's estimated 75,000 deaf.

BEST PUPILS ENROLLED

To Kendall Green and Gallaudet come the best in pupils from among the 23,000 enrolled in secondary schools devoted to the deaf. Available are degrees in 19 fields, all fully approved by the Middle States Association of Colleges and Secondary Schools.

When Gallaudet students graduate, as about 40 will this summer, their degrees bear the signature of the President of the United States.

Since 1954, when the charter was changed to make the Government responsibilities more explicit, Gallaudet has been growing fast toward its hoped for enrollment of from 700 to 1,000 students. Construction now underway would move the school fully toward that student capacity.

Meanwhile, the college has accepted as its responsibility the great untapped area of research into the problems of the deaf and the education of the deaf. A small, vigorous staff is building the nucleus of a future in research.

It is a long way from the one-man student body with which Dr. Edward Miner Gallaudet began.

JOKES ABOUT COLLEGE

Gallaudet, 21-year-old son of a minister who first brought the sign language to America, jokingly referred to his lone full-time student as "the college."

"The college," he was likely to report, "has a toothache today."

Since Gallaudet's death in 1917, only two other men have held the presidency of Gallaudet College, Dr. Percival Hall stepped out after 35 years, short of Gallaudet's 43.

Today's president is vigorous, dedicated Dr. Leonard M. Elstad, who came here originally 37 years ago from Minnesota, to learn to teach the deaf. Elstad has been president for 14 years.

The students are divided broadly into four groups, the Kendall School for District of Columbia children, the preparatory school, the undergraduates at college level, and the graduate school.

Not all the youngsters who seek to enter Gallaudet make it. There are a series of stiff examinations to pass, and then preparatory school. About half who apply make the preparatory school.

NO SPEECH PATTERN

Because a child who is deaf at birth or becomes deaf before he is 5 has no knowledge of sound or language, or no fully formed speech pattern, he usually winds up from 3 to 5 years behind the average hearing student in education. First he must go through the tortuous process of learning by sight objects and connecting them with letters and words. Few ever catch up in the early grades with the hearer who gets off to a running start at 5 or 6.

State or private schools usually find, then, that their students become 18 and older far too soon to finish a complete high school course. Their interests turn to jobs and marriage. Most schools at a State level cut their education off at around the 10th year, as compared to 12. Few then are ready for college work.

The preparatory student at Gallaudet gets 2 fierce years of work poured into 1 to ready him for college courses. It is a difficult and trying year for many reasons.

"When we get them here, many think because they have had extra attention in the family or smaller schools that they are something special," Dr. Elstad notes. "Our first task is to let them know they are just like any other person."

HOUSTONIAN TYPICAL

Typical of the preparatory class here today is Jeanette L. Padgett, a tall, stately 19-year-old daughter of Mr. and Mrs. G. W. Padgett of 4405 Downs Street, Houston.

Jeanette went to the Texas State School in Austin, and spent considerable time in special speech classes at the University of Texas. She can speak brief, pearl-shaped words, but has found the prep courses tough at Gallaudet.

Along with two other Austin graduates here now—Melvia Miller, 18, of 2007 North Main, Houston, and Joy Gibson of Humble—Jeanette feels the Austin school should better prepare its students for Gallaudet. Especially should the school stress literature and science, the three insist.

California, Gallaudet instructors say, does more to prepare its students for college than any other State. There are 38 enrolled here from California now, as against 12 from Texas.

Undergraduates pay a $1,200 a year tuition. If parents are unable to pay, the State vocational rehabilitation takes up some slack and the Government the remainder. It costs about $2,000 a year for each student. Dr. George Detmold, dean of the college, figures these are about average for colleges the size of Gallaudet.

STUDENTS ARE TESTED

By the time students are ready for college entrance, they have been tested and characterized in their abilities to speak, hear and lip read. An intense young doctor of philosophy, D. Robert Frisina, director of the hearing and speech center, is gradually reducing the studies in his area to direct application in education and training. Frisina, only 34, is part of the bright future Dr. Elstad foresees for Gallaudet to become a national research center on deafness and its accompanying problems.

One of the young undergraduates who had been taped, studied and tested and has moved quickly to the top of his class is Robert Bevill, a small intense fellow of 21. Bevill's parents live at 1913 Priest Road in Pasadena, Tex. He is a freshman.

In his freshman year, Robert has been chosen as head of his class, one of its representatives on the student council, member of the intramural board, social committee, reporter for the college paper, the Buff and Blue, and wrestles in the 123 pound weight class. Instructors count him one of the better students. He is here by virtue of rehabilitation grants from both Texas and Arkansas.

EARLY INDOCTRINATION

Students get early indoctrination in the pure sign language and in lip, or as instructors prefer to call it, speech reading.

Classes are taught through the simultaneous use of the spoken word, sign language and liberal use of the classroom blackboard. They differ in specific form, however, from professor to professor.

Dr. Robert F. Panara is totally deaf, and has been since he was 11. He is one of the 23 deaf instructors on the faculty. He teaches English and literature.

One day last week Dr. Panara brought his class into the yellow-chaired amphitheater classroom for a lesson on American poets. His first 10 minutes were devoted to copying the assignment on the blackboard. His class of 30-odd drifted in casually and began copying. The silence was broken frequently by speaking students, who had no hesitancy in speaking out to their colleagues in the next seat or across the room. One thing that doesn't bother these classes is noise.

STUDENTS CONCENTRATE

"Once my lecture begins, they must watch my hands and face to get the content," Panara said.

"They cannot copy notes and listen at the same time like other students."

When the lecture began it was impressive and full of impact. On that particular day Panara was explaining Emily Dickinson. Anyone could have learned more about Dickinson's brilliant choice of words on little things by listening for half an hour to Panara than in several full courses.

His explanation of "The sweeping up of the heart and putting love away. We shall not want to use again until eternity" was visible and with movement of emotion.

His description of a "narrow fellow in the grass," the famed snake, and "Zero in the Bone" were precise and chilling. And when he took Dickinson's train around the mountain, it was with giant steps and with supercilious eyebrows at the shanties along the tracks as he choo-chooed along.

"These are abstractions, and the most difficult for deaf students to understand. For that reason, I must spell them out and act them out. Even with a little ham acting," Panara admits with a grin.

ABSTRACT IS HARDEST

Like Panara, Dr. Powrie Vaux Doctor, who has been teaching history for 30 years at Gallaudet, finds the concepts and the abstract the hardest to get over.

Dr. Doctor is gray-haired and husky, and he doesn't act out his lectures as vehemently as Panara. But when he gets to the word "hammer" his heavy brows come together and his fists strike a blow that goes whack. There can be no doubt about hammer.

Dr. Doctor has promoted and teaches by a structural method in which he links up the abstractions in each day's lesson. But he is still confronted with the disability to assimilate the concept, after all these years.

"How can I teach them what regimentation means? Or democracy? The hearing person takes in his concepts through his ears, by radio, television, movies, the spoken language. These people learn with facts, and find the transition most difficult," Dr. Doctor says.

That he is still going about it after 30 years, and with obvious success judging from some of the papers handed in by his students that day, is a credit to his dedication.

NINE SEEKING MASTER'S

There are currently nine graduates—all hearing persons—pursuing the Gallaudet course toward a master's degree, preparing to dedicate their lives to the deaf. Many come from State institutions. Most of them realize that as teachers they seldom can reach a superintendency of a deaf school without a Gallaudet degree.

In its 95 years, Gallaudet has sent instructors fanning out all over the Nation, along with its alumni. Although different schools of thought exist on matters like sign language versus speech reading, and whether or not the deaf think and dream in their sign language, the Gallaudet theories generally prevail.

In order to train teachers, a college must have a secondary school, on campus if possible, for its students. Kendall School serves as both training ground and a conscientious teacher of the District of Columbia deaf. Under its current program, the District school system pays Kendall for each of its resident pupils. Others come in from parents about the world.

The youngsters, ranging in age from 5 to 16 or thereabouts, live on campus in dormitories during the week. Most of them go home on weekends.

IMPRESSIONS VIVID

Under the guidance of John Gough, principal of Kendall and chairman of the college education department, a visitor gets a first hand view of the cloak of patience required in teaching the very young to speak, and a vivid impression of the intelligence and natural desire to learn expressed by most of the children.

Mrs. Harriet N. Gough, wife of the principal, had on this particular day a half dozen children in the age range of 9 to 11. The highest IQ among them was 101, ranging downward to 76.

John A. Slender, Negro boy with the 101 IQ, is beginning to speak intelligible words. In this class, the short story of the day concerned one Tom who had a red ball, threw it; his dog ran and got it and Tom laughed. John, with clear pride in his growing ability to communicate, ran ran through his lesson with a few boosts from Mrs. Gough.

Each child spoke into a tape recorder and amplifier hooked up to desk sets for those who had hearing.

PATIENCE EXHIBITED

Across the hall, Mrs. Della Norris was exhibiting infinite patience with the 5-year-olds, many of whom come to the school spoiled or in silent retreat from mishandling at home.

Funds are now being sought for a new Kendall school building. Some students live in wooden dormitories, with their only protection from fire the blinking red lights which serve as bells for the awakening of the deaf in times of danger.

One of the two more important features of the college are its physical education program and classes in dancing and drama.

Dr. Peter R. Wisher, head of the physical education department, says he has usually 150 boys from which to draw a football team, and teams for soccer, track, baseball, golf, basketball, wrestling, and cross-country races.

The school competes in the Mason-Dixon Conference.

Like any coach, Dr. Wisher describes the results of this competition as "representative." Actually, Gallaudet has a tough time competing, as its records indicate. In football, a silent count is necessary, and the team has trouble with off-side penalties and its lines can't fully utilize the quick charge. Other team sports have similar problems for the deaf players.

INDIVIDUALS DO BETTER

Where individuals are involved only, Gallaudet does better. Its wrestling teams hold their own with its conference opponents.

Wisher discounts partially reports that deafness also creates difficulty in balance. His department develops good fancy divers and tumblers.

Wisher also heads up the Gallaudet dancers, who have built an enviable record in showings across the country. The use of hands and body by the deaf or nearly deaf students, is more fluid and expressive, Dr. Wisher contends. The rhythm and beat of music comes through to a student leader not totally deaf. Others follow that lead, or pick up the rhythm and beat through vibrations from a loudspeaker placed against the stage floor.

A moving version of the Lord's Prayer is danced, almost wholly by use of the hands. It has been given wide acclaim in many demonstrations.

The Gallaudet dramas, traditional Shakespeare in the sign language, draw capacity crowds several times a year. Many in the audience are deaf from up and down the east coast, who have never seen the classics in that particular form of communication. But hearing persons crowd in also from Washington and sit entranced.

PARTS LEARNED FAST

Student players are fast to learn their parts, Dean Detmold says.

"We can put Othello on after only 3 weeks of rehearsal," the dean says.

This version of Othello will be on NBC for half an hour on May 21. The Gallaudet production of Hamlet last year was aired on the same network. Detmold says there are dozens of requests for performances, so many that they would disrupt normal classes, and therefore are turned down.

Gallaudet, as noted earlier, is largely financed by the Federal Government. But Dr. Elstad has made a strong effort to draw upon private foundations, particularly in the field of research. An outline of funds needed for research in the field of language, acoustics, speech reading—no one knows why some are able to pick up lipreading and others fail—and application of research show a total of $549,000.

Also badly needed at the college are graduate fellowships to pay hearing persons, funds for faculty leaves for study, and a student loan fund endowment.

CAN'T COMMUNICATE

One great difficulty in aiding those students who come up with mental disturbances is the inability of psychologists and psychiatrists to communicate with them. There aren't enough deaf in the Nation for a psychiatrist to specialize in treating the deaf. An estimated $50,000 would carry such a program for 5 years.

Right now, Assistant Secretary Edward Foss Wilson of the Health, Education, and Welfare Department, a member of the Gallaudet board of directors, is personally underwriting a chair in comparative religion. Wilson is a member of the family which owns the Wilson Packing Co.

Representative HOMER THORNBERRY of Austin, whose parents were deaf, has started a fund in memory of his mother, Mrs. Mary L. Thornberry. THORNBERRY serves on the board, and has since 1949. The new hearing center, a 16-sided building under construction, will be named for Mrs. Thornberry, who was also a dedicated teacher of the deaf.

While Gallaudet has turned out many graduates who would otherwise have been a waste of human resources, its alumni have never been great moneymakers. There just aren't any multimillionaires to turn to for private donations in the group.

Any assistance, Dr. Elstad points out, will move the one hope for bringing to the Nation able, understanding deaf, further along the road traveled since 1864.

Important Markets

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, May 21, 1959

Mr. WILEY. Mr. President, as we know, direct mail advertising, over the years, has been a valuable channel of contact for thousands of small businesses throughout the Nation.

In Wisconsin, for example, our gift cheese shippers—one of our outstanding industries—annually sells millions of dollars worth of cheese by mail. This includes the finest varieties of tasty, delectable cheese, such as: American, Swiss, brick, Gouda, Edam, Blue, Camembert, and others.

Recently, the Federal-State Crop Reporting Service of Wisconsin published a special report of the volume of Wisconsin cheese sold by mail. In 1958, for example, our Wisconsin gift cheese shippers spent over a million dollars for postage, shipping, advertising, and special packaging material.

The report illustrates the great degree to which people not only in Wisconsin, but throughout the country, respond to third-class mail advertising, and also the extent to which industries depend on such advertising to carry on their activity.

As an indication of the importance of third-class mail to our Wisconsin cheese shippers—representative of such business throughout the country—I ask unanimous consent to have the report by the Federal-State Crop Reporting Service printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

WISCONSIN CHEESE SOLD BY MAIL PROVIDES IMPORTANT MARKETS

Gift cheese shippers are a multimillion dollar industry in Wisconsin, according to a survey made by the Wisconsin Crop Reporting Service. Sales in 1958 added up to over $5 million based on the establishments reporting in a special survey made for the first time this spring.

American cheese was the most popular in sales by gift cheese shippers in 1958. Three-fifths of the sales were American, but all of the kinds of cheese made in Wisconsin were represented in the 1958 sales reported. Some kinds are well known but sales included many cheeses not so well known such as Gouda, Edam, Port Salut, French, Blue, Camembert, and, of course, the whole family of Italian cheese varieties with their interesting names and different flavors were well represented. In addition, reports of 1958 sales of cheese included many specially processed cheeses and cheese-food compounds. Shown below is a breakdown of the estimated 1958 sales:

Wisconsin gift-cheese shippers sales 1958[1]

[Thousand pounds]

Kind	Total	Mail-order sales	Direct sales[2]
American	2,811	2,042	769
Swiss	917	787	130
Brick	585	452	133
Other	406	216	190

[1] Wisconsin has several firms producing cheese for the gift-cheese industry. Their sales are nationwide at the wholesale level and are not included in these figures. Estimates are intended to cover only mail-order and retail sales of gift-cheese establishments actually located in Wisconsin. Wholesale gift-cheese business by Wisconsin firms is not covered in this report.

[2] Gift-cheese shippers are primarily engaged in selling cheese by mail but many operate cheese stores in addition and sell direct to consumers over the counter. Estimates of these sales are shown in this column. Only a small part of the retail sales of cheese in Wisconsin is represented.

Merchandising cheese by mail involves many expenses for postage, shipping, advertising, and special packaging materials. Wisconsin Gift-Cheese Shippers, according to the reports, spent over a million dollars in 1958 to cover these costs. Largest item of advertising expense was for printed brochures which totaled about $700,000 last year. In addition, postage for solicitation of sales through the mails was $175,000. Another $200,000 was spent on advertising through newspapers, radio and television, and other media. Advertising costs in 1958 averaged $13,154 per firm reporting in the survey.

Nearly as much money is spent in shipping charges as for advertising costs. The parcel post cost in 1958 was $760,000 and this was the predominate means of shipping cheese to mail-order customers. Express costs were also large, and added up to $58,000 and other means such as truck and special package deliveries added another $37,000 to the cost of shipping gift cheese to customers. The average overall shipping charges per firm reporting was $12,200 in 1958. Parcel post charges averaged $10,847 per firm reporting and express and other shipping charges were $1,353 per firm reporting.

Need for Flood Control Measures in Taylor County, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Thursday, May 21, 1959

Mr. YARBOROUGH. Mr. President, the location of the busy city of Abilene and Dyess Air Force Base in Taylor County, a vital part of our Nation's defenses, lends an imperative argument to the need for completion of a flood control survey in Taylor County, Tex.

I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the Commissioner's Court of Taylor County, Tex:

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE COMMISSIONER'S COURT OF TAYLOR COUNTY, TEX.

Whereas Taylor County is daily threatened by catastrophic floodwaters; and

Whereas the U.S. Corps of Engineers has undertaken a survey of the possible remedial action and is contemplating the completion of said survey by June 1961; and

Whereas the city of Abilene and the county of Taylor and Dyess Air Force Base are growing at such a rapid rate that any action taken in 1961 will cost twice as much as it will to take such action in the immediate future; and

Whereas we are deeply grateful for the appropriations that have been made in our behalf: Now, therefore, be it

Resolved by the Commissioner's Court of Taylor County, Tex., That the Congress of the United States and the U.S. Army Corps of Engineers be urged in the strongest possible terms to accelerate this flood survey so that it will be finished in time to avert another catastrophe.

This motion was made by County Commissioner Floyd Tate and seconded by County Commissioner Grover Nelson and unanimously adopted by the entire court in regular session assembled.

REED INGALSSE,
County Judge.

Attest: Mrs. CHESTER HUTCHESON,
County Clerk.

Dr. Conrad M. Barnes, Kansas' 1959 Nominee for General Practitioner of the Year

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. SCHOEPPEL. Mr. President, it is with pleasure that I bring to the attention of Members of Congress the name of a citizen of Kansas who is the 1959 nominee of Kansas for the title "General Practitioner of the Year." He is a man who in belief and practice believes that medicine is more than a professional practice—that it is an art. He believes it is an art in helping others.

Dr. Conrad M. Barnes, of Seneca, Kans., is remarkable in that he exemplifies the true physician in a complete sense, combining the proper physical care of the patient with proper counselling of his emotional problems.

Dr. Barnes has continued his own education from year to year, even taking time out to teach classes in the University of Kansas Medical School, his own school. He loves his patients.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article relating to Dr. Barnes entitled "Medicine is Art to 1959 Nominee," which was published in the Topeka Daily Capital of April 18, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Topeka Daily Capital, Apr. 18, 1959]

MEDICINE IS ART TO 1959 NOMINEE

Kansas' 1959 nominee for the title "General Practitioner of the Year" is a man who believes medicine is more than a professional practice—that it is an art. He believes it is an art in helping others.

He is Dr. Conrad M. Barnes, 47, of Seneca.

Although a native of Missouri, he earned his medical degree at the University of Kansas School of Medicine. Following his internship in 1936 and 1937, he selected the Kansas town in Nemaha County to begin his practice. He's still there.

Nearly everyone knows him simply as "Connie"—the telephone switchboard operator will vouch for that.

A professional associate describes him as a great man with a great heart and dedicated devotion to his chosen profession.

The quality of the medical care he gives is attested to by the honors his colleagues have placed upon him. But beyond that lies the humanity, that art of medicine which gives him infinite distinction.

Connie Barnes is a reticent, modest man, but when you know him well you may hear him say:

"Yes, I worked hard to get this fine new hospital at Seneca. Perhaps because I got tired of climbing stairs.

"I used to have my own little hospital right here. Thirty-two steps from this very spot to the second floor. No elevator, I carried every single patient, too sick to walk, those 32 steps to my hospital. The farmer with the broken hip, the obstetrical case, all of them. Had to.

"We couldn't manage a stretcher around the corner turn. And I wouldn't take a chance on anyone else doing it, so I carried them all."

Connie Barnes' philanthropy has included the gift of a washing machine to a needy patient simply because there was no other way for her to get one. There have been gifts of TV and hi-fi sets, because they would provide more therapy in these instances than the pills he could give them.

As for his doctoring bills, he never sends them to anyone. He says, "They'll pay me when they can. And if they don't their kids will. I've had adults come in and pay for their own delivery. They think it's a big joke."

Professionally, he is one of the men who has given of his time to teach classes at the University of Kansas Medical Center, where he has driven many miles to make this contribution.

He was one of Dr. Franklin Murphy's first lieutenants in the development of the preceptorship in Kansas. He served as the first chairman of the Kansas Medical Society's Committee on Rural Health.

He has held the presidency of the Kansas Medical Society, Kansas Academy of General Practice, and Kansas Blue Shield.

Dr. Mahlon Delp, professor of medicine at the Kansas University Medical Center, says of him:

"His work in Kansas school health has been more productive than that of any other single physician in the State. * * * No man in our entire area so conscientiously and successfully bears the wide responsibility for proper care and patient counseling for the mingled organic and emotional problems which patients have.

"He also has demonstrated constant concern with continuing his own education. None in our State has accumulated more hours of postgraduate continuation education."

A professional colleague says of him: "To my knowledge he has never been too busy to see a patient or any person who needs help. His all-encompassing understanding and love of the human being not as a unit but as an individual (explains) his special interest in the psychosomatic aspect of medicine.

"He has a particular philsophy of living each day to its fullest and he is the one person whom I have met who could and does follow this philosophy."

Physically, Connie is endowed with a large body that instantly separates and distinguishes him from all other persons. Yet he moves with dexterity. For him, his size is natural, even an asset.

Last year he drove 800 miles to Dodge City simply to shake hands with the actor who plays "Doc" on the popular television Gunsmoke program. This was no surprise to those who know Connie because this western character typified something fine that now is all but forgotten in the practice of medicine and Connie wanted to thank the actor for his fine portrayal.

Married and the father of two children, this smalltown Kansas doctor also is described as a real family man. His devotion to his profession is said to be equalled only by his love for his family.

He frequently takes other people into his home—currently, for 1 year, a German exchange scholar is living there.

This is Kansas' Doctor of the Year—its nominee for the American Medical Association's 1959 "Oscar" in medicine.

Nuclear Test Ban Issue—A Course for United States Action

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. HOSMER. Mr. Speaker, I take this means to call attention to my remarks in this RECORD following the day's legislative business under title "Nuclear Test Ban Issue—A Course for United States Action." They set out the moral, practical and military reasons for a four-point program suggested for United States action involving:

First. Announcement of indefinite cessation of the only kind of nuclear testing producing fallout, namely, testing in the atmosphere, attaching reasonable conditions regarding problems arising from future actions by other powers.

Second. The diligent seeking of international agreements amongst the nuclear powers, including Soviet Russia, likewise to ban atmospheric tests, as proposed by President Eisenhower to Premier Khrushchev.

Third. The declaration of a moratorium on talks aimed at banning below-ground and above-atmosphere testing until the air is cleared of emotion, propaganda and misinformation regarding fallout, until the problem of detecting violations is understood, and until the other military and moral question inhering in the issue are debated and answered.

Fourth. The candid release to the public of data regarding testing, detection and other aspects of nuclear weaponry

which are not properly of a restricted security classification.

I also call attention to the following related materials to be found in the RECORD:

"The Case Against the Nuclear Test Ban," an editorial from Air Force magazine, Wednesday, April 29, at pages A3631–A3632.

"Communist Diplomatic Perfidy," my compilation of Soviet treaty violations and reasons therefor, Thursday, May 14, at pages 7373–7376.

"Nuclear Test Ban Pitfalls," a memorandum by Joint Atomic Energy Committee Consultant Thomas E. Murray evaluating the United States inconsistencies regarding the issue of nuclear test bans, Wednesday, May 20, at pages 7812–7815.

Vacation Opportunities

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. WILLIAMS of New Jersey. Mr. President, in the midst of the hustle-and-bustle of the workaday world in which we find ourselves, come far-off thoughts of finding the perfect environment to spend the precious vacation days.

Where can we find the greatest opportunities for recreation to suit our needs, we wonder? To come to the aid of those who find themselves in such a predicament, I point out for them that in the State of New Jersey the opportunities for a variety of recreational opportunities are unlimited. Here is scenic grandeur, sandy beaches, and all other types of satisfying diversions which will delight the heart of the tourist.

An article from the Atlantic City Press describes these recreational opportunities in detail, and for those of you who ponder this question, I ask unanimous consent to have the May 11 article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VACATION OPPORTUNITIES

One could travel far and spend much without encountering a wider variety of scenic grandeur than New Jersey has to offer.

We are reminded of this happy circumstance by the new "Vacation Guide to Fun in New Jersey," issued by the New Jersey State Department of Conservation and Economic Development.

The recreational opportunities afforded vacationists along the Jersey shore, particularly in south Jersey and even more particularly Atlantic City and neighboring resorts, are familiar to all. The miles and miles of wide beaches, boardwalks, hotels, motels, restaurants, amusement places, fishing and boating facilities annually attract millions.

Tourists in large numbers are also drawn to the natural beauty of mountains, lakes, and rivers in this State. The Jersey pine belt has its own allure.

Resort communities, coastal and inland, plan full schedules of regattas, beauty pageants, golf tournaments, contests, and special events designed to attract visitors from out of State.

In addition, New Jersey's 23 State parks and 11 State forests contain facilities for camping, hiking, horseback riding, boating and swimming. Picnicking possibilities exist from one end of the State to the other.

They all make for a diversified and satisfying vacation in the Garden State.

As the Vacation Guide points out, economy is one key feature of a spring vacation in New Jersey. A wide range of accommodations, cuisines, and diversions appeal to varying tastes and pocketbooks. To top it all off, New Jersey is easy to reach by car, bus, train, or plane.

A great many States make a bid for tourist trade, but New Jersey really has the merchandise.

The Matson Navigation Co. and Trade With Hawaii

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. DIRKSEN. Mr. President, some time ago I called the attention of the Senate to the fact that the Matson Navigation Co. has a near-monopoly on trade between the west coast and Hawaii.

I am happy to inform the Senate that the Department of Justice has now taken the lead in seeking to end a situation which cannot be tolerated now that Hawaii is a State of the Union.

I ask unanimous consent to have printed in the Appendix of the RECORD a news item from the New York Times of April 12, 1959, concerning this matter.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LINE RENEWS BID FOR HAWAII RUNS—PACIFIC FAR EAST GETS HELP OF JUSTICE DEPARTMENT IN 3-YEAR BATTLE

(By Arthur H. Richter)

Another round is about to begin in the 3-year struggle by the Pacific Far East Line to get a foothold in the Pacific Coast-Hawaii trade.

The company has been thwarted thus far in all of its efforts to gain Government approval for steamship cargo service from the West Coast to Honolulu. The proposal has been twice rejected by the Federal Maritime Board. It also lost in the Federal District Court and the Court of Appeals, both in the District of Columbia.

The current move is being made in the Court of Appeals, also in the District of Columbia. The Justice Department is scheduled to file a brief in the case by Friday and a further bill of particulars 10 days later.

Oddly enough, the prime mover in the case is now the Justice Department rather than the Pacific Far East Line. The department originally supported the Maritime Board, but then withdrew from the case.

It has reentered as an intervenor and is seeking to show that the Maritime Board erred in holding that approval of the application would result in unfair competition to the Matson Navigation Co.

APPEAL CONSIDERED SURE

Pacific Far East is to submit its brief to the court by May 27 and full arguments will probably follow about 10 days later. The concensus in local shipping circles is that the loser in the coming round will certainly take the case to the Supreme Court.

The case began when Pacific Far East, which holds a Government subsidy contract for operation between Pacific Coast ports and the Far East, petitioned for the right to make two unsubsidized calls a month at Hawaii. After a lengthy hearing, which covers 7,500 pages of transcript and 1,900 pages of exhibits, the Maritime Board's trial examiner and the public counsel approved the move.

However, on May 10, 1957, the Maritime Board, by a 2 to 1 vote, overruled the examiner and public counsel and denied the application. A petition for reconsideration was denied by the board the following July 30.

The company went to the court of appeals a year ago but lost again, this time on the basis of jurisdiction, and the case was heard in Federal District Court last November. The latter ruled simply in two words: "Petition denied."

JUSTICE DEPARTMENT ACTS

At this point the initiative was taken by the Department of Justice, which returned the action to the Court of Appeals. The Department's move was viewed as "double-edged" in shipping circles. Leaders in the field see it as both an attack on the alleged monopoly held by Matson in the Hawaiian trade as well as an attempt to upset the Board's ruling against Pacific Far East.

The papers filed by the Department in the action in district court said that Matson was closely interlocked with major sugar, pineapple, and other important economic interests in Hawaii. The papers said the line, which has been in the service for 73 years, carries 98 percent of the cargo in the trade.

Although Matson is unsubsidized, it operates a subsidized service to Australia through a wholly owned subsidiary, the Oceanic Steamship Co. Matson and Oceanic, it was pointed out, have identical officers, directors, management.

Also, with minor exceptions, they have identical freight traffic staffs in the United States, and have common offices, agents, and terminals.

MONOPOLY CHARGED

There is nothing in the Merchant Marine Act of 1936, the Department held, that gives the Maritime Board rights or powers that include the "preservation of monopoly." It added that the Board's report contained no indication that the agency had given any consideration to the fact that the granting of the application "would help to break Matson's stranglehold on this trade."

The Department further contended that the ordinary methods of determining unfair competition cannot be applied in this case since both Matson and Pacific Far East enjoy Government subsidy for foreign operations.

"We do not believe," the Department has said, "that a monopolist property can be viewed as fundamentally entitled to maintain its monopoly against a competitor whose alleged unfair competition is, in the final analysis, nothing more than the fact that it will be competing effectively."

Spokesmen for Pacific Far East contend in support of the companys' application, that it is asking nothing more than what Matson already has, namely the right to operate an unsubsidized run to Hawaii independent of its subsidized operations to foreign ports.

Address by Senator Humphrey Prepared for Delivery to the California Legislature

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. ENGLE. Mr. President, the California Legislature extended to our colleague, the Senator from Minnesota [Mr. HUMPHREY] an invitation to address its membership on Friday, April 24, 1959. His speech was keenly awaited, and it was with genuine disappointment that the legislators received word that Senator HUMPHREY could not appear before them because of his hasty return to Washington for the Senate debate on the labor bill.

Senator HUMPHREY's remarks prepared for that occasion are a salute to our growing State, and call attention to California's increasing importance in the American scene. I believe that his text will interest Members of Congress and other readers of the RECORD, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS PREPARED FOR DELIVERY TO THE CALIFORNIA LEGISLATURE BY SENATOR HUBERT H. HUMPHREY, SACRAMENTO, APRIL 24

It is a pleasure to return to California.

Actually I—along with thousands of other Democrats—have plans to be out here in July, 1960—in Los Angeles, to be specific. But I find the magnetism of California irresistible, and, like many other Minnesotans who have been drawn to your State, I decided not to wait.

It is one of the greatest honors of my public life to appear before the California Legislature, and I am deeply grateful for your invitation.

As a fellow legislator, I can well appreciate the tremendous problems that face a legislative body in a dynamic and fast-growing State. Representative government finds its heart in legislatures, which most directly represent the people.

You and I know that the process of legislation is one of the most delicate and difficult in the art of government.

I am tremendously impressed, as are many millions of Americans, by the magnificent record Governor Brown has established in his first few months in office. He has faced up to what is obviously a serious fiscal problem, and with your cooperation and counsel, I am sure that together you will solve it. Surely Governor Brown will rank among the great Governors of the Golden State.

And I enthusiastically acknowledge to you here today, again in common with many, many Americans, that the roster of great Governors of California—indeed, of great American leaders—carries the name of the present Chief Justice of the United States, the Honorable Earl Warren.

You have given us many fine leaders and public servants in both political parties. We in the Senate welcome your capable and energetic new junior Senator, CLAIR ENGLE, whose previous congressional experience has been recognized in his assignment to two major committees so vital to California's future—the Senate Committee on Armed Services and the Committee on Interstate and Foreign Commerce.

I might add, in a nonpartisan spirit, that I was pleased that our Republican colleagues have honored one of your former members, Senator THOMAS KUCHEL, by making him assistant Republican leader in the U.S. Senate.

It has been my good fortune within the past few days to visit the States of Washington and Oregon. Very soon I shall stop off in Utah and Wyoming on my way back to Washington, D.C. But no trip to the West is complete—does not even begin, some might say—until one visits California.

To me California symbolizes America's future, her greatest hopes.

For California is a social cross section of the Nation. Here are gathered peoples of all races, religions, and origins, living together with a remarkable absence of strife or friction.

You have marked geographic diversity in your State—towering mountains and flat, fertile valleys; lakes and deserts.

You even have a North and a South, but happily you exhibit—to the visitor at least—no sign of civil war.

California's way of life is an example to the rest of America. Indeed the strength, vigor, and pioneering spirit which it represents is the answer to the repressiveness and deadness of spirit of the Soviet Union.

The answer to the Russian Bear is the Golden Bear of California.

You here in the West—and particularly in California—have cared about and mastered the problems of living with other people, respecting their opinions and traditions, fostering and taking pride in the diversity of your people. For this, you deserve the respect of the Nation and of the world. This is America at her finest.

Symbolic of this is the passage by this legislature, under the leadership of Governor Brown, of a measure to assure equal opportunity in employment for every person, be he rich or poor, black or white, Catholic, Protestant, or Jew. For this effort, I salute both of you and Governor Brown.

I respect and admire your vitality and your eagerness to meet and solve problems. You seem unhampered by convention or shibboleth or by the doubters who so facilely catalog the obstacles but seem incapable of devising the answers.

To me the doubters hold sway altogether too much in America today. Their appeal is to the timid and the cautious in us, not to the venturesome or the daring.

This Nation and this State face new problems, big and difficult problems very different from those we overcame in the past.

These problems will not be solved without looking ahead, without planning for the future.

For everyone except the Federal Government, planning is considered a virtue.

Parents plan for the education and security of their children.

Businessmen look ahead to plan new expansion, new products, to anticipate new conditions.

More and more localities have their planning commissions and staffs.

But at that point, the logic of planning seems, to many people, to come to an abrupt stop. Planning by the Federal Government seems tantamount to original sin. The same is true, to a degree, of planning by the States.

We will yield to such thinking only at our peril and to our future regret. For problems of the future will not solve themselves.

But I have faith in America's ability to solve them—and particularly in California's capacity to meet them.

For the spirit of California is still one of enterprise, of pioneering. Your continued growth is inevitable. Your material success is assured.

But I raise this question with you: How will you grow? How will America grow?

We can build the material things. Given proper leadership, we can reach levels of adequate housing for all, enough school buildings to house all our children, maximum development of natural resource potentials. Science and technology inevitably will make greater inroads on disease and untimely death, hunger and intolerable living conditions. These will eventually be conquered through physical changes in the material conditions of life.

If we live in the grandest houses and attend the most modern schools, but still have not learned to live with each other, to respect differences of opinion, to honor intellectual attainments, we have built upon sand and not rock.

I speak, in short, for building on the inner qualities of our people—those qualities of mind and spirit that encourage man to live at peace and in harmony with himself and his brothers.

There is much unfinished business to take care of in this country. As we go about it, new issues will arise. The human enterprise never finally solves its problems, so long as it remains a going concern. Progress involves not merely the solution of old problems, but the discovery of new ones.

But even if we solved all our domestic problems, our troubles as a nation would not be over. The paradise of our domestic security, as a noted theologian, Reinhold Neibuhr, recently said, would still be suspended in a hell of global insecurity.

So, as we strive to put our house in order, let us not forget our neighbors in other lands. Our material accomplishments must not become ends in themselves, but the means to achieve the ideals we share with peoples elsewhere. Our goal must always be to bolster the faith of peoples everywhere in free institutions and the democratic way of life.

Justice for Retired Military Officers

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. NEUBERGER. Mr. President, Congress last year wisely provided increased pay for active duty officers and men of our Military Establishment. One of the injustices in that legislation was that it did not provide for similar increases for retired officers. Military retired personnel received only a 6 percent increase in retirement benefits while those on active duty and those who retired after June 1, 1958, received much larger benefits. The military pay legislation unwisely, in my opinion, established two classes of retired military officers—those who retired prior to June 1, 1958, and those who retired subsequently. Furthermore, the legislation destroyed the historic relationship that retired pay is a percentage of active duty pay. All service pay laws of the past have extended benefits proportionately to both active duty and retired personnel. Different rates of pay for retired officers of the same rank and with the same number of years of service now ex-

ists, depending on whether retirement took place before or after June 1, 1958.

It is for this reason that I have joined with my good friend, the distinguished junior Senator from Washington State [Mr. JACKSON], in sponsoring S. 541 which would correct this injustice and provide full retirement benefits to officers retired prior to June 1958. I hope that the Armed Forces Committee of the Senate will take prompt action on our proposal.

One of the finest statements that I have seen pointing out the injustices to our retired military officers appeared recently in the St. Louis Post-Dispatch on May 16, 1959, and was written by Lt. Gen. Samuel D. Sturgis. While on active duty, General Sturgis was with the Army Corps of Engineers and he served with distinction in our Pacific Northwest. He helped plan and develop the many Federal power and resource development projects on the Columbia River which have meant so much to my part of the country.

Mr. President, I ask unanimous consent that the article by General Sturgis from the St. Louis Post-Dispatch be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, May 16, 1959]

RETIREMENT INJUSTICE TO OLD SOLDIERS—WORLD WAR II COMMANDERS RECEIVE SMALLER PENSIONS THAN OFFICERS RETIRING NOW

(By Lt. Gen. Samuel D. Sturgis (retired) in the Washington Evening Star)

The 85th Congress was particularly hard working and diligent, but one of its most grievous errors, although of little direct consequence to the taxpayer, was the tremendous injustice done retired officers of the armed forces under the new pay bill, effective June 1, 1958.

For the first time in a century, retired officers of the armed forces were not accorded the usual compensation based on 75 percent of the current base pay of the grade held on retirement.

The savings for which Federal agencies were willing to commit a gross breach of faith, as well as a hardship from the rapid increase in cost of living, averaegs only $13 million a year until these retired men die.

An important point receiving little or no consideration by the press is that the larger part of the regular officers of this retired group not only saw service in World War I, but furnished the top leadership in World War II and Korea—officers like Ridgway, Krueger, Bedell Smith, Mark Clark, J. Lawton Collins, Leslie Groves of atomic bomb fame, and scores of other army, corps and division commanders; distinguished naval leaders such as Radford, Denfeld, Fechteler, Settle, Carney, and Hewitt; and those who pioneered air power to its present heights, like Spaatz, Kenney, Baker, and Quesada.

To illustrate, a major general or rear admiral retiring after June 1, 1958, draws his retired pay at 75 percent of the new active duty rate of $1,350 per month, as against the pay drawn by a major general retiring on or before May 31, which allows only a 6 percent increase over the old retired pay of $807 a month.

This spells out to $1,014 per month retirement pay for a major general or rear admiral now on active duty, who may not have commanded more than a battalion in war, as against a retired major general drawing $848 per month who commanded a division or task force during World War II and Korea.

Some witnesses before the Armed Forces Committee have purported to say that the new schedule's primary objective is to retain scientific and professional personnel.

Such argument is largely specious. For the increased pay differential for these technicians is still far from comparable with corresponding pay scales in civil life. In the case of officers, the very fair and justifiable increases, will have little effect until the services make available to such professional officers a much larger proportion of general officer grades.

It is only necessary to cite the case of Admiral Rickover of the Navy and Major General Medaris of the Army Guided Missile Agency to demonstrate this fact. In spite of their distinguished services (*Nautilus* and Explorer), neither has ever been accorded three-star rank.

How can the Budget Bureau or the Department of Defense, in their recommendations to Congress, ascertain in dollars the difference in the measure of value of officers retired before and after June 1, 1958?

For example, take Maj. Gen. William Dean, whose exploits in command of the 24th division during he early days in Korea won him he esteem and gratitude of the entire Nation as well as the award of the Medal of Honor upon his return from captivity. What possible reasoning could the Bureau of Budget or Deparment of Defense employ to evaluate this gallant officer's worth in terms of retired pay at $848 per month, as against a 25 percent greater retired pay of $1014? That, under the new pay bill, will be paid to any run-of-the-mill major general who retires on or after the mystic date of June 1, 1958.

Plan To Aid Our Lagging Culture

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 21, 1959

Mr. JAVITS. Mr. President, on April 7 I introduced for myself and the senior Senator from Pennsylvania [Mr. CLARK], the U.S. Arts Foundation Act (S. 1598) to establish a U.S. Arts Foundation designed to stimulate throughout the United States the study and advancement of the performing arts. The Foundation would assist and encourage productions of plays, concerts, ballet and other performances by marshaling professional advice, compiling registers of theaters and personnel, and providing modest subventions to help with the difference between box office receipts and costs, both from its own appropriations and from contributions made by private sources.

Appended hereto is an article from the April 5, 1959, issue of the Sunday New York Times magazine describing this Foundation, the need for it, and what it could accomplish to stimulate artistic achievements in the United States, both for the sake of communities now neglected and for the benefit of our position in the world.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAN TO AID OUR LAGGING CULTURE

(By JACOB K. JAVITS)

WASHINGTON.—Culture only too often has been a suspect word in the American language. At the very beginning of the Nation, we acquired a reputation—now undeserved—for being crude and "rock-ribbed." As far back as 1842, when the New Orleans musical prodigy, Louis Moreau Gottschalk, applied for permission to study piano at the Paris Conservatoire, he was laughed down. He had come from America, and that was enough. "America is a country of steam engines," snorted the famous Prof. Pierre Zimmerman, who refused to take Gottschalk as a pupil.

The old traditions linger. We as a Nation are still, sometimes, looking for a practical return on a cultural investment. Unless something will "pay off" concretely, we often will have none of it. This attitude has long tended to persist in the thinking of our Government on cultural matters, and since the notes of a Beethovn symphony cannot be weighed and assessed, since the tread of an actor's foot on a stage does not rock the earth, our cultural institutions have been left by our Government largely to shift for themselves. Whatever men and women have done in the arts, they have done largely on their own.

Except for some tentative help during the WPA days, our Government has never given official recognition to the arts. Where most other civilized nations in the world have lent a helping hand to their artists, we have stood aloof. That our culture is in as healthy a state as it is remains a miracle. For, with practically no government help, we have created symphony orchestras, dance groups and a threater that the world regards with respect. Certainly it is a tribute to our people, and a testament of their aspirations toward the better things in life, that they have accomplished so much on their own.

But in a country of our size, the sum total of artistic accomplishment is not nearly what it should be. A few great orchestras in a few great cities, with large sections of the country foreclosed to serious performances of music, dance, and theater—this does not make for cultural adequacy. Our culture needs help and needs it badly. The time has come when the Federal Government must lend a hand, in accordance with the widely accepted Lincolnian philosophy that the Federal Government has the responsibility to help people do those things that they cannot do for themselves.

I believe that we can best accomplish this objective of strengthening American culture through the establishment of a U.S. Arts Foundation that would bring the prestige of the Federal Government to bear to develop more fully and to disseminate more widely our cultural heritage. To that end, I will shortly introduce in Congress a bill calling for the establishment of such a foundation.

Never has the time demanded such a project more urgently. In self-defense, if for no less selfish reason, we must be prepared to meet the cultural challenge of our competitors. Private enterprise has done a noble job up to now, but we found private funds could not do the job in the international arena. And private funds cannot take care of nurturing all the talent we now have, nor assure the next generation of every possible chance to develop itself to its full potentiality. If we are to measure up to the stature of leader of the free world, we must act as such; and a nation's civilization is equated in many places with its degree of culture.

Our performing arts need support in virtually every area. Our major opera, symphony and ballet groups struggle from year to year with deficits that become increasingly hard to meet only with private funds. Our young artists and creators must fight all kinds of obstacles to make careers; and many give up the fight. A helping hand must be extended to talent. A correspondent to the New York Times, writing about the woeful lack of string players in this country, points out that "the American Federation of Musicians will hold a string congress in Oklahoma this summer. We have almost 180 million people in the United States, and 50—yes, 50—children will have scholarships to the congress. It should be 5,000."

The American Federation of Musicians is doing all it can, and so are other worthy groups devoted to helping the musician, actor, and dancer. But ars longa, vita brevis—and their efforts are a pail of water in the ocean. The cultural surge in America is too big and private funds alone cannot keep up with all the needs of the national interest. For every city that has a theater movement, there are 20 that need one. Opera, even on a semipermanent basis, is missing from all but six or seven cities in America (even the proud Metropolitan, our leading opera house, operates only about 6 months of the year, whereas most opera houses in Europe have much longer seasons, often 11 months).

The ballet renaissance in America has seen the emergence of lively groups in representative sections of the country, but all of them, even our three big touring companies, work gallantly on a shoestring and would go out of existence if private funds were not wearily dredged up, funds that are not nearly sufficient to give the companies a sense of security or scope.

It should not be left to private enterprise alone to integrate the arts on a full-time communal basis, no more than it should be the job of private enterprise alone to support all the museums and libraries. It is true that, in a relatively few metroplitan centers, we have developed a rich and flourishing cultural activity. But the majority of Americans around the country face a meager cultural fare and, indeed, are blacked out of professional cultural activities for a good part of the year.

We are probably the only large nation in the world that does not have a Government-sponsored opera, theater, or symphony. England and Canada have their Arts Councils, Russia supports well over 30 full-time opera houses, not to mention orchestras, theaters, and dance groups. Nearly every country in Latin America pitches in to help its cultural organizations, often with results that achieve worldwide fame. Because Mexico, for example, engaged in a large-scale program of commissioning murals for its public buildings, the Mexican school of mural painting was stimulated to a point where it developed into one of the most significant contemporary artistic manifestations.

In Italy, one cannot go far without encountering a subsidized opera house. Virtually every city in Germany has its state opera, theater and orchestra, financed by grants from the federal, state, and local governments. In France, the Opéra and Opéra-Comique enjoy grants the size of which would make the director of our major opera house turn cartwheels of glee down Broadway.

Last year Austria spent $5,800,000 on its four state theaters in Vienna and plans a slight increase for 1959. This was larger than the sum Austria paid to its entire foreign service. Imagine: $5,800,000 out of a total national budget of $1,500 million.

Thus, while the proposed bill for an Arts Foundation might be considered precedent-shattering in the United States, it would be taken for granted nearly anywhere else in the world. An Arts Foundation in this country can be instrumental in helping to create a truly national establishment of theater, music, opera, and dance. It would give assistance to both professional and amateur segments of the performing arts. It would encourage performances of the best we have in great areas of the country where little is now available. And it would encourage widespread training and teaching of the arts so that more young people may receive encouragement and direction in realizing to the full their artistic potential.

The bill would provide for Federal assistance to private, nonprofit theater, opera, symphony, dance, and other arts groups; to accredited nonprofit colleges and universities and municipally sponsored arts councils and commissions for the presentation of and instruction of the living arts.

After the program is under way, it is estimated that expenditures under the bill would not exceed $5 million annually. (There is every indication that this amount would stimulate as much as $50 million in private activity in the performing arts, over and above what is now being spent.)

Responsibility for making the necessary artistic judgments and for channeling the funds would be in the hands of panels of specialists in the various arts, functioning under a 12-member board of trustees composed of distinguished private citizens appointed by the President. Those trustees would select the chief officer of the foundation. Naturally, the foundation would be expected to function with compelte freedom. Politics can and must be kept out of its operations, as politics has been kept out of the International Exchange Program of the American National Theater and Academy under the aegis of the State Department.

Such a program would, of course, be only a modest start. I do not envisage a series of Government-sponsored theaters and musical organizations. Nor would the Arts Foundation compete with existent organizations. It would instead complement them in the nonprofit field. College theaters would be given small supplementary grants for tours to localities seldom visited by the large organizations. Small cities would be encouraged to set up cultural projects along the lines established by the New York City Center of Music and Drama. Perhaps a grant to some of our important musical organizations would enable them to extend their tours of the Nation. If the box-office receipts did not cover the costs, the Government would help to meet a loss.

Professional help could be supplied to some of the more than 2,000 community theaters in the country. Eventually some of those theaters might become the nucleus of professional companies able to support a full season of theater. Traveling repertory companies would be established. Scholarships could be provided to some of the talented students of the more than 400 colleges and universities that offer degrees in the drama. Young musicians could also be helped by scholarships. Above all, so many neglected audiences of America could have the chance to breathe some of the cultural air they now lack. Who knows but that such exposure to the arts might stimulate the emergence of an American Mozart or Corneille?

The initial sum of $2,500,000 is, as noted, small—about one three-hundredth of 1 percent of the proposed Federal budget for 1959–60. But, small as it is, it would be a tremendous stimulus to the arts in America, if only by assuring the artist—and the whole world—that the American Government has taken, for the first time, an affirmative position toward our cultural heritage.

Perhaps the events of the last few years may have prepared our legislators for the creation of an Arts Foundation. For, within the last decade, our Government has lent a helping hand to art and artists through the international exchange program, supplying financial assistance to get them overseas. We were, indeed, almost forced to do so. For it is a moot question whether the Government would have been able to get the money, even at this late date, to show the world some of our cultural resources had not our great rival, Russia, started sending battalions—no, divisions—of its cultural armies all over the world.

It is not the specific purpose of the proposed Arts Foundation to send American artists abroad. But the Arts Foundation could certainly help to create such a renaissance of cultural activity in the United States as to increase materially our cultural stature in the international arena. The Russian artists, of course, do a tremendous propaganda job. Everywhere they go—and they go everywhere—they instill in the minds of their hosts, by word or deed, the argument that Russia, far from being a warlike nation, is interested primarily in peace and culture; that the great Russian bear would spend all his time and energies sniffing flowers if given the chance.

Repeated often enough, any message begins to be believed. The fact remains that the cultural message is international, and Russia spends enormously more on its culture than we do on ours, to the applause of people throughout the world, and to our detriment. Of course, the cry will go up in certain quarters that the Federal Government has no business engaging in an arts program, just as similar objections were raised against all of the new programs that the Government entered into to keep pace with the times and with the development of America.

Critics blasted the social-security program as Government encroachment upon free enterprise and the private lives of our citizens. Critics blasted the establishment of Federal minimum-wage laws as a violation of industry's prerogatives. Critics blasted the advent of unemployment compensation, of Federal aid to hospital construction, of the Rural Electrification Administration and of the Federal Reclamation Service as unwarranted interference by the Federal Establishment with the national economy or the rights of the individual. Yet today all those programs are accepted and regarded as integral parts of our society.

There are peripheral arguments against an Arts Foundation, some of them well-meaning but certainly refutable. Federal participation in the arts, some lament, means the suffocation of the creative genius of the artist. As if Beethoven, or Van Gogh, or any creative artist who ever lived was in the habit of turning down commissions.

An artist will create best when given the most opportunities, and happily, as long as he has entire freedom to create what he wants. He is his own master, not the servant of the state. In Russia, where the creative artists is the servant of the state, the esthetic worth of much of that country's serious art has been highly dubious during the last generation. As long as America remain America, that cannot happen here.

And what about Federal competition with private industry? The musicians in America will respond to this with hollow laughter. "What private industry?" they will ask. Virtually all serious, large-scale musical organizations in America today are nonprofit and are run at a loss. As for so-called competition with the private theater, the proposed Arts Foundation will not be interested in the big cities, where the commercial theater operates, but in the smaller communities, where it does not. The aim is to build up an audience away from New York—and a body of performers and crea-

tors—that will in the long run help the commercial theater.

In short, the Arts Foundation, which will not be controlled by a Federal bureaucracy but by distinguished private citizens active in the arts, will operate within the framework of private enterprise and voluntary association, strengthening and supplementing their efforts. It is our duty to help the living arts flourish at home so that they may flourish abroad, demonstrating to ourselves and the world the enlightenment and maturity we have and should enjoy.

We have already begun to recognize the fact that the world judges us as much by our culture as by our machinery, perhaps more so. The times are ripe for such an undertaking. Some Congressmen say that only 4 years ago they could not have supported an arts program without being laughed at back home. Practically nobody is laughing any more.

The Persecution of Strauss

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Peoria Journal Star of May 18, 1959:

THE PERSECUTION OF STRAUSS

After months of delay and more than 2 weeks of stormy committee hearings, a committee vote is promised tomorrow on confirmation of Lewis Strauss, Secretary-designate of Commerce. Washington newsmen say Admiral Strauss will be confirmed in spite of all the fuss. Why, then, has there been such a sustained effort to smear him?

One member of the Senate committee has said frankly that back of the Democratic opposition to Mr. Strauss is the old Oppenheimer case. It still rankles the leftwingers. They never forget.

When Admiral Strauss was head of the Atomic Energy Commisison, it was he who declined to renew the commission's contract with Dr. Robert Oppenheimer.

A subsequent investigation brought out some strange and interesting facts. One was that Oppenheimer had lied about some important matters relating to his Communist sympathies and connections. The investigation confirmed Admiral Strauss' judgment. He had performed a service of inestimable value to the people of the United States. But he had also got himself on the permanent blacklist of Communists, fellow travelers, and leftists, just as Vice President NIXON did in the Alger Hiss case and as the late Senator Joseph McCarthy did in exposing a number of Reds in Government jobs.

Putting the finger on Oppenheimer is the real sin of Admiral Strauss, in the eyes of those who have been persecuting him. They have found other grounds for smearing him but he is being punished for only one thing—he raised his voice against Oppenheimer.

That this is the background of the opposition to Strauss is no secret. It has been buzzing around Washington for months. Newspaper columnists have published it. Editorials have discussed it. But nothing has been able to neutralize the implacable hatred of the leftists for Admiral Strauss.

The lesson for Americans is plain enough but many fail to grasp it. The lesson is that the man in public life most devoted to the interests of his nation is likely to be the man most savagely persecuted.

We shouldn't let that happen—but we do.

Testimony of Albert Mayer Before Senate Foreign Relations Committee

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. FULBRIGHT. Mr. President, the Committee on Foreign Relations today heard the testimony of a number of witnesses in connection with its consideration of the Mutual Security Act of 1959.

Unfortunately, the questioning of some of the witnesses was so prolonged that it was not possible orally to receive the testimony of one of the private witnesses with unusual background and experience. I refer to Mr. Albert Mayer.

I have read Mr. Mayer's statement. It is excellent. I commend it to my colleagues.

I ask unanimous consent that Mr. Mayer's statement may be printed in the Appendix of the RECORD, so that it may be readily available to Members considering their attitudes toward the mutual security program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TESTIMONY OF ALBERT MAYER BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE, THURSDAY, MAY 21, 1959

My name is Albert Mayer. I have come down here at my own expense and representing no organization. Generally, public or official organizations are heard at such hearings. It seemed to me that a private professional man with considerable experience in underdeveloped countries might be of value.

I am senior partner in Mayer, Whittlesey & Glass, architect-engineers-town-and-rural planners. We have done work over the last 13 years or so: in India, Philippines, Israel, Morocco, Ghana. The work has been for foreign governments, private business both foreign and American, for the U.N. and with both the Rockefeller and Ford Foundations.

I would like to speak about the importance and urgency of the Development Loan Fund. This is absolutely indispensable because it provides for types of development that are not bankable, but that must be undertaken if the development is to be systematic and consistent and not with enormous gaps and holes in essential aspects. Private enterprise cannot yet be counted on to step in, in anything like an adequate way:

First, because a lot of infra-structure must be made ready so that these enterprises can operate efficiently. A lot of work on roads, railroads, large-scale water supply, housing, etc., must be available if a new steel plant is to operate efficiently. These underlying operations private enterprise cannot afford to undertake on adequate scale.

Second, no matter how hard we push things, it will be a number of years before American or other foreign private enterprise will be getting under way on anything like a really adequate scale in those numerous new underdeveloped countries in which it is now operating only very minimally. Reasons: the one just given; the fact that it takes time to develop that infra-structure adequately; and because just to change the climate and to change gears from the present very low level to the necessary massive, adequate scale of operations by private enterprise, will take not less than 10 years, and probably a good deal more.

I strongly urge that the vote for the Development Loan Fund be to authorize it for a period of 5 years. No development work whether public or private can possibly operate efficiently and economically on a year-to-year basis, and it is only the most minor development project that does not take far longer than a year. Three years is a virtual minimum, and some take longer. No private industry could operate on the basis of year-to-year capital allotments. It is indeed wasteful, painful, and frustrating to work in a project and to watch the effects on personnel at highest levels to the lowest workers, of this year-to-year system. I have seen it myself in numerous places. That imaginative dash, that enthusiastic devotion which are really needed if the new democracies are to make and sustain the needed surge forward, these fail to develop under the stop-go system. We must not only give material help but fire people's imaginations, fire the imagination of a whole people. That is what gets things in motion, sets up a momentum.

Also, the year-to-year debate in this country, with its free-for-all, that inevitably precedes a vote on such matters, with its sometimes fearsome abuse by individuals of the countries we are later going to help, this is a drastic morale destroyer. The help which finally comes and often comes generously, is greatly appreciated, but one might say, in a sense, it is almost an anticlimax to the tension and sense of humiliation that often precedes the finally generous grant or loan. I have been on the ground and observed this, experienced what seemed to me this unnecessary dilution of what should be an event of unadulterated importance and excellence. I would be the last person to advocate anything but full democratic discussion. But there are certainly these drawbacks to it, and I see no reason why the vote for DLF could not then authorize it for a period of at least 3 years. I would prefer to see 5 years, during which time there would not be these concentrated unbridled free-for-alls in our country. We must certainly have these, but please don't let us have them annually or even biennially.

I would add these points: We must have the Development Loan Fund to plug one large gap in the massive development need of the world. But the proposed International Development Association fills another gap, and not quite the same gap. Let us by all means do our level best for both.

Finally, again as to our own Development Loan Fund, I believe there are other advantages in making it a longer-term enterprise rather than an annual one. We need better personnel than, by and large, we are getting for foreign work. I think better personnel could be found. One could write a fair-sized book on this subject. But one reason for this situation is uncertainty of tenure, reluctance to arrange leave going beyond a year or two. A long-term commitment which would be possible in the kind of Development Loan Fund I have tried to visualize, would make it possible to attract the kind of men we must have, and would make possible a stay by such men of a duration much more fruitful than the present

customary year or two. From this we must deduct the initial orientation or getting adequately acquainted period, and then the windup period at the end. Thus the actual fruitful period is very short indeed, excessively short; the waste may be up to 50 percent.

This Development Loan Fund idea is both thoroughly imaginative and thoroughly practical and urgently necessary. Adequately implemented in time and in amount, it can, as it must, lift both the sights, the tempo, the actual material accomplishments, in the underdeveloped countries, and above all lift their own conscionusness of and confidence in their accomplishments and in their ability to accomplish. This added dimension of confidence, of enthusiasm, of momentum, is what is needed to give real inner life, substance, and conviction to the democracies in underdeveloped countries. Help that is ladled out in small doses, that is drastically argued over each time at excessively short intervals, simply won't do this job.

Our Flourishing Maritime Future

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose therewith a very fine speech by Capt. Gilven M. Slonim, USN, the commanding officer of the U.S.S. *Everglades* (AD-24).

Captain Slonim delivered his speech before the Propeller Club in Charleston, S.C., on May 19 on the occasion of Maritime Day:

OUR FLOURISHING MARITIME FUTURE

I appreciate the honor of your invitation to speak before the Propellor Club of the United States, port of Charleston. Adm. E. B. Taylor, commander, destroyer force, Atlantic Fleet, sends his regards. He asked me to express his pleasure with the progress toward the full deployment of several destroyer squadrons and tender to Charleston. Both he, and Adm. Harry Smith, our flotilla commander, as well as the entire destroyer force, look forward to future fleet operations from your naval base as a southern spearhead of seapower.

As a destroyerman and longtime local naval citizen, it is a real pleasure and opportunity to talk with you friends about your leadership in maritime matters.

The courteous and progressive actions of your Greater Charleston Chamber of Commerce have already given us aboard the *Everglades* a feeling of the warmth of your hospitality. Your enthusiasm for the great maritime future of this historic seaport of Charleston I can assure you is indeed shared by my men. They look forward with pride to participation in the attainment of your aspirations for a flourishing future. I sincerely hope that you will call on us for whatever naval help we can provide in the development of your community.

A naval officer rarely has the good fortune to talk with people who share a common interest and understanding of the seas such as I enjoy tonight, so with your indulgence I want to wade in the water a bit.

Water is a lifegiving and a lifetaking commodity. Water affords a dynamic concept. As a nation, we are moving toward making the most of our God-given water resources. Limitless opportunties are unfolding, opportunities such as you are finding here in the port development project in the Charleston community.

Water gives us a lot of hope as citizens. The ideas about water that the Propellor Club is churning up in our Nation's thinking will mean progress. There is room for much more maritime thinking and influence in our national policies.

The promulgation of a National Maritime Day is a marked step forward. Maritime Day provides a symbol of what water means to our Nation as the leader of the free world maritime confederation. There is a lot of power of positive thinking for men who contemplate the sea—its exploration and exploitation. There is a naval challenge also—for as the trade of our ports like Charleston is stimulated and grows, more naval strength is required to control the seas and protect the increased shipping, and our Navy must find ways and means of doing a better job to fulfill its mission.

Tonight, here in Charleston, we are celebrating our first National Maritime Day together. Both facts seem significant. Contemplation of what Maritime Day means to the community of Charleston, what it means to the Navy, how the two are wedded into the fiber of national seapower, has been a stimulating exercise for me.

First, I wondered how we happen to be celebrating Maritime Day? What were the events that led up to a general in the Army, President Eisenhower, proclaiming National Maritime Day? Frankly, this point was an intriguing one for me. Had a salty President like Theodore Roosevelt, say, or F.D.R., proclaimed a maritime celebration perhaps the fact of Maritime Day would have been a lot less exciting. But Ike liked the idea and he did it.

Actually this in itself was not too surprising. All of us in naval planning, as I am sure Admiral Dietrich will attest, had the distinct feeling that General Eisenhower when he was Supreme Allied Commander in Europe had an unusually good grasp of seapower and how it worked. For example, he realized why he needed sizable carrier striking task forces to protect his flanks and support his ground operations. His acceptance of seapower showed that somebody did a fine educational job. This sort of success is always a matter of real encouragement for people, like us, who think in terms of exploiting the seas for the solution of security problems.

Apparently the word has been getting around, and it has been encouraging. For example, a recent policy pronouncement by the Chairman of the Joint Chiefs of Staff in a communication with Senator BUTLER seems to be of particular interest for the Propeller Club. Suppose I read General Twining's remarks since his statement is such an important maritime matter:

"It seems incredible to me that anyone could argue seriously or with justification that new concepts of warfare obviate the necessity of further fostering a merchant navy. I assure you that such views are not held by the Joint Chiefs of Staff.

"If the catastrophe of a general war should be forced upon us by the necessity of retaliation against surprise attack, the merchant marine, after the initial period of devastating nuclear exchange, would pay a most vital role. Indeed, it might very well be the one source of strength of the free world which would pluck victory from chaos. With land transport damaged beyond easy repair, only merchant ships, capable of plying the great highway of the seas, would be able to carry the essential raw materials and foodstuffs required for survival of the major population centers of the world as well as our Armed Forces overseas.

"The Joint Chiefs of Staff annually consider the requirements for sea transportation in support of current war plans. Their studies of these requirements have shown, consistently, a dependence on the merchant marine for support of plans in mobilization and wartime. They are cognizant that a profitably operated merchant marine will provide the best mobilization base for rapid conversion to military use.

"It follows that, in the opinion of the Joint Chiefs of Staff, the American merchant marine does have an essential role in the nuclear age." Since General Twining was speaking in his capacity as Chairman of the Joint Chiefs of Staff, this provides rather impressive evidence that the ideas of water are penetrating the thinking of all services. Better understanding is one of the fundamental hopes of a true concept of unification, and it certainly isn't something a single service or single Chief of Staff will supply. The cross-education of officers of all services is one of the features of unification that the Navy most wholeheartedly supports, and here, I think, we have the reason why.

We are making progress and I think the propeller clubs of this country, certainly the Navy League as the civilian arm of the Navy, and the Navy itself realize that we face real educational challenge in indoctrinating a basically land-conscious citizenry about the importance of seapower.

This fact is well understood by the people of Charleston. By virtue of historic interest and direct involvement in the seas, the trade of which the port of Charleston has been in the forefront for many centuries in our Nation's history. We understand this task of wading in the water enthusiastically and stimulating interest in the seas to exploit maritime potential.

I am somewhat of an optimist. Based upon the reality of the National Maritime Day we celebrate today as a start—symbolic of the growth of maritime importance—I would like to predict that within the next 10 years there will be a Cabinet member—a Secretary for Maritime Matters to counsel the President. As I envisage the position he would administer a Maritime Department. His mission would be to formulate maritime policies aimed at an achievement of maritime progress and a merchant marine second to none.

But back to Maritime Day, what were the current events that led to the designation of the national celebration? Unquestionably, the St. Lawrence Waterway played an important part in triggering this action. The propeller clubs for years have encouraged development of the seaway realizng that linking a broad cross-section of the country to the oceans will mean a marked increase in the volume of oversea trade and hence national economic growth.

While the seaway may have triggered the promulgation it in itself certainly wasn't the fundamental reason. Rather, the growth of maritime commerce, as reflected here since the last great Great War has been the real reason. We find that our trade has increased to approximately $18 billion each year—the equivalent of our Air Force budget. That is the financial stake that all Americans share in overseas trade. World events are causing constant increase in trade, in the importance of commerce. This trend is reflected perhaps I should say stimulated, by unprecedented port development—this too provides a real reason for Maritime Day.

The people of Charleston grasping this importance are to be congratulated on their progressiveness in initiating one of the most promising port development projects on the east coast, its importance to the community is manifestly evident, it is a significant part of the national progress that is leading to substantial maritime growth and dependence on water. This is both a matter of avail-

ability of water and the positive motivation of people.

As we study the historic growth of our major cities we realize that there is a direct relationship between the availability of water for transportation, and the cities' progressive development. Very few of our major cities are far removed from the water. Most of them, as Charleston has grown up on water. The history of Charleston as a world famous seaport emphasizes this fact. An intriguing aspect for me is that this growth in importance is accentuated in the nuclear-missile-space age in which we are living. Fortunately the sea air still stimulates people to get up and go even though a spirit of defeatism and doom through massive destruction is still emphasized by some. The explanation of maritime opportunity and optimism seems very simple though, again it is a matter of what water means in terms of mobility. You must keep moving in the missile age. The man who is fixed is finished. That is why we are moving toward a national maritime strategy.

There is a technological explanation also—the President's mention of the nuclear merchant ship *Savannah* in his formal promulgation of Maritime Day reflected, I believe, a recognition that the full realization of our maritime future gravitates around nuclear power—and the capacity for sustained high speed strategic movements on the sea. We are moving rapidly into the age of nuclear power—and I would emphasize that we lead the entire world in nuclear power, it is our greatest strategic advantage—these are significant maritime facts, military facts of transcendent importance. The fact that Charleston recognizes this, and that nuclear power is vital part of its developmental programs is a matter of much encouragement.

We know that a nuclear division is being incorporated in the Charleston Naval Shipyard. Also that a $10 million Polaris project is part of Charleston's growth. Our Navy has progressed—perhaps somewhat slowly—but today we are building only nuclear submarines to steam under the surface of the seas. We are building a nuclear carrier, the *Enterprise*. The *Long Beach* will be the world's first nuclear powered guided missile cruiser—the people of Charleston were interested I'm sure to learn that this ship may carry Polaris.

But most significant of all of these historic events was the laying of the keel of our first nuclear frigate just last Friday. At last the nuclear task force of the future is taking shape—the task forces that will ensure control of the seas. I say the nuclear frigate is most important because it makes the most of the potential of nuclear power. By eliminating the strangulating necessity for almost continuous fueling of screen ships in fast moving naval operations, the sea keeping qualities of the entire fleet are vastly improved. So, too, is its sustained strategic mobility. Our ability to maintain the seas year round in the rough waters of the North Atlantic will now be assured. This will be a signific step forward toward solving the problem of the submarine menace of the Soviet colonial empire.

This will also mean a significant improvement in our readiness for limited war and hence our ability to limit war. Timing in limited situations is paramount. The prime lesson of Lebanon was that by landing the Marines of the 6th Fleet within 7 hours after Admiral Burge received the green light to go, Mr. Khrushchev was put back on his diplomatic heels for the first time in the cold war.

In nuclear power development, I am delighted that the merchant marine is pushing the Navy hard. This competition will insure progress as part of our program to achieve adequate strength at sea and a flourishing maritime future. The mobility afforded by nuclear power is a key element of the dominant defense role our Navy is bound to play in the future.

There is a particular point I would like to churn up a bit with you friends tonight—the first nuclear frigate is being built in Quincy, Mass. We are going to need many more. Frankly, I'm going to be mighty disappointed if we are not building nuclear destroyers right here in Charleston before too many months have passed. I know you and your representatives in Congress are keenly aware of what shipbuilding means industrially and economically to a community—what it means to our national strength at sea—and free world security.

The *Everglades* is moored just aft of the *Tidewater* at the destroyer-submarine piers in Norfolk. She has been ever since our return from the Mediterranean tour with the 6th Fleet. The *Tidewater* is a fine ship. The *Tidewater* is a floating example of splendid shipbuilding in Charleston. She provides convincing and conclusive evidence that Charleston must be geared to building its share of nuclear powered ships—for our future Navy.

I sincerely hope you members of the Propeller Club will push hard to get in on the nuclear raffle. There will be plenty of room for all—we will need many of these modern ships. It will be a rewarding contribtuion to our national maritime strength and the future of greater Charleston. This is, of course, the real reason for our getting together tonight to celebrate national Maritime Day.

In closing, I would like to say the wonderful work you are accomplishing in the development of Charleston's great port will help make our country conscious of a fact we know. The future of our maritime nation depends on how well Americans understand that our destiny must be found at sea, where the use of nuclear power, not nuclear weapons, can insure our strength, security, and freedom.

Highway Construction

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. MICHEL. Mr. Speaker, I have brought to the attention of the House several times this session the precarious condition of the highway trust fund and that because of the upcoming $241 million deficit in 1960 there will be a serious breakdown in the highway construction program unless we take appropriate action.

The President has proposed an increase in the gasoline tax but I take the approach that we ought first to transfer to the trust fund the roughly $1.5 billion in automobile and truck excise taxes which yearly go into the general fund before we raise taxes again. Early in the session I introduced H.R. 4389 which would accomplish this purpose and I am happy to report that Chairman MILLS of the House Ways and Means Committee will draw his full committee's attention and consideraiton to my proposal when the committee seriously goes into this problem.

Mr. Speaker, under unanimous consent to extend my remarks, I insert an editorial at this point which certainly expresses my sentiments relative to so-called temporary tax increases:

[From the Peoria Journal-Star, May 18, 1959]

BEST WAY'S TO KEEP IT OFF THE BOOKS

President Eisenhower has asked Congress to enact a 1½-cent-per-gallon increase in the Federal gasoline tax for the next 2 years in order to help speed up the construction of interstate highways.

The President says he wants the tax only to be temporary. That sounds fine. Many motorists probably wouldn't complain too greatly about paying an additional cent and a half a gallon for a couple of years in order to get improved highways constructed.

The trouble is that everyone—and we think this must include the President, too—knows that there is no such thing as a temporary tay. There are scores of examples of taxes which were designed to be temporary and which were leived for a specific purpose which have lasted many long years after the time they were supposed to expire.

The luxury taxes levied in wartime are temporary taxes which came to stay. Admissions taxes to theaters and sports events are others. And even some of the gasoline taxes we now are paying were supposed to be temporary, but we still are paying them.

The intention when a temporary tax is enacted usually is good. It is designed to bridge the Government over a certain emergency. But when the time comes for the tax to expire the emergency either is continued or a new one has arisen and once it has been demonstrated that a tax can be collected it is easy to turn to it again for another "temporary" period.

There is only one way to guard against having a temporary tax become a permanent one. That is to refuse to enact it in the first place. And that is the only way in which Americans can hope to avoid having a cent and a half added permanently to the price of their gasoline. Don't enact it to begin with.

Resolution Urging Enactment of the Fair Labor Standards Amendments of 1959

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. TOLL. Mr. Speaker, a resolution calling upon the 86th Congress to enact S. 1046 and H.R. 4488, the Fair Labor Standards Amendments of 1959, has recently been adopted by the following organizations in Philadlphia: Local No. 30, Philadelphia Leather Workers Union; Hotel and Club Employees Union, Local No. 568, AFL-CIO; District Council 33, Municipal Workers Union, AFL-CIO.

I believe the resolution to be important and I wish to call it to the attention of Members of Congress. It reads as follows:

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

Whereas the present Federal minimum wage of $100 an hour is inadequate to pro-

vide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation on their works of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator JOHN F. KENNEDY and Representative JAMES ROOSEVELT and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore be it

Resolved, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

United States Can Use Foreign Aid

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S.C., of Monday, May 18, 1959:

UNITED STATES CAN USE FOREIGN AID

A double-barreled fact of life in this jet-space age is beginning to dawn on those Americans who are concerned with the health and vigor of our economy and our democratic way of life, and that, we hope, is most of us.

As the inventors of mass production, the natural offspring of an expanding, isolated Nation and unfetted initiative, we are no longer the proprietors of it. The techniques we developed are, for better or worse, now largely in the global domain. And their products, made in countries with wage scales a fraction of our own, are coming home to haunt American producers and to gobble up increasing portions of what had been our markets, both at home and abroad.

More and more in the postwar years American companies have been turning to the establishment of foreign branches or subsidiaries as a hedge against this encroachment. Probably the first frank recognition by American industry of the existence and importance of this trend came out of the World Trade Conference held in Chicago early this year.

Yet this is only the economic side of the problem. Arrayed against the determination of Americans to maintain our earning and living standards is the drive of the Soviets to win over the uncommitted nations and those who are wavering through trade deals that are based on political rather than economic gain, that can be made as attractive as necessary by the Reds, to whom profit and progress is nothing as compared with global domination and the enslavement of all under communism.

As a measure of aid in this unequal battle, Representative HALE BOGGS, in his omnibus foreign trade and tax incentives bill, H.R. 5, has incorporated the basic concept of a tax deferral corporation, an overseas subsidiary of a U.S. corporation which would be allowed to defer payment of U.S. income taxes until such time as this income is distributed to the parent company back home. At this time, payment would be made at the full 52-percent corporation rate. Such consideration would permit these overseas companies to accumulate earnings for expansion of the business, would check the flow of U.S. investment capital to foreign corporations, and, in the view of experts such as Robert M. Mitchell, vice president of the international division of the Whirlpool Corp., would even repatriate American firms that have sought profit sanctuaries in various foreign countries.

Previous to the Boggs bill, tax reductions have been urged to provide both these overseas benefits to our whole national economy and a new U.S. weapon in the ruble war, which is getting colder every minute. But, if we can accomplish these advantages through deferral, and with ultimate increases in Federal income, what are we waiting for?

For one thing, our Congressmen are waiting to hear what their constituents think of H.R. 5. Silence may constitute consent, but it's not much encouragement.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT N. C. NIX
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. NIX. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am privileged to include three resolutions passed by outstanding labor organizations in my district. One by the Philadelphia Moving Picture Machine Operators Protective Union, Mr. Harry J. Abbott, president; another by the Compressed and Open Air Caisson, Subway, Underpinning, Foundation, and Tunnel Workers' Local Union No. 420, Mr. Harry Foy, financial secretary; and the third by the American Federation of Technical Engineers, Local 13, Henrietta E. Wahl, executive secretary:

RESOLUTION OF THE PHILADELPHIA MOVING PICTURE MACHINE OPERATORS PROTECTIVE UNION, LOCAL NO. 307, PHILADELPHIA, PA., CALLING UPON THE 86TH CONGRESS TO ENACT S. 1046 AND H.R. 4488

Whereas the present Federal minimum wage of $1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator JOHN F. KENNEDY and Representative JAMES ROOSEVELT and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: therefore be it

Resolved by the Philadelphia Moving Picture Machine Operators Union, Local No. 307, I.A.T.S.E., That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

HARRY J. ABBOTT,
President, Local No. 307, I.A.T.S.E.

RESOLUTION OF THE COMPRESSED AND OPEN AIR CAISSON, SUBWAY, UNDERPINNING, FOUNDATION, AND TUNNEL WORKERS' LOCAL UNION NO. 240, PHILADELPHIA, PA., CALLING UPON THE 86TH CONGRESS TO ENACT S. 1046 AND H.R. 4488

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

Whereas the present Federal minimum wage of $1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas, the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator JOHN F. KENNEDY and Representative JAMES ROOSEVELT and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore, be it

Resolved by Local Union No. 420, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

RESOLUTION OF THE AMERICAN FEDERATION OF TECHNICAL ENGINEERS LOCAL 13, PHILADELPHIA, PA., CALLING UPON THE 86TH CONGRESS TO ENACT S. 1046 AND H.R.4488

Whereas all Americans must be assured a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

Whereas the present Federal minimum of $1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation on their hours worked; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator JOHN F. KEN-

NEDY and Representative JAMES ROOSEVELT and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore be it

Resolved by Local 13, American Federation of Technical Engineers, AFL–CIO, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

HENRIETTA E. WAHL,
Executive Secretary,
Local 13, AFTE, AFL–CIO.

Speech in the Senate

EXTENSION OF REMARKS
OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 21, 1959

Mr. CARLSON. Mr. President, Prof. Philip K. Tompkins, of the department of speech and drama of the University of Kansas at Lawrence, Kans., recently conducted a study of speech in the Senate.

A year ago Mr. Tompkins sent to every Member of the U.S. Senate a questionnaire in which he requested information on such subjects as—

First. "To what extent does speech influence legislation in the Senate?"

Second. "Is speech in the Senate today more important, equally important, or less important than 100 years ago?"

Third. "In the future, do you expect speech in the Senate to be more important, equally important, less important than today?"

These findings have been summarized into a very interesting article which appeared in the February issue of the magazine entitled "Today's Speech."

I ask unanimous consent that the article be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPEECH IN THE SENATE

(By Philip K. Tompkins and Wilmer A. Linkugel)

(Two Kansas University speech professors team up to present a survey of what speaking ability means to U.S. Senators.)

Authors of speech textbooks frequently justify the study of speech because of our system of self-government. Speech, they say, influences men and their decisions. We decided to test this concept by asking the Members of the world' most exclusive debating society—the U.S. Senate—how important speech is in this legislative body. We sent a questionnaire to each of the 96 Members of the Senate; 36 Senators replied.

Eight questions asked for points of information of interest to the members of our profession. Some of the questions were of the "open end" type; we hoped that such questions would elicit more than just a "Yes" or "No" answer. They did. The following is a summation of the Senators' responses:

1. "To what extent does speech influence legislation in the Senate: Very little, little, a fair amount, much, very much?"

Thirty-four Senators answered this question:

Very much	0
Much	4
A fair amount	17
Little	8
Very little	5*

2. "Is speech in the Senate today more important, equally important, or less important than 100 years ago?"

Thirty-two Senators answered this question. One declined to answer it because, he said, "I wasn't here."

More important	0
Equally important	7
Less important	25

3. "In the future, do you expect speech in the Senate to be more important, equally important, less important than today?"

Thirty-one responded to this question:

More important	0
Equally important	27
Less important	5

It is interesting to note that while the Senators feel that speech is less important in the Senate than it was 100 years ago, they believe that in the future it will remain as important as it is now. One Senator wrote:

"Speech in the Senate is assumed to refer to floor speeches. The importance of effectively presenting an argument or information is more important today in presentations before various committees. The general importance of speech is increasing—as a tool to present data and positions in a concise and effective manner, but the place of most decision making is in the committee room. The increasing complexity of legislation (on more complicated subjects) calls for effective use of the language."

Another Senator added: "You will notice that I mentioned that speeches on the floor influence legislation only slightly. This is so because most of the work is done in committee and unless a bill or any particular amendment is very controversial the Members of the Senate will generally go along with the committee recommendation."

According to the Senators' answers and comments, speech does influence legislation. We feel that the declining influence of speech is due to the declining influence of floor speeches. The loss of influence of floor speeches has been made up by the increasing influence of speech in the committee room. In fact, the importance of speech in the Senate may be increasing because of this shift of emphasis.

4. "What method of presentation do you use in the Senate: speaking from notes, speaking from memory, speaking from manuscript, speaking on the spur of the moment, all of these methods?"

Numerous Senators use various combinations of these methods. Those who use one method exclusively, or all of them, are as follows:

Notes	7
Memory	0
Manuscript	0
Spur of moment	1
All	11

Two Senators speak from memory and on the spur of the moment. Two Senators speak from manuscript and spur of the moment. Two Senators speak from notes and manuscript. Two Senators speak from memory and manuscript. One Senator speaks from notes, memory, and manuscript. One Senator speaks from memory, manuscript, and spur of the moment. One Senator speaks from notes and spur of the moment. One Senator speaks from notes, manuscript, and spur of the moment.

The answers to this question support the practicality of giving extemporaneous speaking assignments in speech courses; but they also reveal that other methods of speaking are used by Members of the Senate and therefore merit attention, at least if it can be assumed that other men in public service use similar practices. A reevaluation of some of our courses may be in order.

5. "Do you employ a speech writer? A. In preparing speeches for the Senate? Yes ____ No ____. B. In preparing speeches for your constituents? Yes ____ No ____."

To question A (Senate addresses) they answered: Yes, 14; no, 20. To question B (addresses to constituents) they answered: Yes, 12; no, 22. Many qualified their answers with such remarks as "sometimes," "at times," and "my staff helps." One Senator sent us a copy of an article from the New York Times of April 20 which was reprinted in the CONGRESSIONAL RECORD. We quote excerpts from it because they shed much light on some speech writing practices of Senators.

"The official transcript of debates in the Senate and House is frequently revised, amended, subtracted from, and even embellished with lengthy additions. These changes occur before the transcript ever reaches the printed pages of the CONGRESSIONAL RECORD. Senators and Representatives are permitted to doctor and edit their speeches at will. It is for this reason that I (Senator NEUBERGER) have introduced a resolution to write into the rules of the Senate that no changes of a substantive nature can henceforth be made in the text of what is taken down by the Senate's staff of skilled shorthand reporters. * * *

"After a major debate in the Senate over an issue which stirs profound emotions, such as civil rights or foreign aid, I have seen many Senators sitting around a circular glass-topped table in the reporters' workroom, virtually rewriting the speeches and retorts just delivered on the floor of the Senate. Some will totally expunge comments made in the heat of debate that may seem indiscreet or unwise in the cold, gray light of the next dawn and in the inflexible type of the CONGRESSIONAL RECORD. Others will be adding afterthoughts, which may furnish an extra fillip to a reply that was flat or ineffective when uttered under the duress of argument in the Senate Chamber. This entire process of addition and revision has impelled one Washington wit to suggest that a U.S. Senator, or his counterpart in the House, is evidently the only person on earth who can sigh, "I wish I'd said that," and then actually say it. * * *

"Indeed the practice of altering the text of debate in the Senate and the House is so prevalent that it actually has been sanctified in the rules which regulate the publication of the CONGRESSIONAL RECORD. These even allow Senators and Representatives to take home transcripts of speeches delivered in the halls of Congress, to be leisurely reconstructed at the fireside in the presence of handy reference volumes and one's family and counselors. If this is not rewriting contemporary history, then what is it? * * *

"Senator LYNDON JOHNSON of Texas, majority leader of the Senate, has said that there are few documents more important than the CONGRESSIONAL RECORD. Locked in its pages are the debates, the resolutions, the bills, the memorials, the petitions, and the legislative actions that are the reason for the existence of the Senate. It is a document which affects our laws, our precedents, and our judicial decisions. But

would not the RECORD be of far more value if it were immune to self-serving alterations? * * *

"The House of Representatives allows far greater latitude even than the Senate in tolerating distortion of the CONGRESSIONAL RECORD. A Member of the House can speak perfunctorily for 2 minutes on the floor and then receive unanimous consent to 'revise and extend' his remarks. He later can transform such sweeping permission into an address of 60-minute proportions which is published in the CONGRESSIONAL RECORD as though spoken in its entirety on the floor."

Senator NEUBERGER labeled this practice "phantom speeches."

Authenticity of text is of utmost importance to the speech critic. He needs to take into account the widespread practices of ghost-writing, rewriting of speeches, and delivering of "phantom speeches." Since such practices make research difficult, members of the speech field might well urge their Congressmen to support Senator NEUBERGER's proposal.

6. "What course would you advise a college freshman to take in preparation for a career in politics? Rank in order. Place (1) behind your first choice; (2) behind your second, etc." The following five subjects were listed: Economics, English, history, political science, speech, others (please name them).

Typical replies were, "all are important," and "I can't rank them," or, "I think all have merit." Some of the Senators ranked two and three items first. They were tabulated as such. A first-place vote received five points, second received four points, third received three points, etc. On the basis of such a point system the results are as follows:

1. History, 128 points (13 first-place votes).
2. English, 109 points (12 first-place votes).
3. Speech, 89 points (8 first-place votes).
4. Political science, 86 points (5 first-place votes).
5. Economics, 78 points (2 first-place votes).

Others named (but not with frequency enough to tabulate) were: Journalism, science, languages, psychology, law, philosophy, and "hard work."

7. "Who is the most effective speaker in the Senate today?"

Many of the Senators were reluctant to answer this question. We had hoped to check their votes along party lines, but this was rendered impossible because some of the Senators failed to sign their names. There were 33 votes, as follows: HUBERT HUMPHREY (9); RICHARD RUSSELL (4); EVERETT DIRKSEN (3); WILLIAM KNOWLAND (3); PAUL DOUGLAS (2); ROBERT KERR (2); MIKE MONRONEY (1); JOHN WILLIAMS (1); LYNDON JOHNSON (1); FRANK CHURCH (1); HARRY BYRD (1); WAYNE MORSE (1); FREDERICK PAYNE (1); FRANK LAUSCHE (1); JACOB JAVITS (1); MIKE MANSFIELD (1).

This question gave the Senators trouble. A frequent reply was, "No one—depends upon matter under debate," or, "Anyone who knows the subject on which he speaks," and, "This depends on the subject being considered." One statement tends to support our earlier conclusion in regard to speech in committee: "Those who are best known for their speaking ability are often least effective. Those who are most effective in committee are generally speaking with the greatest influence." An interesting comment was:

"If you want to know my opinion as to the most effective speaker in the Senate today I would have to answer that it is Senator JOHNSON. Senator JOHNSON, however, is not as good an orator as are Senators DIRKSEN, RUSSELL, TALMADGE, PASTORE, HUMPHREY, and MORSE. He is the most effective speaker because of the position he commands as majority leader. That is the way effectiveness works to a large degree in the Senate."

8. "What former Member of the Senate (whom you did not hear speak) would you have most liked to hear speak?"

This question gave the Senators no trouble. They voted as follows:

Daniel Webster (17); John C. Calhoun (5); William E. Borah (2); Thomas H. Benton (2); Henry Clay (2); Henry Fountain Ashurst (1); Edward Costigan (1); Huey P. Long (1); George W. Norris (1); and Zebulon B. Vance (1).

In summary, the Senators do think speech influences legislation in the Senate. The increasing importance of speech in the committee room probaby compensates for the declining influence of floor speeches. The Senators use all methods of presentation. The practices of ghostwriting, rewriting, and the delivery of phantom speeches are prevalent. The Senators consider speech, as academic training, important to a career in politics. Of all their forerunners, the current solons would have most liked to have heard Daniel Webster.

The Members of the U.S. Senate—at least those Members answering our questionnaire—consider HUMPHREY, of Minnesota, the most effective speaker in the Senate. When informed of this result, Senator HUMPHREY wrote to us, "I am most flattered by your findings." We asked Senator HUMPHREY for his secret of success as a public speaker. Senator HUMPHREY wrote that public speaking has always been easy for him, but he was never satisfied with being just a "good" public speaker; instead, he says, "I have tried to develop my capabilities in this area by study and just plain experience."

Alaska: Eagle State

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. NEUBERGER. Mr. President, one of the organizations which campaigned most actively in favor of statehood for Alaska was the Fraternal Order of Eagles. Now, the issues of Eagle magazine for March 1959 has paid tribute to our new 49th State in an extensive article by Mr. Raymond Schuessler. I ask unanimous consent that Mr. Schuessler's informative essay, "Alaska: Eagle State," as reprinted from Eagle magazine, be printed in the Appendix of the RECORD.

I am particularly pleased that Mr. Schuessler's article has paid tribute to the persistence of the junior Senator from Alaska [Mr. GRUENING] in crusading for statehood, an advocacy which Senator GRUENING also has shared with the able senior Senator from Alaska [Mr. BARTLETT].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALASKA: EAGLE STATE

(By Raymond Schuessler)

Alaska's admission as the 49th State means a bright new future for our Arctic outpost and many eager hands and dollars are rushing there to aid in the job of developing this virgin Territory. Many of the hands and the dollars belong to Eagles who are helping to fashion our youngest State.

Pioneering already are six sturdy aeries throughout the State, who are tugging at the bootstraps of this vast untapped lode.

"It's a future we are all glad to share in," says John W. Gilson, secretary of Valdez, Alaska, aerie and president of the local bank. "Alaska's future is unlimited but it belongs to those who aren't afraid of hard pioneering work now and to those who know their gain will be over the long haul and not overnight."

One of the past aerie presidents of Valdez aerie is William A. Egan, now recovering at a Seattle, Wash., hospital after a serious illness, who is currently Governor of Alaska. "Just about everyone who ever lived here in Valdez has been a member," says Gilson. That's how important an Eagle aerie is in this undeveloped Territory. It's just about the only source of recreation in town.

Their clubroom is a hall roughly 100 feet by 35 feet. The downstairs part is used as a theater as well as the lodge room. "With the exception of the elementary school, we have the only hall in town for community dances," says John.

Like forts in a wilderness the Eagle aeries are bringing together the communities all over this frigid frontier, not only in recreation, but in civic betterment. "We have always sponsored community projects," says Gilson. "Right now we are sponsoring the Cub Scouts and the Boy Scouts. Whenever a community project is to be sponsored they contact us first."

There are six Eagle aeries up here at Skagway, Douglas, Ketchikan, Fairbanks, Valdez, and Spenard and all are working as hard as Valdez and Fairbanks (subject of a Home Town article in last October's Eagle) to give Alaska its proper stature.

Valdez came into being in 1898 as the result of the gold rush to Alaska, and Eagles opened their clubroom in 1913. Miners outfitted there for the hazardous pack-trail trip that led over the Valdez Glacier. Some of the flavor of the old town remains yet, and even the old road can still be seen. It has an area population of around 1,500 and is located at the head of a beautiful fiord almost surrounded by rugged mountains and glaciers. Its economy is based on fishing and trucking cargo to the interior. Valdez has stores, curio shops, a school, hospital, motel, dock, and airport. Average summer temperature is 53°, winter 19°, and snowfall about 60 inches.

Alaska is the new American adventure. It has been 46 years since travelers could visit a new State. Tour bookings indicate that 1959 will see the largest migration of travelers to Alaska since the gold rush. Alaskans who have not heard from the folks and friends back home in ages, suddenly find their mailboxes full.

Alaska is the only place in the world where the Arctic may be visited in comfort and on regular tours. This is the real top of the world where there is around the clock daylight in summer and twilight at noon in winter. At Point Barrow the sun stays above the horizon for 82 days each summer. We saw miles of the highest mountains on the North American Continent, an endless vastness of Arctic tundra, Eskimos in their unspoiled native villages, the largest bear and moose in the world, chipped ice from the age-old glacier that probably had parts of Brooklyn under its belly, talked with grizzled pioneer miners and alert young businessmen, and visited old sourdough cabins that stood in the shadow of modern 10 story concrete apartment houses. You can almost see the country growing while you watch.

Alaska's fight for statehood, ever since the first bill was introduced in Congress in 1916,

has been long and arduous. But in 1958 Congress finally turned our Arctic outpost into our 49th State.

Many times during the last 42 years the statehood bill was pigeonholed, other times it was defeated by Congress. Opposition came from steamship lines, some Federal employees who would lose their jobs, small Alaskan businessmen who were afraid of big chainstores, and, most of all, outside salmon canning interests.

Salmon canners from Seattle fought statehood to prevent taxation on their lucrative industry and possible loss of the entire fishing resources itself, since they had been using controversial traps (outlawed in the States) which shoveled in enormous loads of fish at the risk of exterminating the species. These U.S. commercial interests which have prospered from special consideration in a distant colony will now be subject to reforms.

Statehood proponents also had to buck military opinion which insisted Alaska was more "militarily maneuverable" if left a territory. Opposition to this view came from Gen. Douglas MacArthur, Adm. Chester Nimitz, Admiral Byrd, Air Force Gen. Nathan F. Twining, and others.

It is believed by many that Interior Secretary Fred Seaton, working zealously behind the scenes, masterminded the passage of the bill. One of the strongest protagonists through the years was ERNEST GRUENING, a former Governor of Alaska for 14 years, who campaigned vigorously throughout the United States for statehood. Ever since Alaska was purchased from Russia in 1869 for 2 cents an acre, the public has associated "Seward's Folly" with a forbidding outpost where only Eskimos and polar bears could survive.

But during and since World War II the public has become aware of its strategic and economic importance. We have learned that Alaska has enormous timber stands, 31 out of the 33 strategic metals, including America's only tin deposits, possibly more oil than Texas, more coal than Pennsylvania, hundreds of thousands of potential agriculture acres, salmon, great sites for water power, and tremendous game and fur resources. As Anthony T. Lausi, Director, Office of Territories, has said:

"Alaska is as challenging today as the interior of the United States must have been to the pioneers who pushed across the Alleghenies."

The big problem at the moment is the lack of people, capital, and transportation. But with statehood now a reality, Alaska may now burst forth commercially and populationwise.

Weather: Alaska connotes to many a land of igloos and icebergs. But temperatures in Alaska have the widest range in the world. For short periods in the winter it will sink to 70 below in some areas, and rise to 99 above in the summer. Some spots get 14 feet of precipitation, and others only 6 inches. Some spots are frozen to a depth of 300 feet below the surface and other spots do not freeze at all.

Alaska certainly is not a frozen wasteland. After all, three-quarters of Alaska is in the North Temperate zone. The southern area has the same average temperature as Baltimore and Philadelphia; the western area is similar to New England, and the interior is comparable to Montana and the Dakotas. Alaska's proximity to the North Pole is about that of Scotland, Norway, Finland, and Sweden.

Alaska's 210,000 population represents a tripling of population since 1943. With statehood now a reality, a population boom is expected. In time it hopes to support a population of 12 million. Women will find Alaska with a ratio of 16 men to every woman, a mecca for males.

The present population is young; about 42 percent are in the young family age compared with 32 percent of the population in the United States. The median age of the Alaskan population is only 26, 5 years below that of the United States.

It may come as a surprise to many, but this Arctic outpost which boasts only one college is very near the top in the education field. About 7.5 percent of its population are college graduates in contrast to the 6.2 in the United States. A second university, Alaska Methodist, is now going up.

Alaska's towns have the same pattern of schools, churches, civic organizations, Little League baseball, football, hockey (some unique sports such as sled dog races, curling, a $100,000 ice-breaking-up contest), department stores, bus lines, hospitals, and night clubs that are found in almost any town in the States. The exception: Alaskan towns are separated by vast areas of sparsely populated land sometimes connected only by ship or airplane. Here where nearly all professional people own their own aircraft, is the greatest per capita number of fliers in the world. In fact, some 20 percent of all seaplanes in America are concentrated here.

The real hardship in Alaska is the high cost of living, one and a half to two times as high as in the States. Orange juice costs 40 cents a glass, milk 35 cents a quart, gasoline 45 cents a gallon, a one-bedroom unfurnished apartment from $130 to $180 a month. However, wages are equally high; carpenters get $5 an hour, truckdrivers $5 per hour. Food costs may be alleviated somewhat when cattle raising and new, tough, hybrid wheat becomes established. But Alaska will never be able to produce all its own food.

HISTORY

Alaska has no history steeped in heraldic legends and centuries of glorious strife and heroism. It was only in 1728 that Peter the Great of Russia commissioned a Dane, Vitus Bering, to explore Siberia and discover where Asia ended and where North America began. Bering sailed through what is now Bering Strait and established the fact that this narrow channel separated Asia from America. When fur traders began to chase the sea otter along the Aleutians they set up the first permanent Russian settlement in the New World on Kodiak Island in 1784.

In 1867 Russia ceased its expansionist policy and sold Alaska to the United States. It was far from a folly. In 1859, Robert Kennecott, a young biologist, had explored Alaska for the Smithsonian Institute and the Audubon Club of Chicago, and 6 years later he headed the scientific section of the American exploring expedition which surveyed a route for a proposed overland telegraph line to Siberia. Kennecott had obtained valuable information on Alaska and gave it all to Congress and Secretary of State Seward.

When gold was discovered in Juneau in 1880 and later in the Klondike in 1898, some 30,000 prospectors rushed here, many doomed to chase only golden rainbows. Fortunately 20,000 remained to build up the Territory.

Today the country desperately needs settlers: farmers, professional people and just plain workmen. Millions are needed to help in developing Alaska's forests, oil and mineral resources; to fabricate timber, furs, and nonmetallic minerals; to cultivate the lands; to build roads, airports and homes; to develop hydroelectric power, and to build a tourist industry.

There are definite opportunities in this virgin country, but there are no get-rich-quick bonanzas lying at every corner. Most of all, Alaska needs pioneers who are not afraid of work, and who will not expect success the very first year.

Professional men and investors are urgently needed. With much work only seasonal, unskilled help must sometimes shift between two or more jobs. Odd and seasonal jobs are available in stores, garages, restaurants, trucking, construction and building (an extreme housing shortage exists), fishing, mining, railroad, schoolteaching, and office work. The wages are high, in keeping with the high cost of living.

Any citizen of the United States, 21 years of age or over, is eligible to secure a lease of not more than 5 acres of public land in Alaska for home, cabin, health, recreation, or business purposes. The only cost is $2.50 per acre and the cost of surveying it. Up to 80 acres can be purchased for business purposes.

Under Federal law a man can homestead 160 acres if he will live on the land several month out of each year, cultivate a part of the land each year, and build a structure on it. To many there will be new hope and adventure in the 103 million acres thrown open to settlement.

As Robert Service once said of the Yukon:

"There's a land—oh it beckons and beckons,
And I want to go—and I will."

Militarily, Alaska, at the crossroads of the polar skies, is of great strategic importance, for this is the shortest route that Soviet bombers would take to America's industrial heart. But aside from any strategic defenses, perhaps here where Asia and America are only 3.5 miles apart at the Diomede Islands, we can build a better bridge to Asiatic understanding.

Alaska is America's land of the future. It has the industrial and commercial resources to develop within the next generation into a well-balanced self-reliant economic State that will enrich all the 48 States it has joined.

Needed: Research To Prevent Disease in Forest Resources

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. WILEY. Mr. President, my colleagues will recall that earlier in this session I stressed the need for adequate research to prevent loss of the forest resources of our country as a result of blight and disease.

According to estimates, the annual loss from disease in the Lake States region is about 674 million cubic feet. Blight and disease, too, are often the cause of low quality wood supply.

Effective control of such hazards to our forest resources, of course, can best be accomplished by a sound, expanded program of research.

Recently, Mr. William A. McGraw, secretary-manager of the Northern Hemlock and Hardwood Manufacturing Association, forwarded a statement on the need for expanding antidisease research. Specifically, this fine association has recommended an additional annual appropriation of $290,000 for the Lake States Forest Experiment Station, aimed toward expanding the work of this fine station to provide an adequate program of research to protect the tree species of the lake region.

To call the attention of my colleagues to this real need, I ask unanimous consent to have a letter on the subject by the association printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NORTHERN HEMLOCK AND HARDWOOD MANUFACTURERS ASSOCIATION,
Green Bay, Wis., May 7, 1959.

GENTLEMEN: Today, on both the State and Federal levels, assemblymen, Congressmen and Senators are all striving to solve the problems of the independent logging and sawmill industry by creating committees to study the problems of timber marketing and forest management. In actuality, a problem of far greater magnitude faces the entire industry—the destruction of our forests by disease. It is estimated that the annual loss from diseases in the Lake States region, is about 674 million cubic feet and 1,987 million board-feet. This loss of timber through diseases actually exceeds the volume cut and utilized by the entire industry.

In addition to the current loss of wood volume, there are other serious aspects to the disease problem. Much of the low quality in the wood supply is caused by diseases. In hardwoods the volume reduced in quality is probably as great as that destroyed. Some new diseases that are causing severe damage locally in forest stands threaten to spread and intensify. The possibility continually exists that new and serious diseases will invade the region.

Any effective control of these diseases must be based on a sound foundation of knowledge that is largely lacking at present. This knowledge can only be obtained by research—both fundamental studies to provide a basic understanding of each problem and applied research to develop practical control methods based on sound principles.

There are many important and serious disease problems in the Lake States at present, and the small staff of scientists working on them is not sufficient to cope with the problem. The Lake States Forest Experiment Station has a disease research staff of three located at the station headquarters at St. Paul, Minn., and one located at the University of Wisconsin. We feel this research effort is very inadequate in relation to the magnitude of the problem and the damage caused by diseases.

To mention a few of the diseases that are causing much concern in the forest industry in the Lake States—Maple flight, nursery root rots, hypoxylon canker of aspen, white pine blister rust, dwarfmistletoe on black spruce and oak wilt. Maple blight is a new disease of hard maple that first appeared in 1957. It has caused severe and rapid mortality in a local area in northeastern Wisconsin. Although intensive study of the problem got under way in 1958 at great expense to industry, the cause of this disease has not been determined. It presents an unknown potential for spread and damage in the northern hardwood types which cover 9,308,000 acres in the region. Hard maple is the predominant species in this most valuable forest type in the region. Maple blight is not only injurious to adult trees, it also kills poles, saplings, and seedlings, and in some localities it has caused almost 100-percent mortality. The ability of this disease to kill trees of all sizes and classes and thus destroy reproduction as well as merchantable trees is the principal reason for the serious alarm this disease has caused. Some salvage is possible in merchantable trees, but there is no way to minimize the loss of reproduction.

The magnitude of this problem is of such proportions that it would be imopssible for industry itself to finance a program that would be effective. We are well aware of the great demands for a balanced budget and it is necessary to weigh very carefully each proposal that involves additional spending. We do feel, however, that a much greater loss to the Government in taxes would would be felt with the devastation of the important forest industry in the Lake States by disease.

We, the Northern Hemlock & Hardwood Manufacturers Association, along with the entire forest industry in the Lake States, do hereby recommend that Congress take steps to make an additional annual appropriation of $290,000 to the Lake States Forest Experiment Station which would lead to an adequate program of research for the study of the physiology of the hardwood tree species and the control of diseases of all tree species important to the region. This should also provide necessary programs and facilities and to sustain a staff of scientists trained in the skills needed for the solution of the problems involved in forest disease control. We feel that most of the disease problems requiring attention center on the northern hardwood type; it is therefore recommended that much of the work and necessary facilities be located within the northern hardwood zone of the Lake States region.

Sincerely yours,
NORTHERN HEMLOCK & HARDWOOD MANUFACTURERS ASSOCIATION,
WILLIAM A. MCGRAW,
Secretary-Manager.

Jake Waters: An Educator Who Has Guided the Training of Two Generations of Good Citizens in Houston, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. YARBOROUGH. Mr. President, Jake Waters has been principal of George Washington Junior High School in Houston, Tex., since 1926.

He will retired at the end of this school year after guiding the training of two generations of good citizens.

This man is a fine example of the dedicated, industrious educators who staff our Nation's schools. I request unanimous consent to have printed in the Appendix of the RECORD an article by Zarko Franks of the Houston (Tex.) Chronicle for Sunday, May 10, 1959, entitled: "A Hard Goodby—Waters And 'His' School Part After 33 Years."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Houston Chronicle, May 10, 1959]

A HARD GOODBY—WATERS AND HIS SCHOOL PART AFTER 33 YEARS

(By Zarko Franks)

A public school and its headmaster dissolve a 33-year-old alliance this summer.

He would want the school mention first. It's George Washington Junior High, Shepherd and Dickson.

Jake Waters came to it as its first principal in 1926.

Now he must say goodby at the end of the school term because he has reached 70, mandatory retirement age.

Today the man and the school reflect a satisfied weariness.

He speaks of the school with a reverence reserved for a dear friend. His goodby will come hard.

This school serves students from a humble area, including Old Heights and San Felipe, a public housing project.

Jake Waters has seen two generations pass through the big doors on the Dickson Street entrance.

He sat in his second flood office the other day and discussed education, his life work. He was asked:

"Which of your students have distinguished themselves in the community?"

"What is the measure of distinction?" he parried. "Is the jurist or lawyer or banker more distinguished than the San Felipe mother who is raising her seven children to fear God and respect man?"

He warmed up on his subject. "Is the personal life of the man who has gained fame as honorable as that of the mother who makes daily sacrifices for her young?"

He discussed his philosophy on education: "I am not an advocate of compulsory education. I do not believe the law requiring attendance is wise. A number of students are either not equipped or have no desire for academic learning.

TO BE HONORED

Waters will be honored at retirement ceremonies at 7:30 p.m., Thursday, at the school.

He says he and his wife plan to go to his "shack" near Boulder, Colo., after he leaves the school system.

They have no children.

VOCATIONAL NEED

"There is a crying need here for vocational schools that require no entrance standards, such as ninth-grade English."

He asked, "What's wrong with the old-fashioned apprentice system, whereby a boy is assigned to a good craftsman?" Then he hastened to explain, "I don't want to leave the impression that every child shouldn't be given an opportunity for an education. I do feel many don't belong in school. They should be allowed to go to work and learn a trade.

FALSE PRIDE

"The tendency today is to take a pride in turning out a good secretary for Humble Oil, rather than a good plumber."

Walters says he believes in wise discipline of unruly children.

"I've paddled students," he says, "and I've never had a complaint from a parent."

The major problem today, he says, is created by the working mother.

"Our economic situation, of course, forces the majority of mothers to seek jobs," he said, "thus, the children are deprived of their greatest need: Guidance in the home."

This results in problems to teachers, he said, and to the community as a whole.

Israel's Independence Day

SPEECH
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. DULSKI. Mr. Speaker, the most significant event in the postwar history of the Middle East was the birth of the State of Israel 11 years ago. That historic event marked the realization of the 2,000-year-old aspiration of the Jewish people. Today, on the 11th anniversary of its independence, we and the whole free world watch it grow, prosper, and

become the home of refugee Jews, and the hope of world Jewry. There it stands, in place of the old Kingdom of Israel, as a living monument, an inspiring symbol, erected by wise Jewish leaders with vision and foresight. Let us hope that more than 1 million homeless Jews who have found refuge in Israel, and have become its hard-working patriotic citizens, will live and enjoy their life in peace and prosperity.

Statement of Facts Concerning Alleged Abuse of Conservation Reserve Program

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I here include a statement by Mr. Don Williams, Chief of the Soil Conservation Service, which clears up certain published misinformation of great concern to his agency and others.

The statement follows:

U.S. DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Washington, D.C., May 15, 1959.

STATEMENT OF FACTS CONCERNING ALLEGED ABUSE OF CONSERVATION RESERVE PROGRAM

Implications of unethical use of the conservation reserve program for personal gain by a Soil Conservation Service employee in New Mexico, as contained in an article in Scripps-Howard newspapers on May 13, have proved completely misleading and unfounded.

Ray C. McDaniel, Soil Conservation Service deputy State conservationist, Albuquerque, N. Mex., was named by Dickson Preston, Scripps-Howard staff writer, as one of a number of people who have been collecting what the newspaper termed "huge farm profits" by leasing State-owned lands at 25 cents per acre and then collecting an average of $8 per acre by placing the same land into the soil bank.

A thorough investigation has been made by the Department of Agriculture and has revealed the following:

1. The State-owned land, 640 acres, including 135 acres of cropland, was originally purchased by Ray C. McDaniel's father in 1930. Farm buildings were placed on the land but Mr. McDaniel was unable to complete the purchase and the tract reverted to the State. Since 1935 it has been leased by Ray C. McDaniel and continued as the homesite and headquarters for a farm enterprise operated by the elder McDaniel for himself and four sons, each of whom owns adjacent tracts which are farmed together.

2. The State-owned cropland in question (135 acres) is only a small part of the total cropland (1,107 acres) placed in the conservation reserve. Originally (1957) only 460.8 acres of private land were placed in the conservation reserve. Then, in 1958, when the Department of Agriculture was encouraging placement of entire farms in the conservation reserve, the elder McDaniel placed the remainder of the farm, including the 135 acres of State-owned land in the program.

3. Ownership of land has not been a condition of eligibility in the conservation reserve. In addition, in most Western States, State-owned lands are interspersed among tracts of private land and it is customary to operate State-owned lands, under lease, as completely integral parts of the private land operation. In many cases, land leased from the State stays within the same farm or ranch unit for generations.

4. It has been determined that conservation reserve payments made on this contract were normal, proper payments and that all provisions of the contract were in complete accord with policy and law. Furthermore, under the arrangements for receiving the conservation reserve payments, all payments on the State-owned land go to the elder McDaniel.

Thus it is clear that:

(a) The State-owned land was not leased for the purpose of profiting by the conservation reserve program since it was leased by this family many years prior to the beginning of the soil bank program.

(b) Ray C. McDaniel neither sought nor obtained any special consideration as a Department of Agriculture employee in connection with conservation reserve payments on lands either owned or leased by him.

D. A. WILLIAMS,
Administrator.

Steelworker Asks Why

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. MUMMA. Mr. Speaker, here is a letter to the editor that was printed in the Lebanon Daily News.

Mr. John P. Schauer, Jr., as a steelworker, union member, and employee of Bethlehem Steel, has brought out in his letter some interesting thoughts which undoubtedly run through the minds of many of his coworkers.

We always hear so much about what the top dogs in the unions are doing or saying and their feelings, but these little fellows in the union who just pay their dues do not have access to that type of publicity.

His letter, while not only very interesting, reflects his opinions which are thought-provoking.

Mr. Schauer's letter follows:

[From the Lebanon Daily News]

PUBLIC FORUM

DOESN'T WANT STRIKE

EDITOR, DAILY NEWS:

I am an employee of the Bethlehem Steel Co. I am also a member of the union. It is my desire as a union man to say that I am opposed to a wage increase at the present time. I have a lot of friends who are not employed in steel work and yet they will be affected more than I am will as I will be earning more but they, more than likely, will not get raises. I would also like to say that I am quite satisfied with my present wages. I am not alone when I say these things, about 70 percent of the workers would like a better pension plan, sick leave benefits, revert back to starting at 7 o'clock in the morning and other minor grievances. I also wish to state that if all the men were to vote there would be no strike. I also feel that a lot of the men who are presently working in steel plants cannot afford to go on strike due to buying new houses, cars, appliances and other things that are needed in the household.

I cannot see why almost 600,000 men should go out on strike because a few big shots say they must: it just does not make good commonsense. Right now the Government is trying to curb inflation, but if the demands of the union are met, prices will go even higher making it all the harder for people who are not working at steel plants.

I am writing this letter because I cannot see why a few big shots should dictate to the whole country—as I have stated before, if the union's demands are met. The benefits that I have mentioned in this letter would be satisfactory to everybody and would also help curb inflation.

I also think that the Bethlehem Steel Co. would be satisfied with these demands as they are not too stiff to comply with. I have one more thing to say and that is this: If the few big shots who draw up the demands of the union had to go out on strike with no pay they would soon lower their demands. They say that they do not draw their salaries; that may be true but their salaries are in the five digit class which is far above the average steelworker's pay. Consequently they do not miss a month's pay. However, the average steelworker cannot afford to lose a month's pay. Thank you for printing this letter.

Respectfully yours,
JOHN P. SCHAUER, Jr.

Lincoln as a World Figure

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. SCHWENGEL. Mr. Speaker, on Wednesday night, May 20, I had the distinct privilege of hearing a scholarly presentation on "Lincoln as a World Figure," delivered by David Mearns of the Manuscript Division of the Library of Congress.

As I listened to Mr. Mearns' delineation, I couldn't help but be moved by the idea that the universality of Lincoln is certainly an exportable product which we can sell in the market place of men's minds the world around, and as the product is used we know that it will accrue to our benefit and help tip the balance of good will in our favor.

With that thought in mind, under unanimous consent, I include Mr. Mearn's remarks on Lincoln in the Appendix of the RECORD so that other Members can be prompted to explore ways and means to make the worldwide acceptance of Mr. Lincoln one of our most important exports.

LINCOLN AS A WORLD FIGURE

(Address by David C. Mearns, delivered before the Lincoln group of the District of Columbia at the Library of Congress Wednesday evening, May 20, 1950)

Dr. SCHWENGEL has, for reasons known only to himself, decreed that I shall discourse on Mr. Lincoln's place in the minds and consciences of the other peoples of the earth. It is, let me hasten to interject, a subject about which I am imperfectly informed, but it is one about which I have

some distinct impressions, probably unsound, and a few misgivings, probably unfounded. These I must proceed to pronounce but, mercifully, only for 10 minutes.

That abroad Mr. Lincoln should be the best-known American is, it seems to me, only natural and results, as it must result, from the position of primacy he holds in our own mythology. Here at home, the bewhiskered, awkward, listless giant has displaced those other fabulous creatures, the Noble Red Man, the megacephalic bison and the draped and Frenchified Goddess of Liberty. Symbolically, the festooned eagle, holding in its sinister claw the tools of war and in its dexter grasp a contradictory branch of olives, has flown away, leaving the field to groupings of a battered stovepipe hat, a rolled umbrella and a rumpled shawl. In consequence, it is not surprising that the image on the penny—the image on the 4-cent stamp—the image on the $5 bill—should be recognized in other lands as the image of America. Who of us would have it otherwise? He remains, as he will always remain, the most perfect product of our institutions.

But it is not only in counting-rooms and marketplaces and post offices that Mr. Lincoln is encountered in countries other than his own. Actually, he is a familiar figure everywhere: his statue looks down on passersby in London, Manchester and Edinburgh; plaster busts are distributed throughout the globe; his portrait hangs in the Prince of Wales Museum in Bombay; a cast of his hand adorns Nehru's desk. For more than 20 years a Lincoln fellowship has flourished in Hamilton, Ontario.

Carl Sandburg has written that "the facts and myths of his life are to be * * * shared widely over the world, for thousands of years, as the tradition of Knute or Alfred, Lao-tse or Diogenes, Pericles or Caesar, are kept. This because he was not only a genius in the science of neighborly human relationships and an artist in the personal handling of life from day to day, but a strange friend and a friendly stranger to all forms of life that he met."

Mr. Lincoln has always had his foreign partisans. It is only necessary to remind ourselves that his contemporaries included such advocates as Dicey, Goldwin Smith, Earl Russell, the Victorian widow of the Prince Consort, the workingmen of Manchester and London, Sir John Tenniel in the United Kingdom; Garibaldi in Italy; Louis Blanc and Victor Hugo in France. The Rev. William Makepeace Thayer's "The Pioneer Boy" was published at Athens in a Greek translation in 1865. The Emancipation Proclamation had appeared in Nestorian Syriac at Oroomiah, Persia, as early as 1863.

Fifty years ago the Lincoln centennial was widely commemorated. The Lord Mayor of London cabled President Roosevelt: "The Lincoln city flag waves over the Guild Hall today in sympathetic commemoration of the event." His Britannic Majesty, Edward VII, paid "a tribute of honor and appreciation to the strength and simplicity of President Lincoln's character." In Paris there were appropriate observances at the Lyceum Club. In Rome, Signor Nathan, the mayor of the city, attended a festive banquet. There were celebrations at the University of Berlin.

On this side of the sea, the incomparable Jean Adrien Jusserand quoted Plutarch: "It is the fortune of all good men that their virtue rises in glory after death, and that the envy which any evil man may have conceived against them never survives the envious;" adding, "Such was the fate of Lincoln." Baron Kogoro Takahira, the Mikado's Plenipotentiary, told a distinguished audience that "Lincoln left in his life a great example of a public man, not only for his own, but for all countries. So it is no wonder that his fame is worldwide and adorns the universal history of the modern age, as one of the greatest men that ever lived." At the Capital of Mr. Lincoln's Union, that magnificent Brazilian, Joaquim Nabuco, uttered prophecy, saying:

"With the increased velocity of modern changes, we do not know what the world will be a hundred years hence. For, surely, the ideals of the generation of the year 2000 will not be the same as those of the generation of the year 1900. Nations will then be governed by currents of political thought which we can no more anticipate than could the 17th century anticipate the political currents of the 18th, which still in part sway us. But whether the spirit of authority—or that of freedom—increases, Lincoln's story will ever appear more luminous in the amalgamation of centuries, because he supremely incarnated both those spirits. And this veneration felt for Lincoln's memory throughout the world is bound more and more to center in this city—which was the exclusive theater of his glory, and which alone could reflect the anxieties and elations of his heart during the whole performance of his great part in history—as holding the great preeminent title of being the place of his martyrdom."

I do not find that the Czar of Muscovy took any special notice of the event, but one of his subjects, Leo Tolstoi, told Count Stakelburg, at Yasnaya, that Lincoln * * * was a Christ in miniature, a saint of humanity, whose name will live thousands of years in the legends of future generations. We are still too near to his greatness, and so can hardly appreciate his divine power; but after a few centuries more our posterity will find him considerably bigger than we do. His genius is still too strong and too powerful for the common understanding, just as the sun is too hot when its light beams directly on us.

Mr. Lincoln's universality is profoundly indebted to his foreign friends. It was, for example, an Englishman, Lord Charnwood, who gave to a generation, the best one-volume biography; it was, until the advent of Robert Sherwood, another Englishman, John Drinkwater, who gave the most dramatic presentation of Mr. Lincoln's career; it was still another Englishman, Colin Ballard, who discovered his military genius. It was a Cuban, Emeterio Santavenia, who found Mr. Lincoln to be the precursor of the good neighbor policy. (Poor Santovenia. At last report, he was languishing in one of Fidel Castro's dungeons.) It was a Frenchman, the Marquis de Chambrun, who left us the best account of Mr. Lincoln's visit to City Point. It would be easy to prolong the list, but the hammer would fall before it could be completed.

In recent months, Mr. Lincoln has proved himself to be our most popular and our most acceptable export. Mrs. Benjamin Thomas told me a few weeks ago that her husband's book was been translated into, and published in, 13 foreign languages.

In furtherance of his sesquicentennial, the Voice of America has told the Lincoln story in every tongue; Radio Free Europe has carried it into the forbidden places. The U.S. Information Service has disseminated a ponderous packet of Lincoln essays and pictures (the work of experts) wherever there are reasonable signs of life. The Department of State has dispatched authorities to lecture on the Lincoln theme: Roy Basler to Ireland, England, Scotland, Europe; Lloyd Dunlap to Africa; Richard Current to India; Paul Angle to Japan. Everywhere they have been greeted by large, interested, and intelligent audiences.

Even in the press of the Communist-dominated world, Mr. Lincoln is currently publicized as an orthodox, card-carrying Commissar, foully and blasphemously betrayed by his successors. But the point to be made is the point that despite their orwellian perservity, hallucination, distortion, disfigurement, and procrustean mistreatment, Mr. Lincoln is nevertheless represented in their Russian accounts as a man without blemish, fault, or eccentricity. That is something of a personal accomplishment.

Yes, the name of Mr. Lincoln gets about. It may be now unknown to some lonely penguin, adrift on an Antarctic floe. But not for long. A nuclear submarine will surface at any moment bearing happy tidings from the prairie. Neither must the moondwellers remain indefinitely in ignorance. The first lunar probe can and will dispel it. There will soon be a Lincoln fraternity on Mars.

Mrs. Lincoln once related how, on his last day, her husband had expressed an intention "when he was through with his presidential terms, to take me and the family to Europe." If that journey might be made now, what a welcome would be accorded them.

Dr. John Wesley Raley Completes 25 Years as President of Oklahoma Baptist University

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. STEED. Mr. Speaker, one of our Nation's most dynamic educators, Dr. John Wesley Raley, this month completes his first 25 years as president of Oklahoma Baptist University. Oklahomans and admirers of higher learning everywhere join in saluting his achievement and wishing him continuing success.

Under his leadership the Oklahoma Baptist University campus on Bison Hill at Shawnee has been transformed by an expanding array of new structures matched by an equally inspiring sequence of new ideas.

When Dr. and Mrs. Raley first came to Shawnee in 1934 he was among the youngest of university presidents. But already he had compiled a distinguished record that foreshadowed the years to come. He has built not only in material terms but in terms of an environment that has produced citizens equipped to struggle with the problems of our age. Mrs. Raley has recorded the highlights of these years of work in her three books.

As he begins his most massive project thus far, the new Oklahoma Baptist University chapel, Dr. Raley stands as an embodiment of the characteristics of an outstanding university president—forceful, wise, responsible, farseeing.

In the magazine section of the Sunday Oklahoman, Oklahoma City, of May 17, 1959, Jack Spencer has appropriately depicted Dr. Raley's work in an article entitled "The Little Giant of Bison Hill." Mr. Spencer's article is as follows:

SHAWNEE.—Atop a windy hill at the north edge of Shawnee, Dr. John Raley in the last 25 years has built Oklahoma Baptist University into a thriving and ever-expanding college.

No Oklahoma prexy, past or present, has held his place so long as the "Little Giant of Bison Hill" and but seven denominational

presidents in the Nation surpass his longevity. In a profession whose average tenure is 4½ years, the Shawnee educator has gained continually in friendship and general support.

What's good for Oklahoma Baptist University has always been the guiding star of the Raley philosophy. From that day when the young educator came to Shawnee from Bartlesville June 1, 1934, and found the university facing a financial crisis, the Little Giant has given unstintingly of a dedicated wisdom.

"The school owed $40,000 in floating indebtedness when I came," Raley recalled. "There was a refunding drive on, but it had bogged. I told the Shawnee Chamber of Commerce that never again would I ask them to help pay for a dead horse, that I would ask for funds with which to build and expand, but not for debt, I've kept that promise."

Oklahoma Baptist University then had total net assets of $428,000 when Raley, eighth president of the school took over.

Today, a quarter of a century later, the little Scotch-Irish leader has guided the Baptist school to a point where it has $8 millions in assets including $1,600,000 in endowments. Inflation, of course, has expanded the school's property valuations, but that, after all, was a minor factor.

At first, the new president of the Shawnee University had slow, rough going financially. But gradually, the tide turned. The first big gift, $10,000, came to Oklahoma Baptist University from the late T. A. Thurmond, of Ardmore, and that sum was the beginning of the Raley magic which has transformed a small Oklahoma university into one of the most vigorous and useful in the Southwest.

Mrs. W. L. Brittain, of Oklahoma City, then gave $25,000 as the base of the Britain Memorial Library and Art Center and the late J. Lloyd Ford, of Shawnee, one of Dr. Warren Angell's many admirers, contributed $50,000 toward construction of the new Ford Music Hall which now houses the Warren Angell fine arts department.

Angell, who has the distinction of being the only Oklahoma Baptist University faculty member for whom a school was named, has been a constant help and inspiration to Raley in building Oklahoma Baptist University. The far-famed Bison Glee Club and the equally talented Bisonettes, have carried the name of the school—and of Oklahoma—into many States in recent years. There are many who contend that other choral groups are positively amateurish when compared with Angell's beautifully coached aggregations.

Mrs. Rheta Mae Dorland, semiretired after 41 years, is the oldest in tenure of a talented OBU faculty which includes Caroline Meade, mother of television's star saleslady, Julia Meade. Miss Caroline Meade, incidentally, was a member of that first OBU class in 1911 which included the State's senior Senator, ROBERT S. KERR.

In recent years, much of Oklahoma Baptist University's expansion can be traced to KERR's generosity. He has made three gifts of $250,000 each and about $50,000 more in comparatively small donations. A new girls' building, the Mrs. W. S. Kerr Memorial dormitory, was almost entirely fueled by the senior Senator's contributions.

In the past few years, Raley has spent more and more of his time on the highways and byways of Oklahoma in search of money for his beloved school and to deliver speeches before religious or academic groups. The burden of administration at Bison Hill has fallen on the shoulders of young Dr. James Ralph Scales, executive vice president, one of the many outstanding younger men the 56-year-old prexy has developed.

But the placement of Oklahoma Baptist University as beneficiary in wealthy persons' wills, is not Dr. Raley's only interest in life. Above all else, he is a scholar, a deeply learned Christian gentleman. As far back as 1935, he was elected a fellow in the Royal Society of Arts of London, and his doctor's thesis is still regarded as a model at Eastern Baptist Theological seminary, Philadelphia.

The Little Giant's growth to his present prominence can be traced in his personal history: Farmed at Rosebud, Tex., his birthplace, in 1918–19; principal, North Prairie rural school, Chilton, Tex., 1922–23; teacher, American history and Spanish, Carlsbad high school 1923–24; pastor, First Baptist Church of Smithville, Tex. in 1927 to 1930; pastor, First Baptist Church, Millburn, N.J. 1930–31 and then pastor of First Baptist Church, Bartlesville, 1931–34, when elected president of the struggling Baptist University at Shawnee.

The $1 million chapel Raley is now building is the culmination of all that has gone before. It will be the heart of Oklahoma Baptist University, the beautiful and inspiring symbol around which the entire university rotates. The little giant has dreamed of it many years, and few Oklahoma Baptists will not be represented financially when the spire at last is lifted.

A great expansion of Oklahoma Baptist University's College of Fine Arts, headed by Angell, will come about when the chapel is completed. There will be 20 rooms in the new building especially designed for music teaching and all members of the fine arts department, except Angell, will shift to the chapel.

There will be a seating capacity of 2,000 in the chapel and a pipe organ for Mrs. Jack Reese, talented Oklahoma Baptist University teacher, will be a major item of the estimated $250,000 the chapel equipment will cost.

Members of the chapel building committee, some of them former students and all close personal friends of the little giant, are Harry J. Ellis, Okmulgee; Dr. Bruce Carter, Miami; R. C. Howard, Oklahoma City; Dr. Richard Hopper, Ardmore, Ex-Governor Raymond Gary, Madill; Dr. Warren Hultgren, Tulsa; Dr. Jack Baxter, John Goode, J. Frank Buck, and Judge J. Knox Byrum, all of Shawnee; Miles Jackson, Ducan and Mrs. C. A. Summers, Muskogee.

But though raising a million-dollar structure might seem climatic, Dr. Raley already is looking ahead to new buildings at Oklahoma Baptist University. The student union, though recently remodeled, is too small for the school's increasing student body, and an additional wing to the west is contemplated by Raley.

"We can never stop building," he declared, "because the school keeps on growing and one improvement begets another. What was adequate a few years ago is barely sufficient today and will be outgrown tomorrow. We have no way to go but ahead. I hope I never reach the place where I can fold my hands and feel that everything which should be done, has been done."

But it is not in beautiful buildings that the little giant finds his chief pleasure. It is in the knowledge that the school has produced and is now producing some of the finest Christian citizens of Oklahoma.

"I love these kids," Raley confided. "It's an infinite pleasure to watch them develop and go out into the world to build useful, happy lives. No, it's not the buildings that I'm most proud about. It is the graduates and the lessons we were able to instill in them and which they carry with them throughout life."

Dr. Raley has always believed that a strong faculty is all-important. In earlier years, like many Oklahoma school heads, he saw some of his finest educators lured to other States. But as time goes on, there will be less and less of that, Raley vows. He hopes to make the Oklahoma Baptist University faculty one of the highest paid in the Southwest.

A talented musician and writer of three books, the most recent of which, "As the Years Go By," will be out tomorrow, Mrs. John Raley has been a full partner in the Little Giant's career.

Together they have reared a son, John, who joins the Bill Atkinson enterprises on graduation from Oklahoma University law school June 1. The Raleys were delighted recently when John's wife, also an Oklahoma University senior, won the gold Letzeiser award as the outstanding woman of her class.

They also take great pride in their only daughter, Helen, who is now Mrs. James Robert Nash, of Waco. The Nashes have for a century been prominent in the life of Baylor University, and it was at the Texas school where Helen, a receptionist, met her husband.

John was 2 years old when the Raleys came to Bison Hill, and Mrs. Nash was born here. Both, of course, grew up on the Oklahoma Baptist University campus, and both were graduated from it.

For the past 10 years, the Raley family has lived in the handsome new residence north of the university. Prior to that, their home was the modest official mansion south of the school oval.

Ability to leaven every situation with humor as well as commonsense, seems a Raley characteristic. Recently, Dr. Scales was at an educators' meeting in Chicago; dean of men, L. E. Solomon, was likewise out of town, and when it came time for the weekly chapel, Dr. Raley inherited the unaccustomed task of conducting the program:

"Everybody's gone but me," he told the delighted students. "So there's nobody to prevent me from making a speech, and that's exactly what I'm going to do."

The student is all-important on Bison Hill. No matter how busy, Raley always finds time to talk with any who want his counsel.

Recently, when a group of youngsters came to Raley's office for what they called a summit conference, the prexy gave his full attention. Their every question was answered fully and graciously.

"Who knows?" grinned the Litte Giant. "Some of you boys may eventually be on my board of trustees."

Resolution Supporting the Fair Labor Standards Amendments of 1959

EXTENSION OF REMARKS

OF

HON. WILLIAM A. BARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the following four local unions in Philadelphia in support of S. 1046 and H.R. 4488, the Fair Labor Standards Amendments of 1959: Philadelphia Newspaper Printing Pressmen's Union No. 16; Sheet Metal Workers Local 97, A.F. of L.; Laborers Local Union 57, A.F. of L.; and United Garment Workers of America Local Union 263:

RESOLUTION CALLING UPON THE 86TH CONGRESS TO ENACT S. 1046 AND H.R. 4488

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home

and a position of moral leadership in the world; and

Whereas the present Federal minimum wage of $1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator JOHN F. KENNEDY and Representative JAMES ROOSEVELT and cosponsored by many of their colleagues in both houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore be it

Resolved, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

Mr. Speaker, this type of legislation has long been needed and would do much to raise the living standards of our working men and women. I urge that you and the Members here today give these bills your full support and do your utmost to obtain their speedy enactment into law.

A Tribute to the Good Citizens of Maywood, Ill.

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. COLLIER. Mr. Speaker, on Sunday, May 17, the people of Maywood, Ill., joined in a ceremony which should long be remembered in the history of this fine residential community. The occasion was the dedication of a memorial to Company B of the 192d Tank Battalion at the site of the old Maywood Armory from which the gallant band of young men left to play an historic role in the bloody defense of the Philippines.

Veterans organizations with their service auxiliaries, boy scouts, girl scouts, civic organizations, fraternal societies and church and school groups of Maywood and its environs assembled for the colorful and solemn program. Thousands of folks turned out to watch the dedicatory parade as it moved through the heart of the community and others joined at the site of the ceremony for the climax of the program.

It was an occasion of mixed emotions, one of many recollections for the families and friends of those who made the supreme sacrifice at Bataan or on the "death march" after its fall. Yet there was a feeling that the event embraced more than a tribute to the members of the fighting Maywood Corps which is recorded in the annals of heroism in World War II. It was a symbol of solemn gratitude of the folks of this village to every veteran who contributed in any measure to the preservation of the ideals of this great Republic.

There on the site of this historic old armory now stands a bronze plaque with the names of each member of this gallant company there inscribed, and the "eternal light" which will illuminate this plaque after the light of day has passed will serve as a reminder of the gratitude, respect and honor which will be indelibly written upon the history of this typical American community.

Spain's Admission to NATO Should Not Be Delayed

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. ANFUSO. Mr. Speaker, when the North Atlantic nations who are associated in NATO recently celebrated the 10th anniversary of the international organization, many people on both sides of the Atlantic deplored the fact that Spain had to this day not been admitted to membership. To achieve complete Atlantic cooperation for the mutual defense of all nations concerned and yet leave out Spain from this very vital defense setup is difficult to comprehend. It is neither logical nor practical.

I have always favored the admission of Spain into NATO, primarily for reasons of national security and military cooperation. In fact, in January 1957 I had introduced a concurrent resolution expressing the sense of Congress that the United States urge NATO to invite Spain to membership. Unfortunately, our State Department never followed through on this proposal.

In recent months there is again considerable talk of the need to admit Spain into NATO, and this has now been further highlighted by the fact that Gen. Charles de Gaulle, President of France, favors Spain's entry into the Atlantic family of nations. The importance in the stand taken by General de Gaulle is due to the fact that up until now France had all along been one of the strongest opponents to Spain's membership in NATO.

What has become clear to General de Gaulle is gradually also dawning on other Western European nations who had heretofore been opposed to Spain. I believe that this is the ripe moment for the United States to take a firm stand in the matter and to point out to our undecided allies that in the interest of their own security and of the whole free world action on Spain's admission should no longer be delayed. We have important air and naval bases in Spain today which should be a great reassurance to all of Western Europe. In addition, Spain is now a member of the United Nations and other international organizations, so that there is no longer any valid reasons for denying her admission into NATO.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article on the subject from the Washington Star of April 1, 1959.

[From the Evening Star, Washington, D.C., April 1, 1959]

SPAIN SHOULD BE NATO MEMBER—EUROPEAN ALLIANCE VIEWED AS HURT MORE BY ABSENCE THAN IS SPAIN ITSELF

(By Constantine Brown)

Missing from the celebrations of the 10th anniversary of NATO's birth is Spain, which should be a member of that defense organization. This was recognized by the Senate some time back when it passed a sense of the Senate resolution suggested Spain's admission.

Last week Senator STYLES BRIDGES, the senior Republican in the Senate, asked in a speech on the floor that serious consideration be given to inclusion of Spain in the European defense organization. The State Department has favored such inclusion for some time, so did most of the other major members. But admission to the NATO "club" can be denied by one single black ball. It was cast by Iceland, which objected to Spain's participation in the Western defense system because that country was under a "Fascist regime."

The words "Fascist" and "fascism" have been applied indiscriminately in the Soviet lexicon to all who oppose the "democratic" views of the international communism. The government of the small but strategically important island of Iceland is leaning to the left, more from fear of the might of the USSR than from conviction. But it used the current Soviet expression when it remained adamant on the matter of Spain's entry into the NATO family.

The rest of the NATO members, particularly those who will have to bear the brunt in the event of a show-down, are anxious to have Spain included in the alliance, even if some of the governments may have some reservations about the Madrid government. But to the United States in particular, Spain's adherence to the NATO is of paramount importance. This for three reasons: one ideological and the two others practical.

Ideologically, regardless of what political fermentation may exist in Spain today, its people are strongly opposed to the Communist tenets. They will oppose with the same determination as shown in the past any Red infiltration or attempt to change the present regime to suit Moscow.

From the practical point of view, Spain offers us invaluable real estate and potential manpower. We already have 5 air bases and 3 naval bases in Spain. The Spanish government was more than cooperative with us when we suggested that we would like to base some of our fastest and most powerful aircraft in their country as well as create important bases for our naval forces. This brought about an agreement and Spain's participation in military and economic aid. But the advantages we obtained in establishing those bases far outstrip the more than $1 billion economic and military aid we have given Spain over the last 5 years.

We don't know how much longer we shall be able to keep our air bases in Morocco. If the Algerian strife ends soon with a victory for the French the chances are that the present Moroccan regime will survive

and we can keep our bases. But if the Algerian rebellion is protracted, the rule of the Sultan will be threatened and we may be forced out. These were among the considerations which prompted us to approach Spain in 1953 with the suggestion that we establish air and naval bases in its territory. The resulting agreement brought something which is tantamount to an alliance between the United States and Spain.

President Eisenhower and the Joint Chiefs of Staff have repeatedly stated that we cannot possibly match the Russians in ground forces. We have today 15 divisions to the Soviet Union's 176. But our allies in the Far and Middle East have a sizable number of infantrymen under arms. Not so in Europe.

Besides our 5 divisions, there are fewer than 10 others available for immediate action between the Elbe and Rhine. The Italians are developing an imposing military defense. Their role is confined, however, to only one particular area.

Spain could provide with ease 18 full-strength divisions available for the defense of Western Europe as well as the Mediterranean. These men are conscripts who serve in the Spanish army between 2 and 3 years. But except for one division all are, equipped with pre-World War II arms. And Spain, not being a member of the NATO, cannot benefit militarily from the United States as the NATO members do.

We want Spain in the NATO. Some of the major members want her, too. Yet she is being kept out to the detriment of the NATO more than to her own.

Invasion of Homes Without Due Process of Law

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. HALEY. Mr. Speaker, the American people are becoming very concerned over a matter very close to them. The issue that has caused their concern is freedom, liberty, and rights of the individual. As a result, organizations of private citizens are being formed all over the country. Many of these groups adopt a name such as, "Fighters for Constitutional Rights," and the like. They constitute a group of fine solid citizens, and their voices are beginning to be heard.

I bring to the attention of my colleagues a petition which I have received from one of these groups, Sarasota's Fighters for Constitutional Rights, which has been organized in my congressional district:

SARASOTA'S FIGHTERS FOR CONSTITUTIONAL RIGHTS,
Sarasota, Fla., May 12, 1959.

Congressman JAMES A. HALEY,
Office of the Senate,
Washington, D.C.

DEAR CONGRESSMAN HALEY: We respectfully request you to introduce the following on the floor of the Congress and have same read into the CONGRESSIONAL RECORD:

"To the Senators and Representatives of the People, in Congress Assembled:

"Replying to the integrity of the first amendment to the United States of America, which we, at least, choose to interpret as guaranteeing, among other things, the right of the people peaceably to assemble, and to petition the Government for a redress of grievances * * *.

"We, Sarasota's Fighters for Constitutional Rights, have so assembled, deliberated and now wish to record with the Congress our deep-seated grievance with the recent action of our Supreme Court in overriding the fourth amendment by affirming the power of a health inspector to invade our homes without a warrant, or without our permission.

"It is, and has long been, a cherished aspect of our feelings of freedom and security, that no one may invade our homes and our privacy without due process of law. The breaking down of this constitutional barrier to the unauthorized inroads of petty bureaucrats strikes at the very heart and soul of the moral fiber of this free people, and opens the door to those graver transgressions which history shows are bound to ensue if this trend is allowed to go unchecked.

"It is high time the Congress takes not only cognizance of, but action to stop, this continuing amending of the Constitution in a direction contrary to its original intent, in a direction which is nullifying one after another the limitations on governmental power which the far-seeing Founding Fathers in this wisdom so wisely imposed, in a direction which is completely reprehensible to the people that call themselves free, and which is being carried out by our Supreme Court by the flagrant, and admitted, abuse of the term interpretation.

"We, therefore, petition the Congress to act, not only in this, but in all prior and similar matters, and to regain for themselves, the duly elected representatives of the people, the legislative powers which have been and are being usurped by our Supreme Court.

"Adopted by unanimous vote and acclaim this seventh day of May 1959.

"SARASOTA'S FIGHTERS FOR CONSTITUTIONAL RIGHTS.
"MRS. ROBERT DE VANEY,
"Secretary."

Wheat Legislation

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks, I wish to include correspondence between the Honorable ROY W. WIER, Representative of the Third District of Minnesota, and Mr. M. W. Thatcher, general manager of the Farmers Union Grain Terminal Association and president of the National Federation of Grain Cooperatives.

In response to a telegram received by a number of us from Mr. Thatcher, Congressman WIER wrote a letter which goes to the heart of the present trouble in agriculture. Once again, he displays an understanding of farm problems which has made him a true friend of agriculture in the House of Representatives.

The telegram and letter follow:

ST. PAUL, MINN., *May 18, 1959.*

Representative ROY W. WIER,
Washington, D.C.:

Last week the House Agriculture Committee gave the President what he asked for—a wheat bill to meet an impending disaster in wheat. The bill recommended that wheat acreage be cut 30 percent next year and the price support be boosted as much as 20 percent. While this would reduce the wheat surplus there is some question as to whether the price increase is enough to protect family-farmer income.

But since then there has been too much jockeying around—too much backing and filling—and too much evidence of retreat in Congress. The House Agriculture Committee has recalled its bill. The Senate Agriculture Committee has reported out a bill that is unsatisfactory to farmers—and could well play into the hands of the Secretary of Agriculture.

Congress ought to know how farmers feel. No wheat farmer can willingly accept a big cut in acreage unless he is sure of a substantial increase in the support price—to protect his income. Every farmer knows the Senate Agriculture Committee bill will not reduce production by a single acre or a single bushel. It only cuts the farmer's pay. This kind of a bill is doing just what the Secretary of Agriculture wants. It is the kind of a bill that will help kill all price supports. Farmers in our spring wheat States expect their Congressmen to stand up and be counted. They expect something more from the Agriculture Committee members than committee room politics. To say that this bill—or that bill—will not pass Congress or get by the President's veto will not satisfy farmers.

Farmers expect the House and Senate Agriculture Committees to agree on a sound and reasonable wheat bill that will protect the income of producers and reduce wheat production. Anything less is unsatisfactory. At the moment, farmers are wondering whether many of the committee members do not know what they want, or are pliable to pressure from the Department of Agriculture. To argue that a good farm bill is not politically acceptable is no argument at all. Let the farm committee members do the best job they can and then let Congress decide whether the bill will give farmers a fair break. Then it is up to the President to decide whether or not he will veto a fair break for farmers, then the record is there—for everyone to see.

M. W. THATCHER,
General Manager Farmers Union Grain Terminal Association and President, National Federation of Grain Cooperatives.

MAY 19, 1959.

M. W. THATCHER,
General Manager, Farmers Union Grain Terminal Association, St. Paul, Minn.

DEAR SIR: I have read your telegram of May 18 covering the agricultural situation as it exists today with a great deal of interest. As one who watched the agricultural decline and crash in the 1920's and the early 1930's, I cannot help but be deeply concerned at the present agricultural trend. Following the last crash, when the farm land, to a large extent, fell into the hands of the mortgage holders and the big insurance companies as well as the State of Minnesota through its Rural Credits Act, the farmers to a large degree thanks to their industry, thrift, and energy, were able to pull themselves out.

Just what the results of the present situation will be is something for one gifted with prophecy. I hesitate to contemplate it as I have no desire to be known as an apostle of gloom. Nevertheless, if the farmer is able to pull out of this one that is now pending due to the 6 years' efforts of the present administration led by Mr. Benson to destroy the very minimum of protection the farmers might enjoy, is beyond my capacity to foretell.

Sometimes I wonder just how many beatings the farmer can take and still hold up his

head and be recognized as a desirable citizen. Wherever communism might hold sway in the world, nothing in my estimation has been more unjust in economic effects than the treatment of our American farmers.

Not being a member of the Agriculture Committee, I have little to do with the formulating of a program calculated to meet the present emergency; but I assure you, and I think that you will recognize this from the record, that I shall at all times be found in their battle, for the farmer when the chips are down. And I must say that I feel a deep appreciation to you and the Farmers Union for helping and guiding me through the better than 10 years I have been in Congress in matters affecting our agriculture.

Very truly yours,

ROY W. WIER,
Member of Congress, Third District, Minnesota.

Townsend Plan, H.R. 4000, Is the Essence of the Golden Rule

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. OLIVER. Mr. Speaker, I would like to call my colleagues' attention to a report recently issued by the Heller Committee for Research in Social Economics of the University of California. The researchers found that in 1958 a wage earner with two children needed $6,086.88 a year if he lived in a rented home, or $6,435.11 a year if he owned his own home, in order to give his family the standard of living that public opinion currently recognizes as necessary to health and reasonably comfortable living.

To put it another way, the man who rented his home should have had $117 a week and the man who owned his home needed $123.75 a week. The actual average weekly earnings of factory workers in California in 1958 was $83.71—a far cry from the standard the Heller committee deems desirable.

It is quite obvious that even people who are engaged in gainful employment are victims of the gap which separates income and the costs of living—this despite the fact that employed persons often are able to adjust to some extent by obtaining increases in wages and salaries.

The Heller report, it seems to me, also serves to dramatize a situation with which it is not even concerned. I refer to the plight of persons who are retired and are living on fixed incomes such as social security benefits. There is no way for these people to adjust to increasing costs of living.

I am familiar with the argument that the 85th Congress took cognizance of rising costs by increasing social security benefits an average of 7 percent. But this was a "cost-of-living adjustment" in name only, for at the time we passed the bill, costs already has risen by 8 percent since the previous social security increase, and since last summer they have continued to rise, with the result that social security benefits were outdated before the increases became effective. Moreover, the old level of benefits was so palpably inadequate that the tiny 7 percent increase amounted to scarcely more than a drop in the bucket.

This whole problem of relating income to living costs has achieved the dimensions of a national challenge. People still on a payroll may perhaps enjoy some protection, but those already retired are at the mercy of an expanding society. Naturally, we want our economy to expand, but expansion seems to bring with it, higher prices. Surely we are not going to accept the blessings of expansion by penalizing those who are helpless to accommodate themselves to the price spiral.

I believe there is an answer to the problem and that it is contained in H.R. 4000, introduced by our colleague, Congressman BALTNIK of Minnesota. This proposed legislation, more familiarly known as the Townsend Plan bill, would correct what I believe to be one of the major shortcomings of the present Social Security Act. It would create a system under which retirement benefits would keep pace with the cost of living. H.R. 4000 proposes a modest tax on gross receipts. In times of high prices, and thus a high volume of gross receipts, the tax naturally would raise more revenue, and since this revenue would be immediately distributed in the form of benefits, it would enable recipients to cope realistically with the higher level of payments.

We have accepted the principle of parity for farmers; why should we not also provide parity for pensioners? We have been unable to do this under the present social security system, and the result has been grave discrimination against those saddled with fixed incomes. But we can provide a measure of parity with H.R. 4000.

It is the only retirement proposal I know of which has a built-in system to guarantee that pensioners will always, and at any given time, receive benefits in terms of purchasing power geared to price structure at the time the benefits are received.

It was over 25 years ago, Mr. Speaker, that I first was convinced that a retirement income or old-age pension system, as you may prefer to label it, could be the vehicle for the distribution of dollar dividends which would mean security for our senior citizens and jobs for our youth. Since then and to some substantial extent because of the organizational work of the national Townsend leadership, social security was enacted. Today, even though inadequate, this social legislation is the sole support and hope of millions of our worthy citizens. But we need to do more. We can do more. Our economy will prosper to such extent as we improve the living standards of those of our people who are now only existing on poverty-ridden and disease-infected levels. While in Maine recently, I was continuously approached by my constituents in the retirement-age brackets, asking when could they expect more realistic pension incomes.

The principle outlined in H.R. 4000 is a humanitarian principle. It is the essence of the Golden Rule written into a legislative proposal. But, more than that, it has the economic promise of a social dividend taken from the top of our gross national product, which would serve as a most effective built-in stabilizer against recessions, unemployment, and stagnation of our economy. H.R. 4000 means real security for our retired citizens and growth and expansion for all.

The Eve of St. Bartholomew and Its Aftermath

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. RIVERS of South Carolina. Mr. Speak, under leave to extend my remarks in the RECORD, I include the following address delivered by Chaplain (Col.) Robert S. Hall of the Citadel, before the South Carolina Huguenot Society, April 13, 1959:

THE EVE OF ST. BARTHOLOMEW AND ITS AFTERMATH

The massacre of the Huguenots in Paris occurred on the night of St. Bartholomew's Day, August 24, 1572. The marriage of Catharine de Medicis' daughter started the bloodshed. A bell called the citizens to arms and the battle raged with the fury of despair which grew out of the feud in France between the house of Guise and the Catholics, on the one hand, and the house of Conde and the Huguenots on the other. The mortality cannot be determined with even approximate accuracy, as estimates, varying from 2,000 to 100,000, show. Coligny, sought out by Guise himself, was among the first to fall. The two young Huguenot princes, Conde and Henry of Navarre, are said to have ransomed their lives by denying their religion. It is not likely, however, that this would have saved them, had not Catharine, preceiving that their death would have reacted against her by demoralizing the party opposed to Guise and leaving him with unlimited power, induced her son to knowledge before the Parlement his sole responsibility for the deed. The real part which the king took is hard to determine. The pope ordered a medal to be struck in commemoration of the event and sent Cardinal Orsini to convey in person his felicitations to the queen mother.

French Protestantism was a native product of 1512–59. It had no roots in the past, for the Albigenses had been exterminated, the Waldenses had emigrated, the University of Paris was the center of scholasticism, and the reforms of Gerson contemplated no breach with medieval theology. Except for the encouragement given by the sight of other successful revolts from Rome, it owed little to foreign influences. On the other hand, the system of doctrine thought out by Calvin, and the organization elaborated in Paris, have been adopted to some extent in every Protestant country except Scandinavia; while French Protestant exiles have enriched, not north Europe alone, but America and South Africa.

Jacques Lefevre was the Erasmus of the French reform, laying billets he feared to kindle. By 1512, following the example of Colet, he published a new annotated Latin version of Paul's epistles, recognizing his doctrine of justification. In 1523 he began to revise the classical French version of the Vulgate.

The leader was John Calvin (1509–64), a Picard, trained in theology and law; but in 1534 he had to flee owing to his friend Nicolas Cop advocating evangelical views in his rectorial address at Paris. Finding that the movement was imperiled by the supposed anarchism of the Anabaptists and by some of their tenets, he published in 1536 the Institutes of the Christian Religion, casting the purified metal into the old molds, but adding two selections dealing with the current slanders, and dedicating the work to Francis. The book was the first valuable dogmatic treatise, and soon was enlarged and translated widely.

Some adherents were exasperated by the refusal of the clergy to reform, and their placarding of handbills attacking the old doctrines and usages irritated the Catholics. A confession was adopted, reflecting the influence of Calvin. His plan of governing each congregation by minister and elders was followed, and a system was begun of linking the congregation by synods of ministers and elders, much as the South German Anabaptists had arranged a generation earlier. As the movement extended, local synods grouped naturally by the civil provinces and the provincial synods were finally merged in one national synod. The plan was rapidly adopted by Presbyterians everywhere.

The synod of 1559 is a landmark, inaugurating a period of 70 years when the Reformed Church was an important political factor. With the accession of Francis II, a few weeks after the synod, the family of the Guises came to power, and steadily opposed the new religion. By this time several nobles had declared themselves, including Admiral Coligny and two princes of the blood, the Dukes of Bourbon and Conde.

With the accession of Charles IX (1560–74) the queen mother, Catherine de' Medici, brushed aside Bourbon, the first prince of the blood, and became regent. For a year there seemed a chance that she would belie Knox's fears as to the monstrous regiment of women, and imitate the revolution just carried through by Elizabeth in England.

For more than 60 years France was rent by the struggle, though it was suspended so often that nine successive wars are reckoned. The outbreak was at Vassy, where a congregation meeting publicly within a walled city, and therefore illegally, was massacred by the Guises without ceremony. In the intervals of fighting, it became clear that a counter reformation had begun, and that the zeal of the preachers trained at Geneva was offset by the subtlety of the Jesuits. The movement was much transformed in 1572, when Catherine was hurried by Italian advisers into authorizing a general massacre of all Huguenots, beginning with the royal guests. The princes of the blood were saved by a forced conversion, but every other leader of note fell, with thousands of humbler adherents. The survivors perfected their organization on quite representative lines, till there appeared a state within the state, independent of the feudal nobility and of the crown.

With the accession of Henry III (1574–89), two other parties defined themselves: the league of thoroughgoing Catholics, who copied the Huguenot organization, and the politicals, who aimed at internal peace and the exclusion of foreign influence, as of the Guises and Catherine. When Henry of Navarre, who had retracted his forced conversion, became heir-presumptive in 1584, the league was driven to a policy of exclusion. Four years later, the States-General declared against even toleration; but the arrogance of the Guises led to their assassination of the king. Navarre succeeded as Henry IV. (1589–1610.)

The league was so strong that Henry found it politic to become a Catholic in 1593; he was able to banish the Jesuits next year, and in 1598 to grant the Edict of-Nantes, destined to continue for 87 years, in great contrast to its many ephemeral predecessors. This declared Catholicism to be the established religion, maintaining the obligation of tithes and of the marriage laws; but it stopped persecution and recognized freedom of conscience, with the right of private worship anywhere. The so-called reformed public worship was legalized in every place where it was then actually practiced—about 200 towns, with 5 chief cities excepted; also in many thousand castles of the nobles, and in two places within every bailiwick. All synods were authorized to meet. On the civil side, not only were full civic rights guaranteed, and for ministers such treatment as the clergy received, but committees of Parliament dealing with cases involving Protestants were to have Protestant members. As a temporary measure, about 200 towns were left in their military possession, the garrisons being paid by the state.

With the assassination of Henry IV and the accession of his son, Louis XIII (1610–43), the tendency to absolute royal power increased, as was shown by no States-General being convoked after 1614. During the minority, the Jesuits quietly returned, and won many of the clergy to Ultramontane views. The rise of Richelieu in 1624 frightened the Huguenots into revolt, and when La Rochelle fell after 4 years, their separate political existence ended, and their fortifications were demolished everywhere. The peace of Alais in 1629 inaugurated a third period, when they were merely tolerated as inferiors, without any guarantee that the Edict of Nantes would be observed. Henceforth the nobles dropped off, as with the English Puritans after 1660, and the party became chiefly middleclass.

Richelieu and Mazarin, however, gave the Protestants fair play, so that in the troublous days of the Fronde they were loyal. Devoting themselves to manufacture and trade, and not being handicapped by cessation of work on saints' days, they gained nearly a monopoly of weaving wool, linen, and silk. Though they can hardly have mustered more than 1 million people out of 15 million, their importance was far greater. The Edict of Nantes was construed liberally, and public worship was actually maintained in 631 principal places, with 231 others subordinate. The synods met freely, though the National Synod needed special authorization, and a royal commissioner presided. Thought ripened apace under these conditions, and, while in Britain the doctrine of the divine right of Presbyterianism was hardening, the Huguenots preserved a more open mind.

At this time the Huguenots were important enough even to influence foreign affairs. These halcyon days ended soon after the collapse of the English Commonwealth withdrew the only possible external protector. When Mazarin died in 1661, Louis XIV (1643–1715) assumed power, and declined to receive a deputation of pastors come to congratulate him. Local self-government and constitutional methods were rapidly vanishing. Nobles and gentry were invited to court and led into provincial governors were practically superseded by obscure lawyers (intendents) wielding powers as absolute and as illegal as Cromwell's major generals, like whom they were backed by an irresistible army. As the States General never met, National Synods also ceased after 1660; provincial states and parliaments declined in importance; and arbitrary edicts became the only laws. When, therefore, an aggressive company of the Holy Sacrament set itself against toleration, and the one survival of the old times was the estate of the clergy, often convoked to tax itself, the danger was obvious, and there was no constitutional protection.

Emigration was forbidden, and all refugees caught were sent, men to the galleys, women to prison, their property being confiscated; but, though every frontier was patrolled, the exodus was general. Paris alone lost 1,200 Huguenot families out of 1,933; the intendant of Normandy soon reported 20,000 people missing from Rouen, 184,000 from his province; Nantes bewailed the loss of her workmen, Lyons had 14,000 looms silent and only 4,000 working.

These exiles rallied round the prince of Orange, and for a generation cherished the hope of compelling some restoration and even of reforming the whole Gallican Church. New Huguenot regiments were soon embodied in Dutch pay. When William went to the rescue of England in 1688, his aides-de-camp were all French.

Huguenot influence was diverted in its flow from the main stream into many other channels. This began far back in its history; as early as 1536 some preferred England to France; 30 years later many silk weavers set up their looms in the crypt of the metropolitan church of England, where Coligny's brother is buried and where their descendants worship today; Southampton has a God House whose records begin with 1567. Shakespeare lodged in London with Montioy of Crecy, and his "Venus and Adonis" was printed by the successor of Vautrollier. James I had two Huguenot doctors, Chamberlen and Mayerne.

The immigration to Brandenburg down the Rhine left many settlers by the way. Geneva gained 3,000 inhabitants and the watch trade as some recompense for boundless hospitality; a score of colonies arose in Wurttemberg, where French synods met until 1822; Homburg still maintains a French service; a village in Fulda yet keeps up the speech and customs of its founders. But the ravaging of the Palatinate hastened the steps of most of the exiles on to the Mark or the Netherlands.

ONE FOUND AT LAST

The king thought it would be a good idea to find a home in America for the Protestants, called Huguenots by the French. He was also interested in increasing the power of France against Spain.

Jean Ribaut, a brave Protestant captain in the French Navy, was chosen as the leader of the French expedition. Ribaut sailed from France in February 1562, with 150 men. In May Ribaut and his men sailed into the wide arm of the sea that we know as the Broad River. Impressed with the splendid harbor, Ribaut named it Port Royal. It still bears this name. The Frenchmen landed on a small island we know as Parris Island. Here they built a small fort, naming it Charlesfort in honor of the French king, Charles IX.

Ribaut made friends with the Indians at once. He gave them gifts such as hatchets, knives, bracelets, and bead necklaces. In return the Indians brought him pearls, balls of cotton, deerskins, and food.

Ribaut then called his men together and told them he was going to sail northward to explore the country. After that, he said, he would go back to France for more settlers and provisions. He asked who would volunteer to stay at the fort. Here in the new land, he told the men they had not only freedom to worship, but opportunity to improve themselves. Nearly all the men wished to remain. Ribaut chose about 30 and put them under the command of Capt. Albert de la Pierria. Then he sailed for France with the rest of his men.

Things went well, for a while after Ribaut's departure. The Frenchmen visited the Indians and were hospitably entertained. Before long, however, the Frenchmen quarreled among themselves. The captain turned out to be a cruel, harsh commander. He had a drummer boy hanged and sent a soldier named La Chere, a great favorite with the men, to a desert island to starve.

The men began to fear for their lives. They killed the captain, rescued La Chere, and held a council to decide what they should do next.

The Frenchmen had failed to raise crops for food, depending on the Edisto and Yamasee Indians to provide it for them. Now the redmen had little left even for themselves. Conditions had become impossible at Port Royal. Like the Spaniards of San Miguel, the Frenchmen decided to go home. But the Spaniards had had ships, and the French did not even have shipbuilders. They did, however, have a few carpenters. They set to work, the Indians helping them. The Indians were so glad to see the white men go that they gave them the last food they had.

At last the boat was finished. Everyone climbed on board except a boy named Bouffi, who decided he would rather stay with the Indians than risk his life in such a ship. The rest set sail. All went well for a time, but one day the wind stopped blowing, and for days the ship scarcely moved. The store of food ran low. The men gnawed their leather jackets and tried to drink sea water. A dreadful storm blew up and the ship began to leak. The men were by this time so weak that they could scarcely bail out the water.

The time came when there was no more food. After 3 days of starvation, La Chere told the others that, unless one man was willing to sacrifice himself, they would all die. The men drew lots, and La Chere was the one who lost. Without a word, he allowed himself to be killed so that the others might eat and drink of his flesh and blood. A few days later the men were picked up by an English ship. By this time they were nearly mad from starvation and hardship.

The French, however, were not ready to give up their plan of starting a settlement in the New World. A new expedition under Rene de Laudonniere, one of the men who had sailed with Ribaut, made a settlement in what is now Florida. Later Ribaut came with 300 settlers to this colony, Fort Caroline.

In 1680 a group of 45 French Protestants, or Huguenots, arrived. They were followed by many more. The Huguenots were the first group of French settlers to come to this part of the New World since Ribaut's settlement had ended so tragically.

The French Huguenots had come to South Carolina to seek freedom of religion. They had been bitterly persecuted in France because they were Protestants. Their settlements, for the most part along the banks of the Santee River, became known as French Santee. The Huguenots contributed greatly to life in South Carolina. They built six churches of their own. Some Huguenots came from Bordeaux, France. Their leader was a minister, the Reverend Jean Louis Gibert. The French named their town New Bordeaux after their home in France. In time, however, most of the Huguenots joined the Anglican Church.

We must now attempt to pull together various strands of Calvin's thought and make some estimate of his contemporary influence in America.

Calvinism came to our shores through several channels. The French Huguenots, fleeing from persecution after the massacre of St. Martholomew's Eve and again after the revocation of the Edict of Nantes, settled all the way from the Canadian border to Florida but chiefly in North and South Carolina. Another line from Geneva to America is by way of the Netherlands. This comes most directly through the Dutch who settled in and about New York, but there was an interpenetration of Dutch and Puritan thought when the Dutch Calvinists fled to England to escape the persecutions of the Duke of Alva, and later our Pilgrim Fathers took refuge in Holland before coming to America. The third main line—that in which Calvinism is most fully preserved—is that of the Scotch and Scotch-Irish Presbyterians. Thrifty, canny, and resolute ,they settled everywhere save for the fact that their brother Calvinists in New England gave them a cold shoulder and shoved them west. Though New York, New Jersey, and Pennsylvania became the main centers of settlement, they pushed southward to the warmth of the Carolinas and westward to become the main line of advance beyond the Alleghenies and in the second tier of colonies. The fourth channel is, of course, the Congregationalism of the Plymouth and Massachusetts Bay colonies, which came to dominate New England except for the Baptist stronghold in Rhode Island. Together these four groups formed the chief substructure for the erection of the American Republic.

What have they given us? Though any evaluation must of necessity be a wholly inadequate summary, five contributions stand out:

1. A type of character suggested by the phrase "the Puritan virtues." Common to both Puritan and Presbyterian strains (shared by the Dutch and Huguenot, though these are far less influential), these virtues became the implicit standard of respectability and decency in the American way of life. Though we are now far removed from the discipline of Geneva or Massachusetts Bay, it is still the assumption of the majority of our laity in American Protestantism that to be a Christian means to work hard, to save one's money, not to break the law, not to drink (perhaps, also, not to smoke), to be the faithful husband of one wife, and to attend church regularly on Sunday.

2. A strong reinforcement to our capitalistic economy. Though I believe Weber overstates the case for regarding Calvinism as the chief foundation of capitalism, there can be no doubt that the Puritan virtues are primarily middle-class virtues. This conjunction goes far toward explaining why American Protestantism is, on the whole, on the side of capital rather than labor. It explains also why the churches have so firmly undergirded the morality of small-group relations while leaving almost untouched the wider Christian obligations regarding war, race, and economics. John Wesley saw that "religion must necessarily produce both industry and frugality, and these cannot but produce riches." To avoid the resulting corruption Christians, he thought, must be exhorted to gain all they can, to save all they can, to give all they can. Calvinists and Methodists alike have tended to follow this pattern, at least in its first two items. The result is that philanthropy rather than economic justice is the primary economic virtue in most of our churches.

Mention should also be made of Calvin's contribution to capitalism by another channel—the lifting of the medieval ban on usury. The sanction Calvin gave to the taking of interest on investments is regarded by R. H. Tawney as a watershed in the history of capitalism. Calvin did not materially change the practice, for money had been loaned at interest long before his time. What he did was to lift the ban and place responsibility upon the Christian conscience, shifting restraint from ecclesiastical prohibitions to the Golden Rule. The door was thus opened for those who wished to let conscience be their guide. This transition in economic practice was for the most part completed before the settlement of America.

3. A foundation for American democracy. Our political theory stems from two main channels: (a) A Greek (primarily stoic) conception of the natural rights of man, which came to America by way of the enlightenment and had its chief exponents in Thomas Jefferson and Benjamin Franklin; (b) a Christian conception of the equality of all men before God. To the second, Calvinism made a major contribution, though not by the route of the exaltation of human dignity, which is a familiar note in liberal preaching. The present-day call to repentence for our common sin as the basis of any right ordering of society is in keeping with Calvin's spirit. As for the Christian's duty to resist tyranny, a straight line runs from Calvin's Geneva to Cromwell's England, to the Boston Tea Party, and to the interventionism of our time.

4. Emphasis on an educated ministry and an educated laity. We have noted Calvin's concern to establish the university in Geneva. He would not countenance sloppy thinking; for one must offer his best, intellectually as morally, to the glory of God. This spirit was shared by our Founding Fathers.

Among the Puritans and Presbyterians who migrated to our shores the educational level was high. In New England, Oxford and Cambridge men were numerous, and a profound respect for learning was in the heritage of a Christian home. Harvard University was founded, primarily to prepare young men for the ministry, only 16 years after the landing of the Pilgrims. By 1647, Massachusetts had made public instructtion compulsory and had established an educational system extending from the elementary school to the university.

Among the Presbyterian frontier settlers the school had a place second only to the church. Their ministers were men of scholarship, often trained in Edinburgh or Aberdeen; and as the second and third generations came along, a great crop of Presbyterian colleges emerged to give higher education near the homes of the people. Their estimate of the importance of an educated ministry is evidenced by the fact that seminary training has long been required for ordination in the Presbyterian Church.

5. A dogmatic but powerful theology based on the authority of the Bible—In congregationalism predestination gave way before the claims of liberal thought; and, after being strongly influenced in New England by Unitarianism, the Congregational-Christian Church now stands for freedom of religious thought as of ecclesiastical structure. Presbyterianism has followed a course much closer to the genius of Calvin. Though predestination has receded, theological rigor and biblical authority have not. As a consequence of the conjunction of these notes with insistence upon an educated ministry the Presbyterian Church has been more sharply divided by the fundamentalist-modernist controversy than has any other in our time. The liberalism of the clergy far outruns that of the laity. Though the theological stamp of the clergy varies greatly, depending not only on which seminary was attended but in which decade, Presbyterians can usually be counted on to have convictions.

The emergence of neo-orthodoxy is, for the most part, a reappearance of Calvinism but without Calvin's doctrine of election or his biblical literalism. Distinctions between Lutheran and Calvinist thought are less sharp than they once were, yet it is significant that the chief centers of neo-orthodox influence in this country are in seminaries that are Calvinist in background. Emphasis upon God's glory and sovereignty, the sinfulness and helplessness of man, the divine initiative in revelation and redemption, the saving work of Christ, and the Bible as basis of religious knowledge—these concepts, though not exclusive prerogative of Calvin's, were central to his thought. The truth that lies in them is being increasingly recognized by those who stand outside the Calvinist tradition.

When Calvin died in 1564, his grave, by his own wish, was left unmarked, and "no man knoweth of his sepulcher unto this day." Yet, like Moses, with whose spirit he had much in common, he was permitted to catch a glimpse of the Promised Land. Neither could foresee to what magnitude his work was predestined to grow. They belong among the immortals because with total devotion they served God and his people, consenting to have no other gods before the Most High.

Poland's Constitution Day

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. PUCINSKI. Mr. Speaker, recently the people of Chicago had the pleasure of playing host to a distinguished Member of the U.S. Senate, Senator HUBERT HUMPHREY of Minnesota, who delivered the major address at the commemorative services observing the 168th anniversary of Poland's Constitution, sponsored by the Polish National Alliance and its president, Mr. Charles Rozmarek.

An estimated 100,000 citizens of Chicago assembled to hear Senator HUMPHREY speak on this historic document, which for the first time in history introduced to the people of Europe, and specifically to the people of Poland, in 1791, those principles of freedom and constitutional law which had been adopted by our own Nation only 4 years earlier.

I have the pleasure of introducing into the CONGRESSIONAL RECORD today the text of Senator HUMPHREY's remarks which follow:

ALLIES BEHIND THE IRON CURTAIN

(Excerpts from remarks of Senator HUBERT H. HUMPHREY, prepared for delivery before the Polish National Alliance, Chicago, Ill., May 3, 1959)

I am pleased to join you in celebration of the 168th anniversary of Poland's adoption of the Constitution of May 3, 1791. This great document, so much like our own basic charter, stands as a beacon light in the darkness of Soviet oppression. It inspires the hope that a free Poland will one day live again.

Few people on earth have over the years shown a greater love of liberty than the Polish people. Neither partition nor persecution has been able to stamp out the flame of liberty.

No American citizen can recount the glory of the American Revolution without paying tribute to those two great men who contributed so much to the success of Washington's armies—Generals Kosciusko and Pulaski.

Poland has been called a pioneer in European liberalism. Certainly freedom-loving peoples everywhere in the world must take satisfaction from this passage in the Constitution which you commemorate today:

"All power in civil society should be derived from the will of the people, its end and object being the preservation and integrity of the state, the civil liberty, and the good order of society, on an equal scale and on a lasting foundation."

Yes; the peoples of the world know and respect the aspiration of the Polish people for liberty, and are bound in spiritual ties with all the unfortunate peoples who remain behind the Iron Curtain. I can assure you that during my recent visit in the Soviet Union, I did not and could not forget the plight of the 100 million people of Eastern Europe who suffer under the cruel yoke of atheistic and imperialistic communism.

The American people will never forsake them. The American people honor the peoples of Poland, Czechoslovakia, Rumania, Bulgaria, Hungary, the Baltic States, and East Germany for their devotion to the cause of freedom and independence.

But, above all, our thoughts go out to the devout and patriotic people of Poland—that brave country which was first to take up arms in the defense of freedom in World War II, the country which was subjugated not by one oppressor, but by two; yet, the country whose spiritual voice still speaks so eloquently, so courageously through Cardinal Wyszinski.

Yes; our hearts go out to Joseph Cardinal Mindzenty too, and to all the people in martyred Hungary.

The Polish people, too, have eloquent voices speaking for them here in the United States. Certainly none has beeen more effective in moulding the thinking of the U.S. Senate on the problems of central and eastern Europe than Mr. Z. Stypulkowski, Vice Premier of the Polish Government in London, and representative of Free Poland in Washington. His insights and wisdom have stimulated much constructive thinking among my colleagues in the Senate.

Yes, the plight of the captive nations is a subject close to the hearts of all of us.

It is unthinkable that we in the West should abandon these great peoples behind the Iron Curtain. There will come a day of eventual emancipation, and we must take all prudent steps necessary to hasten that day.

And it is not enough simply to voice this hope and declare our dedication to their cause. The peoples of the captive nations need something more tangible to give them faith for the future.

The peoples of the captive nations need a charter of hope from the West—a declaration of intent and concern from the leadership of the West.

First of all, we should place the fate of Poland and other countries behind the Iron Curtain on the agenda of every conference called to consider the problems of European security. We must never let the captive peoples nor their Soviet masters forget that we do not accept as right or final the imposition of Russian Communist rule in eastern and central Europe.

Secondly, we should actively counter Soviet demands for recognition of the status quo in Eastern Europe with our own insistence that Soviet occupation forces withdraw and that free and democratic elections be held in accordance with our solemn wartime pledges.

Yes, our constant objective must be the withdrawal of the Red army from Eastern Germany and Central Europe.

Third, we must not permit ourselves to bargain with the freedoms of other peeoples in order to maintain a conqueror's peace. We must remain loyal to our highest principles—that all peoples have an inalienable right to life, liberty, and the pursuit of happiness.

Fourth, we must never lose the opportunity to point out to the world the monstrous hypocrisy of Soviet imperialism and colonialism. The Soviet leaders, who shed crocodile tears over the remnants of Western colonialism, have imposed in Eastern Europe the most savage and brutal colonialism the world have ever known.

Finally, the charter of hope to the captive nations must include the unwritten assurance of courage on the part of the West—the demonstration that the Western democracies will not yield in the face of force or terror, will never submit to blackmail, and will always stand firmly on what we know to be right for us and for all men.

Speaking of Poland, I have already proposed the establishment of a binational Polish-American Foundation—to put to work the funds which have accumulated to the credit of the United States in the form of zloty, these funds from sale of our agricultural commodities. This foundation should be devoted to the building of creative institutions for the welfare of the Polish people.

As we approach the one thousandth year of Polish christianity what greater contribution could the West, and particularly the United States make, than to assist in the reconstruction of Poland's historic capital city—Warsaw?

There are many concrete things we could do in historic Warsaw which would stand as living symbols of American concern, and vivid demonstration of American friendship for the courageous peoples of Poland.

I am thinking, for example, of the rebuilding of Warsaw's famous Royal Castle—nearly destroyed during the Nazi siege of the capital city in 1939, and reduced to rubble during the Warsaw uprising in 1944. The plans for rebuilding this ancient castle in Poland's five-year economic plan have had to be abandoned for lack of funds. Let us step forward with an offer from Poland's friends in the West to rebuild the Castle in recognition of Poland's great contribution to European civilization.

A second undertaking could be the provision of a home for national army veterans. While the present Polish regime has changed the policy of persecution of the underground army of World War II, nothing has been done to improve the conditions under which hundreds of thousands of these veterans live. These men and women were "our companions in arms" equally against the tyranny of Nazism, and the oppression of the Soviet armies.

We could undertake a great humanitarian task in the building and financing of a large modern hospital in Warsaw—perhaps a children's hospital. Not only would it give direct aid to many tens of thousands, but it would be another symbol of American compassion and friendship in a nation suffering from the effects of Soviet colonialism—a nation disastrously short of hospitals and medicines.

How dramatic it would be to replace the war-damaged buildings that now face the monument of Stalin in a public square in Moscow with a children's hospital—a permanent reminder to the Polish people of the blessings of freedom—directly across the square from Stalin's tragic reminder of oppression.

Yes, and we could build workers' settlements based on western models—yes, homes for workers and yet displays of western living, western concern for people, western initiative.

These things we could do. These concrete acts of friendship for the Polish people we could undertake. No Communist leader would be able to explain them away. Every Polish man and woman and child would know they came out of the open hands and heart of America.

Yes, indeed, I believe that Poland will one day be free again.

I believe the whole world will one day be free of Communist oppression. I believe that mankind has the capacity to live in peace and justice.

But this will not come just by wishing for it. What we must do is to prove to the world—to the free peoples and the subjugated peoples, too—that our free system can beat the Russian system on every front.

What we must do is compete with the Russians—in fact, out-compete them. This

competition is being forced on us by the many faceted Soviet challenge.

We must meet and overcome the Soviet challenge in every area—economically, culturally, militarily, and in the important field of international persuasion.

Competition with Russia will be a long, hard pull. We cannot hope to win with a business as usual attitude. We must have a new sense of urgency and purpose. The struggle is, after all, a struggle between freedom and tyranny.

We cannot win this struggle alone with H-bombs and missiles and the other engines of war—we need also machines, farm products, technology, economic assistance, and above all a renewed devotion to the human values that will endure.

We will do it by helping to create an atmosphere which gave birth to the Polish Constitution of 1791 and the American Constitution of 1789.

How can we prevail in this mighty struggle with Russia?

First, we must compete effectively in the fields of science and technology.

Let us not make the error of underrating Soviet advances in these fields. While we and our allies are still ahead, we must admit the gap is narrowing, and they are breathing down our necks.

We cannot afford to be complacent. We must build the greatest educational system ever known to free peoples and we must do it now.

Second, we must compete in the field of international persuasion, and by this I mean not only mere words, but words backed by deeds.

The propaganda of the deed, such as the launching of a tangible food for peace campaign, will be far more convincing than 10 million words bleamed to the world by shortwave radio.

There is no reason why our agricultural surpluses should pile up in storage bins while millions of human beings are suffering from undernourishment and stark hunger? That is the heart of the food for peace plan which I am sponsoring in Congress. According to my plan America's abundance of food and fiber should be used as a positive instrument of foreign policy and a construtive force for peace.

Third, we must compete with Russia economically.

The dollar competes with the ruble not only in the production race, but also in providing development capital for impoverished economies in the politically uncommitted areas of the world. We cannot compete effectively with more than 4 million workers unemployed and with our industrial plants operating considerably below capacity.

Finally, we must compete militarily. We and our allies must be strong—yes, have superior strength. We will help our allies to maintain adequate forces. Measures of military strength—missiles, nuclear power, strategic and tactical aircraft, and naval forces—will weight in our favor if we make sure the defense budget is based on the power we need and not trimmed to meet somebody's conception of a balanced budget.

I have always supported adequate funds for the military defense of this Nation and the West. Indeed, without a strong shield of military strength we would be helplessly at the mercy of the Soviet Union.

Incidentally, one of the great deterrents to military action by the Soviet Union is its lack of confidence and distrust of the situation in Eastern Europe. The Soviet leaders know that they would have to keep scores of thousands of troops tied up to protect their rear and their supply lines from the freedom fighters of the captive nations if they launched a military attack on the West.

But military strength can in the long run only buy the time for more constructive approaches to peace.

I have spoken about the accumulation of Polish zlotys which has built up in past years—now useless—which has reached more than $150 million in value. And I have proposed a Polish-American Foundation to put these zlotys to work in the interest of improving relations between the Polish peoples and their friends in America, through such projects as the participation in the rebuilding of Warsaw.

But there is far more that we could do, in a less dramatic fashion—but, nevertheless, in ways that would build hope and friendship for the West in Poland.

The foundation would stimulate programs of travel between the two countries. The best way for us to tell our story to the people of Poland and for them to tell their story to the people of America is by personal visits on a people-to-people basis. And there are no better ambassadors from our side than the Polish-Americans who know and love the democratic processes of our great country.

Yes; through such a foundation we could help in many ways to provide medical education, public health facilities, medicine for children, school lunch programs—deeds, and not just words, in the finest tradition of Western civilization and American ideals.

It is the people we must reach. Yes, it is the people of Poland and the other captive nations whom we must hold to the west, shield from despair, show the light of eventual freedom.

Here and now we must rededicate ourselves to strengthening America's ties to these peoples in the darkness of Soviet tyranny, these brave peoples whose tenacious courage has never failed in the face of repeated invasions and tyranny, and who hold silently to the hope of freedom yet again.

Let us take inspiration from these silent allies, from their courage, from their determination, from their toughness and tenacity. They are our brothers: we shall never forget them or give up working for their freedom.

Their cause is the cause of every man and woman in the world who loves liberty.

The Dangers of Inflation

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD a copy of a letter written by a local citizen of St. Louis.

I believe it is important to realize just why the battle of the budget has to be fought and won. If we do not balance our budgets in times of prosperity, we will never balance them. Fiscal year 1960 seems destined to set new records of prosperity. Really we should be paying off some of the Federal debt in these times, not teetering along on a proposed budget with a mere hundred million in the black.

The letter follows:

HELLO SAM: Friendship is a wonderful thing, and truly it is not earned without the sincerest efforts of those involved. But, little did I realize it would cost me so many hours of extra work. Your comments about inflation, at our recent luncheon date, gave me no alternative but to try and evaluate my personal position in regard to this matter. The interest you aroused about this subject caused me to pull off to one side of the highway on a recent sales trip, to make notes on the thoughts that came to mind as I drove—and by the way, this almost made me late for an appointment. At first, I thought it would only take an hour or so to organize and resolve my position—my thoughts—on how I've been affected and have reacted to life during an inflationary period. But, believe me, it has taken considerably longer than any 1 hour. It took longer than 1 hour just to realize that there might even be some importance attached to it. In any event, this didn't come easy.

I can't speak for others, but I can speak for my family. Before now inflation meant something you read out of any book, "a disproportionate and relatively sharp and sudden increase in the quantity of money and credit, or both, relative to the amount of exchange for goods or services; resulting in or producing rising price levels." I'm not so sure it's really that simple or concise in either definition, direction, or results.

For the past 16 years I have earned my own way, and for the past 11 years my personal responsibilities have included a wife and family. I've always considered myself fortunate, and thankful, for what material gains I've made. My starting pay back then was $3,000 per year, but now, if statistics mean anything, our family unit is one that earns $10,000 or more per year, and I understand this puts some stigma on me as the unapproachable upper 10 percent of our society. We have a nice home, a 1954 automobile, and the usual necessities to run our home, like refrigerator, range, washer, dryer, television, etc. Our social schedule is normal and far from elaborate, and we enjoy taking part in church and a few other civic affairs. But Sam, we don't feel privileged—thankful for the opportunity to earn our way, yes—but privileged, no.

Thus, why should I feel concerned about inflation? I'm growing up in it—it has treated me pretty well—we're not hungry. I've read the history books about mass ruination of the homeowners with mortgages, the middle income classes and the like, in Germany, France, China, and other countries, and even heard of the "fairy tale like" stories of a wheelbarrow full of money needed for one loaf of bread. But this happened over there, and couldn't happen over here, at least, I don't think so. We're too smart to let that happen, and anyway I've been so busy trying to grow in my job and accepting new responsibilities that I haven't paid too much attention. So, I guess this necessitates my going back and looking at the past 10 or so years in retrospect.

For example, that candy bar I ate the other day (stole it out of the pantry when the kids weren't looking) was only half as large as the ones I used to buy as a kid—and for the same nickel. Oh well, kids shouldn't have too much candy anyway.

Two years ago, we paid $27,100 (with a $19,000 mortgage) for our 16-year-old home, and we love the home. However, my neighbor across the street made me feel bad when he told me recently that he had paid only $8,900 for his (new) home when he moved in back in 1941—and it is identically the same house. Let's see, that means he paid for his house about the same amount that I had to make as a downpayment, and which took me 14 years to save.

In 1954 we purchased a Ford Ranch Wagon with automatic shift, radio, and heater, and paid about $2,400 in cash for it. I can still remember the lecture I received when the folks turned over to me their new 1939 Studebaker Commander with overdrive, radio, and heater, for use on social occa-

sions in high school: "Son, you are not only responsible for the lives of those who ride with you, but remember that car represents an investment of $900, so be careful." Guess I had better be 2½ times as careful today.

Mom used to wonder where a growing boy put so much milk—at 9 cents a quart. Today I'm wondering the same about my three kids—at 25 cents a quart. Bread was, as I recall, about 9 cents per loaf, and today it's between 24 cents and 29 cents—unless we want it over 1 day old, then it is about 21 cents. As Marie Antoinette said, "If there is no bread, feed them cake."

It was quite a financial struggle for my folks to start me in college, as tuition was about $125 per semester, or $250 for a school year. I just called the university and asked them what tuition is now, and I am informed it is going to be $450 per semester this coming fall, or $900 per school year. What will it be 10 years from now when my kids start? If it continues for the next ten years to increase at the same rate as it did the past 20 years, tuition will be about $750 per semester, or $1,500 per year. Let's see, that means starting ten years from now, and for the next 7 years after that, I'll need about $18,000 available for tuition only, for the three children. If I don't want to borrow that amount, or pay for it out of yearly income at the time, I must start saving about $1,800 or so a year right now! (Or, should I wait for some of the proposed Federal grants for education and let all the populace send my kids to school!)

I could go on making price comparisons for shoes, clothing, utilities, gasoline, coffee, meat and medical expenses, but like I indicated Sam, I haven't been too disturbed, for we're still a happy family with means for providing ourselves with the necessities of life—and with some left over to support church and charitable organizations, and a rather limited (but satisfactory) social schedule.

Suddenly, however, I came to realize that I couldn't comprehend or define inflation by the mere means of price comparisons. Inflation can be responsible for more than the juggling of figures and the amassing of statistics. It's a way of life. It's an attitude. Perhaps I can try to make that more clear by trying to condense my thoughts these past weeks into writing.

Somewhere in the process of mental maturity, I seem to have acquired some standards, principles, or values about an "economic" way of life for our family. Whether these standards were grasped from the environment of my folks' home, my church affiliations, my educational background, or from my intimate friends, I can't recall. More than likely these standards are the result and overlapping of all these environments. In any event, frugality, thrift, and solvency have always seemed important virtues—important standards for running our home—and I might add, these same standards seem to lap over into my day to day business discernment.

Frugality: This is a tough one: I'm as "hungry" for the finer things of life as anyone—yet our family tries to keep a restraint on our desires and appetites for material comforts beyond our means. We don't suppress the ambition for those comforts or luxuries, but we do abstain until their realization is within the economic scope of possibility—and believe me, this requires constant evaluation and decision of need versus luxury—and sequence of participation.

Thrift: This is a tough one too: "It isn't how much you earn, it's how much you save that counts", seems to stick in my mind from away back somewhere. Savings is like a preparedness program—a step necessary to overcome some of the abstention mentioned under frugality.

Solvency and independence: And so is this a tough one. Having enough to pay the bills—to save a little—and to be prepared to meet some uncertain storms of financial adversity; means in short, earning your own way and paying your own way.

Obviously, all three of these standards work hand in hand, and a failure to observe any one of them can lead to the destruction of the other two—and obviously too, we are concerned with degrees of action and decision. How much each month should we save—in life insurance, in savings account, in stocks and bonds, in real estate—in any or all of these programs? Should we trade our 1954 car for a new car, instead of going on a vacation, or buying a new TV? How long before we have to replace the washing machine, the refrigerator, the dryer, for some of these are getting rather old? Can we or should we wait until we can pay cash for that extra room on the house, or should we go ahead and borrow the money? Should I cash in some investments I have, to buy a part interest in a flying club, so as to continue a hobby and sport in which I would like to participate? Should we try to save toward our children's future education, or should we hope to pay for it out of current earnings or borrowings when the time comes? Should we try to pay our home mortgage off fast, or take the full 20 years?

And so the questions go, and so they get bigger and bigger as your income increases, as your responsibilities mount. Frugality, thrift, and solvency are not easy to come by, and at times a decision or action involving any one of them leads to family arguments. (I try my best Sam, to think I am head of the household, but I've come to respect and recognize the power of my partner in life.)

Our family decision—our family choices—will be different from all other families, because our material desires are to our own satisfaction and not to the satisfaction of others. Our standards are not ours alone, however, for they belong to all who wish to practice and maintain them, but even here the degree may vary. We prefer to adhere to a strict savings program—we prefer to pay cash before we buy, and today, and since we've been married, we have had only one outstanding loan—the mortgage on our home. We try to cover the unexpected setbacks by various forms of health, casualty, and life insurance. We try to remain solvent by maintaining more money in cash in the bank than we need for current living expenses. We try each month to set aside $50 or $75 to invest for our children's future education. We pay all current bills and charge accounts promptly and as they come due. We don't think we are unusual, or even different from many millions like us. Out of it all, we feel the pride, proudness, and exhilaration in being able to maintain our own, and in knowing that before we can be our brother's keeper—we must first and foremost try to be our own keeper.

But, Sam, not until our discussion several weeks ago did I question the moral or ethical implications of what I've been writing. Now I wonder, not about the rightness or wrongness of what I'm doing, but the ultimate results of what I'm doing and what inflation might do to me and to my children.

Inflation seems to encourage my desire for consumption. After all, if the prices of real, material goods are increasing constantly, then perhaps I'd better go ahead and get that appliance, or automobile, or new addition to my home now. No longer do my decisions rest merely upon the evaluation of need versus luxury and sequence of participation, or upon waiting until they come completely within my financial scope; but more and more upon mental justification of comparative or expected prices. It is common knowledge that ownership of material goods (without mortgages attached) is better than money if we have real inflation. I might as well keep up with the Joneses, because I can't eat money, and, hand in hand with this, inflation seems to encourage my desire to use credit and installment buying. Why should I have a preparedness program, when by the time it takes me to get enough in savings to purchase something, it can no longer be bought for that amount. It seems more logical to borrow to the limit of my income, and pay the lender back with cheaper dollars (of course assuming I can keep my job and salary going up all the time). Why put my money into investments, insurance, and bonds that pay back cheaper dollars than those I put in? And, this goes hand in hand with inflation, seems to encourage my feeling of dependency. Why worry about the possibility of financial adversity. If I'm out of work, there's unemployment aids; if I'm sick and can't work, my company insurance will pay bills for a while, and following that there are charitable organizations to take over, and if I die there's social security to take care of the wife and kids. And, if I can't pay the bills, everything is bought on time up to the limit of my credit and has a lien on it, so they can't sue—only take back used merchandise.

As I said before, inflation seems to me to be more than the comparisons of prices, the amassing of statistics, it's very definitely and more evidently appearing to me to be a way of life, on attitudes, teaching or requiring standards, principles, or virtues entirely opposite to those which I believe.

Are these the signs of our times?

The public, far from resisting such increases (in prices) goes meekly along, when current income and savings are not enough to pay for what's desired, the consumer will borrow without hesitancy, thereby helping to inflate the economy and make price raising easier. (And after all there's as much money to be made on the financing plan as on the object itself. And today there is no incentive for paying cash—they'd rather you pay on installment anyway.)

Investors, in large numbers, are taking inflation for granted. Stocks are being bought, not primarily for their earnings, but in the belief that the stock market will inevitably go higher because of inflation. (Seems to me this is imprudent speculation with increased risk to all who deem it desirable to have ownership in American business.)

"The criterion for consumption is no longer the needs of the consumer, but the need of the economy to maintain an ever-increasing flow of goods." (But what if I don't want one?)

"The modern American is relying upon others to prepare for his old age, he is apt to let social security take care of his old age, and the basic fact is that he does not save his own money, put it in his own bank account and prepare to tide himself over life's rough spots." (The world owes me a living.)

"It probably would be advisable to own a house with the biggest mortgage you can safely carry. Years from now you will be making payments on the mortgage in cheaper dollars." (Those bankers are too rich anyway.)

"Spend the least amount of money on life insurance for the largest amount of coverage. Do not use insurance for savings." (In 1939 the life insurance ads read, "Retire on $150 a month for life"—today those same ads read, "Retire on $300 a month for life." (I'd sure hate to earn my living selling life insurance today.)

"Congressmen are unwilling to take unpopular steps necessary to limit spending on farm relief, veterans' benefits, public housing, and other long-standing programs." (Regardless of the issues, it is more important to be "in" than "out.")

"A Harvard economics professor estimated that in recent years hourly compensation of employees (including fringe benefits) has risen more than twice as fast as output per man-hour."

"Now that business has increased, we prefer to work our present employees 6 days a week rather than hire new ones, because of the high cost of fringe benefits."

"To raise an additional $12 billion (the amount of this year's deficit) from the present Federal income tax would require the confiscation of everyone's taxable income in excess of $4,000, or an increase in the corporate rate from the present 52 percent to 82 percent." (This could easily redistribute the wealth and provide us only one political party—the Socialist.)

"The Federal Government has paid much of its way by borrowing ever since 1931." (If it works here and this is the most esteemed organization today, why shouldn't I do it as an individual?)

"In the last 5 years, nondefense spending has jumped by a startling $12½ billion, from 20 to more than 32 billion—farm programs, housing programs, welfare programs, veteran services" (and as E. W. Howe wrote, "There is nothing so well known as that we should not expect something for nothing—but we all do").

"The form of success is more in front of us than the spirit." (The extent is more important than the intent.)

Inflationary trends: Who's to blame for it? Who's setting the example against it? Where do we point the finger?—at Congress, at the investor, at the bankers, at management, at labor management, at the farmers, at the veterans, at the whole system? Who cares, for there seems to be too much of the pointing of the finger, pitting person against person, class against class, management against labor, organization against organization, motive against motive—which in essence is merely the fulfillment of the age-old law "That for every action, there is an opposite and equal reaction."

And, I'm beginning to see out of confused mumble-jumble of words, out of the countless facts and figures, out of the pointing of fingers, out of the age-old promises, "for all the people," that today's inventive genius and scientific progress, makes demands even greater on the need for human controls; for nothing scientific, or mechanical, or monetary, will substitute for the communication of principles and the dignities of man.

Yet, inflation becomes a symbol—and like most symbols it tends to become represented as a power beyond that of the individual; a colossus that makes rich men out of poor, that redistributes the wealth, that provides security to the aged and to youth at the same time; a "Savior" to all the people, attaching to itself, as to some martyr, loyal, devoted followers, extolling its claims, echoing its virtues, and banishing its adversaries. Yet, it feeds with one hand and eats with the other, upon its unsuspecting victims at the same time, giving no warning of its creeping, insidious manifestations.

I don't want my children to become slaves, admirers, followers of this symbol. Thus, our communications must start at home. Somehow, someway, my wife and I must get across to them the pride in ownership, the pride in excelling at something, the pride of responsibility, and the pride in being an individual. I want them to know they are not equal just because the laws of this land say they are, but because they earn the right to be equal. I want them to know they can be more fortunate than others, but only because they earn that position. I don't want them to believe that they—or any systems—can be all things to all people. I want them to know that they have a responsibility to others, not because they should support a welfare State, but because one cannot live with others, without consideration and understanding. I'd be more interested in the intent of their giving than the extent of their giving. How can they respect the rights of others, and the responsibilities that are theirs if they don't first earn this respect for themselves. They must know that frugality is deeply rooted in our way of life—that it is a calculated step by step process of growing, and not an irresponsible satisfaction of desires—that it represents a responsibility to one's self as well as to others. They must know that thrift is an act of earning your own way—that it creates respect, that it demands responsibility. And, they must know solvency and independence as the ability of paying their own way and the way for others.

I believe this country was conceived and has prospered on these basic principles, and not on the principles, symbols, mind you, of inflation. As John Ruskin said, "Therefore when we build let us think we build forever. Let it not be for present delight, nor for present use alone. Let it be such work as our descendents will thank us for and that men will say as they look upon this labor 'See, this our fathers did for us'."

Sam, inflation means more to me now than it did some weeks ago—and I find its existence even more distressing, and inbred in our way of life than I thought! As I said, "I can't speak for others, but they too can speak and act for themselves."

Best personal regards.

A. W. GRUER, Jr.

Alaska

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. RIVERS of Alaska. Mr. Speaker, highlighting the recent graduation exercises at the University of Alaska was the presence of our distinguished colleague, the Honorable LEO W. O'BRIEN, from Albany, N.Y., on which occasion the University of Alaska conferred upon him an honorary degree of doctor of laws. This was done in recognition of the inspired, dedicated, and brilliant work of Representative O'BRIEN in support of the Alaska statehood bill during the 85th Congress. I wish to join in this expression of gratitude from the people of Alaska, and further take this opportunity of extending a hearty salute to the whole Congress for the passage of the statehood legislation which has reaffirmed the basic American principles upon which our great Union is founded. I also wish to make available to my colleagues the meaningful and significant message of LEO O'BRIEN in his address to the 1959 graduating class of the University of Alaska, as the thoughts so vividly expressed in that speech are pertinent to the problems with which the people of America are confronted and to the hopes and ideals for which we all stand. The text of the address of our distinguished colleague, Dr. LEO W. O'BRIEN, follows:

President Patty, members of the board of regents, distinguished guests, members of the class of 1959, ladies and gentlemen, I am deeply moved by the great honor you have conferred upon me today, although I realize that in recognizing in this distinguished way the part played by two men in the creation of a new State you have also extended that recognition, in absentia, to many who had vital roles in this historic endeavor.

It is a signal honor, too, to be permitted to address the first college graduation class in the history of the State of Alaska.

You were only freshmen in the fall of 1955 when I paid my first—and until now my last visit to Alaska. I was then, as now, Chairman of the Subcommittee on Territorial and Insular Affairs.

We came to Alaska to investigate the readiness of that great Territory for statehood. Many committees, through the years, had journeyed here on similar missions and, if some of those who greeted us in 1955 were a trifle bored or disillusioned, I did not and do not blame them. Only a few months before we arrived, the House had killed, by a margin of 48 votes, a bill granting statehood both to Hawaii and Alaska.

I have a confession to make. When I came to Congress in 1952, it was a matter of complete indifference to me whether Alaska would or would not become a State. I neither sought nor relished a place on the Interior Committee, dealing as it does with places farther from my home city, Albany, N.Y., than are London, or Paris, or Berlin.

How, then, did the congressional freshman of 1952, who thought only of an early escape to a committee dealing with problems closer to my district, become in 1958 the author and House floor manager of the bill which added the 49th star to our flag?

My first stir of interest in statehood came with the realization that, as chairman of a somewhat obscure committee in Congress, I, a man from Albany, had, in a sense, more power over your affairs than your elected Delegate and your elected legislature. And I had never seen this great land over which I had so much authority.

Then came resentment. Some of you may recall the famous fight over whether the Territory of Alaska should be given control over the treatment of its own mentally ill or whether we should continue a system of Federal control which smelled of the Dark Ages.

The issue seemed simple and those of us who fought for Alaska control over Alaska's mental health program believed we were doing the right, the decent, the American thing.

But, from a dark depth in our national life I did not know existed, there came wild, excited cries of subversion and treason. The hate groups of our land joined forces and carried with them an army of the unthinking and the neurotic. I, who wanted only to help the unfortunate, found myself in the well the House answering claims that we were part of a sinister plot to create in Alaska a million-acre concentration camp to which loyal people could be whisked in the dead of the night, no matter where they might reside.

Absurd? Yes. Childish? No. Many believed those things and the knowledge that they did not only saddened me, but lighted a torch of anger which made me resolve that a Territory which could be attacked because it sought only simple justice should be rid of the shackles which led some to believe that Alaska was a colony populated by serfs and inferiors.

I shall not detain you with a repetition of the strategy which won the statehood battle. It all lies in the record for our children to read.

Rather, I should like to speak of the pride most Americans feel that the United States now reaches to the very border of Siberia and 2,000 miles out into the Pacific.

Why were our people so excited when we admitted the largest State in the Union and, later, the exotic place which is Hawaii? I think it was their realization that our feet

were not cemented in the status quo and that the United States was not frozen into the past.

The responsibility of the other 48 States did not end when their representatives in Congress voted to add the 49th State.

When I and others pleaded with our colleagues last year to give Alaska the dignity of statehood, we said that the resulting economic benefits would flow through the entire Nation. We painted a glowing picture of things to come from the bowels of the great land.

But, this State is very new. Its rich resources will not pop from the earth and leap to market by themselves.

We have taken to us a new brother, but he must be helped as he struggles with the immense new problems of statehood.

But, I am very sure, that every ounce of help we give Alaska, financial, and otherwise, will be repaid in pounds or even tons.

Alaska, in my considered judgment, will, in the lifetime of our children, be one of the greatest and richest States of them all.

I have talked so far of new geographical frontiers. My special message to these young men and women today has to do with the desperate need to establish a new frontier of the American mind.

A great scientist, such as Dr. Teller, and great educators, such as those who have brought you to this point in your desire to know, can give you facts by which you can you can walk toward fuller knowledge.

A politician, such as I, must deal with less solid things. His life, in large measure, has been spent in the observation of human moods and shifting sentiments. During that period of observation, which included 30 years as a political writer, I have come to the considered conclusion that the ugliest word in our language is mob.

Its employment raises unclean pictures in our minds, pictures of temporarily maddened men, with hatred and blood lust in their eyes, killing fellow men because of their color or creed; pictures of hypnotized throngs swaying to the frenzied words of a dictator or demagog.

But I do not speak of those things today. I speak rather of mob thinking, of huge masses of our people bemused before television sets buying their ideas as they would toilet soap.

I speak of mass fixations, the acceptance of unproven facts that all scientists are crackpots, that all politicians are rogues, that all educators are eggheads, that new ideas are subversive.

We are approaching a point in our national thinking where indictment is conviction and a charge is a proven fact. Those who rebel and dare to challenge commit the cardinal sin of questioning the status quo and, therefore, must be anti-American.

We substitute labels, labels such as radical and reactionary, for ideas. Every man must have a pigeon hole and in he goes, though he be round and the hole square.

One of the cynical bits of advice given a freshman Congressman is that he participate sparingly in debate.

"The things you don't say can never be used against you," he is warned.

What a commentary on our times. Remain silent or the mob will throw your words back in your teeth. Repress the expression of new ideas, lest the mob turn on you for disturbing its complacency. Wave your flag but be very careful about defending those parts of our Constitution which stand in the path of mob action. Assert your own patriotism, but don't bother to defend that of persons unjustly accused. The mob may not like it.

Who are responsible for this sorry state of affairs? What elements among us have developed this passion for conformity?

We have, in this great Nation of ours, a group of self-righteous, self-appointed people who believe they, or their leaders, are the keepers of the public conscience.

They say they are against sin, so all who disagree with their views on anything from a local ordinance to foreign policy, are for sin.

They say they are 100 percent American, so all who fight their ideas are automatically trying to destroy our country.

In their arrogance, they would pin the label of treason on our highest officials, our courts, our President, and our Congress if they make a single move contrary to the dicta of their leaders.

They are the annointed of the Lord, the saviors of democracy, the referees of public morals, the last voices of freedom in the land.

I do not suggest that these people are in the majority, but they are dangerous as long as the majority of us remains indifferent and allows their policy of sterility to go unchallenged.

Most of us have had the experience, at a baseball game, of being humiliated by the crudeness and cruelty of a few loud-voiced booers.

We have cringed but remained silent, giving the impression that all of us are ignorant.

That was my experience during the contest over the Alaskan mental health bill. I knew the great body of decent American opinion would be on our side, given the facts, but I still had to go through the strain and heartbreak of false accusations, because the good people were silent and left the arena to the booers.

I know not where life will lead you graduates of today. You will follow many different paths. Some of you will never see one another again.

But it is my earnest hope, as you leave here with your diplomas, that you will also take away a common resolve, to speak up when the self-righteous attack unfairly; to defend new ideas; to avoid—as a very pestilence—condemnation without knowledge.

If you do this, you will be keeping open the most important frontier our Nation has, the American mind.

Michigan: A Study in Character Assassination

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. RABAUT. Mr. Speaker, I am moved to make this statement by my grave concern over the increasing—but completely unwarranted—assaults on the good name of the sovereign State of Michigan. As a citizen and Representative of the State of Michigan, I feel it my duty to come to her defense and to clear the air of the smoke from the various barrages which have been leveled against her. For whether these attacks are merely misguided, misinformed commentary or the conscious, self-serving efforts of some who would reap gains at Michigan's expense, they have the single effect of a deliberate character assassination of the fair State of Michigan.

Even a brief consideration of the charges to which I refer will readily show them to be not only unwarranted but, in large part, untrue, or at best, highly distorted versions of the real facts. Allow me, then, to take up the most prominent of these anti-Michigan allegations and see how they hold up under examination.

One frequent assertion is that Michigan is a welfare State—this with a derogatory intonation. This accusation has a twofold meaning to the critics who make it. First, of all these accusers mean to point a contemptuous finger at what the Los Angeles Times has termed the "highly advanced concept of paternalism" in Michigan and the invasion of local responsibilities they say it involves. Second, they point to a 100-percent rise in State spending in Michigan over the past decade and proceed, by implication, to attribute this increase to the support of various welfare programs by the State. From here it is an easy jump for these critics to assert that the State is broke and that this bankruptcy is directly due to Michigan's welfare activities. These are harsh and harmful words, indeed. Let us examine them. If they are accusing Michigan of being interested in the well-being of her citizens, Michigan gladly and readily admits to her guilt. The only real fact to be found in this diatribe is that State spending has doubled in Michigan in the past decade. However, this would seem to compare rather favorably with the fact that State spending—for all States—now totals more than 5 times as much as it did in 1946. Consider also that, in terms of dollars and cents, welfare costs each Michigan citizen $16.30—State and local taxes combined. According to a new U.S. Census report, this figure puts Michigan 34th among all the States in this respect—lower than 33 others.

Another charge, "taxes are out of line," can easily be disproven in the same fashion. The dollars and cents total of State and local levies in the State of Michigan is $181.13 per citizen. In terms of cash outlay this figure ranks 12th in the Nation. However, this same figure, when considered as a percentage of personal income, is 31st on the national scale—behind 30 of her sister States.

There is a companion allegation that the tax burden in Michigan is stampeding business out of the State. This is patently false. Industry in Michigan spent $110 million for expansion in 1958. This represented a jump of nearly $30 million over the 1957 figure and placed Michigan fourth among all the States in industrial construction in 1958.

The epithet, "unhealthy business climate," is another fusilade of the anti-Michigan invective. This is hardly worthy of our consideration since it is too vague to have any real meaning. If this charge has not already been rendered completely without substance by what I have said thus far, let me point out a few simple facts that will complete the annihilation. The well-known Big Three of the automobile world alone have invested in excess of $3½ billion in Michigan facilities since 1950. The announced intentions of but a few of the leading businesses in Michigan have earmarked in excess of $425 million for investment and expansion in Michigan. Does all this smack of an unhealthy

business climate? Hardly. Rather these are the past facts and the future plans of the leading business leaders of the country who, better than anyone else, are able to gage the business climate in which they exist.

It must, by now, be abundantly clear to all that the charges leveled against the State of Michigan in all of these areas are simply untrue. With States, as with men, no possession is more precious than a good name. I sincerely hope that in demonstrating the utter falsity of the attacks on the good name of the State of Michigan I have fully vindicated her character and integrity in the eyes of the whole Nation.

Virginia Rescue Squad Week

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. JENNINGS. Mr. Speaker, the people of Virginia are observing Rescue Squad Week during this week of May 17–23, and I wish to call this special observance to the attention of my colleagues in the House.

As far as can be determined, Virginia is the only State known to honor each year the humanitarian work of organized rescue and first aid groups.

Because of the extreme importance of the work carried on by this volunteer organization in assisting those in need and distress, I take this occasion to commend the many squads in Virginia and their many, many devoted members.

The Governor of Virginia, the Honorable J. Lindsay Almond, has issued the following proclamation on this special observance. It is included as a part of these remarks:

RESCUE SQUAD WEEK

The people of Virginia are grateful for the fine service being rendered in a great variety of emergencies by members of the lifesaving and rescue squads. These groups, day or night, are available to answer calls from their fellow citizens and also give generously of their time in presentation of demonstrations in first aid and safety measures. They also constitute a corps of readily available personnel for civil defense service in event of major disaster.

I salute these crews and members of the Virginia Association of Rescue Squads and their Ladies Auxiliaries and invite the citizens of the Commonwealth to join in tribute to them by appropriate observance of Rescue Squad Week May 17–23, 1959.

J. LINDSAY ALMOND, Jr.,
Governor.

Mr. Speaker, I have introduced a bill in this session of Congress to materially assist the rescue squads of the Nation in their work. This bill is H.R. 105 and would provide that surplus Federal property could be donated to rescue squads; it is presently pending in the Subcommittee on Donable Property of the Government Operations Committee.

Recently, the International Rescue and First Aid Association—IRFAA—endorsed the provisions of H.R. 105. I called attention to this endorsement in the RECORD of March 12, 1959.

The IRFAA has now advised me that endorsement of H.R. 105 has also come from the Minnesota Rescue and First Aid Association. The Minnesota endorsement is the latest of several endorsements from such State organizations.

It is my sincere hope that hearings will soon be held on H.R. 105 and the measure reported to the House.

There is printed in the International Rescuer, monthly publication of IRFAA, the following quotation from the Bible:

> And a certain Samaritan * * * going up to him bound up his wounds, pouring in oil and wine; and setting him upon his own beast, brought him to an inn and took care of him. (Luke 10: 33–34.)

This perhaps sums up the spirit that is typical of the rescue squads in the Nation as they go about their dedicated work of assisting people in distress.

I know that each of my colleagues joins me today in paying this brief tribute to the rescue squads of Virginia and America during Virginia Rescue Squad Week.

Congressman Gerald T. Flynn, Democrat, of Wisconsin, Defends the Richard I. Bong Airbase

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. FLYNN. Mr. Speaker, I have noted with much dismay remarks made in the CONGRESSIONAL RECORD relative to waste, frills, and extravagance in the construction of the Richard I. Bong Air Force Base at Kansasville in the First Congressional District of Wisconsin. These remarks were filed by a Congressman representing a district in which the base is not located, and were apparently made by him after examination of blueprints and plans furnished by the Leo A. Daley firm of architects of Omaha, Nebr. I also have a copy of these plans, and I have examined them thoroughly. It is with much displeasure that I take issue with remarks printed in the RECORD by a Member of Congress from Milwaukee. None of us favor spending for nonessentials. None of us favor military boondoggling. However, we are all in favor of building adequately and soundly for current needs with an eye open for future needs. The Bong Airbase anticipates a complement of military personnel and civilians working on the base, together with their families, of approximately 20,000 people. This base is being built in a country area and is approximately 20 miles from any metropolitan center.

The criticism contained in the RECORD was to the effect that money is being spent for a theater, bowling alley, hi-fi shop, gymnasium, and indoor swimming pool, steamroom, and squash court, and these facilities are not essential spending. I do not concur in this conclusion, and I allege that 20,000 people located in a country area some 20 miles from a metropolitan city must have on the base reasonable opportunities for relaxation and recreation. The building of a bowling alley or a gymnasium, including a swimming pool and massage room, is not a foolish expenditure of money. The Government of the United States has over $40,000 invested in the training of every one of these air cadets. Because of poor, uninteresting, and inadequate facilities, the Air Force has witnessed its fully trained and highly competent personnel, including those flying the planes, leave the service as soon as their tour of duty was completed. The Government then is compelled to spend another $40,000 to train a replacement. If the Government offered reasonable housing, as it is now doing under the Capehart housing program, and reasonable facilities for recreation, the percentage of those signing up for a second, third, and fourth enlistment would materially increase. The Air Force has experimented and has found a great increase in the reenlistment rate when living conditions have been improved, and this has accounted for a huge saving to the taxpayer. It, therefore, would be very foolish for the Air Force, in building this fine and modern new airbase, to fail to include therein a gymnasium. A bowling alley for the relaxation of the airmen and their families, and even a hi-fi shop in which junior can buy a record for his record player, and even a swimming pool for the airmen's use is not extravagance.

It is proposed in the bill of criticism that the airmen use gymnastic and swimming pool facilities located in cities 20 miles from the base. Imagine, an airman returning from a flight and getting into his car, or if he does not have his own car, of taking a bus into the nearest town some 20 miles away to find a gymnasium and swimming pool. From firsthand knowledge I can state, without fear of contradiction, that the swimming pools and gymnastic facilities in the cities of Racine and Kenosha, are inadequate for their own population, without taking into consideration the 20,000 people the base will bring in.

Most bases have a theater—and a theater providing a seating capacity for 650 people under modern conditions is not unrealistic or extravagant. It is merely building for present needs with an eye to the future, with a thought of taking care of normal needs of the 20,000 people who will live on or near the base. The criticism also includes a community service building wherein there are retail stores, snack bars, maintenance shops, warehouse, laundry and drycleaning shops, concessions, barbershops, a central post office, reading room, Red Cross office, and so forth. It is inconceivable to me that any Member of Congress would propose that a modern up-to-date Strategic Air Command base which will attract 20,000 people should be built in a country area 20 miles from any large city without such facilities being built into the base, and I do not feel it fair to criticize those who designed the base for this expenditure in money, any more

than I would criticize the Air Force for building a modern SAC plane instead of duplicating the Kitty Hawk. We are living in the modern age of 1959, and looking forward to the sixties, and our bases must represent modern needs and facilities, and not the needs of World War I.

I have gone carefully over the plans and I believe that the SAC and the architectural firm should be highly complimented for the designing of a modern SAC base with modern facilities—and on the other hand for the construction of a base that is not extravagant or wasteful, and that does not have needs above and beyond the requirements of the boys who are going to man and staff the base.

In answer to the question of whether the Richard I. Bong Air Force Base really needs these facilities, I say that the Bong Airbase and any other modern airbase built in a similar location definitely needs a swimming pool, a gymnasium, a bowling alley, and the other facilities described herein—and it would be preposterous and unthinkable to have military personnel who are on a 24-hour alert required to go to cities 20 miles away and attempt to use the inadequate facilities that those cities have. I feel it would be nearsighted and would do nothing to prevent the thousands of airmen, trained at great expense to the Government, from leaving the service. Whereas the facilities of a modern base will help to keep trained personnel in the service and will result in a large saving to the country. I earnestly solicit the examination of the Bong Airbase plans by any Member of Congress who has an interest therein.

New York State Supreme Court Justice J. Vincent Keogh

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. ANFUSO. Mr. Speaker, New York State Supreme Court Justice J. Vincent Keogh, a brother of our distinguished colleague from New York, the Honorable EUGENE J. KEOGH, has been given a tough assignment. In order to be able to build the $330 million Narrows Bridge from Brooklyn to Staten Island, New York City had to take title to home involving 1,577 families who are to be dislodged.

Under the most favorable circumstances this would not be an easy matter to accomplish satisfactorily for all concerned. With the housing situation such as it is in New York, it means additional dislocations and discomfort for these many hundreds of families, and in numerous instances it may involve economic losses. It is not surprising that many of the homeowners in the area are upset.

Justice J. Vincent Keogh has been appointed as arbiter to handle this situation and make sure that the homeowners receive fair treatment. I can think of no one more able and more fair to handle this kind of a "sticky job" than Justice Keogh, and I am glad this task has fallen to him. There is no doubt in my mind that he will be just and fair in his efforts to satisfy the ousted residents of the area.

Mr. Speaker, it is a privilege for me to tell this body, in which another Keogh serves with great distinction, that I have known Justice Keogh for over 20 years and have followed his career with keen interest. I knew him as Assistant District Attorney for Kings County and later as U.S. Attorney for the Eastern District of New York to which post he was appointed by President Truman in 1946. He held that office for nearly 5 years until he was chosen for the State Supreme Court, where he has been serving with great distinction for almost 9 years.

Justice Keogh is also known for his fine human qualities and his deep interest in the welfare of youth. For a number of years he has served as Commissioner of Boy Scouts for the Borough of Brooklyn and as President of the Brooklyn Council of Boy Scouts. He is never too busy to do a favor for those who need his help or seek his advice. He is always friendly, gracious, pleasant. The ousted residents can be assured that their problem will be in good hands and receive just treatment.

Mr. Speaker, I wish to insert into the RECORD a brief editorial from the New York Journal American of May 1, 1959, dealing with the matter discussed above and Justice Keogh. The editorial is as follows:

A FAIR "SHAKE"

The people of Bay Ridge have had their share of tribulation fighting the planned $330 million Narrows Bridge.

Now that the city officially has taken title to homes along 7th Avenue, from 60th Street and the Fort Hamilton ramp, we hope the 1,577 families involved get a better than fair "shake" in the condemnation awards.

The "sticky" job of satisfying the soon-to-be-ousted residents falls to Brooklyn Supreme Court Justice J. Vincent Keogh. He is in a "spot" we wouldn't wish on anybody.

Based on Judge Keogh's record, Bay Ridge residents should feel assured that a more fair-minded arbiter could not be found to handle their problem.

So, when he notifies homeowners they will receive a "fair market value" for their property, it should provide some balm to the displaced in their hour of anguish.

It has been a bitter battle for the residents. They fought hard and clean in a sincere drive to maintain the dignity and beauty of their community.

We hope they are adequately paid for their efforts by an honorable settlement with the city.

Newsman Backs Snyder Policy

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Illinois State Journal-Register, Springfield, May 17, 1959:

NEWSMAN BACKS SNYDER POLICY

(By Robert W. Richards)

WASHINGTON.—It's simply not true that Assistant Defense Secretary for Public Affairs Murray Snyder gags news out of the Pentagon that American people have a right to know.

Snyder has taken a verbal kicking around from Representative JOHN B. MOSS, Democrat, of California, and J. Russell Wiggins, editor of the Washington Post and Times Herald and the new president of the American Society of Newspaper Editors.

Both have made something of a career out of the freedom of the information refrain, with exaggerated claims that the Government is hiding too many secrets on the grounds they would jeopardize national security if released to press and television-radio reporters.

This correspondent, after observing the Capital scene for 16 years, can't buy the plaint. Washington is a sieve, with the only secrets kept those not worth telling. The whole town, as the late Sir Wilmot Lewis of the London Times used to say, is a whispering gallery.

So long as the political "outs" continue their incessant striving to expose the sins of the "in," secrets in places high and low, like murder, will out.

In no other administration, it should be remarked, has there been such a ready dissemination of information.

President Eisenhower's several illnesses, were quickly announced and handled on a play-by-play basis.

The policy of telling all—save that which would imperil the U.S. military safety in the cold war with communism, was set at the very beginning of the Eisenhower administration by White House Press Secretary James C. Hagerty, former New York Times man.

Snyder, himself a veteran reporter for the New York Herald Tribune, served as Hagerty's first assistant for several years until the President, angered that too often the Pentagon brass rushed out their latest weapons to the press at budget or appropriation time, sent him to the Defense Department to put a stop to this.

Mr. Eisenhower, it can be said, conceded that Russian espionage probably would in due course learn all about the new U.S. hardware, as they did the nuclear bomb, but he didn't want to make it available to Soviet spies for the nickel or dime it cost to buy a daily newspaper.

It is also the policy, though there have been exceptions to it during the past few years when some exclusives have been fed out to favorites, to provide that all media get all the news at the same time.

Snyder, for example, arranged that reporters have a second-by-second countdown on the first Vanguard satellite blastoff which fizzled ignominiously.

The same congressional gentlemen, who and criticized him for suppressing information, then clobbered him for advertising to the world the American failure. They wanted it both ways.

When an attempt was made to tie up the seven Mercury astronauts to prevent their giving out information for free. Synder acted with dispatch to squelch the arrangement.

Though the astronauts, one of whom will ride the first man-made moon into orbit, are not under defense and his jurisdictions. Snyder called on the National Aeronautics and Space Administration to step hard on their agent.

Of course it was ridiculous to think that employes of the U.S. Government could make stick any such arrangement.

But it was Snyder who applied the paddle and quickly. He also promised like sets of rules for defense personnel whose epochal feats in a nuclear-space-jet age might be sold for publication.

Consumers Have the Power To Kill Fair Trade Move

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an editorial appearing in the Nashville (Tenn.) Tennessean on March 26 of this year pointing out that consumers have the power to kill fair trade if they so desire.

Unfortunately, the American consumer is not organized and has no lobby to represent him in the Congress of the United States. Those who seek to destroy the free competitive system and to gouge the consumer are well represented with well-paid and well financed lobbies in Washington.

One of the most effective lobbies has been that behind the so-called fair trade bill, which is really not fair trade at all but which is a virtual repealer of the antitrust laws of the United States in the language of the Federal Trade Commission and the Department of Justice.

The so-called fair trade bill, H.R. 1253, if enacted is going to cost the consumers of this country $1 billion or more, according to the spokesman for the Department of Justice. It is nothing but a consumer gouge bill, and will authorize all sorts of economic coercion, blackmail, and interference of a most ruthless sort in the business of others. It will place a price floor under nationally advertised commodities which will not help the little man but which will actually only benefit the large producer and the large retailer. It will do nothing about the private brands which now cause the gravest of difficulties. H.R. 1253 should be defeated.

[From the Nashville (Tenn.) Tennessean, Mar. 26, 1959]

CONSUMERS HAVE THE POWER TO KILL FAIR-TRADE MOVE

People often write in to complain that, though things are not going to suit them in Washington, they have a feeling of helplessness when it comes to doing something about it.

Well, they are not as weak as they think; and they can do something about it.

They can, for instance, mobilize their strength to fight the lobbies which now are trying to push through Congress a bill to permit manufacturers to fix retail prices. This is the so-called "fair trade" law which has been tried and found wanting. It embodies the principles of the trusts against which sentiment is solidified, and it makes a mockery of free enterprise.

This new price-fixing bill is conceded a fair chance of passage unless the legislators are made aware of consumer opposition. If it should become a law, manufacturers would be able to fix the retail price to suit themselves—and do it by decree. Agreements from the retailer who believes in the old idea of free competition would not be necessary.

Recognizing the evils involved, several big manufacturers have abandoned "fair trade" practices which have already been outlawed as unconstitutional in 17 States. But the practices will be made constitutional if the manufacturers have their way.

Fortunately, the Federal Trade commission and the United States Department of Justice are now solidly lined up with the consumers. Chairman John Gwynne of the FTC has put the issue this way:

"The fixing of retail prices is inconsistent with the American system of free competitive enterprise and is contrary to public policy as expressed in the anti-trust laws since 1890."

But the manufacturers, who would cry "dictatorship" if the Federal Government went into the price-fixing business, refuse to see anything incongruous in their attitude.

If the lobbies are successful, the Nation's consumers will be in for multi-million-dollar losses which they can ill afford on top of higher taxes which threaten.

These consumers, however, have it in their power to stop the thing in its tracks by letting their Representatives in Congress know that they will be accountable for their votes on the issue. It is as simple as that.

There is nothing fair about "fair trade" and the people should insist that their welfare comes before that of the lobbies.

Remarks of Hon. Hugh S. Cumming on May 15, 1959, Armed Forces Day, at Langley Air Force Base, Va.

EXTENSION OF REMARKS
OF
HON. THOMAS N. DOWNING
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. DOWNING. Mr. Speaker, the Honorable Hugh S. Cumming, Jr., former Ambassador to Indonesia and presently the Director of Intelligence and Research of our State Department, delivered an interesting and informative address at the Armed Forces Day banquet held at Langley Air Force Base last week. A careful reading of the remarks gives one a keener insight on the East German problem presently confronting us.

I ask unanimous consent that the address be made a part of these remarks and printed in the appendix of the RECORD:

ADDRESS BY THE HONORABLE HUGH S. CUMMING, JR., THE DIRECTOR, BUREAU OF INTELLIGENCE AND RESEARCH, DEPARTMENT OF STATE, AT THE ARMED FORCES DAY BANQUET, LANGLEY AIR FORCE BASE, VA., AT 8 P.M., EASTERN STANDARD TIME, FRIDAY, MAY 15, 1959

I need not conceal the fact that when I received through Congressman DOWNING the invitation of Mayor Brittingham and Mayor Bentley to address you tonight, I felt both honored and deeply touched; honored at the opportunity to be with such a distinguished and representative gathering of my fellow citizens, touched to be once again, and this time as your guest, in the corner of Virginia that I and my ancestors have called home. It was here that I attended the Symmes-Eaton Academy and Hampton High School; it was in the nearby waters of Hampton Roads and Chesapeake Bay that I learned to swim and sail and fish; and it was at Fort Monroe that I received my commission as a second lieutenant during the First World War.

Forty-one years later, on this eve of Armed Forces Day as we salute our Army, Navy, and Air Force here at home and overseas, I know you share with me, and with free people everywhere, the longing for a durable peace. Unfortunately, the values we cherish—individual dignity, religious and political freedom, economic well-being—do not remain inviolate simply because we wish it so. Inescapably from time to time the ideals of men and their institutions undergo vigorous and critical testing. Certainly no more demanding test has confronted us—as it has for more than a decade—than the hostility of the ambitious, aggressive, and heavily armed Sino-Soviet bloc, dedicated as it is to the premise that the future belongs to communism. With the whole world as its proclaimed goal, international communism stands as the greatest moral and physical peril in our history. Thus, never before has it been more imperative that we achieve a thoroughly united effort by the military and civilian power of our Nation. Only through joint, cooperative action may we meet and overcome this formidable challenge.

Fortunately, action of this sort is characteristic of the United States. Our President is at the same time Commander in Chief of the Armed Forces and Chief Executive in our foreign relations. I am happy to think that our joint action finds concrete expression in my presence here today, bringing a pledge of cooperation by the Secretary of State to our symbolic union of the armed services and the civil authorities in tomorrow's ceremonies.

Let me turn to another important factor in the strength of our country—a factor that it is especially appropriate to emphasize here in the Commonwealth of Virginia. One of the chief bases of our national unity and of the freedom and progress that characterize our society is our representative system of government. It is with no small pride that we in Virginia recall the contribution to American democracy made by our revolutionary forebears and by following generations of our fellow Virginians.

Never has this heritage been more critically important than now. As our environment grows increasingly complex, as the potentialities for political and social control by government become stronger, the problem of creating and maintaining institutions which truly advance individual freedom and dignity becomes more pressing. In our own case, and in the entire western world, individual liberty has been strengthened and individual dignity has been enhanced. No doubt government in the modern world has constantly extended its influence on the individual's well-being; it follows that the measure of a government's legitimacy can only be the degree to which it is responsive to the needs of those it governs. Fortunately for us, the architects and builders of our United States have constructed a system of government clearly dedicated through its representative character to the welfare of the individual.

On the other hand, wherever social and political institutions are shaped solely for the gain of a dictatorship, liberty and dignity are destroyed. At this very time when we are meeting together here, there is a meeting going on in Geneva that sharpens this contrast between nations that share a heritage of freedom and those that are totalitarian dictatorships. I think it might be appropriate this evening for us to con-

sider one of the puppet governments that has been set up by the rulers of the Communist bloc—a government which shows what those rulers are working to foist on free peoples throughout the world. Let us look at the so-called "German Democratic Republic," where a puppet regime seeks to control and dominate all aspects of life, in politics, business, art, and social activity.

At Geneva, our Secretary of State, Mr. Herter, is now meeting with the Foreign Ministers of France, Great Britain, and the Soviet Union on problems that result from the continued artificial division of Germany. The United States has welcomed the opportunity to discuss these issues peacefully and it hopes—as Secretary Herter has said—that the talks "will prove to be business-like negotiations and not a propaganda exercise." Given the long list of broken pledges by the Soviets, the allied West has wisely adopted a firm "I'm from Missouri" position.

German advisers from West and East, from the German Federal Republic and from the so-called German Democratic Republic, are present to assist the four foreign ministers. The Soviet Union claims that both sets of Germans should attend the conference as full-fledged participants, representing what the Russians call the two German states. As a first step in examining the character of the East German regime, let us have a brief look at the backgrounds of the advisers who have alleged that they represent the national interests of the 17 million Germans who live in the Soviet Zone.

Of the four principal advisers two are Soviet citizens; the third was educated in the Soviet Union and is married to a Soviet citizen. Only the fourth has a reasonably German background—but he is manifestly cast in the role of window dressing and very seldom heard from. You may well ask, "How can such men profess to represent the aspirations of a people who want to reunify their country, and exercise national self-determination—to choose their form of government, their own social and economic system?" The obvious answer is that they don't. What they do represent is a credo out of Moscow and allegiance not to the German people but an allegiance to communism and to the Kremlin. What they value is, in their own words: "Unbreakable friendship and deep love of the Socialist Soviet Union, of the Liberation Army (that is, the Red Army), loyalty to the cause of Lenin and Stalin and to the Communist Party of the Soviet Union." This langauge speaks for itself.

The self-styled German Democratic Republic, when established in October 1949, was justified by the Russian and German Communists as a response to the creation of the Federal Republic of West Germany. As a response it was strikingly inadequate. For proclamation of the Federal Republic in September 1949, followed on democratic elections and a democratically adopted constitution. In East Germany neither free elections nor free discussion preceded the formation of the regime. The entire process was manipulated from the Kremlin to orbit another satellite in the Soviet system. I want to emphasize how completely artificial the East German regime is. This mockery of a government was arbitrarily installed and is forcibly maintained. There is no background, either in historical precedent or international agreement, for any separate form of government in East Germany.

Following World War II, the declared purposes of the Allied Powers—Western and Soviet—with regard to Germany were: (1) denazification, (2) prevention of the rebirth of aggressive forces, and (3) assistance to the German people in recovering their national self-respect and standing in the community of free nations. But, long before 1945 and the Potsdam Conference, the Soviet Union had already cynically set to work to make Germany a Russian puppet. It selected, trained, and repatriated persons who are today the political and military leaders in East Germany.

Conspicuous among them and typical of these people, Wilhelm Pieck, President of the East German regime, has been a Communist since his early youth. Walter Ulbricht, First Deputy Prime Minister, is a Communist, was long a colonel in the Red Army, is probably still a Soviet citizen. Ulbricht was the prime mover in engineering the phony National Committee for Free Germany, which later was the instrument for the Communist takeover. Another is Hilda Benjamin. Red Hilda has been a Communist since 1924 and has a son who took his college training in Russia. She is now Minister of Justice, or—as the Germans prefer—"Minister of Injustice."

With the help of puppets like these, the Russians then proceeded to impose the present regime upon the helpless East Germans. As the uprisings of June 1953 demonstrated, the regime could and can be maintained only by force. There are 22 Soviet military divisions still in East Germany. While these divisions play their main role in the larger Soviet strategy towards Europe, they have also been an indispensable mainstay to the regime while it built up its own instruments of forcible repression. Here we see the Soviet contribution toward self-determination, toward letting the German people solve their own problems.

The East Germans do have a constitution. Among its principles are some that have a real democratic ring—until we catch the echo from the pious words of the constitution "granted" the Russian people by Stalin. Article 6, for example, speaks of the "exercise of democratic rights"; article 8 of "personal liberty"; article 9 of "freedom of expression and assembly," and article 14 of the "right of trade unions to strike." But this constitution is no living instrument like our own. Its principles remain a dead letter. Indeed, when the regime, with active aid from Soviet military forces, bloodily suppressed the uprisings of 1953, every one of these provisions were violated. There were no illusions about the value of these hollow promises in the minds of the patriotic heroes at that time who defended themselves with stones against Russian tanks. Who can doubt that the spirit of these heroes is still alive?

The constitution provides also for equal, universal, direct, and secret elections. But who are the people allowed to vote for? Only groups that meet the Communists specifications may nominate candidates, and at each election the voter is offered only a single list of candidates without choice of party. He cannot even vote "no," but to object must publicly refuse to drop his ballot in the box—with obvious consequences. This system has produced 99-percent majorities like those which have so long been a routine in the Soviet Union. It is the inventors of this system, by the way, who so loudly criticize the "mechanical majorities" of the West in the United Nations.

One might wonder why the regime bothers to hold elections at all. They are but a semblance of democratic process, representing no more than a political con game. To the overwhelming majority of the population they are the ultimate in intellectual humiliation. To the regime, however, they add one more means of inflicting discipline.

I have talked at some length about the political complexion of the Soviet Zone of Germany, the unrepresentative character of its regime, and the complete dependence of that regime on the Soviet Union. Despite this record of unresponsiveness to the needs of the people, we in the Department of State are sometimes asked, "Why doesn't the United States recognize East Germany? We recognize West Germany, don't we?"

The fundamental reason for not recognizing the German Democratic Republic is that it simply is not a national entity. It is—to repeat—an artificial regime created by the Soviet Union and imposed in the Soviet zone of military occupation because the Soviet Union has not been able to dominate all of Germany. The Federal Republic of West Germany, on the other hand, does not claim to be a separate German state, but is a temporary and partial federation which will be dissolved when a constitution and democratic government for the whole German people comes into force. The Federal Republic, with a population of 50 million, is accepted as the international spokesman for the entire German population by all the non-Communist countries of the world. Our recognition of the German Democratic Republic would mean our acceptance of the Communist thesis that Germany is not one, but two nations—it would mean, moreover, abandoning the population to communism.

In its unremitting campaign to control the mind and spirit of the East German people, the regime goes to extraordinary lengths. Let me give you an example of its attention to detail. For many years the Duden reference dictionary has traditionally been the one classical authority for Germany on the usage and meaning of words. Today, in the Soviet Zone, a second Duden has appeared. Even this homely device has been used to distort the simple and traditional meanings of Western concepts. Democracy, for example, is defined as "a form of government, the nature of which is determined by whatever class is in power." Individualism is "self-interest without any consideration for society." To enlighten is "to instruct politically." The word "atheism," which was defined originally as simply "denial of the existence of God," is given a new twist as "scientifically founded denial of the existence of God."

On a very different plane, religion is opposed by the regime, as it is, to be sure, by all Communists. The latest attack has taken the form of a ceremony, a confirmation of the young—but confirmation in atheism. Available evidence clearly shows that soon no boy or girl will be able to enter an institution of higher learning until he or she has received this confirmation.

Or take the law. Courts of so-called justice make a mockery in East Germany of due process, rules of evidence, and rights of defense counsel. Their nature was clearly revealed less than a month ago when five Dresden university students—aged 18 to 21—were given prison sentences totaling 37½ years at hard labor for allegedly promoting "anti-state" activities on their campus. Observers reported that the trial judge repeatedly attempted to influence the students in their answers, and that you couldn't tell the defense attorney from the prosecutor.

Such demoralizing and evil practices will in time pave the way for weakening and undermining the regime. As injustice continues—in the churches, the schools, the trade unions, the business community—the regime will be the loser. The freedom to work, to worship, and to study as one chooses is indivisible. History has repeatedly demonstrated the futility of attempts at infringement of these inherent rights.

Indeed, the Soviet Union would do well to pause in pressing its unreasonable and unwarranted demands on Berlin—to hesitate in urging its puppet regime to impose still further burdens on its subjects. The Soviet leaders might well ask themselves what is to prevent the East German people from rising again as they did in 1953, and, with greater force, demanding their rights and freedom.

The most eloquent testimony of a people in despair is told by the refugees who reach the West. These are the people of whom it has been said: "They vote with their feet." In 10 years 3 million Germans—teachers,

physicians, clergymen, engineers, laborers, even state officials—have fled from the Soviet zone. Many of you may recently have seen and heard some of these people tell their stories on television. The refugees are welcomed by the West and each arrival is a loss for the Communists.

These considerations make it all the more urgent to settle the problem of Germany in a way that will insure German reunification in peace and freedom. Secretary Herter and his Western colleagues at Geneva are approaching this problem with a clear determination to advance the cause of peace and freedom, by first standing firmly by the West's obligations in Berlin. Armed Forces Day symbolizes for us the military strength we possess to support this firmness. Provided we all play our part, military and civilian together, our diplomacy can effectively give expression to our determination.

President Eisenhower, as you know, has made clear his willingness, if progress is made by the Foreign Ministers, to participate in a heads-of-government meeting to further the cause of reunification and the overriding problem of European security. A divided Germany is a problem which extends beyond Europe alone; it has vital meaning for the entire world. And, as the President has said:

"We must avoid letting fear or lack of confidence turn us from the course that self respect, decency, and love of liberty point out. To do so would be to dissipate the creative energies of our people upon whom our real security rests. This we will not do."

Thank you.

The Labor-Management Performance Act of 1959, H.R. 7265

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. KEARNS. Mr. Speaker, yesterday, May 20, 1959, I introduced my new labor bill, H.R. 7265. I am submitting herewith an explanation of this bill which I hope each and every Member of the Congress will read.

THE LABOR-MANAGEMENT PERFORMANCE ACT OF 1959—H.R. 7265

Weeks of hearings in the House, together with the public reaction against the Kennedy bill as passed by the Senate, demonstrate the need for a new approach to labor reform.

The heart of the problem is the breakdown in performance under existing laws. Whether the failure is in the law or its enforcement is an open question. The result is that the fundamental rights of the working men and women of this country definitely are not being protected.

The breakdown is most serious when it fails to provide protection against internal union abuses and to oust the criminal elements from the union movement. Union members can sometimes obtain relief from internal union problems through use of the courts, but it is a long and expensive process. Few rank and file union members can afford the time or the money. In the criminal area congressional hearings have clearly exposed an appalling failure of enforcement.

Nevertheless, the Senate act relies on court enforcement of its watered-down bill of rights and on criminal penalties for most of the rest of its provisions. Such legislation is no more than a repetition of the same old theme song, "Let the House of Labor take care of itself."

H.R. 7265 offers a fresh approach. It is based on the recognition that, if the corrupt element is to be eliminated from the labor movement, the major part of the responsibility rests on the membership of any union to do its own house cleaning. They will do it if they are given the necessary tools and real protection while the job is being done. H.R. 7265 does exactly that.

The bill contains a simple but comprehensive bill of rights which will go a long way toward insuring that control of the union will be in the hands of the members rather than the officials. Independently audited financial reports are required, but the bill recognizes that regardless of where the reports are filed, only union members will be sufficiently well informed to question them. Thus it provides that the reports must be given to union members only. By far the great majority of union leaders and employers are honest Americans; therefore, no reports are required of labor officials or employers. Such reports are aimed only at wrongdoers, and it is ridiculous to think a criminal is going to write us a report of his crime.

Enforcement procedure is of paramount importance. H.R. 7265 contains a simple, well-tested method—the unfair labor practice procedure of the National Labor Relations Board. All the member need do is file a charge of a violation of the bill of rights or the reporting provisions, and the NLRB takes over the investigation and prosecution of his case. He is protected from retaliation while the case is processed. The confidence which rank-and-file workmen have in the Board is amply demonstrated by the fact that last quarter they filed 62 percent of the Board's unfair-labor practice cases. The bill also includes important changes in Board structure to speed up its case handling.

Any labor reform measure must include restrictions on organizational picketing and secondary boycotts. Emotions run high on these issues, but both unions and employers are inclined to forget the impact of such activities on the working men and women who suffer as a result. Their right to be free of such coercion must be preserved if the freedom of association guaranteed by the Wagner Act is to mean anything.

H.R. 7265 prevents picketing after a union loses an NLRB election and, at the same time, markedly speeds up NLRB procedure for holding such elections. It also stops picketing where the labor organization involved cannot establish that 30 percent of the employees want the union to represent them.

In the secondary boycott area, there are presently restrictions on inducement of secondary employees. They are retained, and a ban on threats, restraint, and coercion of any person added. "Hot cargo" contracts are also outlawed.

The time has come to assure a greater voice to the union member in calling strikes. It is obvious that union officials must compete with each other to get the maximum wage increase for their members. Too often the members lose money as a result, either from lost wages or inflation caused by the increase. Consequently, the bill provides for a secret ballot strike vote to be taken within 7 days prior to commencement of any strike.

There are many other provisions in the bill, which are explained in the following summary and explanation. They likewise provide practical methods of protecting the rights of individual workmen.

The Performance Act of 1959 is the least restrictive on the activities of legitimate unions of any bill presently before the House. It provides far fewer opportunities for harassment of honest unions. At the same time it provides the union member with the only practical, realistic method of enforcing his rights that can be found in any of the bills introduced.

SUMMARY AND EXPLANATION OF H.R. 7265—POLICY

Section 2. (a) The policy of Congress originally stated in the Wagner Act and in the Taft Hartley Act, is repeated. Briefly, it is to encourage the practice and procedure of collective bargaining and to protect the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection.

PERSONS SUBJECT TO RAILWAY LABOR ACT

Section 102. To assure uniform treatment of all union members, with a minimum of interference with existing law, persons subject to the Railway Labor Act are made subject to the bill of rights and reporting provisions only.

DEFINITION OF "LABOR ORGANIZATION"

Section 103(c). The definition of "labor organization" is amended to include intermediate labor bodies.

REVISION IN THE STRUCTURE OF THE NATIONAL LABOR RELATIONS BOARD

Section 104. The addition of new unfair labor practices will increase the caseload of the NLRB. To increase the Board's capacity and to provide faster processing of NLRB cases, three changes the NLRB structure are made:

First. Section 104(a): The Board is increased from five to seven members with terms of office increased to 7 years. The additional members will increase the capacity of the Board substantially by permitting use of more three-man panels.

Second. Section 104(b)(1): The Board is authorized to delegate to its regional directors the processing of representation cases. Such cases account for more than 50 percent of the Board's workload. During the early years of the NLRA, the Board undoubtedly needed to handle these cases itself. More than 20 years later the rules of decision are well established and nearly all of the cases are decided on established precedent. To make certain Board policy is followed by

regional directors, provision is made for appeal to the Board. Action of the Director is not stayed pending the appeal, however, to avoid the taking of an appeal as a delaying technique. This change of procedure will materially decrease the time spent in processing representation cases and eliminate advantages which parties have long sought to obtain by delays. It should therefore encourage consent elections and reduce the number of formal proceedings.

Third. Section 104(b)(2): The Board is made a truly quasi-judicial body and the General Counsel is made responsible for the administration of the agency. The estimated saving in Board workload is 15 percent. Historically, there has been serious conflict between the Board and the General Counsel sufficient to impair the efficiency of the agency. Most of the conflict has arisen over administrative matters. The proposed change will eliminate the major reason for disagreement and, with administrative responsibility centered in a single individual rather than in a group, a more efficient operation will result. Full control of all judicial functions of the Board, including its rulemaking power, remain with the Board.

Section 104(c): Provision is made for an Acting General Counsel. At present, certain functions of the General Counsel, including the issuing of complaints in unfair labor practice cases, cease when there is a vacancy in the office. The bill will permit appointment of an Acting General Counsel in order that the business of the agency may be carried on.

"HOT CARGO" CONTRACTS

Section 105(b). It is made an unfair labor practice for an employer to enter into any agreement, including a "hot cargo" contract, to engage in a secondary boycott.

UNION DISCRIMINATION AGAINST NONMEMBERS

Section 106(a): Although a strong bill of rights is included, the right of a union to refuse membership to persons it believes undesirable is recognized. An amendment to section 8(b)(2) of the LMRA precludes the union from causing an employer to discriminate against such persons.

SECONDARY BOYCOTT AMENDMENT

Section 106(b): The present language of section 8(b)(4) of the LMRA is left in effect and inducement of secondary employees continues to be an unfair labor practice. In addition, a ban is placed on "threats, coercion, or restraint" of any person where the object is one of those proscribed by section 8(b)(4) and contracts which cause an employer to engage in a secondary boycott are outlawed. Thus peaceful persuasion of secondary employers would be permitted but could not be carried to the point of threat or made part of a contract. The line drawn is the one between peaceful persuasion by the union and "strong arm" tactics.

ORGANIZATIONAL PICKETING

Section 107(b): Picketing to force an employer to recognize or bargain with a union after the union has lost an NLRB election is banned by amending section 8(b)(4)(C) of the LMRA. The amendment would permit picketing prior to the election except where the union is unable to establish that 30 percent of the employees affected want the union to represent them. As in the case of the secondary boycott amendment, the line drawn is that between peaceful persuasion and force. Picketing prevented by the amendment has but one effect. That is to force employees to accept as their bargaining agent a union which they have shown they do not want. Whatever educational value the picket line has is, at that point, far outweighed by its coercive effect on the employees and its interference with their freedom not to associate for collective-bargaining purposes, a freedom which Congress has specifically guaranteed in section 7 of the LMRA.

ENFORCEMENT OF BILL OF RIGHTS AND REPORTING PROVISIONS

Section 104(c): Violations of the bill of rights and the reporting provisions of the Performance Act are enforced through the unfair labor practice procedure of the National Labor Relations Board. As stated previously, inadequate performance under existing law is a large part of today's labor reform problem. Many, if not most, of the evils sought to be corrected can be reached through criminal laws or by private civil suits. Neither remedy is of real practical value to the rank-and-file union member. For conviction, a crime must be proved "beyond a reasonable doubt." Because of this burden, enforcement officials will try only clear-cut cases. Few cases are clear where, as here, so many witnesses are afraid to testify.

In the past the right to civil remedies, while helpful in some instances, has been beyond the reach of the average workman because of the cost. He cannot afford to hire a lawyer and go through the long procedures necessary, particularly when he must first exhaust his internal remedies within the union which may take years in itself.

The unfair labor practice procedure is a much more practical method of enforcement. It is thoroughly tested in the courts, eliminating procedural uncertainly. It can be uniformly applied because, even while the substance of the new unfair practices is being tested, a uniform policy will be followed. The injunctive remedy is available but, based on past experience, the Board can be expected to use it very sparingly. Also, if used, a uniform policy may be expected. While the Board has very broad powers to tailor remedies to correct unfair labor practices, it does not award damages. Cases instituted for harassment purposes will be inexpensively disposed of through the power of the general counsel to refuse issuance of a complaint.

The individual workman will clearly benefit by use of the unfair labor practice procedure. Where he believes he has been wronged, he need only file a charge with NLRB and the expense of investigating and processing will be borne by the Government. He will also have the power of the Government to protect him and any witnesses who testify for him from retaliation. NLRB's interest will be in securing relief as quickly and effectively as possible, preferably by settlement.

Enforcement by the Secretary of Labor was considered unwise for two major reasons. First, an entirely new enforcement agency within the Department would have to be established and its procedures tested in the courts—an expensive, time-consuming process. Second, it is unsound to ask the Cabinet Member whose real function it is to cooperate and work with labor to be a policemen over labor. If factionalism in the labor movement were to increase, a Secretary sympathetic to one faction could seriously harass the other.

BUILDING AND CONSTRUCTION INDUSTRY PROVISIONS

Section 107(a), (b) amends section 9(c)(1) of the NLRA to permit prehire contracts in the building and construction industry. Two safeguards are included: (1) There must have been a history of collective bargaining, and (2) if more than 30 percent of the employees in the bargaining unit object, an election will be held.

Because of the temporary nature of employment in this industry, the election provisions of the NLRA have not been practical. Employers and unions have been forced into technical violations of present unfair labor practice law, but no general counsel of NLRB has issued complaints in such cases, recognizing the equities involved. For the protection of all concerned, however, the law should be changed.

Permitting such prehire agreements handles the problem but, if employees are to be protected in the freedom guaranteed by the act, the two safeguards are essential. With no history of bargaining required and no chance for the employees to object, the "sweetheart" contract could effectively be used in many areas where there are substantial numbers of nonunion workmen. It will not interfere with established building trades unions because they have acquired the necessary history and an overwhelming number of members of the bargaining units are loyal union members.

ECONOMIC STRIKERS

Section 107(c). Economic strikers not entitled to reinstatement are permitted to vote in NLRB elections for a period of 6 months. A cutoff date has been used to avoid problems of former employees continuing to return indefinitely to influence the results of elections. The 6-month limit is believed to be adequate to cover any but most unusual situations.

REPORTING REQUIREMENTS OF SECTION 9(F) AND (G) OF LMRA

Section 107(d) repeals the reporting requirements of section 9(f) and (g) of the LMRA. This section required reports of union constitutions, bylaws, etc., and of financial transactions. No reports to the Secretary of Labor are required by the Performance Act and there are no prerequisites to use of NLRB. In the past, these reports have been of little, if any, value and provide

many possibilities for raising procedural technicalities in NLRB cases.

NON-COMMUNIST AFFIDAVITS

Section 107(d) repeals the requirement of filing non-Communist affidavits as a prerequisite to use of NLRB. While this section may have served a useful function at one time, its advantages at present are far outweighed by its disadvantages. The present requirement can be used as a procedural device to interfere with NLRB processes. The clerical problems in handling the paperwork are many and expensive. To add an employer requirement of such affidavits would be of no practical value and would merely increase the waste of money and effort. The problem of ousting Communists from the union movement is handled by a criminal provision in section 308.

UNFAIR LABOR PRACTICE CHARGES

Section 108 contains necessary amendments to section 10 of the NLRA. Present law permits any person to file an unfair labor practice charge. To avoid possible use for harassment, the amendment limits to the members of the particular labor organization charged the right to file a charge of violation of the reporting provisions. The amendment further requires that, upon notification of filing of the charge, reports which were furnished to members under the reporting provisions must be furnished to the general counsel with an affidavit certifying their accuracy. To protect rank-and-file members, the identity of the charging party in such cases will not be disclosed without his permission.

BILL OF RIGHTS

Testimony of rank-and-file union members before both the McClellan Committee and the House Education and Labor Committee clearly demonstrates the need for clarify the rights of union members within their own labor organizations. While the great majority of unions and union officials are a credit to the labor movement, a small fringe of dishonest and corrupt officials have seriously interfered with the rights of individual workmen.

Section 109 provides a simple, yet effective, statement of the basic rights which union members should have. It preserves to the union, however, an unlimited right to deny membership regardless of reason. The rights listed will not interfere with the operation of legitimate unions but will provide members with the means to rid themselves of dishonest officials. It should be borne in mind that this section will be enforced through the NLRB unfair labor practice procedure. Therefore, some of the requirements are not set forth as precisely as in other bills introduced. NLRB, as an administrative agency, can take into consideration all of the facts and circumstances in a particular case and determine whether the rights of the individuals have been impaired. In other words, the agency can assess the conduct in the light of the surrounding circumstances and within the guidelines laid down in the section.

Section 20(1) requires each labor organization to have a constitution and bylaws.

Section 20(2) guarantees the right of free speech and assembly within the union subject to reasonable restrictions.

Section 20(3) guarantees every member equal rights within his union.

Section 20(4) guarantees the members adequate notice and a chance to vote on all matters pertaining to dues and initiation fees.

Section 20(5) protects the members in the right to use the courts and administrative agencies without retaliation.

Section 20(6) guarantees due process to members charged with violations of union rules.

Section 20(7) requires that each member of a bargaining unit be furnished a copy of the collective bargaining agreement.

Section 20(8) bans the use of union dues for political purposes within the union or in the election of public officials.

Section 20(9) guarantees members against threats or acts of violence by any other member.

Section 20(10) prevents employer delay in forwarding checked-off dues from being used to discriminate against members.

Section 20(11) guarantees free and uncoerced election of union officers while still providing labor organizations with flexibility in establishing their own election procedures to meet their individual requirements.

Section 20(12) assures members of a bargaining unit of a secret ballot strike vote within 7 days prior to the commencement of the strike.

Section 20(13) guarantees fair and just administration of trusteeships while permitting flexibility in their operation and length of existence.

Section 20(14) establishes the fiduciary character of union officers with regard to union funds.

Section 20(15) safeguards union funds by requiring bonds of those handling union moneys.

REPORTS BY LABOR ORGANIZATIONS

Section 109, section 21 sets forth the reporting requirements of the bill. These are that labor organizations report only to their members, not to the public or any agency.

The Senate bill and all bills previously introduced in the House have required labor organizations to submit detailed reports to the Secretary of Labor and for him to make public disclosure of the reports. Such requirements will be of limited value in labor reform and will provide a prolific source of harassment of unions in their legitimate activities. A union's primary responsibility is to its members and they in turn should have primary responsibility for seeing that it operates in accordance with their desires and within the framework of law. While unions also have a duty to the public because of their broad impact on the activities of every individual, this duty does not require that every act must be disclosed or explained to the public. Only the members are entitled to such information.

The reports in other bills are comprehensive and will probably number in the hundreds of thousands. It would be most unrealistic to think that any Federal agency or department would be able adequately to analyze the reports and determine which are questionable. From a practical standpoint, the enforcement agency will have to be altered to investigate particular reports, and it is only reasonable to expect that the impetus in such cases will uniformly be from interested members of the organization. Even public disclosure will be of little value to other than the members. Only they are likely to have sufficient knowledge of the true facts to raise questions concerning the reports.

Therefore, reports to the members will provide those who must raise questions of impropriety with necessary information. And the unfair labor practice machinery will provide a simple, inexpensive method by which an investigation may be set in motion. At the same time, reports to members only will require the great majority of unions to do nothing more than they do at present. These are the honest, properly conducted unions. There is no reason for the public or a Federal agency to become involved with their internal affairs.

Section 21(a) sets forth general information which the union must provide to its members, including lists of officers, amount of fees, and complete information on internal union procedures and rights of members.

Section 21(b) requires that the information be kept current.

Section 21(c) lists the financial information which the union must supply to the members.

Section 21(d) requires that copies of the foregoing reports, together with the union constitution and bylaws, must be furnished to the members.

Section 21(e) provides that the labor organization must keep for 5 years records on which the reports are based and must make them reasonably available to members.

VIOLATIONS OF REPORTING REQUIREMENTS

Section 109, section 22. While the principal method of enforcing the reporting requirements is through the NLRB, criminal provisions are also included in the case of knowing and willful violations. This section, a counterpart of which can be found in all of the bills introduced, is designed to be used in those few cases where the violations are so flagrant as to make a criminal remedy the only practical method of terminating the conduct permanently.

NONEXCLUSIVENESS OF REMEDIES

Section 109 includes an amendment to the LMRA (sec. 23) which provides that the rights and remedies included in the bill of rights and reporting provisions are in addition to any existing rights and remedies. If present remedies were adequate this bill would, of course, be unnecessary. The purpose of the bill is to add, rather than take away, protection for the individual worker. Therefore, Congress should not, as a part of the bill, impair present remedies.

PAYMENTS TO EMPLOYEE REPRESENTATIVES

Section 110, amends the LMRA to make it unlawful for an employer, directly or indirectly, to pay off (1) any representative of his employees, (2) any person or organization seeking to represent his employees, (3) any employee to influence other employees in the exercise of their rights to deal collective, and (4) any union official with the intent to influence him in his capacity as a representative of the union. It is also made unlawful for any person to seek such a pay off.

This provision is intended to prevent sweetheart agreements and other types of payments which interfere with employee rights. It goes to one of the serious evils disclosed by the McClellan committee.

EXTORTION PICKETING

Section 110 also makes extortion picketing a crime. Such conduct is already an unfair labor practice but, because of the criminal nature of the conduct, the provision is added.

EMBEZZLEMENT

Section 110 (sec. 306) makes embezzlement of union funds a Federal crime.

LOANS TO OFFICERS AND EMPLOYEES OF LABOR ORGANIZATIONS

Section 110 (sec. 307) also forbids loans in excess of $5,000 by a union to its officers or employees, and by an employer to a representative of his employees in any amount. Such loans have been demonstrated to be one of the most common devices for abuse by criminal elements in unions and in union-employer relations.

EX-CONVICTS AND COMMUNISTS BARRED FROM UNION OFFICE

Section 110 (sec. 308) prohibits any person convicted of a felony at any time within the previous 5 years from serving as a union official. The section is intended as a further step in ridding the union movement of the criminal element which has crept into a few unions. It also bars Communists from holding union office.

NO MAN'S LAND

Section 112 permits State or Territorial courts or agencies to exercise jurisdiction over labor disputes regardless of the jurisdiction of NLRB unless there is a direct and positive conflict between the Federal and State or Territorial law. Where the Board declines to assert jurisdiction, a State or Territorial court or agency has jurisdiction irrespective of such conflict.

Proposed Wheat Legislation

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. BREEDING. Mr. Speaker, at a meeting of wheat people in Sublette, Kans., on Saturday, May 16, 1959, in my discussion of the proposed wheat legislation with many wheat farmers in attendance this resolution was drafted and given to me to bring before the Congress of the United States:

As wheat producers we seek not favoritism but justice. We are convinced there is a mighty arm for national defense in our present surplus of foods. Also, adequate food reserves contribute to nation-wide economic stability. These advantages seem to be overlooked in much of the discussion about curtailed production.

We all need to remember that without adequate food, even in reserve, we will be weak, both economically as well as defensively. As farmers and businessmen we are seeking to avert economic disaster.

There is danger of collapse of our present high standard of living and national income in a severe downward revision of the wheat program. We believe this danger is invited by a reduction in parity of from 75 to 65 percent if the present acreage limits are maintained. We believe if farmers voluntarily reduce plantings 30 percent, or even 20 percent below present levels they should receive 100 percent of parity. Otherwise we will be singled out to operate at a loss which we cannot long absorb.

This resolution is entrusted to Congressman J. FLOYD BREEDING for presentation to Congress.

ROLLAND JACQUART, *Chairman.*

This resolution was adopted by the following gentlemen who were in attendance at the meeting:

Sublette, Kans.: L. W. (Pat) Murphy, G. E. Cox, Rolland Jacquart, C. G. Dennis, W. O. Kelvan, Percy J. Gheen, W. F. Lindeman, Ed. M. Watkins, Kenneth Cox, Forrest Cox, Roy N. Love, James Kelman, Chester E. Ellsaesser, H. H. Garrett, Floyd Burgess, Laurence Meairs, W. O. Hainline, G. G. Sibley.

Syracuse, Kans.: Murlin Carter.

Meade, Kans.: A. W. Batman.

Garden City, Kans.: Clyde Mercer, E. W. Henkle.

Dodge City, Kans.: Wallace M. White.

Larned, Kans.: Anson Horning.

Sylvan Grove, Kans.: John H. Becker.

Kinsley, Kans.: Art Stiebe.

Scott City, Kans.: C. D. Luke, Mrs. C. D. Luke.

Ulysses, Kans.: Walter Ford, K. Fred Maxwell.

Satanta, Kans.: Orville Tunis, Herbert Foster, Lester N. Alexander, J. J. Moody.

Copeland, Kans.: Ray Ellsaesser.

The Land Grant Centennial

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, with your kind permission I should like to insert in the RECORD an article in the Denver Post of May 13, written by its able columnist Roscoe Fleming, concerning Senate Joint Resolution 66. This resolution provides for the centennial celebration in 1962 of the establishment of the land grant colleges and State universities, and the establishment of the Department of Agriculture. Mr. Fleming feels, and I agree, that inclusion of the Homestead Act should have a major part in any 1962 celebration. But I will let Mr. Fleming take it from here:

It may be news to you that we have actually had massive Federal aid to education for nigh on to 100 years now, with no disaster yet to the Republic, but only great and enduring good.

This is the real meaning of the resolution now pending in Congress to create a commission to plan the centennial celebration, in 1962, of two great congressional acts of 1862.

Abraham Lincoln signed one act as of May 15, 1862. It established a National Department of Agriculture, dedicated to forwarding the science and prosperity of American agriculture.

Lincoln signed the next act on July 2, 1862; it provided for Federal contributions of land to establish in each State at least one land-grant college of mechanics, science, and agriculture.

This was the Morrill Act, named after its sponsor, Justin Smith Morrill, of Vermont, who spent 43 years in House and Senate.

In 1890, by the way, the same man followed up with a second Morrill Act, providing for Federal cash contributions to the land-grant colleges as well as of land.

Each State now has a land-grant institution, comprising in all an educational network unique and unrivaled in all the world. The centennial resolution says these now enroll one-fifth of all the Nation's college students; they graduate more than one-half of all its scientists, and nearly one-half its Reserve officers.

They have become so accepted and so proud a part of American life that it is hard to see how the Nation could have achieved its present leadership without them. The millions of country kids who might never have otherwise had a chance at higher education, have repaid the expense many times over.

There is another 1862 act which no one mentions so far in connection with this centennial, but which deserves a centennial all its own as a massive third pillar of national policy, with tremendous consequences for good.

This was the Homestead Act, by which the Government granted 160 acres to any man who had the courage to try to establish a family farmstead on it.

Sometimes it worked badly, or was applied to situations in which it wouldn't work at all, or was abused.

But all in all, it played a tremendous part in itself in the rapid settlement of the West and of the Nation; its offspring the Reclamation Act was all-important in settling the West, again despite abuses which still prevail, and despite would-be abusers who are still trying to tear down its principles, to their own profit and to the public loss.

There should be a Homestead Act centennial during 1962, or the Homestead Act should be included in the resolution providing for the other two.

In the Nick of Time

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. WALLHAUSER. Mr. Speaker, I hope that all of my colleagues will take the required 30 seconds to read the edi-

torial that appeared in the Newark New Jersey Evening News of May 19, 1959, included herewith, which is so well written that any comment from me would be superfluous:

[From the Newark (N.J.) Evening News, May 19, 1959]

IN THE NICK OF TIME

The House Ways and Means Committee, with zeal commendable and timing obvious, is going to take another look at our income tax structure. If the tax structure has eyes it will recognize the committee, for no band of legislators has looked it over more frequently, or for more reasons.

The lofty aim this time, we are told, will be to effect "* * * significant reductions in individual and corporation income tax rates without sacrificing the revenues needed by the Government."

And when may this courageous undertaking the commonweal be translated into tax relief for the suffering populace? Why 1960, of course, the very year we go to the polls to elect a president and a new Congress.

It couldn't come at a better time, certainly not for the Democratic chairman of a Democratic committee in a Democratic Congress that would like to extend its control all the way down Pennsylvania Avenue, to the White House.

An Editor Views Federal School Aid

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. CEDERBERG. Mr. Speaker, there is an increasing flow of mail and personal visits from educators—not parents—in behalf of Federal aid for education. The editor of the Bay City (Mich.) Times points out that only one State in the Union has more to lose under such a program than does Michigan.

The editor describes the situation by saying:

There is no reason to believe that increasing Federal grants for elementary and secondary schools would do anything more than further penalize Michigan and other States in its class, while relieving the "gimmie" States of a still greater share of their re-responsibility for education.

The editorial is very much to the point and I submit it for consideration of my colleagues.

It follows:

FEDERAL AID FOR OUR SCHOOLS

Michigan persons who continue to advocate an expanded program of Federal aid for schools should spend a few hours with a new report titled "Rankings of the States" published by the National Education Association. The statistics included in this document prove beyond question that only one State in the Union has more to lose than does Michigan from any such program.

In a listing of the States showing what proportion of the money spent on their public elementary and secondary schools now comes from the Federal Government, Michigan is tied for next to last place with New York and North Dakota at 1.4 percent. Only New Jersey, with 0.5 percent, gets a smaller share.

Heading the list is Alaska, which receives 14.7 percent of its school money from the Federal Government. New Mexico is next with 10.1 percent. Nevada, the country's gambling refuge, is third with 9.8 percent. Six of the next nine States are in the South. The seventh on the list is Virginia, which has been putting up one of the bitterest fights against desegregation. Of its total school funds, 6.8 percent comes from the Federal Government.

It is worth noting also that Arizona, which has been offering all sorts of wonderful inducements to industry to locate within its boundaries—including promises of no taxes for 10 years—is 15th on the list. It gets 5.2 percent of its school money from Uncle Sam.

Of all the Midwestern States, Indiana, which habitually boasts of its low State taxes, is the only one to rank higher than 39th. It is No. 27, with 3.3 percent of its school funds coming from Washington. Iowa gets 2 percent and all the other Midwest States get 1.9 percent or less.

Of course the amounts spent per pupil vary greatly among the States, from $164 in Alabama to $535 in New York. Michigan's per pupil expenditure is $375.99, of which only $5.26 comes from the Federal Government. By way of comparison, $17.245 of the $331.65 Arizona spends per pupil comes from Washington, and $10.725 of the $325 Indiana spends comes from this source.

There is no reason to believe that increasing Federal grants for elementary and secondary schools would do anything more than further penalize Michigan and other States in its class, while relieving the "gimmie" States of a still greater share of their responsibility for education.

Lincoln in Africa

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. SCHWENGEL. Mr. Speaker, as further evidence that Abraham Lincoln is the best known American amongst the peoples of the world, I present this brief report by Mr. Lloyd Dunlap, consultant in Lincoln Studies, Reference Department, Library of Congress.

Mr. Dunlap presented the report at a meeting of the Lincoln Group of the District of Columbia on Wednesday, May 20, following an address by David Mearns who spoke so eloquently on "Lincoln as a World Figure."

Here is further proof that the image of Lincoln speaks volumes in every tongue and for that reason he continues to be an important factor in our acceptance in the world community:

On February 13 past I began a speaking tour under the auspices of the Department of State. The area to which I was sent was Africa; my subject was Abraham Lincoln.

It is perhaps appropriate, following Mr. Mearns' eloquent statement concerning the impact of Lincoln upon other nations of the world, to speak briefly of reactions and attitudes I found on my tour. It is indeed gratifying to report to all friends and admirers of our 16th President that the name of Abraham Lincoln was regarded with something close to reverence in the countries I visited—The Sudan, Ethiopia, and the troubled Rhodesias. Everywhere I found an amazing interest in Lincoln. In places which can best be described as unlikely I found persons with not only a deep respect for the man, but a considerable knowledge about Lincoln. Some examples may help.

In Khartoum each of my lectures was attended by an elderly Sudanese, dressed in native costume. He spoke no English and brought his own translator, but I was told that he was a life long admirer of Lincoln who had read with enthusiasm anything about him printed in Arabic. In Addis Ababa a schoolboy touched upon a controversial point in the Lincoln field when he asked me: "I have read that Mr. Lincoln's wife was a bit of a nuisance to him. Is that true?" In Salisbury, Southern Rhodesia, the great privilege of lunch with Chief Justice Sir Robert Tredgold, revealed a man with a deep understanding and appreciation of Abraham Lincoln. Americans can read with great national pride the remarks he delivered to his countrymen on Lincoln's birthday.

Audiences—in schools, libraries, service clubs, and cultural centers—held the memory of this great man in deep and sincere respect. It was humbling to have 500 African schoolboys break into applause after hearing the Gettysburg Address. Not, I'm sure, from its delivery, but because of the unparalleled beauty and promise of the words.

Newspapers carried editorials praising Lincoln as one of the world's truly great men. Radio broadcasts reached thousands more with the story of Lincoln.

Abraham Lincoln seemed to me the best known and most loved American in the hearts and minds of these people. Why this should be can be explained, I think, only in terms of Lincoln's life and career. His rise from obscurity to unmatched greatness is an example universal in its appeal. His words are cherished wherever there are men who cherish freedom. There is something in him with which all can identify. In Africa, at least, and I'm sure, throughout the free world, Abraham Lincoln is both the symbol and the spokesman for American democracy.

America's Moral Obligation To Unite Emigrant Families

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. BARRY. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD a submission of the American Committee on Italian Migration, in behalf of emigrant families who are, under our present immigration law, likely to be forever separated from their families in Italy. In my belief this is an appeal which should be brought to the attention of this legislative body.

PROPOSAL TO RESOLVE A PROBLEM OF GOOD WILL IN THE AMERICAN NATIONAL INTEREST

(Submitted by American Committee on Italian Migration, National Catholic Resettlement Council)

The American Committee on Italian Migration (ACIM), a nationwide organization of 127 chapters, wishes to call attention to a situation which has grown into a serious and tragic problem—an accumulative result of many years—for many thousands of Americans separated from their close kin abroad.

ACIM refers to those Americans who have filed petitions for the entry of their sons and daughters, brothers, and sisters—classi-

fied in the fourth preference quota of the Immigration and Nationality Act.

Since the first, second, and third preference quotas of the act are allotted 100 percent of the annual entry quota, those who fall under the fourth preference section must depend on deficiencies in the first three to be fortunate enough to obtain visas—a rare and unlikely occurrence. Thus, there is frustration and despair resulting from the law that gives hope to Americans by permitting them to file petitions, getting them approved, and then compelling them to wait for their kin who may never come.

Of course, the heartbreak is not only felt by Americans—the petitioners—but is also shared by their loved ones abroad whose hopes for reunion are also dim. Consequently, thousands upon thousands of disconted people whose hopes are first raised and then dashed certainly cannot believe in the good will we try to engender through our foreign policy. They can become easy prey to the propaganda of our enemies.

ACIM states categorically that this is an ethical problem which—as far as the sons and daughters of Americans are concerned—is also moral and can be resolved by Congress both simply and speedily.

In September 1957, legislation, now known as Public Law 85-316, was passed, which includes a provision (sec. 12) to reunite spouses and minor children of aliens legally residing here (third preference cases) whose petitions had been approved prior to July 1, 1957.

Congress is urged to simply amend this provision to include fourth preference cases and thus provide for the immediate entry of the many thousands, the petitions for whom have piled up in a backlog at the American consulates through the years. Further, it is urged that in order not to create another problem of separated families, those applicants who are married and have families may be permitted to bring them.

For those who fear that this proposal may possibly affect our unemployment situation, we point out that it is never untimely to ask changes in our immigration laws when they work great hardships on American citizens who are close relatives of the aliens. In addition, economists prove that the entry of 80,000 or 100,000 immigrants would have negligible, if any, effect upon employment.

There was little or practically no opposition to "reunion," in 1957, by Congress which, in its wisdom, acknowledged the moral question inherent in the plight of separated families.

ACIM is confident that these same legislators will be motivated by the same concern to act favorably on this proposal which, incidentally, is in keeping also with the resolutons on immigration adopted by the AFL-CIO late last year and by which it still stands.

Michigan Industry

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I should like to call my colleagues' attention to the following excellent articles on Michigan industry written by Culver Bailey, staff writer of the Michigan Educational Journal:

AUTOMOBILES: A FABULOUS INDUSTRY

(By Culver Bailey)

Michigan is the seat of a fabulous industry—the automobile industry.

Once an unknown infant it lay cradled in Michigan's small, local machine shops. Today it is maintaining a progressive march that for half a century has been creating a social and economic revolution in all of America. Now one person out of every seven in the United States earns his living from the manufacture, sale, service, and use of motor vehicles, and one of every sixth business in America is automotive.

The automobile industry is Michigan's No. 1 business, and this is exemplified in the hundreds of acres of spacious manufacturing plants belonging to its three giant corporations—Chrysler, General Motors, and Ford—all located in and around its geographically oriented hub—Detroit. At the perimeter of this hub lies the cities of Flint, Pontiac, Dearborn, and Lansing. Likewise all staunch foundations of this fabled industry.

Firty years of progress on the automobile has been rapid, for today you lightly touch the starter, then go somewhere—anywhere. You can do this anytime you want and your car glides along, eating up distance, getting you to the next town before you know it. The more you thing about this little fact, the more impresisve it will become, for it has not always been this way. Children have not always had the easy access to schools they now enjoy; loved ones during the turn of the century living 40 or 50 miles away were rarely visited. A rarity, too, was adequate contact with medical doctors. Many advantages and comforts have come to us through the efforts of the great men of Michigan's automobile industry.

These were courageous men, and they gave romance to the sweat, dirt, and grime from which they brought forth a vehicle that has given vitality and progress to America. These automobile pioneers came up from the work benches, and they became the founders of Michigan's automobile companies—David D. Buick, the founder of the Buick car; Ransom E. Olds, pioneer of the Oldsmobile car; Henry Ford, who originated the Ford cars; Walter Chrysler, headman in the rapid rise of the Chrysler, De Soto, and Plymouth cars, and who later bought the Dodge car from John and Horace Dodge, two brothers who formerly had developed and manufactured that car. Henry M. Leland, engine precisionist who brought forth the Cadillac car; Edward M. Murphy, pioneer of the Pontiac car; and Louis Chevrolet, who developed the Chevrolet car.

The labors of these men bore fruit, as we see today. Back in the decade of the nineties, these men had something within their hands besides calluses, and they scented something in their nostrils besides greasy smells and pungent gasoline odors—their dreams have now been multiplied thousands of times, for presently there are enough cars in our United States to carry everyone with 3.3 persons riding in each car. They broke the long spells of lineliness for the farmer by giving him the automobile. Their product broke cultural barriers, and it has caused 3,418,000 miles of roads and streets to be built that have laced our Nation into a proud land.

R. E. Olds of Lansing headed the parade. He was the first to establish the production methods as we know them used today to manufacture automobiles. In 1899 he erected the first factory for manufacturing automobiles on Jefferson Avenue near the Belle Isle Bridge in Detroit. Olds had demonstrated before any other American car, that automobiles could be made and sold in quantity, and that fortunes could be reaped from their manufacture. Once that fact had been established, Detroit put its money on the automobile.

And well it did, for Michigan's copper, lumber, and foundry magnates, who backed the automobile pioneers financially, eventually gained millions of dollars.

In other parts of the United States during the experimental nineties, bankers seldom risked lending a dollar bill on this new industry, and the wealthy men kept their investments close to the New York stock market. Perhaps the one exciting automobile event in the East came in 1892, when Charles E. Duryea, of Springfield, Mass., became the first person in the United States to drive on a road a vehicle powered by a gasoline engine. The many automobiles born in other parts of the Nation died out quickly.

So the Midwest took hold, and automobiles flourished under the optimistic faith and pioneering spirit of the men in Michigan.

There were upward of 80 different kinds of passenger cars manufactured in the city of Detroit sometime between 1902 and 1928. Other cars manufactured in Michigan towns during this time included such names as the Mighty Michigan, States, and Barley, all produced in Kalamazoo. The Argo, Hollier, Earl, Fuller, Briscoe, and Gem were among the cars built in Jackson; the Deal was built and sold out of Jonesville; the Giroscope was developed in Adrian, and the Alamobile was produced in Hillsdale. There were many others manufactured in Michigan, and there have been more than 1,500 different kinds of passenger cars developed and manufactured in America from 1900 until this present day.

Now there are only five automobile corporations in America. Three of them—Chrysler, General Motors, and Ford—are in Michigan. The other two—Studebaker-Packard and American Motors—are located in other States.

Before the Chrysler Corp. was conceived, no one of note in the nineties had ever heard of Walter Chrysler—then an engine wiper. People soon did hear of him, however, for he became president of Buick, and later vice president of General Motors. He came out of retirement to form his own Chrylser company, and eventually incorporated the De-Soto, Plymouth, and Dodge cars into his product line.

The General Motors Corp. was formed in 1908; it was born in the mind of a young man from Flint named William C. Durant, a grandson of Henry Crapo, onetime Governor of Michigan. Durant, a former partner of the Durant-Dort Carriage Co. in Flint, was a millionaire by the time he was 40 years old. He combined the Buick automobile company, which he managed with Oldsmobile, Pontiac, Cadillac, and later with his own company, Chevrolet, into one corporation.

With the advent of the Model "T" Ford in 1907, the Ford Motor Co. was firmly launched in business. Money for this company—Henry Ford's third, final, and very successful one—was furnished by a Detroit coal dealer, Alexander Y. Malcohnson, and the coal dealer's car checker, James Couzens, and several others. Since that time this family-owned automobile firm has added to the Ford: the Mercury, Edsel, Lincoln, and Thunderbird lines.

Today, L. L. Colbert is president of the Chrysler Corp., Harlow H. Curtice heads the General Motors Corp., and Henry Ford II, grandson of the founder of the Ford Motor Co., is president of that company. These men carry on where the others before them left off, and now they are pioneering their wares with the same faith and optimism that, in the beginning, made Michigan the automobile capital of America.

MADE IN MICHIGAN

(By Culver Bailey)

This business of manufacturing is an important one to you and to me. Today it is the life bloodstream of Michigan.

Being Michigan's main artery, it indirectly plays an important part in your livelihood—it helps finance new school buildings for your work, helps pay your salary, and it creates the need to construct more school classroom space and hire additional teachers.

It is the only type of business that will generate, by itself, a significant employment increase within a community. Industry does this not only by hiring vast numbers of people to work under one roof, but, too, by creating the demand for additional community services—beauty parlors, supermarkets, etc. These services are needed, and it means employment for more people.

During the first half of the 20th century, Michigan became one of the Nation's leading manufacturing States. This can be attributed to the available supplies of water, the large amounts of electrical power, the richness of the State in natural resources, and the availability of skilled labor. Currently, the Wolverine State ranks sixth in America in industrial employment.

For each of the last 10 years Michigan has ranked first in the Nation in income derived from its manufactured products. This fact is reflected in the relatively high wages paid by the automobile industry and the dominance of manufacturing as a source of income for the people of Michigan.

The story of the beginnings of manufacturing in our State began with the automobile industry. From this beginning hundreds of associated industries supplying the automotive factories flourished in Michigan. These factories, in turn, led to the coming of still others to supply them. Today the auto industry is the No. 1 industry of our State. The metals industries and the furniture industry in Grand Rapids employ additional thousands.

In Battle Creek, the well-known cereal industry is outranked in employment by the fabrication of metal products and primary metals industries. In fact, Kalamazoo County is the only major manufacturing county in the State in which either the automobile or metals industries is not dominant. Kalamazoo's major manufacturing industry is paper and allied products. The story on the rapid development of the automobile industry appeared in the September Journal.

However, there is an element of weakness in this single-industry dominance of automobiles in Michigan. A slackening of consumer demand for automotive vehicles, or a stoppage of raw materials, due to wars or national emergencies, strikes Michigan an especially heavy blow.

Steps are continually being taken in this State to remedy this manufacturing headache. Michigan's government tries to create a favorable environment here for diversified industry so that manufacturers will select this State for their operations. During the past 10 years, this has not been attempted in vain, for of all the Nation's industry groups defined by the U.S. Bureau of the Census, 81 percent are operating in Michigan—364 out of 451. By comparison, only 74 percent of all the industry groups were represented in the State in 1939.

Today in Michigan there are manufacturers of electrical machinery; printing and publishing; lumber and products; stone, clay, and glass products; rubber products; machinery; chemicals and allied products; paddings and upholstery filling; wire work; wood products; and others.

The personnel employed by these many manufacturers are increasingly coming under the influence of education's contributions.

More and more education plays an important role in preparing manufacturing employees for their jobs.

EDUCATION'S ROLE

Education achieves this through 94 public school systems throughout the State. In each of these school systems there are coordinators who supervise cooperative educational courses in trade and industrial education and business education. Conducted under the auspices of the Michigan Department of Public Instruction, these cooperative school and work classes help increase the numbers of highly skilled persons for employment in industries.

Take, for example, Edward Delp, of Lansing, who is studying to become an impression die sinker. Delp's night class subjects include logarithms, mathematics, drafting and trigonometry. He puts into practice during the daytime what he learns during classtime evenings.

In Delp's case, as in others enrolled in cooperative evening classes, the Lansing school system works together with management and labor to set up and carry out the requirements which Delp and other students must meet.

Education and industry today have combined forces to fuse manufacturing into a way of life that is fresh and vigorous. Dozens of small Michigan communities have reaped handsomely due to the coming of industry.

Manufacturing is the only type of business that, by itself, will cause increased employment within a community. With this thought, it could be said that industry might be called the sourcespring for a majority of the occupations found in the State of Michigan, and, too, the sourcespring for many a happy home.

MICHIGAN'S CHEMICAL INDUSTRY: RESOURCES AND RESEARCH

(By Culver Bailey)

A $2 billion industry that is old in this State yet so new that its complexion sometimes changes overnight has made Michigan one of the top producers in a rapidly expanding field.

The new fabrics in your clothes, the new techniques for processing your food, the new and better materials in your home and auto—all can be traced to chemistry. To a large extent, you owe your life to chemistry and the drugs and medicines it supplies.

Michigan is one of the Nation's leading producers of chemicals, more than a billion dollars' worth annually. So for Michigan residents, the chemical industry means money and employment as well as goods and materials.

Led by the Dow Chemical Co. of Midland, the chemical industry ranks close to the top among Michigan's 20 major industries. It numbers more than 400 establishments, 240 of which are in the Detroit area and most of the rest in the southern half of the Lower Peninsula, making it the 11th biggest industry in number of companies in the State.

As the sixth largest employer in Michigan, the chemical industry provides jobs for more than 40,000 Michigan residents, including nearly 18,000 in Detroit. The Michigan Economic Development Department considers the chemical industry one of the best "growth" industries in the State. The potential for expansion is tremendous. Low has grown at the rate of 14 percent every year, and the chemical industry as a whole has expanded 10 percent annually. This compares to a 3 percent expansion for all industry over the past 30 years.

WIDE VARIETY OF PRODUCTS

Michigan turns out a wide assortment of chemical products from table salt through wallpaper paste and dishwashing compounds to wire and cable coverings. Nobody is sure exactly how many medicines, bleaches, insecticides, plastics, cleaning agents, preservatives, nutritional aids, and industrial chemicals are made here, but they are known to run into the several hundreds.

Basically, Michigan owes what has happened so far and the rosy promise of the future to natural advantages that have built its reputation near and far as "the Nation's salt cellar" and a "water wonderland."

Almost the entire lower peninsula is underlaid with solid beds of rock salt. They range from 400 feet thick at Detroit to 1,800 feet at Midland. Salt is a basic produce for the chemical industry. And the beauty of it is, nearly everywhere there is abundant water within reach to support salt recovery extraction methods and processing operations.

In addition to salt, the State is blessed with other basic ingredients of the chemical industry—limestone, gypsum, iron, copper, and wood. Importing some iron and copper from Minnesota and coal from Pennsylvania, Michigan relies on Louisiana to supply its sulfur needs.

Research is basic to the chemical industry's progress. The Manufacturing Chemists Association says the industry is the largest private investor in basic research, which helps it bring out an average of 400 new products each year. For example, casts for broken bones made by treating plaster of paris with a plastic resin instead of water are twice as strong with only half the weight. These casts resist water, permit better X-rays, and save the doctor's time. Remember, too, that the Salk vaccine was born in the research laboratory.

FIVE HUNDRED AND SIXTY MILLION DOLLARS FOR RESEARCH

The MCA estimates research spending for 1958 at $560 million and says even more is planned in 1959. A typical chemical company allocates 3 to 4 percent of sales to research. One chemical company said that for every $1 spent in research, development, and other experimental costs, it reaps at least $5.60 in new sales after 5 years.

Utilizing the wealth of raw materials in Michigan and investing heavily in research, the State's chemical manufacturers are not resting on past successes. They have big hopes for big advances in the next few decades.

THREE MAJOR CHEMICAL AREAS

Michigan's chemical manufacturers are geographically located in three major areas—Midland, Detroit, and Montague-Whitehall. All three are built over great deposits of rock salt and salt brine, which settled out of evaporating inland seas as long as 400 billion years ago.

Since salt deposits play such an important basic role, it is interesting that only a small fraction of Michigan's production from this resource is dried and evaporated for table use. The bulk of the salt recovered goes largely into industrial chemicals, dust and ice control, food processing, meat packing, textile production, and water softening. About two-thirds is used in the form of brine by chemical plants. All told, salt is estimated to have about 14,000 uses.

Ranking first in salt production, Michigan is second in output of magnesium compounds. Bromine (natural salt) is used in the manufacture of dyes, in medicine, metallurgy, and in chemical operations as a disinfectant. To Diamond Crystal, Morton and International Salt largely goes the credit for Michigan's repute as the No. 1 table salt producer, a mark of long standing.

DOW IS MICHIGAN'S GIANT

The backbone of the chemical industry in the State long has been Dow Chemical Co. at Midland, which employs approximately 10,000 persons, and a group of other estab-

lished firms such as Wyandotte Chemical Co., Parke-Davis & Co., the Upjohn Co., International Salt Co., Morton Salt, Union Carbide & Carbon, and the Diamond Crystal Salt Co.

In 1890 Herbert H. Dow, a Case Institute (Cleveland) graduate, thought bromines at Midland could be produced cheaper and better. Dow's thinking proved correct. The company that bears his name is one of the giants of the industry today with 15 plants in 10 States. Dow's main plant at Midland, believed to be the world's largest chemical facility, is a center for production of plastics, ammonia, calcium, hydrochloric acid, fungicides, weed killers, chloroform, and aspirin.

When World War II forced the American chemical industry into supplying needed plastics, synthetic rubber, and magnesium, Dow became an important leader. Today, one-third of Dow sales is in plastics and one-tenth is in magnesium. Dow Chemical is the world's largest producer of magnesium, its alloys, and semifabricated forms. It is also one of the Nation's largest producers of chlorine and bromine.

About 25 miles southwest of Midland is the Michigan Chemical Co. at St. Louis. Like Dow, this company initially took its raw material from the ground—natural brine. During World War II the firm expanded to produce DDT and magnesium compounds. Setting up its research departments in 1944, the company was an early producer of antihistimines, insecticides, solvents, and bromine compounds.

CONCENTRATION NEAR DETROIT

Michigan's second major chemical area is centered in the Detroit downriver area between Detroit and Trenton. There the State's chemical plant concentration is the thickest—240 plants. Salt there is taken from the earth in the form of artificial brine.

From the oldest and largest chemical plant in the Detroit downriver area—the Wyandotte Chemical Corp.—to the smallest firms, a bevy of chemical products are manufactured: soda ash for making glass, cleaning compounds, chlorine, dry ice, and phosphates.

The Wayandotte Chemical Co., second-largest chemical employer in the State, with 4,500 employees, is the world leader in specialized cleaners for business and industry.

Postage Stamp in Honor of Garibaldi

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. ANFUSO. Mr. Speaker, I am today introducing a bill to provide for the issuance of a special commemorative postage stamp, of the Freedom Fighter series, in honor of Giuseppe Garibaldi, the famous 19th century Italian patriot under whose courageous leadership the people of Italy achieved national unity and independence. My colleague, the gentleman from New Jersey, the Honorable PETER W. RODINO, JR., joins with me in cosponsoring this legislation.

Giuseppe Garibaldi was born at Nice, France, on July 4, 1807, exactly on the date only 31 years after the United States had declared its independence. There is no doubt that he was greatly inspired by our concept of liberty and national independence, and used it to encourage the people of Italy to learn from our example. He died in Italy on June 2, 1882, at the age of 75.

Garibaldi came from a poor fisherman family and received little education in his youth. He was a sailor on various trading vessels and became a strong supporter of Mazzini to set up a Republic in Italy. In 1834 he was condemned to death for his support of Mazzini, but he succeeded in escaping from Italy and made his way to South America. He entered the service of the Republic of Rio Grande and aided the people of Montevideo in their struggle for independence. He was the leader of a famous Italian legion and eventually earned the title of "Hero of Montevideo."

At the outbreak of the revolutions of 1848 in Europe, particularly the uprising against Austria which then controlled important parts of Northern Italy, Garibaldi decided to return to Europe and join his countrymen in the struggle for Italian independence. He raised a group of volunteers and harassed the Austrians, but his efforts at this time did not succeed. He then proceeded to Rome where he was appointed by Mazzini to command the forces of the Republic. He fought against overwhelming odds and desperately defended Rome against the Austrian onslaught for 30 days, but finally had to retreat. As a result of this struggle he became known as the defender of Rome.

Garibaldi was once again forced to leave Italy, and this time he decided to come to the United States, which already then was regarded by the nations of the world as the champion of liberty and freedom. To Garibaldi, as to many others after him, America was both a place of refuge and strength; consequently, it was natural for him to turn to this country for support in his struggle to achieve freedom for his people.

He arrived in this country on July 30, 1850, and landed at New York, where his arrival had been eagerly awaited by people of all walks of life, not only those of Italian descent. Already at this time he had a great reputation as a fighter for freedom. On the day of his arrival in New York, the newspaper New York Tribune wrote as follows of him:

> The ship *Waterloo* arrived here from Liverpool this morning, bringing the world renowned Garibaldi, the hero of Montevideo and the defender of Rome. He will be welcomed by those who know him as becomes his chivalrous character and his services in behalf of liberty.

A huge demonstration had been planned for him, including an official welcome at the Battery, greetings by the mayor of New York, and a parade up Broadway to the Astor House—as we are in the habit of welcoming great heroes in our own day. But Garibaldi refused this honor on the ground he was only an exile from his native land and did not wish to cause this country political embarrassment. In a letter to the committee planning the demonstration, he said:

> No such public exhibition is necessary to assure me of the sympathy of my countrymen, of the American people, and of all true Republicans. * * * Though a public manifestation of this feeling might yield much gratification to me, an exile from my native land, severed from my children and mourning the overthrow of my country's freedom by means of foreign interference, yet believe me that I would rather avoid it, and be permitted to * * * await a more favorable opportunity for the redemption of my country from foreign and domestic oppressors.
>
> Next to the cause to which I have devoted myself, I value nothing so highly as the approbation of this great people, and I am convinced I shall enjoy that when they become satisfied that I have honestly and faithfully served the cause of freedom, in which they have themselves set so noble an example to the world.

Garibaldi remained in the United States only for about 10 months. During this time he refused to become a burden to his friends and insisted on doing menial work in order to support himself and to send money to his wife and children in Italy. He finally obtained a job in a candle factory on Staten Island—and to this day the great vat where this Italian patriot stirred tallow alongside his American coworkers has been preserved because of its historical interest and its significance for United States-Italian relations.

From the United States, Garibaldi proceeded to South America and ultimately made his way back to Italy again to fight for its freedom and independence. He participated in the war of 1859 in which he scored important victories in the Alps region. He helped free Sicily in 1860, occupied Naples, and joined the two Sicilies with Italy, but declined all honors for himself. He then retired to his farm on the island of Caprera, where he made his home for the remainder of his life. From there he came forth on few special occasions, such as in 1864 when he made a visit to Britain where he received an enthusiastic welcome; in 1870 when he offered his help to the French Republic in the war against Germany; and again in 1875 when he was seated in the Italian Parliament after Italy had become a united and independent nation.

Garibaldi is sometimes described as "the George Washington of Italy." Surely, a man of his caliber and his achievements, who was instrumental in winning freedom and independence for his people, deserves the title of "Freedom Fighter" and as such should be included in our list of those to be honored by special postage stamps. The issuance of such a stamp would add to the good will and the strengthening of friendship between the United States and Italy, which is one of our most important allies in the world.

In conclusion, I wish to express my appreciation to the Italian Historical Society of America for bringing this matter to my attention and for suggesting the issuance of a stamp in honor of Garibaldi. The society deserves to be commended for this proposal. I know that millions of Americans of Italian descent would welcome the issuance of such a stamp and would feel proud of this honor bestowed upon a man who has contributed so much to further the cause of freedom in Italy and in the world.

Michigan Editor Salutes J. Edgar Hoover

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 13, 1959

Mr. CEDERBERG. Mr. Speaker, few if any Government officials have to their credit a career record comparable to that of J. Edgar Hoover, Director of the Federal Bureau of Investigation.

Mr. Hoover recently completed 35 years as Director of the Federal Bureau of Investigation, and in connection with that anniversary the editor of the Midland (Mich.) Daily News published an editorial entitled "J. Edgar Hoover Due a National Salute." The editorial follows:

J. EDGAR HOOVER DUE A NATIONAL SALUTE

The success of J. Edgar Hoover in administering the Federal Bureau of Investigation for 35 years is in the Horatio Alger tradition of the poor boy who made good, but beneath the surface melodrama is the serious story of the development of a responsible professional investigative body. His anniversary date is tomorrow.

Hoover has served as FBI Director under five Presidents and an even dozen Attorneys General without becoming a political figure. His name has been brought into political controversies, but never as a partisan. He is the Nation's top law-enforcement official, but he has publicly fought against a national police force.

When appointed acting Director of the FBI in 1924 by President Coolidge, Hoover was but 29. He had been in the Justice Department 7 years; he had a law degree earned in night school.

The FBI, created in 1908, after its 16 years of existence was a politics-ridden agency, tainted by scandal. Its personnel was largely composed of political hacks, riffraff, and ex-convicts.

Hoover accepted the appointment on the joint understanding that the Bureau was to be kept out of politics and that it would be responsible only to the Attorney General. He set about weeding out the incompetents and seeking out men of good moral character."

What Hoover at first had looked on as a temporary job has stretched out into a career, and the Bureau has become a great center for scientific crime investigation. Where once there were no fingerprint identification files, the Bureau now has some 150 million cards.

On the eve of his 30th anniversary as Director, Hoover was asked if he thought there was any danger of the FBI becoming a Gestapo. His reply was typical: "No, there is no danger * * * not if we have men of character in the organization and an alert public opinion." And today his attitude remains unchanged.

Hoover is one of a handful of Federal executives receiving an annual salary of $22,000, only $3,000 less than that of Cabinet members. The pay is by no means out of line with his responsibilities. And no other agency head has so long been so successful as Hoover in getting congressional approval of mounting requests for funds.

For all his emphasis on integrity and responsibility, Hoover is no prude, as his Washington neighbors are well aware. He has a reputation as a gourmet and wine fancier. In Washington he dines regularly at Harvey's, a fairly expensive steak and sea-food restaurant; in New York he is frequently seen at the Stork Club and other plush watering places.

He drinks Scotch and plain water, but rarely takes more than two. A racing fan, Hoover often appears at the nearby Maryland and West Virginia tracks.

For his World War II security work, Hoover won the Medal for Merit, a top civilian decoration. President Eisenhower presented the National Security Medal 5 years ago, and in January 1958 Hoover was one of the first recipients of the President's Gold Medal Awards for "distinguished Federal service."

He is the author of many articles and several books, the most recent being the best-selling "Masters of Deceit," which is called: "The most authoritative book ever written on communism in America." Perhaps more important to Hoover—and certainly to the Nation—is the fact that he has created his job in his own image, has become for his own contemporaries the model of the professional policeman.

Fair Trade Issue Up Again

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Des Moines, Iowa, Register on March 28, 1959, setting forth many cogent reasons why H.R. 1253, the so-called fair trade bill, should be defeated.

That bill is not in the interests of the retailing industry, or in the interests of the consumers. Most manufacturers either oppose fair trade or pay it only lipservice because they are aware that it is both economically unworkable and inconsistent with our system of free competitive enterprise.

H.R. 1253 should be defeated.

FAIR TRADE ISSUE UP AGAIN

The argument over the claimed advantages and disadvantages of the fair trade system of legalized price fixing has been going on so long that it would hardly seem necessary for Congress to hold hearings on the bill before it.

It has been debated in the legislatures of most of the States. Forty-five States have at one time or another over the last 25 years enacted laws permitting the practice.

The issue of constitutionality has been argued again and again in the courts. In 16 instances, the State courts have held the law or some portion of it unconstitutional.

No State legislature has repealed a State fair trade act once it was passed, but in a good many States so little effort has been made to keep it in force that it has been virtually nullified.

Responsibility for enforcement has rested almost entirely with manufacturers of brand name products who have insisted on, or have been pressured by retailers into, maintaining a fixed retail price for their products. The practice suffered its most severe setback a year ago when a number of large manufacturers of electric applicances announced they would no longer attempt to make or enforce price-fixing agreements.

This break in the ranks of the price fixers is responsible for the renewed efforts this year to get Congress to enact a law that would impose the practice on all States irrespective of the desires of the States themselves. Heretofore the Federal law has merely authorized the States to pass fair trade acts or reject them.

Two features of the fair trade practice have aroused most of the objections to it. One is that it runs counter to accepted principles of competitive enterprise in business. The other is that it has subjected individuals to conditions in the conduct of their business to which they did not specifically agree. By signing a contract with one retailer in a State to abide by a fixed price for a specific product, the manufacturer of that product may automatically force all other retailers handling his product to abide by the terms of that contract.

Manufacturers admittedly have the right to attempt to persuade all retailers to sell their products at a fair price. However, the fair trade principle goes far beyond this. It involves an attempt by the manufacturers and dealers to get the State or Federal Government to enforce price agreements.

The years of experience with fair trade have made a valuable contribution to better understanding of the practice.

This experience has shown, according to a survey made by the U.S. Department of Justice, that where the fair trade laws are actively enforced the price that is paid by the public is exceedingly high.

The survey revealed that prices for a list of 132 common drug, household appliances, and other articles averaged 17 percent higher in cities where fair trade practices were in force than in cities where they were not.

In some fair trade cities the prices paid by consumers were much higher than that average. In a number of cities included in the survey where fair trade practices were not operative the savings to consumers were startling. In Washington, D.C., prices were 32 percent below those in fair trade cities. In Kansas City they were 31 percent lower and in Dallas they were 29 percent lower.

With that kind of experience on the record, it would seem that Members of Congress would be exceedingly wary of subjecting the entire Nation to a law that is already on the skids in most of their home States.

Taxes—Mostly the Bill for Crime and War

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to quote a thoughtful observation on the subject of the taxes we pay to our city, county, State and Federal Governments. According to the author of this observation, which was made by Dr. Raymond B. Drukker of Berea College, Berea, Ky., near my own congressional district, a substantial part of the taxes we pay is the result of crime and war. I am certain that Dr. Drukker is correct and I think it is well worthwhile to consider the thoughtful observation that was made by him on this subject. The statement by Dr. Drukker is as follows:

Have you ever totaled the bill you get from your city, county, State, and Federal tax offices which is for crime and war? Why not try to get this item because it would be very enlightening and frightening.

Why do we pay so heavily for these causes? We pay because we seem to prefer the luxury of sinful desires. We have made living very expensive because we and God are not on friendly terms, sometimes not even on speaking terms.

We are told sin is any lack of conformity to or transgression of the law of God. The creature is in rebellion to the Creator. Man substitutes his personal wishes for the will of God. It is our privilege to do all this. The bill collector, however, never fails to show up.

The next time you send in your check for taxes to your city, county, State, or Federal tax collector put down what you know you will be paying for human evil and write on the check, "So much for sin."

The Happy State of Hawaii

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Stanley S. Jacobs as it appeared in the ADI Bulletin, April 1959 issue:

THE HAPPY STATE OF HAWAII
(By Stanley S. Jacobs)

Public education for all, without racial or religious barriers, has helped make our polyglot 50th State a living lesson in American democracy.

As the girls pour out of the office buildings and round the corner of Bishop and Fort Streets in Honolulu, a bookkeeper of Japanese ancestry, a Caucasian file clerk, and a part Hawaiian stenographer walk arm in arm to a nearby cafeteria.

An observer from the mainland might notice them—and give second thoughts to the varied racial blend. But, in all likelihood, a citizen of Hawaii wouldn't give the subject a thought at all—he'd be so accustomed to the sight.

The policeman who holds up traffic for the girls is Chinese, the cafeteria cashier is Korean, and the other diners will be Filipinos, Puerto Ricans, Negroes, and Caucasians of many religious faiths and national origins.

On the beaches, in shops and theaters, people of differing racial backgrounds mix freely and in friendship. In the public schools, at the University of Hawaii, students and faculty are similarly heterogeneous.

Hawaii may be the only civilized place in the world where a nonwhite stranger will proudly—without a trace of self-consciousness—explain his racial origins and mixture in detail to a Caucasian. In Honolulu, the U.S. Marine Corps recruiting posters shows the face of an oriental. Honolulu's Danny Lee is the only police chief of Chinese origin in the United States. The local sheriff is the pure Hawaiian champion swimmer, Duke Kahanamoku.

Hawaii is the only State in the Union with an oriental majority. Every 1 of 64 racial combinations possible can be found there. Of the total population of about 600,000 civilians, most numerous are the Japanese or part-Japanese (38 percent), followed by Caucasians (20 percent), part-Hawaiians (15 perecnt), Filipinos (13 percent), and Chinese (7 percent), pure Hawaiians (2 percent), Puerto Ricans (2 percent), Koreans (1 percent). Only about 12,000 pure Hawiians still remain; many of them live on remote Nihau Island.

There are, occasionally, a few traces of old frictions—but these are increasingly rare. Generally, the picture is one of easy geniality. Hawaii proves clearly that people of many races and religions can live together in brotherhood. This happy lesson causes consternation and distress to the racist and bigot. Professional anti-Semite Frank Britton, for example, took one look at the Hawaiian picture and, in the March 1959 issue of his American Nationalist, made a belated desparate appeal: "Block Hawaiian statehood. Write your Congressmen."

How did the happy state of Hawaii come about?

Hawaiians, before and since the European discovery of the islands in 1778 by the famous English navigator, James Cook, have had their share of troubles. Their history indicates that they were a courteous and hospitable people who sometimes suffered under an autocratic, tyrannical nobility and priesthood. After discovery, they were, to some extent, hurt by the rivalry and contentions among the big powers, including England, France, and the United States. They were also subject to wars and disease. But, as in few places in the world, the arrival of outside civilization brought with it a high degree of spiritual and material growth.

Its polyglot, many-hued composition is largely due to the fact that, throughout the 19th century, Hawaii was subject to various experiments in immigration as part of the large powers' efforts to build up Hawaii's labor force. Polynesians were brought over from the South Sea Islands as part of an experiment in a cognate race plan. Later came Americans and Norwegians, Germans, Russians, Poles, and others. Portuguese were introduced in large numbers, starting in 1878. Today, they and Puerto Ricans—in addition to orientals—constitute the bulk of the Hawaiian labor force.

It was in the 19th century, too, that the foundation was laid for the happy State of Hawaii today. That was when the Christian missionaries came. In other areas of the world, missionaries have sometimes been charged with stifling indigenous culture, with covering beauty with Mother Hubbards. But in Hawaii, they came to have profound and benign influence. Among other things, they brought to Hawaii mass education, literacy, and new concepts of good government. Their work is directly responsible for the good intergroup relations picture in Hawaii today.

The first company of missionaries arrived from New England in 1820; 14 other companies followed in the next 35 years. In all, over 150 men and women came in those years to introduce churches, schools, and the press. The Hawaiian language existed only verbally; within 2 years after the first group arrived, the missionaries had learned the language, reduced it to writing, and began printing the first textbook. By 1840, 50 books had been published. In 1834, two Hawaiian newspapers were published; an English-language newspaper, founded in 1843, is still published today. The New Testament was completed in Hawaiian in 1832, the Old Testament in 1839. And always the natives of Hawaii were eager to learn. By 1845, less than two dozen years after the language was first put into writing, 80 percent of the population of Hawaii was literate.

The missionaries also tried to teach the science of government to Hawaiian rulers. In 1839—after hearing lectures on government gven by missionaries—the Hawaiian king promulgated the Declaration of Rights, Hawaii's Magna Carta. The first constitution was established in 1840; the first compilation of laws in 1842. Hawaii had started on the road to responsible and democratic government, the kind that would qualify it for statehood in 1959.

By 1958, there were 202 public schools with a total enrollment of about 130,000. Segregation is unknown in these schools; at Lei Day exercises at Maui High School one year, for example, seated on the queen's throne was a lovely girl, part Portuguese, part German. Her six ladies-in-waiting were Korean, Caucasian, Chinese, Japanese, pure Hawaiian, and Filipino.

The unsegregated school system has played a basic role in building and keeping good intergroup relationships—as well as making the heterogeneous citizens of Hawaii into Americans. According to Hung Wau Ching, a prominent merchant:

"Every one of us, every single Chinese, Japanese, or Puerto Rican, received a good education here. It made us Americans. The end products of our school system are just about as American as any boy from Vermont or Kansas."

There are, of course, a host of problems implicit in the polyglot situation. Instruction in public schools, naturally, is conducted in English. Some parents, particularly those with Chinese or Japanese backgrounds, send their children to foreign language schools as well. Through the years—and particularly after Pearl Harbor—restrictions were imposed on the teaching of foreign languages.

After the close of World War II, however, the territorial legislature itself took action to remove unreasonable fetters from foreign language schools. Under a 1949 enactment—still in force—any child who has graduated from the second grade may attend a foreign language school without restriction; younger children are free to attend these schools provided instruction does not exceed 5 hours a week.

The spectacle of an American State with a Caucasian minority was undoubtedly one of the major factors in holding up statehood for Hawaii.

In 1900, Hawaii's Governor Sanford Dole flatly declared that statehood was out of the question "because it might result in a Japanese Governor one day."

Despite martial law invoked after Pearl Harbor and feeling against Japanese at the time, today the AJA's—Americans of Japanese ancestry—are among the island's most respected and popular people. For one thing, they proved their Americanism during the war. Not only was there not a single case of disloyalty or espionage among them; the 442d Regiment Combat team—composed of Japanese-Americans—became one of the most decorated of all American military units, with 18,000 individual citations to its credit.

Not only Japanese, but all the other citizens of Hawaii operate as Americans first. And, as Dr. Andrew W. Lind, professor of sociology at the University of Hawaii, points out, "racial bloc voting simply does not exist in the Islands."

When racial problems do occur, they are usually quickly resolved. There was a minor fuss several years ago when a Chinese merchant moved into a Waikiki beach house owned by the president of the Hawaiian Pineapple Co. But the cry "It will cheapen land values" fell on deaf ears in the community.

In 1954, the Hawaiian Civic Club, composed of persons of full or half Hawaiian background, had a flurry of excitement over the rule that "non-Hawaiians" could not be admitted. This exclusion was primarily aimed at the Japanese. But good sense prevailed and the ban was lifted.

If any one group has inferior status in Hawaii, it is Puerto Ricans—one of the smallest of minorities—who, for a variety of sociological and economic reasons, have been compelled to take the lower-paying and more menial jobs. But their situation is the exception, not the rule, for Hawaii's minorities.

Today Hawaii is emerging from an era of paternalism and domination by a handful

of rich planting and business families. It is on the threshold of a new prosperity and boom, based in large part on its attractions as a tourist mecca.

And, as the 50th State—Hawaii will show the rest of the United States, by striking example, how well diverse ethnic and racial groups can live together, in harmony and understanding.

Our $9 Billion Headache

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. BROOMFIELD. Mr. Speaker, the absurd spectacle of our Federal Government holding on to more food than has ever been accumulated before in history is a cause for great apprehension among many Members of Congress. The problem of these mountains of surplus food must be faced, because the American taxpayer simply cannot afford to foot this tremendous bill year after year.

Following are the list of two articles on this problem which appeared in the Detroit Free Press recently. It is my opinion that these articles very clearly point out the problem and what it is doing to our Nation:

OUR $9 BILLION HEADACHE
(By Ray Cave)

It is one of the miracles of modern international economics that the Government can have a $9 billion farm surplus and can't: (1) Sell it, (2) give it away, (3) destroy it.

The Government can do nothing but play mother hen to its fantastic pile of food and fiber. The only thing to do with an egg that big is sit on it.

The very act of sitting on it costs the taxpayer more than a billion dollars a year.

How is it possible that this land of plenty can't share its wealth with the less fortunate countries of the world? Here are two examples:

The price-support program has kept the price of American cotton well above that of cotton produced in other countries.

As a result, the American cotton-export market suffered disastrous cutbacks as buyers turned to other countries for cheaper cotton.

The Agriculture Department wanted a subsidy to be paid on exported cotton. With the Government paying some of the price, exported cotton would compete with other countries, and this would cut back America's cotton surplus, the Department argued.

Not so fast, said the State Department.

A fortune has been spent by the United States to start cotton growing in underdeveloped countries of the world.

Now these countries are selling cotton, and you want to use more U.S. taxpayers' money to take markets away from these small countries, the State Department argued.

The battle raged to the White House—and back to Congress.

Eventually a major export subsidy was approved for cotton, but not until America's share of the international cotton market had fallen drastically.

Surplus cotton stocks are now low, but in a few months are expected to total up to 7 million bales.

It's plain that the Government will have to be careful how it works off any of that surplus cotton in the international market. It couldn't give it away without threatening he cotton-based economies of many countries.

Why don't we give wheat away? People are starving and they need it.

But other countries sell wheat. Such as Canada. If the United States gave wheat to all of Canada's customers, then some other people might not be starving—but Canadians would be.

Several plans permit the United States to sell sizable quantities of its wheat overseas. Development of these markets, in fact, allowed the Nation not to increase its wheat surplus in 1957 and 1958.

But the plans didn't get rid of any significant amount of the surplus then on hand. And now the 1958 wheat crop has wiped out those gains and added a whopping new surplus.

"We're pouring these surpluses down every rathole in the world," said an official. "The only trouble is, they all fill up too soon."

If we can't sell it, and we can't give it away, why don't we dump it in the ocean? Wouldnt' that save storage costs?

The answer is: There's something basically repugnant about destroying food. Foreign affairs experts have told the Agriculture Department that America's prestige would never recover from the world's outrage if we destroyed what others could eat.

How long will we have the surplus? Agriculture Secretary Ezra Taft Benson hopes farm price-support programs can be changed to stop overproduction.

Changes which he hopes will have this effect already have been made in corn and cotton, though it now looks as if each change is going to increase production at least temporarily.

Once overproduction is stopped, the present surplus could be worked off slowly as marketing opportunities arose.

Even this will cause a stunning financial loss to the taxpayer.

The relatively small amount of Government surplus now being sold returns about 70 cents on the dollar the Government paid for it.

But as price supports are lowered—and this is Benson's main aim—the market value of commodities drops.

At the same time, of course, the value of the farm surplus drops. And instead of getting 70 cents on the dollar, you get 50, or 30, or 10. But even at that, it would pay to sell the surplus and stop the present storage costs.

A good summary on the outlook for getting rid of the farm surplus comes from a high Commodity Credit Corporation official. He is close to the statistical picture, and he says:

"No market appears in the immediate future which might allow us to capitalize those huge holdings."

"Only a major catastrophe could bring them into use."

That is the answer to the surplus problem.

You can't sell it, you can't give it away, you can't destroy it. You can only wait for a catastrophe.

"LITTLE FARM" PLAN HELPS RICH INSTEAD
(By Ray Cave)

WASHINGTON.—Ezra Taft Benson, for 6 stormy years the Nation's Secretary of Agriculture, told the Senate Committee on Agriculture and Forestry recently:

"The (surplus) problem narrows down to a few crops in which, with the greatest of good will and the very best of intentions, outmoded programs have been too long continued."

It is this history of good will and best intentions which has made a shambles of the Nation's price-support program, unbalanced the economy of one-fifth of the Nation's agriculture and saddled the taxpayer with $9 billion worth of farm products the country can't use or even give away.

Eighty-five percent this money (it is more than the Army will spend this year) has been used to support the price of just three American crops: Wheat, corn, and cotton.

The first of this year, the Commodity Credit Corporation, which administers the price support program, owned wheat worth $2,192 million, corn worth $2,037 million, cotton worth $226,132,000.

The Government is about to add to this, from 1958 crops, about estimated $800 million worth of wheat and cotton and $310 million worth of corn.

Storage, interest, and transportation for the surplus alone will cost more than a billion for the year.

This, says Benson, is "what has resulted from clinging to outmoded, obsolete, ineffective price support and acreage control programs."

Worse yet, he says, "our price support programs, even though originally designed with the small family farms and low income farm people in mind, have resulted in huge expenditures for a few farm products produced primarily on a relatively few larger mechanized farms."

Statistics show that the program affects only one-fifth of American agriculture. It is of greatest benefit to the biggest, wealthiest farms.

This is the sad result of a program which started in the depths of the depression with a simple, sound idea.

The farmer always has had to market at harvest time—when prices were lowest. If the farmer could find a way to hold his crop and sell it later, he could get a higher price.

So, the Government decided: "We'll loan the farmer the value of his crop. Then he can wait, sell the crop when the market is better, and pay us back the loan. If the market gets worse, an unlikely circumstance, we'll keep the crop as forfeited collateral."

The value of the crop was determined by a percentage of parity. Parity is the amount a farmer would have to sell his crop for to live as well as he did in the fairly good farm years of 1910 to 1914.

The purpose was to keep the little farmer on his feet in hard times.

These early farm programs weren't working, but World War II saved the country from the first big surpluses.

The war ended, but the crops still grew. Congress set the price support level at a high percentage of parity.

By 1949 the Nation was threatened with serious farm surpluses (serious by 1949 standards, but not by today's).

In 1950 the Korean war caused surplus to be used. Some say that because of this the Nation needs farm surpluses as a stockpile in case of world war III.

In January 1953, Ezra Benson took office. Doing something about the $3 billion farm surpus was the major job the Republican administration set for him.

Six years later, the farm surplus is $6 billion higher. Next year it will go up another $1,400 million.

How could this have happened under an administration which believes in getting the Government out of the price-support business?

There are two main reasons:

1. Recent Congresses, like every other Congress since 1933, didn't have the nerve to tightly control farm production while making high support payments, or to sharply cut price-support payments while allowing high production.

2. More important, the farmer learned how to raise more on his land than any Congressman in history imagined.

The main control on farm production has been acreage allotments. Congress has changed these allotments, or restricted the

Secretary of Agriculture's use of them, to suit various political pressures.

For example, if the acreage allotment system which the Congress of 1958 felt was wise could be applied today, not a single acre of wheat would be planted in the United States this year.

Instead, 59 million acres of wheat will be planted this year 2 million acres more than last year when the wheat surplus and crop hit record highs.

It had been hoped that the acreage reserve clause of the soil bank would cut the surplus. Under this program farmers have been paid $1,570,234,000 over the past 3 years not to plant anything.

If a farmer had a 100-acre allotment he would put the 20 worst acres in the acreage reserve (getting paid for that) and dump 100 acres worth of fertilizer on the 80 remaining acres, increasing yields so much that he hardly missed the 20 acres.

But the technological advancement of the American farmer has proved the crushing blow to price-support programs.

Last year a record production in 14 major crops occurred on the smallest acreage planted to those crops in 40 years.

The high increase in yields per farm is so great that it is little wonder Congress hasn't realized the full effect on the price-support program.

If this program caused surpluses a decade ago, it is no wonder that the surpluses are many times bigger now.

Poison in Your Water—No. 80

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the St. Louis (Mo.) Post-Dispatch of March 4, 1958, entitled "Pollution High in Mississippi River Here, U.S. Official Says":

POLLUTION HIGH IN MISSISSIPPI RIVER HERE, U.S. OFFICIAL SAYS—SITUATION SUBJECT TO CORRECTIVE ACTION UNDER FEDERAL COMPULSION—CONFERENCE EXAMINES PROBLEM

The Mississippi River in the St. Louis area is excessively polluted and, therefore, subject to corrective action under the Federal Water Pollution Control Act, F. W. Kittrell, Chief of Stream Pollution Studies of the U.S. Public Health Service, said today. The act gives the Government power to compel abatement of pollution of interstate streams.

Kittrell spoke at a meeting of representatives of governmental agencies and private industry at Soldiers' Memorial, at which plans were discussed for reducing pollution of the Mississippi and Meramec Rivers and the Coldwater Creek watershed.

THOSE ATTENDING MEETING

Attending the conference were representatives of the States of Missouri and Illinois, the Bi-State Development Agency and the U.S. Public Health Service. The meeting was called under provisions of the Water Pollution Act.

The Mississippi River in the St. Louis area often is covered with oil waste and large quantities of floating garbage, Kittrell said. "An average drop of water in the Mississippi at St. Louis contains 20 sewage bacteria," he added.

The East St. Louis and Interurban Water Co. receives its water supply immediately below the Wood River refinery area, Kittrell said. Although both the refineries and the water company have invested much money in means of removing impurities, the water still is unsatisfactory "and plagued by taste and odor problems," Kittrell added.

PROBLEMS DOWN STREAM

Cape Girardeau, Chester, Ill., and Menard Penitentiary at Chester have serious water supply problems because of pollution of the Mississippi at St. Louis, Kittrell said. Besides making the water below St. Louis of bad taste and odor, sport fishing has been virtually ruined by St. Louis pollution as far south as Cairo, Ill., he added.

Industries have promised full cooperation in solving problems which inevitably will arise in connection with the pollution control program, the board of trustees of the Metropolitan Sewer District reported.

The Metropolitan Sewer District has filed application with the Housing and Home Finance Agency for a loan with which to undertake "preliminary engineering studies on the Mississippi River," the district's trustees said. "It is estimated that the studies will require 2½ years and will cost $270,000. It is anticipated that the money necessary for the studies will be available by July 1, 1958, and the studies should be completed by January 1, 1961."

BOND ISSUE NEEDED

At least 1 year would be necessary to review the report, select a plan, and complete arrangements for a bond issue, the trustees said.

"It is anticipated that such an issue could be presented to the voters in the spring of 1962. If successful, construction plans would be immediately authorized, and construction of the first units of the project could begin about January 1, 1963."

"The trustees said that on the assumption construction would require 4 years, the last sewage treatment unit would be placed in operation about January 1, 1967.

"Changes and improvements of the sewage treatment plant serving the Meramec River watershed are planned for this year, the trustees said. As soon as these revisions have been made and the plant operation can be studied, consideration will be given to the future needs of the area."

A bond issue is definitely planned for the Coldwater Creek watershed this year, the trustees said. If successful, construction could start early in 1959 with construction of the treatment plant facilities completed by January 1, 1961. The trunk sewer probably would require an additional 6 to 9 months for completion."

The major part of the drainage from the metropolitan sewer district goes into the Mississippi along a 22-mile stretch of the west bank, between the northern and southern boundaries of the district, the trustees said.

"There are more than 80 separate outlets which discharge into the Mississippi River in that stretch," the trustees said. They added that each of these outlets must be studied individually to determine how and where interception should take place and to determine the volume of wastes to be intercepted.

In addition, the trustees said, characteristics of the wastes must be ascertained to determine whether any unusual condition exists which might necessitate special consideration.

Studies must be made to determine the type and degree of treatment which must be provided, the trustees said. They noted that preliminary consideration indicates that as many as 11 small plants might be most economical, or as few as one large plant.

AFFECTS FISH, FOWL

Pollution of the Mississippi in the St. Louis area is having a damaging effect upon fish and waterfowl downstream, the Missouri Conservation Commission said in a prepared statement.

"Fish market operators along the Mississippi are buying fresh fish from other sources other than this river," the commission's report said. "Once a customer has the experience of getting bad-tasting fish, he refuses to buy more fish from the Mississippi River."

Untreated industrial and sanitary wastes have had damaging effects several hundred miles downstream, the commission said. "To make this great stream a virtual sewer represents a denial of a public right. It denies the right of all of the people to use it for fishing, hunting, recreation, and for food production."

No Small Affair

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press of St. Marys, Pa., of Thursday, May 14, 1959:

NO SMALL AFFAIR

While the State of Pennsylvania and the Federal Government seek a raise in gasoline taxes, based on the theory of "who cares about a few extra pennies per day" it might be well to take another look at what the tax can cost the car driver in actual dollars and cents.

And we have never seen the argument better presented than in an advertisement put out by the Associated Petroleum Industries of Pennsylvania, from which we take the liberty to quote:

"The most disarming thing about the gasoline tax is that it is so well camouflaged that even when a motorist knows he pays the tax, he does not feel that it is a very high levy.

"He overlooks a tremendously important fact:

"Motorists pay the gasoline tax in quarters and half dollars—not in pennies.

"The single fact points up the most vital aspects of motor fuel taxation. First, it emphasizes the burden—the everyday burden—of the gasoline tax. In emphasizing this burden, the statement also exposes the fallacy of thinking of the gasoline tax as a matter of mere pennies. The statement points up, too, that a veritable river of silver is constantly flowing into our Federal and State treasuries—money that is earmarked for improving and extending our system of roads.

"In Pennsylvania, every gallon of gasoline sold for highway use is subject to a Federal tax of 3 cents and the State tax of 5 cents. Consequently, every time a motorist here buys 5 gallons of gasoline, he pays 40 cents in tax. And when he asks for 10 gallons, he pays 80 cents in direct tax alone. Thus the gasoline tax he regards as a matter of a few cents actually costs him quarters and half dollars.

"Few will fail to recognize the economic importance of this fact—that the more money they must spend for tax, the less gasoline they will have available for business or pleasure.

"The fact that motorists spend quarters and half dollars for gasoline taxes has been

usually played down. Time and again the gasoline tax rate is referred to as "just a few pennies," or "the motorist never misses it." Thus, a more or less natural tendency has been discernable to perpetuate the myth that the taxation of gasoline is still a penny-ante game.

"However, the stakes are high and getting higher. The State gasoline tax alone takes almost $160 million from highway users in Pennsylvania and the Federal tax costs motorists here another $95 million.

"In these times, public discussion of multi-billion-dollar budgets and expenditures has dulled the public's sensitivity to the burden of taxation. And so a tax expressed as say, "5 cents per gallon" sounds like practically nothing at all. But at the point of purchase it means that on a "buck's worth of gas"—40 cents of that dollar goes for taxes.

"Highway users already are paying for roads, and paying heavily. And it is imperative—as a matter of actual survival—we keep a wary eye out for proposed tax and regulatory policies which could eventually stunt our business and our Nation. In the so-called old countries burdensome taxation and regulation has so killed incentive and initiative that the United States is forced to take the leadership in preserving freedom and progress. All too often, proposals are made in our country which would eventually raise the tax burden to the deadening level it has reached in other parts of the world.

"Actually, the gasoline tax is a small part of this overall tax burden picture. But to the motorist who will think ahead and who can envision to what monstrous heights this tax might be raised unless the public fights it off, the gasoline tax is no imaginary ogre. The threat is real—the tax is real.

"Yes, we are way past the stage where we can logically continue to think of the gasoline tax as a matter of pennies. Last year the average tax paid on gasoline in Pennsylvania was 40 percent of the retail price—higher than most luxury taxes.

"If that is surprising, it is because we forget that the stakes have been raised. We are throwing bigger coins into the gasoline tax pot nowadays."

Housing Legislation

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. COLLIER. Mr. Speaker, in view of the vote on S. 57 earlier today, I am simply going to take about 2 minutes to make a matter of record facts pertinent to the housing legislation. Now that the action has been taken, it is ironical to note that there is today in the United States more than 6 percent vacancies in rental apartments and more than 1 percent in vacant houses. Percentagewise these may seem like minute figures but actually the number of vacancies across this Nation are many times over the number of units which are provided for in this budget-busting legislation. What many of us think was more reasonable and rational legislation in this area met overwhelming opposition on this floor today.

Certainly, everyone is aware of the fact that the building of houses and apartments are proceeded on a larger scale this year than last year so that at the end of this year we will have an oversupply of housing in this country.

I just wonder if anyone has stopped to consider how many rental property owners will be caught squarely in the squeeze by the vacant housing units and skyrocketing real estate taxes.

Speaking for that part of my district which reaches into the city of Chicago, it is interesting to note that statistics show that in the metropolitan area permits alone last month were issued for 695,000 homes. The largest number for any 1 month since the boom month of April 1956.

In the city of Chicago, home and apartment construction during the past month showed gains of 97 percent over levels of 1 year ago. Apartment building permits alone in the city of Chicago last month were up 119 percent over a year ago.

The seasonally adjusted annual rate of Chicago area residential buildings last month climbed to a 1959 high of 62,285 units. Last year's actual production was 40,587 units and in the suburban area of Chicago apartment building has risen to an alltime high, while suburban home building soared sharply, too.

The April statistics show that suburban apartment building for the first 4 months of this year nearly doubled the number of the corresponding 1958 period.

In the face of these figures which I suspect are quite parallel to those of other metropolitan areas, we bring forward the most extravagant housing bill in the history of this country.

I received a letter today from the Greater Chicago Property Owners Council presenting some of the figures I have cited and containing a warning of the squeeze in which property owners whose taxes support the necessary Government revenues face.

It just seems to me we have embarked on a binge to create surpluses of every nature and description from the farm to the cities and most everywhere in between and with each ambitious program we create greater fiscal deficits in the Federal Treasury. Now, if one of these days we dedicate our legislative activities to creating a little surplus in the Federal Treasury and applied it against the astronomical national debt, I am sure that many good folks in this country would enjoy a feeling of gratitude and security and, particularly, the folks on pensions and fixed incomes whom we stroke gently on one side of the face while firmly bashing them firmly on the other.

The Red Stripes in Our Flag

EXTENSION OF REMARKS.
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. QUIGLEY. Mr. Speaker, it is a great pleasure to place in the RECORD the Armed Forces Day address given by Maj. Gen. H. J. Vander Heide, the commanding general at the Indiantown Gap Military Reservation, Annville, Pa., at York, Pa., on Saturday, May 16, 1959:

ARMED FORCES DAY ADDRESS, YORK, PA., MAY 16, 1959, BY MAJ. GEN. H. J. VANDER HEIDE

Mayor Schilding, Congressman QUIGLEY, other distinguished guests, members of the Armed Forces Week Committee, ladies and gentlemen, Armed Forces Week offers our American people an annual opportunity to evaluate our Armed Forces, an opportunity to determine for themselves whether our military forces are adequate for the security of our freedom, an opportunity to determine if the tax dollar is sufficient and well used in developing and maintaining our military forces.

During this week military installations hold open houses so that the public may learn about the effectiveness of our personnel and equipment. The status of our forces, and the threats to our freedom, are highlighted in news media and in talks throughout the Nation.

It is well that this is done, because under the form of government that we desire, our military forces are only as good as our people as a whole are willing to make them.

Today we maintain a military force—land, sea, and air—of 2½ million people. This is the largest force our country has ever maintained during a so-called period of peace.

Is this size force necessary? Is its cost justified? I believe the answers lie in a brief review of historical facts since World War II. You will recall that at the beginning of World War II the only Communist power on earth was Russia herself. At that time she controlled a population of 170 million people. A population about equal to that of the United States today.

Let us review very briefly what happened since that time. Remember how, in 1940, Russia took over Latvia, Estonia, and Lithuania. Remember how after World War II we collapsed our military forces. Remember how, while we were militarily weak, communism took over country after country which had been weakened by the war. Remember, in 1945, it was Poland, East Germany, Albania, and Yugoslavia. In 1946 it was Bulgaria and Rumania. In 1947 Hungary, and in 1948 Czechoslovakia. By the end of 1948 nearly half of the formerly independent countries in Europe had fallen to communism.

Remember what happened in the Far East. In 1945 Russia took over North Korea, South Sakhalin, and the Kurile Islands. In 1946 it was Mongolia. In 1949 all of the great land mass of the Chinese mainland fell to communism. In 1950 Tibet and North Vietnam fell.

By that time communism had expanded to such an extent that Russia controlled a population of nearly 1 billion people—that is about half the population of the earth. What was left of the free world realized that it would have to band together if it was not to fall piecemeal to communism.

The North Atlantic Treaty Organization (NATO) had been developed and was starting to strengthen. The Southeast Asia Treaty Organization (SEATO) was being molded. Other mutual-assistance agreements, whereby each member nation agrees to support each other if attacked, were being developed. Under these agreements the United States also provides assistance in the form of materiels and technical advice. The free world was developing unified strength.

But in June of 1950 efforts were made to communize South Korea. We immediately entered the war, and under the United Nations, saved South Korea from communism. We had lost our fear of the Communist surge. Our country had acted with positive decision regardless of the possible danger of igniting a general war.

Since that time our country has taken a firm attitude in dealing with forced Communist expansion. We have made it clear that we will use our own forces if necessary, any place on a moment's notice, to prevent communism from denying the rights of any member of the free world. Our determination on this point was clearly displayed to the world through our use of military forces in Taiwan and in Lebanon.

The firmness of our country's policy was clearly stated by our President last fall. He was talking before all members of the United Nations. He was dealing with the problems in the Middle East which had caused us to send troops to Lebanon, and the British to send troops to Jordan. In substance President Eisenhower said: "This world of individual nations is not going to be controlled by any single power or group of powers. This world of individual nations is not going to be commited to any single ideology. Please believe me when I say, the dream of world domination by a single power is an impossible dream." That was a strong statement. Our President made it clear that we would do all in our power to insure that Russia's dream of world domination is in fact, an impossible dream.

We must not weaken from that position. It is important that we realize that since adopting a firm policy in 1950, Communist expansion has been slowed to a walk. However, communism keeps nibbling at the periphery of the free world and continues its ultimate objective of devouring all of the world.

Today we are facing another crisis in Berlin. Our country has taken a firm stand. We have indicated a lack of fear of even a general war if necessary for the preservation of the rights of the Western allies and the freedom of the West Berlin people.

To back up our position we must maintain strong ready military forces. Such forces, if sufficiently strong act as a deterrent to war. We feel that Russia will not seek her own destruction if she feels we have the power to destroy her.

I know more about the Army than I do about the Navy and the Air Force. So, let me say a little about the responsibilities, strength and deployments of our Army forces. The Army has four primary responsibilities:

First, as our Nation's forward line of defense, the Army has forces near the Iron and Bamboo Curtains. If an aggressor should strike, these forces would offer resistance until reinforcements could arrive. In Europe, we maintain the fire-division 7th Army. In Korea we have the 8th Army with its 2 divisions backed up by 18 South Korean divisions. Sizable forces are stationed in strategic locations in Hawaii and in the Caribbean area. About 40 percent of our overall strength is deployed overseas.

Providing reinforcements for our oversea units, is the second job of the Army. For this purpose, it has a combat-ready Reserve in the United States. Its hard-hitting spearhead is known as the Strategic Army Corps or STRAC. The slogan of STRAC—"skilled, tough, ready around the clock"—describes its mission. Backing up the STRAC spearhead are other active Army forces to provide additional combat reinforcements for either limited or general war.

The third major job of the Army is a substantial share in the air defense of the continental United States. This is the responsibiltiy of the Army Air Defense Command. It maintains some 200 guided missile battalions on alert 24 hours each day. They defend, with their Nike surface-to-air missiles, 20 strategic industrial and highly populated areas.

The fourth primary responsibility of the Army is one of vital and personal interest to many of us here. It is to maintain strength to reinforce our Active Army units. This strength comes from the 27 Army National Guard and 10 Army Reserve divisions and other nondivisional Reserve units. They are organized and trained for either limited or general war. The divisions have the same pentomic organization as the Active Army divisions. They can mesh speedily and efficiently with other Army forces engaged in combat.

The Army Reserves, which of course include all Army elements of the National Guard, provide a vital part of our national defense. In time of war, their role is indentical with that of the Active Army. In combat there can be no distinction between Active and Reserve forces. It is essential that our citizen soldiers have the same organization, the same type of leadership, the same training and the same equipment as the Active Army. If war does come, they must equal the professionl soldier in combat readiness and in quality. Our reservists, in addition to pursuing their civilian careers, devote much time to military training in order to keep qualified for their military jobs. The shrinkage of time and space no longer permits the United States to mobilize and train forces over a period of time while our allies face the enemy. Because of this, the degree of combat readiness and efficiency of our Army Reserves comprise the determining factor in any emergency situation which is beyond the scope of our Active Forces.

Another essential Army activity is conducted in the military assistance advisory groups. The United States maintains these in some 75 countries. They contribute to the strength of the free world through the help they give our allies in developing the effectiveness of approximately 200 divisions in the collective security system.

An additional important activity of the Army is in the missile field. The Navy and Air Force, of course, also have vital interests and accomplishments in this field. However, the Army fostered the earliest steps and I would like to mention a few of its achievements. In 1944, the Army fired our country's first modern military ballistic test vehicle. In 1949, an Army missile established the record-breaking speed of 5,150 miles per hour, and reached an altidure of more than 250 miles. That flight marked several important "firsts." For the first time in history, communication was achieved by radio with an object more than 250 miles above the earth; for the first time, a two-stage rocket was separated in flight; for the first time, rocket motors were ignited at high altitudes, and the existence and nature of the thermal barrier were determined.

An outstanding example of the achievement of the Army's great missile team is the 1,500-mile intermediate range ballistic missile, Jupiter. It is now in production. It is taking its place in the line of America's defense as an operational missile in the Air Force. The Army's Jupiter–C rocket lifted the United States into the space age. It hurled the first American satellite, Explorer I, into orbit on January 31 of last year. On March 26, the Army Jupiter–C put Explorer III into orbit, and on July 26, Explorer IV.

The latest Army achievements came about as part of its participation in the Nation's efforts to probe outer space. Of five shots authorized, two were allotted to the Army. The Army's first try on December 6, 1958, did not develop quite enough velocity, and the missile, Pioneer III, penetrated only 66,654 miles into space. Pioneer IV, the Army's second probe, was fired early on the morning of March 3, 1959. By the afternoon of that day, all America knew that, for the first time, it had a missile loaded with valuable scientific instruments that had traveled well past the area of the earth's gravitation. The missile was on its way into orbit around the sun.

The Army's arsenal contains more than 10 types of missiles and rockets. Tactical surface-to-surface missiles range in size from the mighty Redstone, which can deliver a nuclear warhead 200 miles, to the antitank missile, capable of destroying the heaviest tank.

In connection with missiles, I would like to extend a word of caution. In view of the great range and destructive power of some missiles, some people are prone to believe that a war of tomorrow may be won by missiles alone. I assure you that against a determined foe that is not true. Balanced forces will be needed—forces to move over the ground, through the seas and through the air. Some people would like to believe that ground forces are becoming obsolete. The task of the infantryman is a muddy, bloody one, and I wish they would not be needed, but that just is not true. Against a determined enemy, there is only one way to ultimate decision. That is by overrunning the ground from which the enemy fights. General Bradley expressed it this way: "No victory has been insured until the man on the ground takes possession by his physical presence on the enemy's soil." General Lemnitzer, our Army's newly appointed Chief of Staff, expressed it this way. He said: "To protect people on this earth you need to hold the land with forces on the ground." I assure you gentlemen that as far as I go, and I believe our American people go, our country will never submit to conquest by remote control. Nor, I believe will Russia.

Overall, I feel our Army and our other services are doing exceptionally well with what we have. I am especially proud of the accomplishments of our Army Reserves. They have come a long way in the past few years. Every unit we now have would be useful if needed tomorrow.

Today we are facing a great challenge. That challenge, as expressed by our President in his state of the Union message to the 85th Congress, was: "Can government, based upon liberty and God-given rights of man, permanently endure, when ceaselessly challenged by a dictatorship hostile to our mode of life, and controlling an economic and military strength of great and growing power?" The President answered his own question in these words: "For us the answer has always been found, and still is found, in the devotion, the vision, the courage and fortitude of our own people. Moreover, we face this challenge, not as a single powerful nation, but as one that has in recent decades reached a position of recognized leadership in the free world."

So far, since the Korean war, the overall military strength of our country, Army, Navy, Marines, Air, including our Reserves, plus the assistance given to other countries has proven sufficient as a deterrent to war and as an effective restraint on the forced expansion of communism.

I feel certain that the value of freedom means enough to all of us to warrant the sacrifices necessary to maintain our country's present effectiveness in preserving a free world. If we hesitate to make sacrifices, if we develop into a Nation of individuals, each interested in only his personal gains, then we, like the Roman Empire, and each great power that has since risen and then fallen, may expect conquest and oblivion.

The opportunity in a free country for developing selfish interests, and the dangers thereof, have been recognized for many years. In 1917 Teddy (Theodore) Roosevelt said: "The things that will destroy America are: Peace at any price, prosperity at any price, safety first instead of duty first, a love

of soft living, and a get rich quick theory of life."

Somehow, I feel, that theory of life will never become damagingly effective, if we consider the meaning of the red stripes in the flag of our country. Those red stripes, when our flag was designed, symbolized the blood that had been shed to make possible the birth of our free Nation.

Today as we look at those stripes, we cannot help but think about the lives that have been given, and the other sacrifices that have been made so that you and I could walk on this earth as free men. It took a million lives to do that. Yes, we have a great obligation to those who have gone ahead of us, and for those who follow us. I feel that our generation will meet the challenge facing us. We will not lead our country, through selfishness, into oblivion. We will sacrifice the meaningless dollar, and our blood, and lives if necessary, in order to preserve a free world for our children and for their children.

True Champions

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. CAHILL. Mr. Speaker, I am happy to announce to the House that today members of the 1929 championship basketball team of Camden Catholic High School, Camden, N.J., are attending a reunion in Washington in celebration of their 30th anniversary.

These men have been fast friends throughout the years—all reside in the same general area of New Jersey where they lived during their high schools days and all are contributing to the general well-being of their community, State, and Nation by taking a real interest in community, State, and national affairs.

This group has maintained throughout the years a vital interest in their alma mater and played a dominant role in the reestablishment of the athletic program at their high school in 1946 which has brought not only credit to the school but inestimable benefits to the students and the community at large.

The members are accompanied by three men who helped guide them in their youth and have been their warm personal friends during manhood. These men are Rev. Paul N. Fairbrother, formerly athletic director at Camden Catholic and presently pastor of St. Patrick's Church, Woodbury, N.J.; Elmer "Al" Hertzler, former basketball coach and now associated with the Army Engineers here in Washington and Thomas Ryan, former baseball coach and now sports editor of the Camden Courier of Camden, N.J.

The members of the 1929 team, most of whom have joined in this reunion, are William "Pat" O'Brien, Wallace "Bud" Sheehan, Rev. Peter N. Budniak, Matthew Slapkowski, John Flood, Lawrence Crevey, John Bach, Joseph Lloyd, Joseph Sascovitz, J. Edward McGowan, Charles Woods, and William "Reds" O'Brien. The team managers were James Campbell and Harry Kelleher.

All of these men have, by their accomplishments in their respective fields of endeavor, been a credit to their school and community and have by their friendship and loyalty to each other through the years, demonstrated the great spirit and teamplay that carried them to championship heights in 1929.

Of such stuff is America built.

Michigan: A Land Rich in Resources

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. LESINSKI. Mr. Speaker, three major ingredients for industrial growth are resources, power, and transportation, all of which abound in Michigan, and are well described in the following articles by Culver Bailey, staff writer for the Michigan Education Journal:

MICHIGAN: A LAND RICH IN RESOURCES
(By Culver Bailey)

Michigan is a land of multiple riches—a second timber growth, wildlife, minerals, and 11,000 lakes—all basic to the needs of a present modern age.

Today these riches are ingredients of the newspaper you read daily, the boat you may fish from, the automobile which carries you from home to job, or the chair you now sit in. Each of these products has a part of Michigan's natural resources in it.

Nature piled up Michigan's resources during more than two billion years of geological time. Man spared a few resources, but some he bludgeoned without mercy.

A century ago big men, with rough muscular arms and hands, stripped much of Michigan's forest land. Some 34 million acres of the 36.5 million acres of Michigan land were forests. Today 19 million acres are classified as forest land. In 1880 Michigan lumbermen led the Nation in the production of lumber—five and one-half billion boardfeet.

Lumberjacks swung single and double-bladed axes time and again. Hardened steel cut the cambium and other living tissues of pines and hardwoods. They first cleared trees close to the rivers and worked their way from the western and eastern edges of the State diagonally north toward the center of Michigan, approaching the State's junior continental-divide, the current route of highway M-27.

The lumbermen dumped the trees into rivers flowing toward the Great Lakes, with the logs ending up at lakeshore towns of Muskegon, Grand Haven, and Traverse City on the west, and Alpena, Saginaw and Bay City, along Michigan's eastern coast. Most of Chicago was built with Michigan white pine, and then reconstructed again with it after Chicago's great fire in 1871.

FIRES FOLLOWED CUTTING

Months of drought and parched earth followed ruthless cutting of Michigan lumber. Cast away dry limbs and leveled trunk stubble furnished the fuel for six great Michigan fires between 1871 and 1911. Thousands of people became homeless, and hundreds of others died—some caught trapped hiding in underground vegetable cellers. Flame flicked across the State from Muskegon to Bay City, and south down into the thumb area toward Detroit.

After the fires a new kind of Michigan was born. The price paid for the fire had compensations, however, for today all the wonderful store of living things in the Wolverine State can be traced to this period in our history.

It took the burning to develop the immence deer herd here. The ruffled grouse began to thrive on the scrubby undergrowth that grew after loggers and fires had gone. Much wildlife was destroyed by fires, but in its place came our popular pheasant and rabbit stocks.

Before the fires, deer couldn't reach edible bark and limbs of the 150-foot giant hardwoods abounding in the State. The low-growing bush plants and the tender aspen trees which grew up following the upset of nature's balance offered a rare treat for fast-growing deer herds.

Since that time, Michigan's wildlife has grown to 310 species of birds and 60 native species of mammals. Today in the State's 11,000 lakes and 36,350 miles of streams there are found 28 families of fish, with 125 species of these the best known. Some of the best known are pike, whitefish, greyling, pickerel, cod, bass, and perch.

IRON ORE DISCOVERED IN 1844

In comparison to his rude treatment of the forests a century ago, man paid homage to Michigan's metallic minerals. Yet the minerals too—iron ore and copper—could have been taken from the land more resourcefully. But Michigan was the leader, and it brought up ore from the earth with a vengeance. This State led the Nation in iron ore production from the ore's first discovery near the present town of Negaunee in 1844 until the great Minnesota Mesabi Range became the leader in 1901.

Michigan today ranks second in the Nation in iron ore with an annual production rate of 13 million tons. The ore supply is depleting, however, and without additional high grade ore discoveries, the remaining 140 million tons will be exhausted in 10 years.

However, a discovery in 1948 of 2 billion tons of low grade iron ore 100 feet below the surface in the upper peninsula is expected to give Michigan's iron ore supply a boost. There is enough of the mineral there, geologists say, to supply as much as was mined during the past 110 years. The productive Marquette and Menominee Ranges presently are producing the low grade ore and sending it by train to the Sault, and from there shipping it by lake freighters to Great Lakes' ports.

The skilled Cornish, Scandinavian, Italian, and Irish miners of the Upper Peninsula relentlessly hammer underground, knocking chunks of the low grade ore into smaller pieces. They scoop it up with mechanical machines and send it on its way to the earth's surface.

COPPER INDUSTRY RANKS SIXTH

A story somewhat paralleling Michigan's iron mining is the State's copper industry—only copper mining has declined much more. Michigan, the former ruler of the Nation's copper production, today ranks sixth in the Nation. Arizona, Utah, Montana, Nevada, and New Mexico rank ahead in that order.

Copper and iron ore in Michigan are costly to produce, for these metallic minerals must be brought up from mine shafts as deep as 2 miles. Some years the cost-profit margin for these two minerals is hair-thin. The leading metallic mineral States take iron and

copper from shallow open pit mines—a much less-costly method.

Michigan's pure, malleable copper—a rarity in other parts of America—is mined out of the Keweenaw Peninsula. It has been mined there for thousands of years. Records date back to 5000 B.C. to ancient Indian tribes who heated copper in shallow pits and quickly dashed cold spring water against it to cause the copper to crack, thus affording easy opportunity to pry the copper loose for weaponmaking.

Though Michigan's metallic minerals have slipped from the prominent national positions they once held, the State's nonmetallic minerals are coming to the fore. Gypsum, to make plaster to coat your bedroom walls; sand and gravel, to make concrete for Michigan's vast construction projects—new homes, factory buildings, and metropolitan shopping centers; and salt, to manufacture supplies for the farmer and the chemist, all rank high in America's production of nonmetallic minerals.

Other nonmetallic mineral resources produced in Michigan include marl, cement, clay and shale, lime, peat, bromine, magnesium compounds, calcium-magnesium chlorides, and potash. The bromines, compounds, and chlorides are sold to local chemical industries.

MICHIGAN'S OIL RESERVES

Also from the depths of Michigan's earth comes oil. Since the 1890's some 23,000 wells have been dug in this State. Three new oil wells recently began production—Scipio field in Hillsdale County (January 1957), Albion field near Albion (December 1958), and Pulaski field near Jackson (January 1959). Today most of the producing wells are clustered in central Michigan. Walker field, west of Grand Rapids, is the State's largest oil field (7,200 acres). Porter field, Midland County, leads in cumulative production with 46,833,793 barrels (1957 statistics).

Without Michigan's vast water resources, the automobile industry and other industries would find it difficult to survive here. For every 100 gallons of water a person uses directly, many times that amount is used for him by industry and service facilities. In industry it takes 14,400 gallons of water to produce 1 ton of pig iron; 65,000 gallons to produce 1 ton of finished steel; 18 barrels of water to refine a barrel of oil; and, 15,000 gallons of water to make an automobile.

Each person requires 1,300 gallons of water daily to meet his direct and indirect needs. Underground water is a source of supply for small communities in the State, but the larger cities pump water from the Great Lakes. They also take water from nearby rivers.

Cities, towns, and villages, are expanding steadily. Their boundaries are progressing outward; subdivisions spring up almost overnight. This expansion of urban areas means that Michigan's natural resources are diminishing on a per person basis. There are more people (Michigan is second only to California as the fastest growing State in the nation) now living within this state than ever before. Each year Michigan residents crowd the lakes, parks, forests, and land.

Today there are 1.5 million more people in Michigan than there were 8 years ago. What a far cry this is from the solidly timbered lands of the State 100 years ago and from the days when one of four retreating glaciers left an indelible line from Muskegon across the width of the State to Bay City. The glaciers left a dividing line of fertile clay loam soil in southern Michigan and sandy forest lands in the north.

ESTHETIC RESOURCES, TOO

Michigan abounds in natural resources. Both the utilitarian and esthetic kinds (esthetic includes Michigan's picturesque rivers, lakes, and scenic views) are here practically for the asking. Fortunately, no longer do men of the former lumber baron vintage exist.

Instead, we have profited from the mistakes of a century ago. The establishment of a State conservation department to preserve the balance of nature attests to this. With your help, Michigan's remaining natural resources can be preserved for the appreciative generations to come.

POWER: ATOMIC AGE NEARS REALITY

(By Culver Bailey)

Michigan's power past and present combined together into a knotted bundle of energy, is today swiftly annexing to itself a parcel of the future.

The parcel is the atom, and the present power sources—water, coal, and steam—patiently mark time for the rapidly approaching future. They work and wait, eventually to be swallowed whole by the coming atomic age.

"Twenty-five years from now all new powerplants will furnish atomic energy," predicted Dr. Paul S. Geracht, vice president for atomic energy at the Chase Manhattan Bank in New York City.

Meanwhile, Michigan's present utility power of conventional steam pressure mounts to tornado-like speeds up to 700 miles an hour. The pressure revolves turbines which cause mighty generators in 33 steam plants throughout the State to unleash electrical power.

These stanch generators will hold the line, supplying enough power to light our cities and operate our factories, until the atom can be harnessed to produce electricity.

In 2 years scientists expect to launch their quest to produce peacetime atomic power; the place will be the new 15-acre Enrico Fermi atomic powerplant at Lagoona Beach, near Monroe. In February, scientists will begin conducting experimental tests at the Fermi plant, the largest in the world, under nonnuclear operating conditions. Nuclear fuels will not be used until the entire plant installation has been thoroughly tested.

The scientists will attack their objective with a huge, gleaming, steel walled, fast neutron breeder atomic reactor, as high as a two-story house and nicknamed the "pot." Of the 10 different types of atomic reactors, the last breeder was chosen for the Fermi plant because it likely will prove economically competitive with coal in producing electricity.

One pound of uranium 235, the size of a cube of sugar, produces as much heat as 30 carloads of coal. Heat, the main product of the fast breeder reactor, is transferred from the reactor vessel by liquid sodium through stainless steel tubes to turbines. The turbines, revolved by the heat pressure, turn the electricity producing generator. Plutonium manufactured as a byproduct will be bought by the Federal Government for use in atomic bombs. It can also be used for fuel in other types of reactors.

The 91-ton breeder reactor, housed inside a 77-foot high metal-plated dome, promises to be the key to undreamed expansion of Michigan's electrical facilities.

Enrico Fermi, one of the world's greatest nuclear scientists, in whose memory the atomic plant was named said in 1945 that the country which first develops a breeder reactor will have a great competitive advantage in atomic energy.

The Fermi plant reactor had its beginning in 1951 with the formation of four industry study groups. They sought a new source of abundant, low-cost electric power.

In 1954 Atomic Power Development Associates (APDA) was organized by 31 power companies and 18 engineering and manufacturing firms. Together they shared the expensive research, experimentation, and development work that has gone into the basic design of the $75 million Fermi project. The Power Reactor Development Co. (PRDC), comprised of 18 power companies and 7 manufacturing firms, constructed the huge atomic reactor.

However, at the moment, Michigan's conventional electric and natural gas powers, as we know them today, reign supreme. With the strength of straining horses, electricity flows unnoticed into your home through long, thin, copper wires no longer than your finger.

It turns the machines of our giant manufacturing industries, gives us light to see by, helps heal our bodies, and spreads our ideas from one place to another. It is an awesome power, and it has hewn away barriers to help establish modern civilization.

It brought progress to Michigan via steam and waterpower. In an instant, a particle of coal is shot into the boilers of Michigan's 33 huge electrical steam-generated plants. Less than a second later the energy of that coal, transformed into steam, produces electricity. An instant later electricity is miles away, heating your electric iron, running your refrigerator, or lighting your reading lamp.

Electrical power, too, is produced in 13 Michigan powerplants sponsored by the Rural Electrification Association (REA). These farmer owned and operated cooperatives are aided financially by the Federal Government.

Or, water flowing through 69 power dams in the State likewise cause generators to be turned and electricity to be produced. One of the larger dams, Tippy Dam, is located on Manistee River, just east of Manistee. The Au Sable, Manistee, and Muskegon Rivers supply power for most of Michigan's dams. Smaller dams are located on, among others, the Maple, Grand, and Thornapple Rivers.

This electrical power from the steam-generating plants, the REA farmer-owned cooperatives, and the dams carry out many tasks once requiring backbreaking work.

What a change this is from the old days. Manufacturing plants formerly fed coal into a steam-generating boiler at one end of the factory building, and the generated steam turned long poles stretching from end to end high above. A myriad of leather belts and pulleys were attached to the machines and connected to the long revolving pole above. The pole, while turning, gave the machines power to produce goods.

Today each machine has its own motor. Powered by electricity, machines hum effortlessly, in some instances almost noiselessly, day and night.

TRANSPORTATION: ST. LAWRENCE SEAWAY PLAYS IMPORTANT ROLE IN MICHIGAN'S FUTURE

(By Culver Bailey)

Two great arms, Lake Huron and Lake Michigan, in 1962 will link Michigan shipping, truck and railroad industries to a new transportation wonder, the St. Lawrence Seaway.

This Great Lakes-saltwater link will bring to Michigan the cheapest, quickest foreign import-export transportation the State has ever known. It will put the Detroit, Bay City, and Muskegon ports on a direct sea route with the rest of the world.

Within 3 years 10,000-ton cargo capacity oceangoing vessels will steam through the Detroit River seeking Michigan ports. They will want to unload cargoes of Scandinavian

timber, China clay from Great Britain, aged liquors from France, olive oil transported from the Mediterranean, and metallic minerals—copper, lead, zinc, and manganese—from Canada.

However, these ships may be in for a surprise. Michigan ports aren't prepared to wrest great foreign cargoes into their existing facilities. Detroit's port is unable to handle the anticipated foreign shipping. Bay City and Muskegon are improving their ports, but they aren't large enough yet.

Even so, the State's internal transportation systems should be ready to do their part in generating foreign trade. Underway today is a $1¼-billion State highway construction program. Within 5 years new 4-lane, divided expressways will be located within 30 miles of 90 percent of Michigan's industry. Carrier trucks, with loads up to 35,000 pounds of freight, will roll along the new highways to deliver cargo from Great Lakes' ports inland to the automobile, steel, and primary metals industries.

And the 13 Michigan railroads, some with tracks laid evenly next to port docks, wait patiently for the first foreign ships to push their way through Lakes Huron and Michigan. Trains will haul cargoes of heavy machinery, iron ore, gravel, and cement to Michigan's metal industries, and general commodities (including some sugar and coffee) to processing factories.

At present, however, the problem of inadequate ports persists. Detroit's 25-mile-long port is too small. Last November the Greater Detroit citizenry passed up a second chance to construct a $7 million port terminal which would bring the city an estimated $40 million in 1965 from import-export shipments alone. Detroit's failure to provide for increased seaway traffic could mean a loss to the city of $110 million in direct and indirect income in the next 5 years, according to Carlis Stettin, director of the Detroit port commission.

SEAWAY IS A NEW RICH COAST

This 8,300-mile new American north coast will be richer than the Pacific and gulf coasts combined. Challenging the Atlantic coast for the Nation's shipping supremacy, it will connect Chicago, Milwaukee, Duluth, Toledo, Cleveland, Hamilton, Toronto, Montreal, and Buffalo. Midwestern ports will compete with the rich Eastern ports of New York, Boston, and Philadelphia. Via the St. Lawrence Seaway, Hamburg, Germany, will be 199 miles closer to Cleveland than to New York City.

If Detroit doesn't act soon, Bay City and Muskegon—slowly progressing—could divide Detroit's lower Michigan hinterland potential and reap the rewards (a port's hinterland is the inland trade region served by a port).

The Midwest hinterland—extending from the Rocky Mountains to the Ohio River Valley—is in Michigan's backyard. Today the Midwest sends its exports of steel, automobiles, and machinery from its major production centers by railroad to the east coast. From there the exports are reloaded on ships sailing to foreign ports.

The combined cost of sending cargo by rail and then by ship will be practically double the cost of sending the same materials on a direct water route from Detroit, Bay City, or Muskegon to European ports via the seaway. This is why Michigan automobile manufacturers and primary metal industrialists could send cargo to foreign ports cheaper than ever before. Automobile shipments aboard a 500-car capacity oceangoing freighter via the seaway will save manufacturers $45 a car.

Construction of the St. Lawrence Seaway began 4 years ago by Canada and the United States. The actual work consisted of cutting a seven-lock canal around turbulent rapids between the eastern end of Lake Ontario and Montreal.

SEAWAY TO OPEN IN 1962

The seaway will be completed this spring. However, ocean vessels cannot be sent into the Great Lakes until 1962. The lakes' connecting channels will not be deepened to the required 27 feet until that time. America is spending $141 million for its part of the seaway remodeling job. The cost is great; it has to be. Enough earth and rock have been moved to fill a 27,000-mile-long train of 50-ton hopper cars.

The seaway is expected to be worth the cost many times over. Nevertheless, Michigan's ports have a big job ahead of them, and the first task—convincing Michigan's citizens of the seaway's potential worth—is the toughest.

Michigan's highway authority, the railroads, and the truck terminals are aware of the seaway's potential. Within 5 years through expressways for 95 percent of Michigan's residents will be as close as Lansing is to St. Johns—a distance of 80 miles or less. The 5-year billion dollar highway construction program will connect all State cities of 50,000 population or more. Three interstate expressways are included in this program; US-27, extending from southern Ohio to the Straits of Mackinac Bridge and beyond to Sault Ste. Marie; US-16, linking downtown Detroit to Chicago; and US-23, an expressway connecting New York State with Detroit and Muskegon.

Currently 193 road and 134 bridge projects are in various stages of construction. About $142 million was spent last year for highway construction. Total highway costs for 1959 will reach $190 million.

As all motorists know, travel today on the new four-lane, divided expressways is easier and quicker in comparison with the old two- or three-lane highways. Stoplights don't exist, and the slowdown of traffic resulting from cars and trucks moving in and out of roadside drives has disappeared. The through traveler can maintain consistently high speeds—often averaging more than 20 to 30 more miles an hour than on the old roads. The more than 1,000 certified truck lines in the State also appreciate more convenient expressway-driving.

Michigan—with transportation arteries leading to all parts of this mitten-faced State—should welcome the St. Lawrence Seaway. However, if our Michigan ports suffer from hardening of the arteries (that is, insufficient facilities), all that may be seen of foreign ships is a trail of smoke on the Great Lakes' horizon.

Big Labor Union Power a Growing Menace

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. MASON. Mr. Speaker, big labor union bosses are wielding too much political and economic power today. Organized by Samuel Gompers, the "Grand Old Man" of union labor, to combat the power of the industrial barons of 40 years ago, big labor has gotten out of hand and some of its unscrupulous present-day leaders are wrecking our national economy.

Inflation has been speeded up by the exorbitant wage demands of these union leaders. Prices of American-made goods have soared. Imports from cheap-labor countries are pouring into the United States as never before. American exports have been drastically reduced because we have been priced out of world markets. American production machinery has been slowed down, with the result that many American workers have lost their jobs.

Why? Mostly because of the unchecked political and economic power of the leaders of big labor.

The rank and file of labor union members have little or nothing to say about all this. Policies and programs of the big labor unions are determined by the labor bosses—not by the labor union members.

The rank and file of labor union members have no way to protect themselves from the corruption, the misappropriation of union funds, the dictatorial methods of their self-perpetuating leaders—abuses and corruption recently revealed by the McClellan Senate committee.

Samuel Lubell, a noted political and economic writer, interviewed a wide cross-section of steelworkers on the eve of their leaders' negotiations for a new contract. Man after man told him: "We don't want higher wages. And we don't want to strike because a strike means a loss of pay that we'll never make up."

The magazine U.S. News & World Report confirmed Mr. Lubell's findings in its issue of May 25, saying:

> It is being pointed out that the rank and file of steel workers are not in a mood to strike. They are not keen for wage increases that vanish in higher prices and taxes.

Yet the big union leaders continue to insist: Higher wages or we strike.

Mr. Speaker, what will that mean? More inflation. What has it meant in the past? Well, featherbedding and increased wages out of all proportion to increased productivity. These are factors that enable cheap foreign-made goods to undersell American-made goods in world markets and in our own American markets.

For the first time since 1865—almost 100 years—British exports to the United States exceed her imports from the United States. And the same situation is rapidly becoming true in our commerce with Japan, Germany, Belgium, and other nations.

Mr. Speaker, because the cost of production—wages—has been pushed so high by the labor leaders, American goods are in less and less demand in world markets. The downward trend of American sales in foreign countries is becoming increasingly serious. Our prices for goods are entirely out of line with the prices of similar goods produced by exporting nations with which we have to compete. When American prices are too high for American buyers—as they are today—they are far too high for low-wage foreign people to buy.

Summed up, all this means fewer jobs for American workers and more jobs for foreign workers.

Is that good, I ask, for American workers generally?

Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS JUSTICES ASSIGNED TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Tribute to Dean Francis Bowes Sayre, Jr.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and stimulating story which appeared in the New York Times of today about Dean Francis Bowes Sayre, Jr. There are few men who have made more contributions toward making this a better world than Dean Sayre.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCION OF WHITE HOUSE—FRANCIS BOWES SAYRE, JR.

WASHINGTON, May 21.—Francis Bowes Sayre, Jr. went back today to his birthplace, the White House. At his birth it was occupied by his grandfather, President Woodrow Wilson. From then until now, no other child has been born there.

Now 44, and dean of the Washington Cathedral (Protestant Episcopal) the Very Reverend Mr. Sayre went back to the White House offices as Chairman of the U.S. Committee on Refugees. The purpose was a 2-day meeting with President Eisenhower to discuss this country's participation in World Refugee Year, a program to liquidate as far as possible the problem of the homeless across the globe.

Dean Sayre's leadership in this effort was typical of his wide range of interests—humanitarian, social, and political—outside the pulpit that have marked his career since he was ordained in 1940.

These activities have made him a somewhat controversial figure in the religious community, but he never has allowed the probability of controversy to stay him. He spoke out against the late Senator Joseph R. McCarthy of Wisconsin when the Republican Senator was at the peak of his power. He called the Senator's followers "The frightened and credulous collaborators of a servile brand of patriotism."

Though some of his wealthier parishoners remain stubbornly opposed to self-government for the voteless District of Columbia, the dean is a steadfast champion of home rule. He said some of its opponents now posessed back alleys to power but with home rule they would need to find new pipelines to power.

The cleric, 6 feet 2 inches tall, leads a busy, energtic life. Up early, he conducts the early service of holy communion at 7:30 a.m. in the cathedral, then crosses Woodley Road to breakfast with his family.

His wife is the former Harriet Taft Hart, daughter of Thomas C. Hart, a retired admiral who commanded the Asiatic fleet at the outset of World War II and later was briefly Senator from Connecticut.

DEAN IS FATHER OF THREE

They have three children, Jessie, 10; Thomas, 8, and Harrie, 3. A Thai boy, Tridhos Davakul, 17, has been living with them for 7 years while he attends the cathedral school.

The Dean and Davakul's father grew up together, and whimsically the Dean refers to his young charge as "my private point 4 program."

By 9 a.m. Dean Sayre is in his office for a series of appointments, informal meetings with his staff, dictation and telephone conversations.

Part of his job is to raise funds to finish the cathedral, started in 1907. When time permits, the Dean loves to clamber up ladders and on platforms high in the unfinished cathedral. He talks with the carpenters, stonemasons, and stone carvers while his secretary tells telephone callers that the Dean is in construction conference.

YOUNG SAYRE STUDIED ABROAD

From his White House birthplace young Sayre moved with his parents, Francis B. Sayre and the late Jessie Woodrow Wilson Sayre, to Cambridge, Mass. His father was then a professor of law.

Young Sayre spent his early years at Belmont Hill School near Cambridge. When his father became adviser to the King of Siam, he went to Bangkok for a year. He attended schools in Paris and in Switzerland before entering Williams College, from which he was graduated cum laude in 1937.

His theological training was obtained at the Union Theological Seminary in New York and at the Episcopal Theological School in Cambridge. His first assignment was as assistant minister at Christ Church, Cambridge.

He entered the Navy in 1942, and served nearly 4 years, including duty as chaplain on the heavy cruiser San Francisco in the Pacific.

"We were bombed, hit, strafed, kamikazied," the dean recalled. "It was the finest ministry I ever had in my life.

"You really get to know people when you eat, sleep, get bored, get afraid with them."

After the war, he served churches in Cleveland until he was installed in May, 1951, as the fifth dean of the cathedral in which his grandfather is buried.

New Maritime Developments

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. MAGNUSON. Mr. President, many promising new developments in ship design, navigation, and expediting cargo shipments were discussed at length in the address my colleague, Senator LEVERETT SALTONSTALL, of Massachusetts, delivered last night May 21, 1959, before the Propeller Club of Washington, D.C.

Because of the new light cast upon this vitally important subject, I ask unanimous consent that Senator SALTONSTALL's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR LEVERETT SALTONSTALL, OF MASSACHUSETTS, BEFORE THE PROPELLER CLUB OF THE UNITED STATES, WASHINGTON, D.C., MAY 21, 1959

Control of the sea—a watchword of the past—is still today synonymous with world leadership. Ocean commerce is the very lifeblood of the world. Nations aspiring to world leadership always sought to promote their own trade through ocean commerce, and it is more than coincidence that through the ages world leaders have been strong maritime nations.

Today commerce consists not only of trade upon the sea, but above it in the modern jet airplanes now just going into trans-Atlantic service. One jet passenger liner makes the round trip from New York to Paris in the course of a day.

Can we draw a historical parallel from those nations which preceded us in leadership of the world's activities upon the sea? Each of these nations conquered a new frontier of commercial enterprise. The Phoenicians explored the Mediterranean from end to end, passing the Pillars of Hercules and reporting back what they found beyond. The Romans carried this further, exploring down the coast of Africa and up the coast of Europe. The Vikings and Venetians further expanded the realm of man's knowledge of the world around him.

Henry the Navigator of Portugal sent men around the Cape of Good Hope. Isabella of Spain financed Columbus. Following these acts, Spain and Portugal became the leading centers of western commerce, until leadership was wrested away from them by the sea-dogs of England.

A century ago the United States was making a bid for maritime leadership with packets and clipper ships. Much of the ship development was done in East Boston by our own Donald MacKay, who took large risks by building ships on speculation. The courage of the captains was legendary. However, our western expansion halted this growth, and British steamers soon took over the sea.

Again, later, in the last throes of sail, the most unusual schooner ever built, the *Thomas W. Lawson*, was launched in Quincy. She was an effort to create a minimum cost collier. She suffered two collisions in her career with steamers whose captains did not realize she was moving faster than they were.

The First World War wiped the sailing ship from the sea for good. During it, we built up a large merchant fleet of Hog Islanders and other ships. Our great trouble was that we let our sea leadership go back to Europe after the war. Until the Maritime Commission programs of the 1930's little was done to expand U.S. activities on the sea.

During World War II the United States again inherited the responsibility of leadership in the defense of freedom. With it came leadership in world commerce. Whether we like it or not, we must face up to the challenge and shoulder the responsibility it imposes. We have begun to do that already, with our ship replacement program, but more must be done. Today we must seek out the new frontiers and conquer them.

Time is our new frontier—not geography. Today time is money more than ever before.

Magellan's crew took 3 years to circumnavigate the world. Now a satellite does it in 90 minutes or less. The cargoes of today need to be carried at greater speeds. The turnaround of the vessels carrying them must be cut. Now the battle is not to the discoverer, but to those who take the risks of new investment, of new research and development, and make those risks pay off. Our American forefathers on the sea risked all they had on their voyages of discovery of new markets in the spice islands and the Near East.

In recent years man has broken the sound barrier and speed has become a vital and precious commodity in exploiting the medium of the air. But man has yet to break the sea barrier to any like degree. Through the years there has been no dramatic improvement in the speed of surface vessels from the days of square riggers to our most modern nuclear-powered vessels. If ocean commerce is to remain vital and strong, competition demands that ocean vessels achieve faster, improved speeds. For speed is the key to both economical operation and the quick service which today's world demands.

Here in the United States we are testing the nuclear possibilities of a general cargo ship, the NS *Savannah*, shortly to be launched at Camden. Her namesake predecessor taught the world many of the advantages of steam. While the first *Savannah* had difficulties with her fuel supply, this *Savannah* will have none.

But nuclear propulsion raises another difficulty of its own—great weight. The shielding required to surround a nuclear powerplant takes up much valuable cargo space, so it is probable that for the present it will only be feasible for larger vessels.

Partly to solve the problem of getting more productive space, our research people have under test a gas turbine engine which, though it requires fuel, is relatively economical in the use of that fuel. It can be built cheaply of standard parts, so that the entire powerplant is relatively light in weight for the power it delivers.

I am told that our gas turbine Liberty ship, the *John Sargent*, has made 20 knots—light, of course. What would this have accomplished had it happened during World War II? It could well have shortened the war, for these gas turbine engines can be mass produced. I am told that they are very similar to a Pratt and Whitney J-57 but with another turbine wheel attached; put together they cost about $225,000 to produce 16,000 horsepower and only weigh about 6,000 pounds. With intercooling, I understand it can equal a diesel in fuel economy and is actually more efficient on cold days at sea level than it is at high altitudes, because of the greater density of the air.

Speed is the way to today's fast-moving world. What are we doing to increase the speed of our vessels?—not by just a few knots—but by double or triple the present possibilities? No displacement vessel has yet, to my knowledge, exceeded 45 knots, not even submarines which do not meet surface resistance.

But there are possibilities—for example, of hydrofoil craft which go far beyond 45 knots. Hydrofoils, in principle, are nothing more than miniature airplane wings, terribly strong, operating just below the surface of the water in a medium 800 times as dense as that supporting an airplane. The foils actually lift the hull out of the water, thus enabling the vessel to achieve greatly increased speeds. It derives obvious advantages from the density of water. Anyone who has ridden on an aquaplane or water skiis knows how this principle works. Last year I had the opportunity to manipulate one of the Navy's experimental hydrofoil vessels, and what a thrill it gave me.

The Maritime Administration is experimenting and private research is investing in hydrofoil craft to learn their possibilities and their limitations. They may hold the key to increased speed for ocean travel and commerce. A few years ago the Congress appropriated $1 million for hydrofoil research. Yet the money was never spent. Fortunately, farsighted officials of the Maritime Administration embarked last year upon a thorough research project designed to investigate the possibilities of hydrofoil application to maritime vessels. I quote from Clarence Morse, Maritime Administrator, when he made this announcement a year ago last January:

"We intend to take a closer look at the possibilities of hydrofoils for larger ships. In the air, aeronautical scientists have broken the sound barrier. Why shouldn't we break the sound barrier on the surface? Why should we continue to think in terms of 30–35 knots? Why shouldn't we think in terms of Mach II, or better, at sea?"

He also said:

"We will still have a merchant marine when the rocket boys are landing on the moon—and we will have a merchant marine which is far more efficient than our existing fleet."

Again, let us look at our competition. In the western world, a few hydrofoil passenger craft are now operating—in Italy, Switzerland, Puerto Rico, and elsewhere. But, Russia, our chief competitor, has them in regular use on inland canals. I have been shown photographs of Russian hydrofoil vessels which operate at high speed on her inland canals in less than a meter depth of water.

Other hydrofoils are being tested on the ocean, where it has been found that they can maintain high speed in spite of rough seas. By lifting the hull of the ship 14 feet or more above the water, which is entirely practical in the open ocean, seas of up to 20 feet in height—or over 90 percent of those encountered in the North Atlantic—can be passed over without difficulty.

Airplanes may carry the most expensive types of cargo, but here may be a vessel which carries the intermediate merchandise—not ore or oil—but general cargo. Time is money, and the investment in a cargo delivered in 3 days is far less than the investment in a cargo delivered in 2 weeks.

Delivery, however, involves more than just moving things from place to place across the oceans—it involves cargo handling with its high manpower costs. What new advances are contemplated here? We all know of the roll-on, rolloff ships, which though not yet perfected may still have great potential. We know that conveyer belts and forklift systems are now standard on docks and piers. Tomorrow new systems may make these standard in ship's holds. Ships have been ordered that use cranes rather than masts and booms for cargo hoists. Expanded use of specially designed vessels to transport solids in a liquefied state offer great possibilities (sugar and sulfur are present examples). Container ships, which though expensive, have obvious advantages, are being studied. New equipment purchases for the piers of our ports must be encouraged, and ships fitted to make best use of them. Many well known efficiencies in time and laborsaving devices are well known, but have not been put into practice to any extent.

Nowadays a ship spends from 35 to 50 percent of her time in port. Since she earns only while moving, any speedup of the turnaround in port can generate new profit.

Much can be done in the way of voyage planning with the new data processing equipment. Cargo stowage plans can be worked out and optimum voyages and schedules predicted far in advance, making better use of our investment in ships. An idle or empty ship is an expense, not an earner.

So much for the present. Research is the key to the future. Research is now going forward on those advances which I have discussed tonight and many more with which you are better acquainted than I.

But research is worthless unless the idea is tried. Some ideas can be tried inexpensively, such as the new layout of the navigation bridge which has been suggested. Others are tried by the Government which has already made the major investment in some navigation systems for the benefits of our armed services. These new developments in navigation will provide greater safety and thereby greater opportunity to operate at greater speed.

Take, for example, space research now underway.

Navigational satellites may soon be circling our earth which will enable a mariner to determine his position within a small fraction of a mile on any place on the earth. This will eliminate the need for Loran and other equipment which requires stations closely spaced around the globe. Once in orbit, these satellites may make the investment for the shipowners mush less costly in time saved and accidents avoided. One collision or one wreck costs the whole industry money, for it comes out of insurance premiums. We taxpayers can assist in many ways, but eventually the burden of the responsibility to maintain our Nation's supremacy on the sea will fall on you people.

Just as the railroads have lost much of their more valuable cargo to the trucklines which provide greater flexibility of service, you are endangered by the airplane with its greater speed and opportunity to land closer to the point of destination. The railroads have not been replaced in the carrying of iron ore and coal, but they have lost much of their miscellaneous tonnage.

Flexibility, efficiency, greater speed, lower cost, and less weight. These are all goals toward which we must strive. There is no reason why you and I should not consider looking forward to turbine or nuclear powered hydofoil craft crossing the Atlantic at speeds in excess of 100 knots, carrying medium-size general cargoes, turning around in less than a day. This will accomplish in sea transportation many of the gains which have been accomplished in the last 30 years by the trucking industry on land. Ships will no longer be economically restricted to hauling large cargoes along relatively fixed routes due to the need for large terminal facilities and deep harbors. Smaller craft will be operating at greater speeds, with more frequent service to many more ports, including those on our Great Lakes which have opened a new market to the salt water shipper. Other new markets in Africa, in South America, in southeast Asia, and in India are only just now being developed.

If we are willing to take the risks of developing new ideas, many of which are already known and well established, we can look forward to closer contact by our own ships with our neighbors across the sea and within our own Nation.

I believe we are prepared to take these risks. Already our Maritime Administration is doing much research, our Navy is looking at new ideas, and, best of all, our shipping companies are building new ships.

This work needs more effort and more coordination. The National Academy of Sciences is presently making oceanographic studies, a subject closely related to shipping. This study should be expanded or a parallel one instituted to coordinate and expedite research on commercial ships, setting up a fund to which private companies and Government bodies could contribute men, ships, and material.

Private cooperation with Government is the key to this work. An example in which I take some pride is the way in which work has been carried out under the Saltonstall-

Kennedy fisheries research program, where privately owned ships have experimented with new types of nets and equipment supplied by the Government.

Under a similarly coordinated program, I can visualize private lines operating their own ships with experimental engines, paid for by the Government, or a small hydrofoil cargo ship being built by the Government and privately operated between the United States and Hawaii. These are merely examples of what an amateur can conceive.

Research must be carried on and development must follow. The burden of carrying forward America's present world leadership will fall largely upon you. I am sure that in a few years we will see the American flag in many new ports to pick up cargoes that are hardly known today, in ships that stay only a few hours, and ships that bear small resemblance inside and out to those that now ply the seas.

But they must be American-flag ships, or our children will inherit far less from us than we inherited from our forefathers.

Metric System of Weights and Measures

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. NEUBERGER. Mr. President, the Oregonian, of Portland, of May 9, 1959, published an excellent editorial entitled "Sensible Measure." The editorial advocates a conversion to the metric system of weights and measures. Already our scientific community uses the metric system, so why should it not be used by the American public as a whole? I think the editorial in the Oregonian, Mr. President, should be printed in the Appendix of the RECORD for the information and enlightenment of my colleagues, and I ask unanimous consent for that purpose.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENSIBLE MEASURE

When a nurse gives you a shot in the arm, she measures the dose in cubic centimeters. When you buy film for your camera, chances are it will be designated as 35 millimeters in width. In the growing field of physics, American scientists, as well as those of nearly every other civilized nation, use the metric system exclusively.

This was pointed out in an announcement by the American Geophysical Union the other day that returns on a questionnaire published in leading scientific and engineering journals are running 93 percent in favor of America's changing from its table of weights and measures to the metric system used in most non-English-speaking nations. The scientists and others returning the questionnaire do not favor a sudden switch, but one of gradual evolution over 20 to 25 years.

Despite the Iron Curtain and other barriers, the world is becoming more closely related. One can cable or telephone an order from almost any part of the world today and day after tomorrow a plane can deliver it from an American factory. But if the American product is measured in inches or pounds, the foreign buyer will have to be a sharp mathematician to be sure that it is just what he wants.

It was only 4 months ago that the United States and Britain got together on just what an inch is. It is now 25.4 millimeters. But until January of this year, the American inch was 25.4000508 millimeters and the British 25.3999722 millimeters. The discrepancy could make a lot of difference to a buyer and the failure to use the common language of measurement—the metric system—could cost American industry a pretty penny. The penny, incidentally, is sensibly part of a decimal system, just like the millimeter.

Ounces and pounds, inches and feet, quarts and gallons don't make sense. Some day we'll have to go farther than the nurse's shot in the arm, the camera film and scientists' computation to get in step with the larger part of the world. It will cost a lot of money to change our dies and rulers but it will be worth it in the long run.

Address by Rev. John E. Colman, C.M.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an excellent address on the subject of education by the Reverend John E. Colman, C.M., of Niagara University in New York, at the Vincentian-day Academic Convocation on April 20, 1959, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NIAGARA UNIVERSITY AND THE PURSUIT OF EXCELLENCE

(Address by Rev. John E. Colman, C.M., Vincentian-day academic convocation, Niagara University Student Center, April 20, 1959)

As a token of esteem, Niagara University has just bestowed upon three Christian gentlemen honorary degrees impressed with the seal of the university. Part of that seal includes Niagara's motto, "Ut omnes te cognoscant"—That all may know Thee. This is not only our motto, this is our constant aim—that all men may know Jesus Christ, and, knowing Him, may strive to be with Him forever.

This, however, is only one task of a university, and, for a few minutes, I would like to speak to you about other tasks in American education and Niagara University's role in the pursuit of excellence.

There is little doubt that modern conditions require the substantial lifting of the entire Nation's educational level. Furthermore, our American belief, based on a very Christian tradition, in the overriding importance of human dignity, demands that each individual be helped toward a full realization of his particular potential. Many obstacles, however, appear to thwart the achievement of these seemingly divergent goals. Contrary to what some people may believe, the ideal of excellence and the ideal of equality of opportunity are compatible. The very recent Rockefeller brothers report, compiled by some of the finest minds in America today and entitled "Education and the Future of America," stresses this compatibility in the following terms, "Our society will have passed an important milestone of maturity when those who are the most enthusiastic proponents of a democratic way of life are also the most vigorous proponents of excellence."

Today, thoughtful American educators appreciate that equality does not mean that the same amount of talent is found in each individual but rather that God has endowed each person with the same basic nature. At Niagara University we have long understood this truth.

One criticism leveled against the American educational system today by thoughtful American critics is that there is too much emphasis on quantity. But let us not be too harsh. In all fairness we must give credit to the American people who have exercised heroic achievements in creating a system of universal education. Still, we would be less than honest if we did not admit that we are certainly failing in many ways to meet the unparalleled opportunities and the stern demands of our times. Too many of our schools are overcrowded, understaffed, and ill-equipped, and the forecast is that the pressures will become more severe in the years ahead. But, we repeat, let us not be too harsh; we are still a relatively young country, and now is our golden opportunity to improve our quality. The intelligent leaders in our Nation are alert to this problem.

In July 1957 the second report of President Eisenhower's Committee on Education Beyond the High School noted: "If an unwelcome choice were required between preserving quality and expanding enrollments, then quality should be preferred, because it would do neither individuals nor the Nation any good to masquerade mass production of mediocrity under the guise of higher education. But the choice between quality and quantity is not mandatory. The Nation needs more of both, and it can have more of both if it decides to do so."

And in December 1958 the New York Board of Regents complained that progress in the educational system of this State is impeded "because we continue to make compromises with quality and with excellence."

Finally, to illustrate this point about the Nation's rising to meet the pressures that face it, let me quote just once more from the Rockefeller Bros. Report already mentioned. "If we are to meet these pressures, our schools will need greatly increased public support and attention, and much more money. But they also need something besides money; an unsparing reexamination of current practices, patterns of organization and objectives."

This, then, is the general condition of American education and what the country's best brains think should be done about it. It represents great quantitative strides up to the present with a great qualitative challenge for the future provided we are alert to seize the opportunity. Now what about Niagara University's role in this overall picture? It is no revelation to you good people that Niagara University stands in need of funds. This is true of every university in the country, even including Harvard with its current endowment of several million dollars. But there is something besides money that we must talk about tonight.

It is difficult to show concretely the influence of Niagara University upon the Nation since our alumni are scattered at such a distance. But let me present to you a brief sketch of some of the contributions which Niagara University is currently making to this immediate area. Do you realize that two out of every five dentists in Niagara Falls attended Niagara University? Do you know that 2 of every 10 of the physicians and surgeons, and 2 of every 5 lawyers of Niagara Falls attended Niagara University? Did you ever hear before that one out of every three of the certified public accountants and one of every two of the accountants of Niagara Falls are alumni of Niagara University? Did you know that besides school principals, guidance directors, supervisors, and psychologists, almost one of every two of the secondary public school-

teachers of the school district of Niagara Falls have attended Niagara University?

These are the facts of the current contribution of Niagara University to the Niagara Falls area. Let no one say, therefore, that Niagara University has been asleep. This university, side by side with its sister universities, has lived through the era of quantitative expansion and it is obvious that Niagara University has exerted a tremendous influence, educationwise, especially in the immediate area.

Now it should also be obvious to any astute observer that Niagara University is also alert to greater quantitative demands in the future. This very day is especially significant for us because ground has been broken for the first building construction of our second century of operation. The plans for today's groundbreaking had to be considered months and years ago. Furthermore, justly authorities have cited weaknesses in the caliber of instruction and the quality of students and Niagara University, like every other good university, has recognized these shortcomings and plans to do something about it. Even now, Niagara University is making an unsparing reexamination of current practices, patterns of organization and objectives such as the Rockefeller Brothers report suggested. There are faculty committees which are currently engaged in formulating these unsparing reexaminations; they are presenting them for action in the near future.

But my dear friends, we cannot rest upon our oars. The task of bringing our ship to port seems an unending one but we must constantly stirive to do our best to help its progress. If I may continue the nautical metaphor, we cannot rock the boat by negativism but must strive to give the cooperation that is essential to the harmony of a well-regulated ship. We must endeavor to raise the sights of good students to help them to be truly excellent in a world searching for competent leaders.

Before concluding, may I remind you that the things which we have cited thus far only refer to an excellence in the natural order. In addition to the contribution in the pursuit of natural excellence for which we must be grateful to Niagara University, there is another contribution in a higher order of excellence which it is well nigh impossible to evaluate. Nevertheless, we must appreciate its existence. Besides encouraging numbers of students to develop their natural capacities and to serve as loyal citizens, Niagara University endeavors to shape their wills to conform to the moral order and to motivate them to a love of God. This contribution, while difficult to measure, is an incalculable gain for the Niagara Falls area, for the State, and for the Nation.

Yet our motto remains for us a challenge. We are aware of our shortcomings and the extent of the field that is ripe for the harvest. The pursuit of excellence is never easy and the path is filled with many roadblocks. Nevertheless, we face this challenge today with renewed vigor as we pledge our confidence in Niagara University and in its very own motto repeat—"Ut Omnes Te Cognoscant"—That All May Know Thee.

Equal Time Nonsense

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, May 22, 1959

Mr. BUSH. Mr. President, the radio and television industries face an impossible situation as a result of a recent FCC interpretation of section 315 of the Communications Act of 1934. Section 315 provides that any radio or television station which permits a legally qualified candidate for public office to use its facilities must afford equal opportunities to all the other candidates for that office.

This so-called equal time section was intended to prevent television and radio from discriminating among candidates in their strictly partisan appearances. It appears obvious that the intent certainly was not to interfere with the ordinary newscasting activities of the radio and television industries.

Recently, however, in the Lar Daly case in Chicago, section 315 was interpreted by the FCC as applying to newscasting as well as other types of programing. If this ruling goes unchallenged, it can seriously diminish the public service role of the radio and television industries as well as complicate their editorial and newscasting functions.

The junior Senator from Indiana [Mr. HARTKE] has introduced a bill which offers a clarification of the intent of section 315. I am happy to be a cosponsor of this bill, S. 1858, and I urge that the Members of the Senate support this legislation when it comes up for a vote.

A number of periodicals and newspapers throughout the country have devoted editorial space to this important matter. I ask unanimous consent that three of these editorials—from the Saturday Review, of April 11, 1959; the South Bend Tribune, of March 21, 1959; and the Cincinnati Post and Times-Star, of March 20, 1959—be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Saturday Review, Apr. 11, 1959]

Neither the press nor the public seems likely to give the attention it deserves to an issue that CBS has courageously forced into the open. The NBC-Chet Huntley affair concerned the NAACP, segregation, and delicate questions of judgment—it had more human and headline values. The CBS case involves a local primary in Chicago and rises from an action by a man who puts "America First" between his first and last names. But it also involves the powers of the Federal Communications Commission and, particularly, section 315A of the act under which the FCC operates—the section that requires a broadcaster, if he puts his facilities at the disposition of one candidate for office, to do the same for others.

At the time of the prinfaries in the mayoralty campaign in Chicago, news broadcasts on various stations showed film clips of the mayor greeting the President of Argentina and starting the March of Dimes campaign. I am not sure whether other stations as well as CBS's WBBM–TV also showed the mayor and his Republican opponent filing nomination papers. Lars "America First" Daly demanded equal time, on the ground that he also was a candidate. That is, he demanded equal time for the two official acts of the mayor as well as for the third, purely political, event. The FCC ordered the stations to grant the demand. WBBM–TV refused to comply, pending an appeal to the FCC—an appeal to which that body made no reply, so that the campaign ended with the station disobeying an order of the FCC and Lars Daly without his equal time. CBS has now asked the FCC for a statutory decree, reversing its order.

The intent of section 315A is parallel to the intent of the reversed Mayflower decision, which allows a broadcaster to editorialize provided he searches out and presents a contrary opinion. It is to prevent broadcasters from using the air-channels they enjoy by franchise from the Government for their own ends, to prevent unfairness. The section, dealing specifically with political campaigns, would seem to apply to the appearance of a candidate, in his own behalf, or a spokesman for him, in a political capacity.

The effect of 315A is something the framers of the law did not intend. It is, briefly, to diminish the amount of time allotted to political discussion. Referring to the Chicago case, Frank Stanton, president of CBS, said that the grant of equal time to the 20 or so minority candidates in an eletcion would have taken "approximately 20 percent more time than all the time spent by all our TV network newscasts on all the news." The only protection is not to give time to anyone at all.

Mr. Stanton also noted that newspapers and magazines enjoy special mailing privileges; thus they are partially subsidized by the Government, and that the application of the FCC decision to them would require equal space to be given to all candidates—an open infringement, probably, of the first amendment.

It is easy to see how a broadcaster, relieved of any obligation to give equal presentation in newscasts could favor one candidate—he could even give equal time and present one candidate in a more favorable light than another. Yet the traditions and the economics of broadcasting make such an outcome improbable and until the danger is clear and present, our national tradition is in favor of preserving the first amendment. It is good to know that one network has had the courage to challenge the Commission which, with its power to refuse renewal of license, has a virtual life-and-death power over the network's constituents.

A further point is that Mr. Stanton proposes, if the FCC does not reverse itself, to "appeal to the courts, appeal to the Congress, appeal to the people." In that order, I presume, and I should have preferred an appeal to the people first. Not that section 315A doesn't pose a dilemma requiring intricate thinking and decisions beyond the simplicities of broadcast argument. It does—and considering how much research into the trivilities of broadcasting is being done, it is a pity that the essential question—the relation of television to the first amendment—has not been profoundly discussed. But the people are the prime factor—or should be—in the protection of their freedom—and it will hardly be worth preserving it for them if they do not themselves care to fight for it when it is endangered.—Gilbert Seldes.

[From the South Bend Tribune, Mar. 21, 1959]

SILLY RULE SHOULD BE CHANGED

The equal rights for political candidates on radio and television is a hangover that is accurately described by President Eisenhower as "ridiculous."

With the best intention, this rule was propounded in the early days of radio. In long practical experience it has proved embarrassing, unreasonable, and unjustified.

If it ever was justified, it has become outmoded. There was some intelligent objection when it was first applied, but the general sentiment was that it should be given a fair trial. It could have been rescinded long ago without any threat to the public welfare.

The basic implication in this rule, that all candidates for public offices are equally

important, is merely theoretical. All are not equally important from the general public viewpoint.

In a primary, for example, anybody can become a candidate by meeting a few simple requirements. Not all candidates for nominations are serious contenders for public offices. Some merely use the primaries for self-advertising purposes.

But the rule of equal rights for all candidates on radio and television applies in periods of primary as well as general elections. This is the fact pointed up by the Federal Communications Commission in a Chicago case.

During the recent primary campaign in that city the Democratic mayor appeared on some televised news shows. As mayor he had much more news importance than his Democratic opponent in the primary who, as it turned out to nobody's surprise, was an extremely ineffective opponent.

The latter demanded equal time on TV. It was refused. He appealed to the FCC and was upheld, by a 4-3 vote, even though the mayor had appeared on the news programs as the chief executive of Chicago instead of a campaigning politician. The televised news films merely showed him welcoming the president of Argentina and giving a boost to the March of Dimes campaign.

The equal rights rule was made transparently absurd from the public welfare viewpoint. Congress should act in this session to amend it in the interests of justice and commonsense.

[From the Cincinnati Post and Times-Star, Mar. 20, 1959]

EQUAL TIME NONSENSE

Frank Stanton, president of the Columbia Broadcasting System, has asked the Federal Communications Commission to reconsider a ridiculous ruling it made last month.

The ruling compelled Chicago TV stations to give equal time to a rival candidate for mayor because Mayor Richard J. Daley, also a candidate, had been shown briefly on newscasts.

There was a flash shot of the mayor filing his nomination papers, a 22-second glimpse of him greeting President Frondizi of Argentina, and a 1-minute shot of him opening the March of Dimes campaign.

The mayor didn't ask for the time; he didn't buy it. The mayor got in the show only because he was part of the news show.

But Lar Daly, a perennial candidate, demanded equal time and the FCC, by a 4-to-3 vote, said he was entitled to it. This is the same Daly who once announced he was a candidate for President, then sued the TV networks for equal time with Ike. A judge threw out the case.

The law, in what the trade calls the "ulcer" section, requires TV stations to give equal time, if asked, to political candidates who use the facilities. That is, if a candidate buys or is given time, his rivals may have a like time under like conditions.

The FCC frivolity in the Daly case goes way beyond that—it tampers with the news. If the Government bureaucrats get to telling the news media what they must broadcast or print, it won't be long before they are dictating what they cannot broadcast or print.

Sober Facts About the Farm Situation

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 22, 1959

Mr. HUMPHREY. Mr. President, at the same time that the slick paper magazines are attempting to destroy the farm programs through irresponsible reporting, many farm magazines are presenting reasonable and thoughtful articles on ways to improve these programs which are of vital importance to farmers and consumers alike.

The Prairie Farmer is an old and respected magazine with a very large circulation among real farmers in the Middle Western and Southwestern States, and it is often characterized as a conservative publication. In recent issues it has published two thoughtful and challenging articles on the subject of compensatory payments for livestock, written by L. W. Cook, of Macon County, Ill., as well as an illuminating introductory editorial titled "Sober Facts About Farm Situation."

At this particular time, when so much nonsense and misinformation is being spoken and written about agriculture and Government programs, it would be well for all of us to read these timely articles.

Mr. President, I ask unanimous consent that these two articles and the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the Prairie Farmer, Feb. 21, 1959]

SOBER FACTS ABOUT FARM SITUATION

President Eisenhower's message to Congress on the farm situation is a sobering document in several respects. One is the growing realization that the cost of the program has become intolerable. It may be that America can well afford to spend this kind of money to keep agriculture in a healthy state. The trouble is, our present crazy quilt of farm programing is getting us nowhere, and our farm economy is not improving in health. The taxpayer should not be saddled with a costly system that makes little or no progress toward the solution of the ills it is intended to cure.

It's clear enough now that if lower supports are to put agriculture in a healthy state, we haven't been lowering them fast enough. Supports have not gone down enough to head off the accumulation of surpluses, either because such a course is politically inexpedient or economically dangerous. You can take your pick.

The other sobering aspect of the President's message is that he has very little to offer in the way of a better program. He suggests more of the same. This means supports should be lowered further in the hope that sometime soon we will reach the point where production will become so unprofitable that it will fall off and permit supply and demand to come into equilibrium. Will this happen with corn at 95 cents or 60 cents? Will it happen with milk at $3.25 a hundred or $2 a hundred? No one knows.

Who would get hurt most in this period of prolonged belt tightening? Recently a group of economists, considering the possibility of going on a free-market basis, estimated that if we could completely insulate our present Government holdings, prices would drop another 30 percent and there would be 3 years of austerity for farmers before prices would begin to recover. They estimated that the greatest strain would fall on the medium-sized farmers, not the large operators with good reserves to ride out the adjustment period, nor the small and part-time farmers who have severely restricted standards of living.

The 3 years of austerity might range anywhere from severe depression to the kind of recession we experienced in the years just before 1958.

So, let's not kid ourselves. The state of the farm economy does present a serious problem. It is politically inexpedient or economically dangerous, or both, to pull all props out from under farm prices.

Prairie Farmer believes we should make our agriculture as efficient as feasible and that we should keep decisions as far as possible in the hands of the farmer himself. However, we may as well face the fact that compromise and partial monopoly will play an important part in agricultural economy as well as our general economy in the foreseeable future.

That means we should take another look at the commodity programs to see if we can work out less expensive methods that we can live with in the future. We should also take another look at the compensatory payments which, frankly, have had a disagreeable taste to many people, including the editors of Prairie Farmer.

There is talk in Washington of compensatory payments on grain and feed crops. This, in our opinion, would be sheer foolishness. One way out of the present puzzle is to feed our grains, including wheat, to livestock, and increase the use by our population of the high-nutrition foods. If compensatory payments must be resorted to, then they should be on livestock, as is pointed out by L. W. Cook on page 10.

So it's back to the grindstone to sharpen our ideas of how we can reconcile the warring factions in our agricultural leadership and the contradictions in our farm economy. And we had better get at it right away because the patience of the American people is wearing thin.

BELIEVES LIVESTOCK PROGRAM IS ONLY SENSIBLE APPROACH—MAKES URGENT PLEA FOR FARM PROGRAM TO INCREASE USE OF ANIMAL PRODUCTS

(By L. W. Cook)

Since I am an old and loyal reader of Prairie Farmer, perhaps you will let me comment on your editorial "What Price Should Soybeans Bring?" And to use this comment to talk about our farm policy in general.

The soybean problem, in fact our whole farm problem, is much more complicated than we farmers and our city cousins have been realizing. The price of soybeans must be set with regard to the support price on corn. If the price of beans is low with respect to corn, fewer beans will be planted. If the soybean price is high with respect to corn, more soybeans will be planted. A farmer is no different than any other businessman; he tries to do the work that will make him the most money.

WON'T RAISE MANY BEANS

Today we have a support price on corn of about $1.12, and all planting restrictions have been removed. So, if we cut the support price on beans by 46 cents, as is being recommended, we won't raise many beans. What farmer would plant beans at $1.70 when he is guaranteed $1.12 for corn? At these figures corn would bring in about twice as much money as beans.

Now the stated purpose of those who advocate a lower farm price for soybeans is that our soybean oil can compete effectively in European markets with South American sunflower seed, African and Asian peanuts, and Filipino and Indonesian copra. I suppose the term, "compete effectively" means, "run them out of the market." But the trouble is, of course, we hope the South Americans, the Filipinos, and the Indonesions will be on our side in our war against communism. Can we afford to make their farmers mad at us? Most of their people are farmers.

I don't know how many soybeans we ought to try to produce in the United States, nor what the soybean price to the farmer should be. I do know that Government farm policy is directing the production of farm products in the United States—and doing a miserable job of it.

Take milk for example. Last year we produced less milk than we did in 1957. Yet during 1958 about 4 million new babies were born. Why less milk for more babies? Because of our farm policy.

According to figures furnished by the University of Illinois, the average Midwest dairy farmer works 3,100 hours per year. This is more than 8 hours per day, every day in the year. This includes every Sunday, and Christmas, and the 4th of July. For this he is paid an average wage of $1.05 per hour. This is about half as much as the lowest "organized" wage in industry. But if $1.05 is the "average" wage, then many farmers have been milking cows for 50 cents per hour. No wonder those dairy farmers who can are getting out as fast as they can. But this won't help the Nation. It is predicted we will soon be having 5 million new babies a year.

I cannot see on what basis it can be argued that we have ever produced a surplus of milk. Our nutritionists tell us we have been producing only a little more than half as much milk as we need. Despite all the billions of dollars we have spent to "help" the farmer, the United States ranks eighth among the major nations of the world in the consumption of fluid milk.

But under our present farm laws no solution to our milk problem is in sight. Since the end of the Korean war, milk prices in the 24 major cities in the United States have gone down 21 percent to the dairy farmers, but up 8½ percent to the city consumers. We are legislating ourselves out of milk.

MISGUIDED ENCOURAGEMENT

So you see, what we have been doing under our present farm policy is encouraging production of the wrong kind of agricultural products. We have made it more profitable for a farmer to produce row crops for the Government than to raise food for the people. There is no surplus of milk, bacon and eggs, or beefsteak. We cannot produce more animal protein than is needed for the health of the people of the United States, and the world. That is utterly impossible with our present knowledge of agriculture.

Let us see what would happen if our farm policy were reversed. Let's say we made it more profitable for our farmers to raise milk, meat, and poultry, rather than as now subsidizing them to raise corn, cotton and wheat.

To begin with, if it were more profitable for a farmer to milk cows than to raise corn and soybeans, many farmers would do just that. This applies to meat and poultry versus wheat and cotton too. Then, as we raised more livestock, we would be creating a demand for corn, and soybeans, and feed wheat. Eventually there would be an answer to the row crop farmer's problem, because eventually he would be raising a useful product, not one for Government storage.

CONSUMER DESERVES BREAK

And as to the city consumer? He'd just eat better for less money. And he certainly deserves a break. He has been very patient. As it is now, he is being taxed to help the farmer, when the only result of successful help would be to raise the city taxpayer's grocery bill. Under a livestock farm plan, he would be getting lower prices, better health, and a higher standard of living for his tax money.

The Government would be relieved of the absolutely impossible job it now has. Today the Government is attempting to direct the production of farm products for which no markets exist. But if the Government, through the medium of price floors, had the opportunity to indicate to the farmer, "We need more milk, and less wheat," it would be possible for the Government to do a worthwhile job in the allocation of our agriculture resources.

Nobody, including me, is ready to suggest the Government get out of farming. It won't do the city workers any good to have all the farmers broke, nor all the country banks in trouble, nor all the country school bonds in default, and farmers unable to buy machinery, or shoes, or unable to keep from turning their mortgaged farms over to insurance companies. It won't help toward world peace, or help us in our war with Russia and China, if we suddenly dump our agricultural surpluses on the world markets. It is unthinkable that our Government can get out of farming.

END OF ROPE

But we must have a change in our farm policy. One is coming. Every farmer knows that. Every man who works in a city knows that. Every Congressman in Washington knows that we cannot continue to spend over $1 billion a year just for the storage of the surplus farm products the Government now owns. Something is going to happen. We have reached the end of the rope with our present farm policy.

These are critical times for farmers. Almost any kind of new farm legislation is apt to be passed. I suggest there would be betterment if we would define a farmer as a man who works in the country and raises food for the man who works in the city.

[From the Prairie Farmer, Mar. 21, 1959]

BASE FARM PLAN ON LIVESTOCK IS PLEA OF PRAIRIE FARMER READER TO U.S. CONGRESSMEN

(By L. W. Cook)

In my first article I attempted to show that all farmers, as well as all city workers, would be better off if we changed our farm policy from one of subsidizing a farmer to produce crops for Government storage to one of subsidizing the farmer to produce products the people could use.

I attempted to show that this change could be brought about if we made it more profitable for a farmer to produce milk, poultry, and meat rather than corn, cotton, and wheat.

GIVE WRONG SIGNALS

I contended that Government farm policy is directing the production of farm products in the United States and giving the farmer the wrong economic signal as to what our country needs. I contended that any farm program that can cost a billion dollars a year just to store surplus products people can't use, must be changed.

I presume you are asking me now, "How would you go about making this change?"

The problems facing the farmers who produce milk, bacon and eggs, and beefsteak, are not exactly the same. With hogs, for example, the question is, How do we solve the problem of boom and bust? The cycle goes like this: (1) Farmers find it more profitable to feed their corn to hogs than sell it to the Government, so they raise more pork; (2) about a year and a half later so many hogs are on the market that the price to the farmer falls below his cost of production, so many farmers quit raising hogs and go back to selling their corn to the Government; (3) then the cycle repeats.

NONE WENT TO WASTE

The reverse of this, of course, is true for the housewife. At times she goes to her butcher and finds hams cheap. Later they become expensive. But it is interesting to note that a few years ago when hams were very cheap (when farmers were losing their shirts raising pork), all of the hogs raised were consumed. This could mean, I think, that our lower income groups will eat more pork when they can offord it.

The situation with respect to milk is different. The outstanding characteristic of the milk business is unregulated monopoly. It can hardly be argued we have very much free enterprize in the milk business, when we consider that from the end of the Korean war in the 24 major cities of the United States milk prices have gone down 21 percent to the farmer, but up 8½ percent to the consumers.

But monopolies need not be bad. Under proper Federal regulation monopolies can be very useful business tools indeed. REA is a monopoly. So is the American Telephone & Telegraph Co. All electric power and light companies are regulated monopolies.

The basic trouble in milk at the present time, I think, is that while milk is currently handled in a wide area of monopoly still, the public does not know this. My first suggestion, then, is that the whole problem of milk be opened up for public inspection.

Congress could do this by creating some sort of permanent regulatory commission to study and regulate the production and distribution of milk. Here again, there is nothing new in this suggestion, except in its application to agriculture. The production and distribution of stocks and bonds is regulated by the Securities and Exchange Commission. The airlines are regulated by a commission. Tune in your radio or television and you have operated an instrument regulated by a Federal commission.

In my opinion Congress must, at this session, at least set up a commission to handle milk. We produced less milk last year (1958) than we did the year before. Yet during 1958 about 4 million new babies were born.

In my previous article I gave figures to show why so many farmers have had to quit the business of milking cows. Many farmers simply must be paid more money for their milk, if we are to have enough milk. But I try to be a realist. In my opinion, under present circumstances, the farmer isn't going to be paid more money for his milk unless Congress passes a direct compensatory payment plan. Unless Congress does this, in my opinion, we will simply have a continuation of the present trend. Milk prices will go up to the consumer and milk production, and hence milk consumption, will continue to decline.

SPECIFIC RECOMMENDATIONS

With this background then (including the previous article) I will try to make some specific recommendations:

1. Congress should, as soon as possible, set up a commission or study group, to advise Congress, as soon as practicable, on the best way to change our farm policy from one of subsidizing the farmer for raising crops for the Government to one of subsidizing the farmer for raising livestock products for people. In setting up this study group Congress should appropriate sufficient funds so that the best economists and sociologists in the country can be put to work on the problem. Congress should also advise this group that direct compensatory payments to livestock farmers should be considered, in addition to any other alternatives that might be suggested.

2. Congress should, at this session, pass at least a token direct compensatory plan for the dairy farmer, and take the first steps toward creation of a permanent milk commission to regulate the production and distribution of milk. This commission should not be under the jurisdiction of the Department of Agriculture.

I would suggest the immediate granting of at least a 50-cent-per-hundred direct compensatory payment to the dairy farmer for both cheese and grade A milk. This would not be enough for most farmers, but it would express the determination of Congress to help in the milk situation, and should encourage many dairy farmers to hang on a little longer.

My concern here is that our dairy herds are being dispersed. It takes years to build up a good dairy herd again. This bill, in my opinion, should also stop the Government purchase of such things as cheese, powdered milk, and butter.

Let the open market distribute these products in this country at whatever price they will bring, and get the Government immediately out of the business of storing dairy products. We can better keep the dairy farmers in business with direct compensatory payments.

I have heard it suggested that direct compensatory payments might be made to producers of the six so-called basic crops—wheat, cotton, corn, tobacco, rice, and peanuts. This, in my opinion, would be a very bad mistake. It would contribute nothing to the long-range solution of our farm problem. Our policy, I think, should be to encourage many of these farmers to turn to livestock production. And the livestock farmer, generally speaking, is the farmer on the family sized farm.

DUMPING HURTS US

Besides, we must quit dumping our Government surpluses in foreign lands. It is hurting us in the war with Russia. Christian exporting is fine. Dumping is dangerous. There isn't really any strong demand any place in the world for the Government's holdings of wheat, cotton, corn, tobacco, rice, or peanuts.

Barring wars, in most areas of the world the people can raise for themselves the carbohydrates and cereals they need. There is relatively little need for more foods of plant origin any place in the world. But the world need for the better protein of animal origin is quite insatiable.

Uncle Sam Collects Taxes and Returns Them to the People—Corpus Christi Tells How

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, May 22, 1959

Mr. YARBOROUGH. Mr. President, paying taxes to support our Government is a duty which all of us realize is worthwhile and necessary—yet, particularly around April 15 of each year, we wish we could keep our money.

An article by Jim Greenwood in the Corpus Christi (Tex.) Caller-Times recently pointed out how this tax money is returned to the people in the form of services rendered. For example, more than $75 million has been returned to taxpayers in the Corpus Christi area in the form of work on bettering the city's seaport facilities, improvement of public housing, help in the field of public welfare and health, assistance to schools, and many other projects.

Mr. Greenwoods' article, I feel, points out a side of the picture which is not often stressed: while taxes take away they also give in return.

I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Greenwoods' article from the Corpus Christi Caller-Times for Sunday, May 17, 1959, entitled "What Do You Get for Your Taxes?—Federal Government Has Big Stake in You—Uncle Sam Does More Than Collect, He Sinks Millions Into the City's Economy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT DO YOU GET FOR YOUR TAXES?—FEDERAL GOVERNMENT HAS A BIG STAKE IN YOU—UNCLE SAM DOES MORE THAN COLLECT, HE SINKS MILLIONS INTO THE CITY'S ECONOMY

(By Jim Greenwood)

Uncle Sam taketh away at income tax time, but he returneth a lot, too, to Corpus Christi area.

Corpus Christians immediately recognize a healthy return on their Federal Taxes in the form of the naval air station and other military installations which keep millions of dollars circulating through the local economy's bloodstream.

Too, there are the many Federal offices—post office, immigration and customs, Federal Bureau of Investigation, the various agricultural offices and others—on the local scene that add both to population and payroll.

But what are the other ways in which Federal funds find their way into the local community? Some are not nearly so obvious or widely known.

A group of such instances where Federal funds have been, or currently are involved, represent a staggering Federal contribution of more than $75 million.

The port of Corpus Christi, city utilities, local highway projects, including the new high bridge and the Tule Lake lift bridge, the local school systems, the Corpus Christi Housing Authority, the new city airport, Spohn Hospital, local welfare and health programs have benefited or are benefiting from the gift of Federal money.

There are others who benefit directly from Federal assistance—the farmers who participate in the agricultural conservation program; the aged, who receive old-age and survivor's insurance benefits; war veterans and widows, who receive veterans benefits, dependent children, needy blind, to mention a few.

The Federal programs are almost beyond enumeration.

Looking at that phase of Federal assistance which applies to local public improvement, school, housing, and hospital projects, you get an impressive picture of local tax dollars finding their way back home.

The most spectacular program currently underway involves Federal financial aid to the interlocked port redevelopment and expressway building that is changing the face of the city.

The Federal Government is deeply involved in this area, along with State, city, and county governments, and the local navigation district.

In construction of the high bridge, the Federal Government under the Public Roads Act is paying about $5,740,000 of the $11,480,000 total cost of construction of the bridge and the north and south expressway approaches to it. The State government is paying the remaining half of construction costs, with the city, county, and navigation district providing the $6,600,000 right-of-way costs.

An integral part of the port redevelopment program is the construction of the Tule Lake lift bridge, now nearing completion. The Federal Government, under the Truman-Hobbs Aid to Navigation Act, is paying about $4,866,514 of the total estimated cost of $6,726,514. The city, county, and navigation district are paying the balance.

When this bridge is completed, and railroads now using the old bascule bridge to cross the port can be routed over it, the bascule span at the entrance to the port can come out and the port entrance channel widened.

The Federal Government's share of this program, under Rivers and Harbors Act appropriations will total about $575,000.

This will add to the $20,480,611 already put into development and maintenance of the port of Corpus Christi by the Federal Government since the port was opened in 1926. Total investment in the port since it was opened so far amounts to about $35,775,507, with local taxes and operations revenues accounting for about $15,294,896 of that sum, according to Port Director Byrd Harris.

The Federal Government pays half the construction costs of primary highway projects in the city—including such expressways as the proposed Lexington freeway, the proposed crosstown expressway as well as the high bridge and its expressway connections. The State pays the balance and splits right-of-way costs with city and county governments on most of these projects.

Federal contributions to the Lexington freeway will total an estimated $6,653,000 toward total estimated cost of $15,147,000.

Preliminary estimates indicate the Federal Government will pay about $2,650,000 on the crosstown expressway.

Interstate Highway 37, from Waco Street connections with the high bridge approach system to the city limits, may involve as much as $20 million in Federal funds. In this particular project, the Federal Government will be paying 90 percent of all costs with the State picking up the balance.

The State expressway office here, planning the interstate and other freeways, estimates total cost of Interstate 37 in Corpus Christi between $20 and $25 million.

The Federal Government, through its aid to aviation program, is participating with the city on construction of the new municipal airport near Clarkwood. Bernard Schrader, city coordinator for this project, estimates the Federal Aviation Agency may allocate as much as $2,986,000 toward a total cost of about $6,415,000. The full extent of Federal participation has not yet been determined.

The Federal Government put about two-thirds of the more than $1 million invested in the city's present municipal airport, Cliff Maus Field.

A Federal loan of $400,000 and an outright grant of the same amount were obtained by the city in 1935 to develop its first modern-day sewage treatment plant on Broadway.

The coming of the Naval Air Station to Corpus Christi triggered a number of federally financed or assisted improvements including construction of Alameda and Lexington Boulevard as military highways.

The Federal Works Agency financed Oso sewage treatment plant construction and built a main trunk and some laterals up and off Santa Fe in 1943 because of the impact the air station was to have on Corpus Christi. After operating the facilities for a few years, the city paid the Bureau of Public Facilities $100,000 for the $425,000 worth of improvements.

The need for more water for the Navy brought about $1,465,721 worth of Federal improvements to the municipal supply system. The city later paid the Government $600,000 for the facilities.

La Armada housing project was built to house the influx of naval personnel, and turned over to the Corpus Christi Housing Authority to operate. In subsequent years the authority developed Wiggins Homes and the Leathers Center and has operated its $6,800,000 worth of public-built housing as low-rent housing for several years. The housing authority is repaying the Govern-

ment out of rentals for most of the cost of this federally-financed construction, but has received grants totaling $523,672 to supplement its operations over the years.

War Impact Act aid has been available to local schools for several years—pouring $2,231,364 into the Corpus Christi school district, $300,000 into the neighboring Flour Bluff District to help with construction of new plants and to offset operation expenses. The assistance is based on the number of students whose parents are employed in military activities in the area.

The Hill-Burton Hospital Act has provided $1 million for Spohn Hospital's current $3 million expansion project. Memorial Hospital hopes to get similar assistance in an expansion now being planned.

Federal civil defense legislation enables the city to get reimbursement for half the funds it puts into police, public utilities, and public works mobile radio equipment and the local air raid warning system.

If the local urban renewal program becomes a reality, the Federal Urban Renewal Administration will contribute about $4,579,439 in loans and grants to the $6,618,479 slum clearance project.

Debtor Nation?—The United States Must Put Solvency Ahead of Charity

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the May 18, 1959, issue of Barron's weekly which points out the shift of the United States from a creditor position toward a debtor position in world trade and the effect of this change on our gold reserves.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEBTOR NATION?—THE UNITED STATES MUST PUT SOLVENCY AHEAD OF CHARITY

In and around Washington these days, as the annual debate over foreign aid proceeds apace, politicians of varying persuasion have engaged in a strange kind of competitive bidding. Thus W. Averell Harriman has branded the administration as niggardly for seeking only $700 million for the Development Loan Fund. Chairman J. WILLIAM FULBRIGHT of the Senate Foreign Relations Committee has urged that the Fund be given a kitty of $7.5 billion, to spend at its whim over the next 5 years. Senator HUBERT HUMPHREY, bemoaning the massive failure of our national leadership, has demanded that the United States counter the growing Soviet challenge with a 7-year, $14 billion plan of its own. Finally, that curiously hostile good neighbor, Premier Fidel Castro of Cuba, has exhorted Washington to pour out $30 billion in the next decade to make Latin America safe for democracy.

Whatever their differences, all these proposals apparently take one thing for granted: that U.S. resources are inexhaustible. The facts, however, suggest otherwise. Since early last year, the United States has been losing gold in amounts great enough to evoke torrents of comment, here and abroad. That outflow, moreover, is only one symptom of a more far-reaching economic malaise—the mounting deficit in U.S. international accounts. The balance of payments, in short, has begun to shift adversely; this country, for so long a creditor to the rest of the world, overnight has become a debtor. Washington may try to cling to its ruinously high standard of living. Sooner or later, however, it will have to cut its coat to fit its cloth.

For nearly a decade, Congress has chosen to ignore this simple truth. Through military and economic aid, under the so-called mutual security program, as well as through farm surplus disposal, the United States recently has been expending a massive $5 billion a year all over the world. Moreover, since 1957, the Development Loan Fund has been extending credit to backward countries at low interest rates, mostly on terms providing for repayment in local, fiat currencies. To add to the burden, President Eisenhower has asked the lawmakers to authorize a contribution of $250 million, plus a guarantee of $200 million, for a new Inter-American Bank. Finally, the administration is seeking to double the capital which it originally put up for the International Monetary Fund and the World Bank. The free-spenders on Capitol Hill, as noted, would do much more.

This burst of postwar philanthropy had its start at a time when the United States was an oasis of prosperity in a war-ravaged world. In those days, the economic wise men of many lands were knitting their brows over the implications of the celebrated dollar gap, and the impregnable liquidity of the United States. Since then, however, economic resurgence in Europe and elsewhere drastically has altered the international scene. The most dramatic evidence of the shift is the rate at which gold, figuratively speaking, has been leaving these shores. Since the start of 1958, this country has lost more than $2.6 billion of the precious metal. From an all-time high of $24.6 billion a decade ago, the U.S. gold stock now has fallen to $20.2 billion, the lowest level since World War II. A year ago, many observers, on first noting this trend, chose to view it as temporary. Recent statistics, however, suggest that the outflow may become chronic.

The persistent loss of gold, moreover, is only part of the story. For the United States today, on a number of accounts, is losing dollars as well. One is the upsurge of private American investment abroad, which happens to be an adverse entry in the balance of payments. Another is overseas travel by Americans, who are seeing the world in an ever-swelling tide. The most significant factor of all is the recent shift in foreign trade. Throughout 1958, U.S. imports held up conspicuously well, rising from an annual rate of $12.3 billion in the first quarter to one of nearly $14 billion in the fourth. So far this year, they have been scaling new highs. Exports, by contrast, shrank last year by nearly one-sixth—and their decline has persisted to date.

As a result, this country's export surplus (in merchandise) steadily has dwindled. From nearly $1 billion in the first quarter of 1958, it declined to less than $600 million in the fourth, and to a meager $271 million in the first 3 months of 1959. Furthermore, since it lumps in farm surplus disposal and economic aid, even this figure is overly optimistic. Counting only paid-for merchandise, the balance of trade in the first quarter of this year ran against the U.S. by nearly half a billion dollars. Altogether, these unfavorable tides of commerce have caused short-term dollar claims against this country to pile up—to an aggregate, at last report, of $16.6 billion.

The eagerness of Americans to travel and invest abroad obviously has contributed to this sorry state of affairs. But the real villian is the Nation's growing inability to hold its own in world markets. U.S. agriculture, for example, conditioned as it is to massive subsidies, scarcely can sell any of its produce overseas without Federal help. Similarly, many industries, saddled with ever-rising costs, are less and less able to compete with foreign producers, either at home or abroad. The mounting plight of American industry is highlighted by some World Bank figures, which pinpoint where its loan proceeds are spent. In the 8 years through June 1955, the Bank's borrowers spent more than 63 percent of such funds in this country. In fiscal 1956, the U.S. share dropped to 50 percent, and the next year to 44 percent. Last year, it plummeted to less than 39 percent, and in the final 6 months, to a new low of 34 percent. In global competition, in short, the United States steadily has been losing ground.

To halt this ominous drift will not be easy. Neither the administration nor Congress—nor many a would-be beneficiary, for that matter—appears to recognize the vast shift which has taken place in the U.S. balance of payments. Yet, as all the foregoing suggests, an era in international finance has come to an end, and a new one has dawned. This country no longer can be creditor or philanthropist to the rest of the world. Henceforth solvency, like charity should begin at home.

Address by M. C. Chagla, Ambassador of India

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a very thoughtful address by the Ambassador of India, M. C. Chagla, before the Committee for International Economic Growth in Washington on May 4, 1959, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY HIS EXCELLENCY M. C. CHAGLA, AMBASSADOR OF INDIA, CONFERENCE ON INDIA AND THE UNITED STATES, 1959, SPONSORED BY THE COMMITTEE FOR INTERNATIONAL ECONOMIC GROWTH, WASHINGTON, D.C., MAY 4 AND 5, 1959

The subject I have been asked to speak on emphasizes not the importance of Indo-American relations generally but in today's world and, therefore, I must take a look at the world as it is today and at the picture as it presents itself.

Now, I wish to undertake a task which is both difficult and not very pleasant. I wish to draw attention to certain ideas which are current and which are accepted as axiomatic and almost sacrosanct, and my purpose will be to try and establish that these ideas are based on erroneous assumptions and have been responsible for policies which have resulted in a great deal of harm.

The first idea which is accepted by every politician in Europe and the United States is that there is tension and conflict between East and West—"East" representing the Communist countries and "West" the countries that are arraigned against the former. We are given to understand through radio, television, and the columns of the newspaper every hour of the day and night that there is a cold war on and the temperature of this war varies, sometimes it becomes quite hot, so hot as almost to reach the boiling point.

We are solemnly warned with a sang-froid which takes one's breath away that we are all the time walking on the brink of a precipice and that any miscalculation or error might hurl humanity into the abyss yawning below. It is suggested that the differences existing between Soviet Russia on the one side and the United States, England, and France on the other constitute the only grave crisis that the world is facing today.

To my mind, there is a much greater crisis which confronts the world and that is the division of this world into developed and underdeveloped countries, into countries which have plenty and countries which are on the verge of starvation. That able and astute statesman, Disraeli, once said that England was divided into two nations—the rich and the poor—and England could never become prosperous so long as that division existed. If we look at the world as consisting of a world community and not separate states, Disraeli's remark applies with all its force to the present situation. The world community is divided into two nations, the rich and the poor, and the real malaise from which the world suffers is this—the highly industrialized nations of the world have achieved a standard of production which would never have been considered as possible a few years ago but the distributive agency has failed to keep pace with the growing production. It is a strange and sad commentary on the present situation that while there should be superfluity and undreamt of luxury and material comfort in some parts of the world, there should be want and starvation in other parts.

MENACE OF POVERTY

The one major premise on which all sections of opinion in this country are agreed is that the greatest danger to the world is international communism. It is looked upon as a monster casting its shadow everywhere threatening the democratic faith and the democratic way of life and seeking to embrace in its terrible grasp every part of the world. I am myself passionately devoted to democracy and I know that the stature of man can only grow and he can only attain the dignity which is his right under a system of government in which he can function as a free agent. But what frightens me today is not the inroad of totalitarian or dictatorial ideas but the growing threat and menace of poverty.

Many countries in Asia and Africa have attained freedom in the last 15 years. This led to the exuberance and uplift of the human spirit. Freedom has led men to think, to compare, and to complain and also to ask the crucial question, "What is the content of freedom?" What has freedom meant to the common man? Has it improved his lot? Has it raised his standard of living? Has it given him education and employment? If freedom has only resulted in the trappings of democracy, the vote, parliamentary institutions and responsible government, then freedom has failed to give to the people what freedom is essentially intended for—social and economic justice.

We are often told that the most pressing problem today is the defense of the free world and for that it is said every sacrifice should be made. I entirely agree with the proposition that freedom is in peril and must be vigilantly safeguarded. In the long evolution of the human race, the most precious object it has achieved is the concept of freedom. But there is a serious error in equating the free world with the world that is opposed to communism. I understand by free world that part of the world where freedom prevails, where the mind of man is untrammeled and where he can give expression to his thoughts and ideas and is free to associate with whomsoever he likes. But I find in the so-called free world the worst type of reactionarism, dictatorship, antiliberal forces entrenched. Are we to support these forces merely because they wear the badge of anticommunism when the very support given to them may ironically result in the true forces of freedom being suppressed?

Another grave fallacy which has currency is that nations which are not in alliance with democratic countries which are opposed to the Communist states are neutrals. My country is one of those against whom this charge is often leveled. This charge is based on a total misapprehension of the policy and principles for which India stands. We are uncommitted to the cold war. We are opposed to military alliances because we feel that they only add to tensions and conflicts. It is our profound belief that by keeping out of the cold war we are serving the cause of peace. If peace is ever to prevail in this troubled world, it can only come by there being good will and understanding between nations. To increase the area of cold war is surely not conducive to peace. The more countries keep away from it the larger is the climate of peace. It is the uncommitted nations that can use their good offices to bring about better relations between countries which are at present facing each other in battle array. But to be uncommitted to the cold war does not mean that we are uncommitted to cause which we hold sacred. We are deeply and irretrievably committed to the cause of democracy and to the cause of freedom.

INDO-AMERICAN COOPERATION

Coming now to the specific question of cooperation between India and the United States, I think the greatest basis of our cooperation is our common belief in certain basic principles. We believe in the freedom of the individual, in the dignity of man and in the rule of law. We believe that democracy is the only form of government devised by human ingenuity which can create a true welfare state without sacrificing the freedom of the citizens that live in it. To me this bond appears to be stronger and more enduring than an artificial bond created by military pact or military alliances. Pacts are euphemeral in their very nature. They are opportunistic, intended to serve a specific purpose or object. The bond between our two countries has a spiritual basis to it. It is created out of a common sharing of values and ideals. Therefore, there can be a true cooperation between us in the defense of the free world, free world in the sense in which I have defined it, in defense of true freedom and democracy.

There can also be cooperation between us in the noble and vital task of fighting poverty in a part of the world where 400 million people live. I beg of my American friends not to look upon their programs of economic aid as part of their mutual security. In doing so, I think people of this country are underestimating the important role they are playing in the world today. In giving economic aid to underdeveloped countries, this country should not look upon it as merely a part and parcel of its security program, putting it on the same level as the money it spends on its defense program. The true aspect of economic aid will only be realized when there is a reorientation of the policy underlying economic aid. I want this country to look upon it as a crusade against poverty. This country has been noted for the many noble causes it has espoused. There is no nobler cause than this crusade I am speaking about. It is only when this is realized in this country that the true image of America will appear in underdeveloped countries. It is a false and unjust image when people in underdeveloped countries look upon American aid as actuated by American self-interest or when it is more insultingly looked upon as an extension of dollar imperialism. If it is once realized in this country that prosperity, like peace, is indivisible and that you cannot have real prosperity in one part of the world if there is poverty in another, and that economic and industrial development is part of a world problem to be tackled on a world basis in the interest of a world community, that the moral consciousness of the people will be aroused and economic aid will assume its true aspect of a war that has to be waged against the forces of evil.

LONG ARDUOUS WAR

I advisedly use the word "war" because this is not a short sharp struggle with regard to which one can lay down short-term plans. It is a long, arduous war, a long-term affair which has to be planned on a long-term basis. Your country was engaged in two wars in recent times. You did not lay down any specific period during which the war had to end. It was a war which had to be waged to victory. I want you to look upon this war from the same point of view. Determination, heroism, sacrifice, expenditure of men and money were the contributions you made for your success. The war I am speaking of does not recall for the shedding of blood or the use of bombs and other weapons of destruction. It is a humanitarian war, the success in which will bring forth results a thousandfold more enduring and more beneficial than the results of the two last wars.

Incidentally and inevitably this war will also be a war against totalitarianism. What is happening in China and Russia must have a certain amount of glamor for underdeveloped countries. Both were poor countries. Russia in the course of two decades has become one of the most industrialized and powerful countries of the world and China is forging ahead. These two countries have registered resplendent successes which have seemed to many underdeveloped countries as indicating a new way of life which must of necessity produce prosperity and a higher standard of life. It may be that these successes have been achieved at the sacrifice of personal freedom, dignity of man, and an element of violence and coercion had gone into the producing of these results. It is in the light of what is happening in Russia and China that what is happening in India today assumes such vital importance.

MEANS AND ENDS

India is a poor country and she is as anxious to bring prosperity to her people as Russia and China are but the whole philosophy of our people requires that we should attach the same importance to means as we do to the ends to be achieved. We have been taught, and that is a lesson we have taken to heart, that ignoble means tarnish the ends or objects which they ultimately attain and that is why, anxious as we are to make our progress rapid, we have set our face against all ideas of violence and coercion. Our economic policy is based on consent and we propose, God willing, to achieve our economic objectives by democratic processes. People here sometimes do not realize that a great and decisive battle is being waged in the world between dictatorial and democratic methods of solving the problem of poverty. India is the battleground and the victory or defeat of democracy will be registered in that country. If democracy fails in India, freedom will be the casualty over the whole of Asia and Africa. In cooperating economically with India in this decisive struggle, you will be fighting communism more effectively than if you were to give India hundreds of bombers and nuclear rockets and were to enter with India into the closest of military pacts.

May I say this in conclusion: We do not so much want help or aid from the United

States as we want cooperation and partnership. On a governmental level, we want loans to help us to tide over this very critical period in our economic history. Don't forget your own country was in need of these loans when you started on your own exciting adventure of industrializing this great country. The loans you received were long-term loans, loans which did not operate as millstones round your necks, loans which you could repay when you had turned the corner. These are the kind of loans we require. Loans which will testify to the faith that the American Government has in the future of our country. Even more important, to my mind, is investment of private American capital in Indian industries. There is a wide and expanding scope for this investment. Your trade delegation which recently went to India has pointed out that there are at least a hundred industries in which American capital could safely and profitably invest. I attach more importance to this because it would lead to economic cooperation between the peoples of the two countries and cooperation between peoples is much more important than cooperation between governments. In the short time that I have been here, I have realized how warm and cordial the feelings of the people of this country are toward the people of my country and how anxious they are to help India in the great experiment by which she is trying to achieve social and economic justice democratically. What is needed most, to my mind, is a proper direction and guidance to these people as to how to give practical effect to the large fund of good will toward us which exists here and I hope and trust that this conference will be able to give the necessary guidance and direction.

Celebration of June, Dairy Month

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. WILEY. Mr. President, as we know, next month is June, Dairy Month.

Across the Nation, the dairy industry, along with the United States and State departments of agriculture, is cooperating in an all-out effort to increase the consumption of dairy products, not only during June, Dairy Month, but throughout the year.

The big challenge, of course, is to get across the dairy food message to consumers.

Among other things, it is important to stress, first, that dairy products are a best buy for the family budget, providing more than one-third of our total food needs for less than one-fourth of the total food budget; second, that milk is good for folks of all ages—including adults and folks in their "golden years," as well as babies and teenagers; third, that we further educate the American family, particularly the housewife, not only as to the health-giving quality of our dairy foods, but also as to the variety of ways in which dairy products, including milk, butter, cheese, ice cream, and other items, can add zest, color, and a variety of flavors to the daily diet.

The accomplishment of these goals will not only provide better health for the American people, but will also help to resolve some of the economic problems confronting the dairy industry.

The May 20 edition of Dairy Record outlined the scope of the national program being planned for June, Dairy Month.

Mr. George S. Buckley, of Los Angeles, will head the staff of some 50 State June Dairy Month chairmen to carry out this splendid program.

In addition, the article includes a list of dairy leaders who will direct the activities.

To pay tribute to these leaders in the dairy industry for their fine work in this outstanding program, as well as to encourage the development of better programs for consumption of dairy products, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUNE DAIRY MONTH TO BE LAUNCHED WITH HEAVY NATIONWIDE PROMOTION—MANY AMBITIOUS PROJECTS FEATURE ANNUAL DRIVE TO SPUR DAIRY CONSUMPTION

CHICAGO.—Ten days from now, June Dairy Month will be launched from coast to coast and from the Dominion to the gulf, with more publicity than has ever been accorded that event.

Already scores of States have had pre-June month kickoff events, and invariably they have attracted larger and more enthusiastic audiences than at any time in their long history.

One of the most ambitious events will be the coronation festival luncheon at the Olympic Hotel in Seattle on June 5, where the new Washington dairy princess will be introduced to an audience of 850 people, followed that night by a dairy princess ball in the armory for some 6,000 people, with proceeds going to the Seattle milk fund, a local charity.

BULKLEY, NATIONAL CHAIRMAN

George S. Bulkley, of the Carnation Co., Los Angeles, will head a staff of some 50 State June Dairy Month chairmen, who will have general supervision over the State programs, although the American Dairy Association will do most of the routine work.

In most of the States, dairymen will continue to serve as State chairmen, but this year there will be some exceptions, notably in Minnesota, where Ron Kennedy, of F. H. Peavey & Co., Minneapolis, large grain dealers, and Mrs. Orville Freeman, wife of the Governor, will jointly serve in that role.

STATE MANAGERS

Listed as State managers are the following:

Alabama: Robert E. Lee, Sr., Gadsen.

Arizona: W. W. Cole, office of dairy commissioner, Phoenix.

Arkansas: Jimmie Ligon, Central Arkansas PCA, Conway.

California: John Watson, Petaluma.

Colorado: Stuart Benshoof, Safeway Stores, Denver.

Florida: Jack Dew, Southern Dairies, Jacksonville.

Idaho: Glen Thomas, Upper Snake River Valley Dairymen's Association, Idaho Falls.

Illinois: L. J. Cork, Joliet.

Indiana: Branch McCracken, coach, Indiana University, Bloomington.

Iowa: Prof. Verner Nielsen, Iowa State College, Ames.

Kansas: Ivan Van Nortwick, Kansas Ice Cream & Milk Institute, Inc., Lawrence.

Kentucky: Ben Butler, commissioner of agriculture, Frankfort.

Louisiana: Paul Gantt, Rosedale.

Maine: Herbert Waterman, New Gloucester.

Michigan: Ward C. Hodge, Farm Bureau, Snover.

Minnesota: Ron Kennedy, F. H. Peavey & Co., Minneapolis; Mrs. Orville Freeman, Minneapolis.

Mississippi: W. C. Brookshire, Brookshire Ice Cream Co., Meridian.

Missouri: Harvey Johnston, department of agriculture, Jefferson City.

Montana: Howard Dissly, Fergus County Creamery, Lewistown.

Nebraska: Willard D. Heyne, Hillside Dairy, Uehling.

Nevada: Ray Yoder, Crescent Creamery, Reno.

New Hampshire: George A. Clement, New Hampshire Grange, Lisbon.

New Jersey: W. M. Nulton, Jr., N.J. Guernsey Breeders Association, New Brunswick.

New Mexico: Mrs. Edith Schulmeister, Albuquerque.

New York: E. J. Rowell, National Dairy Council, New York City; John King, Borden Co., Troy.

North Carolina: Voight Gilmore, Travel Council of North Carolina, Southern Pines.

North Dakota: Glenn Olson, American Dairy Association of North Dakota, Jamestown.

Ohio: Robert Webner, Cottage Creamery Co., Orrville.

Oklahoma: Emmett N. Carter, American Dairy Association of Oklahoma, Purcell.

Oregon: Jerry Aakhus, Carnation Co., Portland.

Pennsylvania: Robert C. McKinley, Dairy Council, Inc., Philadelphia.

Rhode Island: Francis Perry, Buttonwood Dairy, Warren.

South Carolina: C. G. Cushman, Clemson College, Clemson.

South Dakota: John B. Richards, Brown Swiss Dairy Products, Rapid City.

Tennessee: Leonard Rogers, Tennesse Valley A. & I. Fair, Knoxville.

Texas: J. O. Woodman, North Texas Producers Association, Arlington.

Utah: Richard Stevens, Rosehill Dairy, Salt Lake City.

Vermont: Derick V. Webb, Shelburne Farms, Shelburne.

Virginia: Grady G. Wolfe, Virginia State Chamber of Commerce, Richmond.

Washington: Cliff Henning, Cliffhaven Jersey Farm, East Stanwood.

West Virginia: Robert L. Steele, associate extension dairyman, Morgantown.

Wisconsin: Truman Torgerson, Lake to Lake Dairy Co-op., Manitowoc.

Wyoming: Royal H. Jenson, Afton.

Betrayal of a Public Trust

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. HUMPHREY. Mr. President, Time magazine is continuing its barrage of misinformation about everything that has to do with farm programs and farm policy. In the May 11 issue the magazine deals in its usual fashion with the legislative action on S. 144, the bill to restore full loan-making authority to the Administrator of the Rural Electrification Administration.

Personally, I shall make no attempt to answer such a bad example of news reporting. I have no need to since the

Rural Electric Minuteman, published by the National Rural Electric Cooperative Association, has responded to the Time article with an editorial which I believe all of us would like to read. It is most aptly titled "Betrayal of a Public Trust."

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BETRAYAL OF A PUBLIC TRUST

The May 11 issue of Time magazine carries, on page 21, a story headed "Veto Upheld." It purports to be a news story about Ike's veto of the Humphrey-Price bill and the fight in both Houses of Congress to override the veto.

It's just about as ridiculous a piece of writing as you'll ever come across. It is factually innacurate, and we think the editors knew it was inaccurate when they wrote it. The style, a creamy blend of prejudice and propaganda, would shame the editor of a power-company house organ.

Time says, for example, that the bill would "transfer power to approve or reject REA loans from Agriculture Secretary Ezra Benson to power-hungry Clyde Ellis, director of the National Rural Electric Cooperative Association."

In an answering letter which Time has promised to print, NRECA Legislative Director Dick Dell said:

"This statement (the one quoted above) is patently false and is deliberately contrived to discredit Mr. Ellis and NRECA, as is the rest of your story. Under S. 144, loanmaking authority would have been restored to the REA Administrator. The present Administrator is David Hamil, an Eisenhower appointee.

"Your story, of course, completely ignores the issue with which S. 144 was concerned. The REA Administrator is appointed by the President for a 10-year term, and is confirmed by the Senate. His job is to make loans for rural electrification facilities. In 1957, Secretary Benson ordered a political appointee in the Department of Agriculture—who has no term of office and is not confirmed by the Senate—to review loan applications before the loans were made by the Administrator. We do not believe this is a principle of good administration or good government."

Time had a lot of other things to say in a similar vein. For example, it says the bill, "As drafted by Benson-hating Senator HUBERT HUMPHREY * * *, was a direct slap at the bedeviled Agriculture Secretary and, indirectly, at the President himself."

If we cared to use Time's style, it might be more accurate to say: "As drafted by the REA-hating editors of Time, this story was a direct slap at HUMPHREY and Ellis, and, indirectly, at the 5 million Americans who are rural electric system members."

This is not the first time the magazine has shot its poisoned barbs at rural electrification. In a report on the NRECA annual meeting in February, Time called the 7,000 rural people who attended "a cold, hostile, subsidy-loving audience" in describing the reaction to Ike's speech.

This was an ugly, untrue thing to say about a lot of nice people who are every bit as patriotic and a lot more responsible than the gray-flanneled editors and publishers of Time. The subsidy-loving company that puts out Time, Life, and Fortune gets millions of dollars in mail subsidies every year. In a congressional report last year, the Post Office Department estimated the subsidy for Life alone, for 1 year, at $9,494,000.

Time claims a circulation of 2,300,000. Each issue is probably read by about 10 million people. Most of those people, having no other source of information on the subject, will presumably believe what they read. When the editors betray their public trust, the result is brainwashing at its worst.

The Washington reporters for Time say they did not send in the story the way it finally appeared. The inaccuracies, the slant, the bias, were inserted by the New York editors. We hope they're proud of themselves.

Domestic Donations of Department of Agriculture—Surplus Foods Up 42 Percent in First 9 Months of Fiscal Year

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. SCOTT. Mr. President, I hold in my hand some data with regard to donations of surplus foods which I think are of considerable interest, and I ask unanimous consent that a statement I have prepared in regard to this subject be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DOMESTIC DONATIONS OF USDA SURPLUS FOODS UP 42 PERCENT IN FIRST 9 MONTHS OF FISCAL YEAR

More than 2¼ billion pounds of surplus foods have been donated by the U.S. Department of Agriculture during the first three-fourths of the current fiscal year, for use in school lunch programs and by charitable institutions in this country and by needy persons in this country and abroad.

Total distribution of 2,252,500,000 pounds represented an increase of 42 percent in donations to recipients in this country over the same period a year ago, and a decline of 15.9 percent in the volume of donations to foreign recipients.

The donated foods were acquired by the Department in the operation of price support and surplus removal programs, and were donated through the direct distribution program of USDA's Agricultural Marketing Service. Not included in these figures are foods which the Department has purchased specifically for schools participating in the national school lunch program.

Surplus foods donated through the program were used during this period by more than 14 million schoolchildren taking part in school lunch programs, and by about 1.4 million persons in charitable institutions. In addition, they were being distributed in March to 5,741,298 needy persons in this country.

Distribution of surplus foods to schools and institutions is made in all the States, the District of Columbia, and in five Territories. Forty-four States, the District of Columbia, Puerto Rico, and the Trust Territory of the Pacific Inlands are currently taking part in distribution of surplus foods to needy persons. Not all areas in all participating States take part, however; in March, 1,214 counties and 164 separate cities took part—a slight increase over December participation.

The following table shows the number of needy persons in family units receiving donated foods in March 1959:

Alabama	13,210
Arizona	60,956
Arkansas	295,378
California	52,445
Colorado	26,370
Connecticut	1,025
District of Columbia	34,185
Georgia	38,488
Illinois	85,687
Indiana	103,654
Iowa	91,094
Kansas	12,107
Kentucky	294,874
Louisiana	178,925
Maine	60,541
Maryland	45,827
Massachusetts	4,198
Michigan	514,851
Minnesota	51,252
Mississippi	400,920
Missouri	122,466
Montana	13,012
Nebraska	2,010
Nevada	1,247
New Hampshire	8,992
New Jersey	17,695
New Mexico	42,057
New York	405,013
North Carolina	739
North Dakota	12,820
Ohio	67,804
Oklahoma	257,368
Pennsylvania	858,791
Puerto Rico	605,666
Rhode Island	12,312
South Carolina	1,886
South Dakota	38,531
Tennessee	171,041
Texas	143,051
Utah	25,778
Vermont	15,157
Virginia	41,580
Washington	7,151
West Virginia	301,264
Wisconsin	65,142
Wyoming	9,628
Trust Territory	4,050
Total United States	5,741,298

With the increase in the number of recipients, the donation of foods to needy persons increased by 80.2 percent over the same period a year ago. Distribution to charitable institutions was up 15.8 percent, and distribution to schools for lunch programs was increased 1.3 percent.

After all requests for donations of foods in this country have been met, remaining foods are made available to voluntary U.S. relief agencies for distribution to needy persons abroad. During the past quarter-year, 19 of these agencies distributed USDA surplus foods to needy persons in 78 foreign countries.

Most of the foods donated during the past quarter-year again were cereal products, including flour, cornmeal, and rice; remaining foods distributed were principally dairy products.

The following tables show the surplus foods donated, the quantities of each, and their costs. Figures cover the 9 months of July 1958 through March 1959, with comparisons to the entire 12 months of the preceding fiscal year (July 1957 through June 1958):

Quantities of surplus foods donated for domestic and foreign use, fiscal year 1958 and estimated July–March fiscal year 1959

[Million pounds]

Commodity	Domestic								Foreign distribution		Total distribution	
	Schools		Institutions		Needy persons		Total					
	Fiscal year 1958	July–March 1959	Fiscal year 1958	July–March 1959	Fiscal year 1958	July–March 1959	Fiscal year 1958	July–March 1959	Fiscal year 1958	July–March 1959	Fiscal year 1958	July–March 1959

[3] Includes requests approved prior to July 1, 1958.

Address Delivered by Secretary of Agriculture Ezra Taft Benson

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, May 22, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the text of the address delivered by Secretary Benson last night at Cedar Rapids, Iowa, at the annual farmer-businessmen dinner at Cedar Rapids, Iowa. The address was alluded to on the floor of the Senate earlier today. It is possible that the full text of the address was not available at the time to show exactly how the Secretary actually treated the REA matter. Therefore I submit the entire text for inclusion in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON, ANNUAL FARMER-BUSINESSMAN DINNER, CHAMBER OF COMMERCE AGRICULTURAL BUREAU AND LINN COUNTY FARM BUREAU, CEDAR RAPIDS, IOWA, MAY 21, 1959

I am delighted to have this opportunity to visit with you in your beautiful city. I am grateful to the Chamber of Commerce Agricultural Bureau, the Linn County Farm Bureau, and to all of you for making this visit possible.

Coming here has aroused a flood of happy memories. I love the State of Iowa. It seems only yesterday—although my grandchildren and the calendar make me realize it was actually 32 years ago—that Mrs. Benson and I first came to Iowa in an old Ford pickup. We had been married only a few days when I enrolled as a graduate student at Iowa State Agricultural College.

My modest scholarship of $70 a month seemed adequate for a young couple who had heard somewhere that two could live as cheaply as one.

During my first year at Iowa State I rode on a special 4–H Club train en route to the International Show in Chicago. On that train trip we sang the proud Iowa song, "That's Where the Tall Corn Grows."

The cornstalks with which we kept time to the music, as I recall, were tall enough and husky enough to discourage any who might have doubted our claims.

Today the cornstalks in Iowa may not be as tall as those we remember, but they produce more bushels to the acre. And the farmers have the same vision and the same quiet faith which gave strength to their ancestors who pioneered these rich fields.

So it is good to be back with you. And it is inspiring to see city people and country people sitting at table together. If this gathering results in just a little better appreciation of American agriculture by our people in the cities, and a little better appreciation of American business, industry, and the professions by our farmers, it will have accomplished much.

Tonight I want to set the record straight on some important points concerning our American agriculture. These are the points I have particularly in mind:

First, the so-called farm problem is not just a farm problem—it is a national problem, an American problem.

Second, farmers are not to be blamed for this problem. On the contrary, we should be unstinting in our praise of the American farmer's productive ability. Never in history have so many been fed so well by so few.

Third, this problem cannot be solved by continuing the old outmoded price support, acreage control program—to do so will only make the problem worse.

Fourth, to achieve and maintain a prosperous, expanding, and free agriculture, we must solve the farm problem.

We all know the major elements of this problem.

Vast surpluses of a few commodities exert a depressing influence in the market.

Farm people are caught in a cost-price squeeze.

Half our farms have gross incomes of under $2,500 a year.

Some producers are struggling with acreage allotments which are too small to permit them to farm efficiently.

The costs of maintaining Government farm programs are at an alltime high, and rising.

These are the major elements.

Now, I say to you that this is not just a farm problem. It is an American problem—it is our problem. Whether you live on a farm or in the city, whether you operate a thousand acres or grow a few plants in a windowbox, whether you run a tractor or a machine in a mill, whether you have your money invested in a corn-hog operation or in a business on First, Second, or Third Avenue, whether you are an agricultural producer in one of Iowa's 99 counties or a professional men in one of Iowa's thriving cities and towns—this is our problem, yours and mine.

We taxpayers—and let's all remember that farmers are heavy taxpayers, too—have $9 billion tied up in surplus farm products—most of it corn, wheat, and cotton. We are paying $1 billion a year in storage, interest, and handling charges on these surpluses. Though these costs are assessed against agricultural appropriations, very little of this money goes to our farmers.

But it is not only because all of us are taxpayers that the farm problem is our problem. It is our problem—yours and mine—because past efforts to deal with it have carried us far along the road to Government regimentation and control over agriculture. Many farmers are no longer free to plant, to compete, to market, and to make their own decisions.

Proposals are now being made which, if adopted, would go far to socialize agriculture—to make farmers depend for much of their income on direct payments from the U.S. Treasury. This threatens not only the freedom of agriculture—it threatens the free American economic system in general.

Each one of us, moreover, depends upon agriculture for sustenance. I have heard it said that the economic life of this Nation fluctuates with the ups and downs of the automobile industry. Well, I recall that practically everybody in this country got along from 1942 to 1946 without a new car. But I'd hate to see this Nation try to go without food for 5 days much less 5 years.

The farm problem is our problem because it has a bearing not only on our taxes—not only on our freedom—but on the very food of life itself.

My second point is that the farm problem was not caused by farmers. It is the outgrowth principally of two factors:

The technological revolution in agriculture; and

The continuance of an outmoded price support, acreage control program long after this program had ceased to serve a useful purpose.

Here is what I mean by the technological revolution. For the Nation as a whole, an average acre that produced 28 bushels of corn in 1940 produced 52 bushels last year—nearly double.

An average acre that produced about 15 bushels of wheat in 1940 produced 27 last year—nearly double.

An average acre that produced about 250 pounds of cotton lint in 1940 produced 469 pounds last year—nearly double.

The old price support program was built on the false premise that production can be effectively controlled through acreage allotments and marketing quotas. The experience of the past 25 years has demonstrated that this is not true.

Congress will not legislate, farmers will not accept, and no Secretary of Agriculture could enforce acreage allotments so low as to achieve market balance at 90 percent of parity based on a formula which goes back 45 years.

Under the formula in the old law do you know what the national acreage allotment for wheat would have been this year? Zero—no wheat production whatsoever.

Do farmers want this kind of a program? No. The big majority of farmers do not want Government handouts and Government regimentation.

A recent nationwide poll by the Farm Journal showed that 8 out of 10 farmers responding want greater freedom and less Government in agriculture.

In the referendum of December 1956, 61 percent of the corn farmers voted for lower support and increased acreage.

Last November corn farmers voted by almost 3 to 1 to eliminate corn acreage allotments and lower the level of price supports.

Obviously the farm problem is not the fault of our farmers.

My third point is: We cannot solve the farm problem by continuing the outmoded programs. This is obvious from the current situation.

Producers of cattle, hogs, poultry, fruits, vegetables, and various other products which are not price supported or controlled have had growing markets. We do have temporary gluts in the market. We are having trouble with eggs now, and we are using sound means to relieve the situation. But we are not going to repeat the fiasco of 1950 by putting Government into the egg business.

The so-called basic crops—corn, cotton, wheat, rice, peanuts, and tobacco—the one-fifth of our agriculture that is not free—the crops that have depended the most on supports and controls—these are in the most trouble.

And they will continue to be in trouble, barring some emergency, until they are priced and promoted to sell. History reveals that these crops were baled out of trouble by two wars. None of us wants war as a solution.

The last Congress enacted some badly needed legislation for corn, cotton, and rice. It was a limited move in the direction of common sense. But it came too late to avoid serious surplus troubles and loss of markets. And nothing was done about wheat, tobacco, and peanuts.

That is why corrective farm legislation is doubly important now.

We are facing a very grave crisis in wheat and a serious situation in tobacco and peanuts.

By July 1960 our wheat carryover will be about 1½ billion bushels. Converted into bread, that would provide 515 loaves for every man, woman, and child in this country. We will have $3½ billion of taxpayers' money tied up in wheat alone.

But that is not all. If we continue the present program, it will mean a further buildup of the surplus by 200 million bushels or more a year. I say to you in all sincerity that this could end in disaster of a magnitude such as we have not seen before in our American agriculture.

A ground swell of antifarm program sentiment is developing that endangers the whole price support idea. An editorial in Life magazine urges wiping out the whole program. "The whole farm support program," it says, "is a colossal failure. The only sensible thing to do about it is to get rid of it, stop it. Why go on pouring good money after bad?"

Not for a moment do I believe this is a sound approach. I cite it simply to show the danger that exists—the resentment that is steadily growing against paying tremendous costs for a program that makes the problem worse.

My fourth point is: To have a prosperous, expanding, and free agriculture, we must solve the farm problem.

The huge surpluses have cost farmers billions of dollars in lost income—up to $2 billion a year. This is not the path to prosperity.

Our commodities have been forced out of some of their traditional markets. This is not the road of expansion.

Too many farmers have lost the right to make their own decisions. This is not the highway to freedom.

If we want a prosperous, expanding, and free agriculture, the first necessity is to face the facts—these facts:

The old price support, acreage control program has failed.

The failure is due to the program itself—the program required by old legislation.

Therefore, the remedy lies in changing the legislation—which means changing the program itself.

President Eisenhower has sent four special agricultural messages to the Congress. The latest was in January of this year. Officials of the Department have spent many hours testifying before committees of the House and Senate on the details of our recommendations. I testified in February before the House Agriculture Committee and the Senate Committee. We submitted legislative language for needed changes in the wheat law the forepart of March. The President made two more appeals for action on wheat last week. The date for announcing the 1960 wheat acreage allotment and marketing quota has been extended from May 15 to June 1.

We have recommended that price supports should be based not on the old outmoded parity of half a century ago, but on a percentage of the average market prices for the immediate preceding years. So far as wheat is concerned we have urged that all acreage allotments and marketing quotas should be eliminated as soon as price supports are adjusted to realistic levels. This is the kind of program that corn farmers voted for overwhelmingly in the corn referendum last November.

In this competitive world farmers must be free to make adjustments and commodities must be priced to sell—otherwise surpluses pile up in Government warehouses—and a Government warehouse is not a market. When we do price to sell, markets increase. Here, for example, are some very interesting figures on feed grain consumption for the 6 months ending March 31.

Compared with the same months a year earlier, corn consumption was up 244 million bushels—or 12 percent.

Consumption of grain sorghum was up 93 million bushels—or 42 percent.

Consumption of oats was up 97 million bushels—or 17 percent.

This is a sound development.

We must always remember, however, that balance in agriculture involves good judgment. There is now underway a strong trend toward building up cattle herds. The reduced rate of slaughter indicates an increase in the cattle inventory this year of possibly 4 to 5 million head. I urge cattlemen to make production plans that will

avoid overexpansion with undersirable results later on.

Hog producers are increasing production, and returns this year will reflect the larger supplies. Here again, I strongly urge farmers to make wise production decisions.

Our approach is sound. The overwhelming majority of agricultural economists, like the majority of farmers, endorse what we are trying to do as sound and best for agriculture.

A recent survey of agricultural economists of our 49 land-grant colleges has just been been published. Of the 37 economists replying, 4 out of 5 say that, "any laws further hamstringing the free market will hurt the farmer, the consumer, and the Nation."

We cannot price abundant farm products as if they were scarce without piling up surpluses.

The evidence of 25 years says that we cannot balance supply and demand by means of present acreage controls. The economics of the farm problem are simple—we need less government in farming. We must quit trying to fix prices unrealistically. This is the source of the twin evils of production for Government warehouses and Government control over farmers. We must emphasize markets, increased efficiency, and competitive selling. We must eliminate Government's stranglehold on agriculture.

Until this is done, agriculture will be burdened with too much Government, too much politics, and too little commonsense.

The longer this situation continues, the more we all have to lose—for this is our problem. But the biggest losers are farmers themselves.

Now I want to say something about another aspect of the farm situation.

In recent months we have been in the middle of a debate about rural electrification.

When I was a youngster on a farm in Idaho many years ago I milked cows by hand, fetched water by the bucket, and studied my lessons by the light of a kerosene lamp. We had no radio or television, no refrigerator or freezer, no milking machine or water pump, no electric lights or telephone.

Later, electric power brought light, a telephone, and running water to the farm. We hailed it enthusiastically, as an emancipator—it freed us from drudgery.

I know what it meant to my mother to have electric power at her fingertip. I know what it means to farm boys and girls to have enough light to read or study by at night. I have seen the worn and tired faces of farm men and women glow with new life at the mere prospect that electric power would soon be available.

Nobody has to sell me on the great work of the Rural Electrification Administration.

I am gravely concerned, however, about a growing national attitude of dependence on government. The tendency seems to be to look to Washington for the solution to every problem. There is no surer way to lose our American heritage of freedom than to let this tendency grow unchecked.

Few of our people realize how far we have already gone on this path. Here is an instance—a contrast—that may help to open our eyes. Back before the turn of the century the Congress passed a bill providing for free gifts of seed to farmers. It involved only a small amount of money—about $10,000 I believe. But the bill was vetoed by President Grover Cleveland—a Democrat—because it also involved a big principle. He expressed the principle thus: "Though the people support the Government, the Government should not support the people."

We are in danger of forgetting those words today. Powerful forces are pushing us toward a planned and subsidized economy which weakens initiative, discourages industry, destroys character, and demoralizes the people.

Now, how does this bear on the debate over rural electrification?

It comes down to this. I believe, and so does President Eisenhower, that REA and the rural electric cooperatives have now come of age. They are strong enough and mature enough to begin to stand more on their own feet. Because I have plainly said so, many ridiculous charges have been made against me.

It has been suggested, for example, that I am against cooperatives. Nothing could be more untrue.

I grew up with cooperatives. I have had the privilege of working for and with hundreds of them, and I have never for a moment lost my faith in cooperative organizations. I am a co-op booster—always have been—and I am proud of it. Sound co-ops have proven their place in the free enterprise system.

Now here is what raised the tempo of the debate in recent months. President Eisenhower in his 1960 budget message proposed a change in REA financing. Since 1944 REA has had an interest rate of 2 percent. This does not cover the costs of the money to the Government. The President suggested that this 2 percent interest rate be replaced by a rate which will cover the current cost to the Treasury of equivalent term borrowing and other reasonable costs. This would apply to new loans only. Further, he suggested that legislation be enacted to broaden the sources of capital for the REA programs. This would assist borrowers in obtaining from private sources funds to finance needed expansion.

I find these proposals just and reasonable. So do most Americans who have the facts.

I want you to know the facts. Decisions about the future of the rural electrification and telephone programs need to be made. These are important programs, far too important for their future to be decided in terms of political expediency.

I have a proposal for a permanent financing plan for the REA electric and telephone systems. Here it is:

1. Authorize these rural systems to have their own bank—their own lending institution—which they may operate and ultimately own entirely.

2. Let them have their own national policy board to direct the affairs of their bank. Members of this board would be nominated by the rural electric and telephone borrowers. Plans for organizing and operating the REA bank should be carefully developed to meet the particular capital requirements of the electric and telephone borrowers.

This system is operating successfully in the Farm Credit Administration with its banks and local lending institutions which are farmer-owned and operated.

When these Farm Credit institutions were first organized, skeptics said that they'd never succeed. Well, the record has been outstanding. The farmer-members and their cooperative service organizations now borrow nearly $3½ billion annually from their own Farm Credit institutions—that's almost as much every year as the whole 24-year total of REA loans.

Farmers have invested more than $287 million capital in their credit institutions. Through careful and prudent management, they have accumulated net earnings of more than $361 million. They have an orderly retirement plan in effect to return their remaining Government capital to the Treasury.

These long-range plans for the Farm Credit System were worked out over a period of time through consultation with representatives of the local and district Farm Credit institutions. That is the way a permanent financing system for the rural electric and telephone borrowers should be developed.

I am very proud of the accomplishments of the rural electric and telephone systems. They are strong and healthy. They should now start formulating plans which would enable the users of these systems ultimately to own and operate their own national financing institution.

The REA programs are among the best investments ever made by the American people.

Let's keep REA and all farm programs sound and fair—fair to farmers and fair to all our citizens.

Our farm people are the salt of the earth. They have always come first with me. As a farmer, the son of a farmer, yes, the grandson of a farmer, and as a former county agent, it is natural that I should feel this way. And I shall continue to speak out for what is right for farmers, and right for America, as long as God gives me life and a voice to do so.

Now, let me return briefly to some of the wild charges that have been made.

It has been said that I have interfered with the administration of REA. This is utterly false.

The Secretary of Agriculture has been responsible for the general direction and supervision of REA since 1939. When I became Secretary in 1953, I made no change in REA's internal policies or procedures.

In 1953, President Eisenhower transmitted to the Congress, a reorganization plan. This plan as it affected REA, was substantially the same as one sought unsuccessfully by the Truman administration. It transferred to the Secretary all functions of REA. It authorized the Secretary to delegate the performance of transferred functions to any other agency of the Department.

After the reorganization plan took effect, I delegated the REA functions to the Administrator of REA to be exercised under the general direction and supervision of the Secretary. To assist me in carrying out this and other responsibilities in connection with our credit programs in agriculture, I designated a Director of Agricultural Credit Services.

In June 1957, I asked the REA Administrator to submit certain loan applications to the Director of Agricultural Credit Services of the Department for his information and possible discussion—for his counsel. I'm just old-fashioned enough to believe that there is safety in counsel. This arrangement did not affect the loan-making authority of the REA Administrator in the slightest degree. He has continued to make all loans.

It has been suggested that I interfered with the approval of a particular loan application—a $42 million generation and transmission loan application submitted to REA in 1957 by Hoosier Cooperative Energy of Indiana.

This, too, is false. I have never interfered with any REA loan application, including the Hoosier application. The so-called $42 million Hoosier loan application has never been disapproved. The fact is that REA has no proper application from Hoosier Cooperative Energy on which it can take action. If and when REA gets such an application, you can be sure it will be processed like any other.

Some people would like the country to believe that I am engineering a weird master plan to wreck REA. Here is a sample of their language.

"That crowd (I assume that includes me) is hell-bent on handing us over to the Wall Street bankers—the Wall Street control power companies, and they are not going to rest until they do it."

Well, let's look at the record—the record of REA progress during the past 6 years.

The REA has been in existence for about 24 years. Almost one-third of all its electric loans have been made in the past 6 years.

The telephone program has been in existence about 10 years. Four-fifths of all telephone loans have been made in the past 6 years.

On January 1, 1953, 45 REA borrowers were delinquent in payments; in April 1959, just one was delinquent.

The net worth of REA electric borrowers has more than doubled in the past 6 years.

The authority of REA to make generation and transmission loans is a vital part of the rural electrification program. Since January 1, 1953, these loans have accounted for almost 31 percent of the total loaned for rural electrification, compared with 19 percent before that date.

If I had plotted a conspiracy to harm REA, you can see that I have failed miserably.

The core of the debate is that I consider it politically, economically, and morally wrong for successful organizations like REA borrowers, with sizable reserves and increasing revenues, to keep dipping into the Federal Treasury at the taxpayers' expense to the tune of millions of dollars per year for interest payments alone.

Surely that makes sense.

But, no matter how many facts are presented, a vocal and organized minority continue to dredge up phony issues. They pursue one of their favorite pastimes—taking potshots at me. They continue to play politics with REA.

When you cut away all the rhetoric, all the noise and fury, here is what they are asking:

"Why single us out to pay our own way? We were doing all right as we were."

The answer is simple. This is not 1935, when only 11 percent of our farms were electrified. This is not 1944, when fewer than half were receiving central-station service. This is 1959, and over 95 percent of our farms are electrified. The backbone electric system to serve nearly all of rural America has been completed; one of the principal objectives of the rural electrification program has been achieved.

REA borrowers will continue to need large amounts of capital funds to meet their increasing load demands. A large part of this continuing need for capital is coming from the increasing loads of nonfarm consumers. Over one-half of the power sales of REA borrowers is now to nonfarm consumers. That trend will continue. The ratio of new nonfarm consumers to farm consumers is now 3 to 1.

We want to see that these borrowers obtain the additional capital funds they need and continue to prosper as independent community service organizations, paying their own way.

REA borrowers have demonstrated their ability to pay their own way.

I am certain that the majority of the directors, managers, and members of rural electric cooperatives want to pay their own way. They do not want to rely on Government support. This is in keeping with the best of American traditions.

I have full confidence in the judgment of an informed American people. That is why I consider it such a privilege—and such a grave responsibility—to meet with you tonight.

We must build solidly for the future of our agriculture. To do this, I repeat, is not just a farm problem. It is an American problem—our problem.

I pledge to you and through you to all the farm and city people of America that I will continue to do all in my power to develop and maintain a prosperous, expanding, and free agriculture. And I also pledge to you that I will never support any policy or program which I believe is not in the best interest of our farmers and fair to all of our people, regardless of political pressure.

Our goal, I repeat, is a prosperous, expanding, and free agriculture.

We need such an agriculture to help our Nation confront at full strength those on the international scene who are eagerly scanning our economy for a sign of weakness. We need such an agriculture to meet the inevitably expanding demands of our rapidly growing population.

Let us seek the solutions we so sorely need. There is no room for blind partisanship, for prejudice, for bitter bias. Agriculture is neither Republican nor Democrat. It is American.

As Americans all, let us get on with the job. God willing, the progress, prosperity, and strength of our American agriculture are now only in their beginnings.

The Farm Problem—GTA Daily Radio Roundups

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 22, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two GTA Daily Radio Roundups, dated May 15 and May 18, 1959, prepared by the public relations division of the Grain Terminal Association, of St. Paul, Minn., relating to the farm problem.

There being no objection, the roundups were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, MAY 15, 1959

Our favorite Washington reporter tells us he is in a gloomy mood this week from watching how the President, the Secretary of Agriculture, and Congress are chasing each other around and around on the serious, crucial farm issue without getting anywhere.

He says, "It's startling, sometimes, to notice how negative the whole current Washington mood and situation are. The White House is hypnotized by the budget."

"Congress had a liberal surge in November but the southern leadership took care of that," he adds, "and some of the Dixiecrats are as harmful to farmers as Benson-Republicans." And the President has been of no help either. Back in January he sent a farm message to Congress. "Get rid of all the farm surpluses, farm costs, and all of the Government farms regulations," is in substance what the President told Congress.

Now, after 4 months of silence, the President tells Congress it must do something in a hurry about the wheat referendum. He tells Congress it is stalling. He said that on May 13. It happened that on the same day the House Farm Committee said, "All right, Mr. President, if you are in such a hurry, here is a wheat referendum bill. It ought to do the job, if you don't veto it." That bill okayed by the House Farm Committee is basically a sound one.

It is a fair and reasonable effort to do two things: To reduce wheat production and protect farm family income at a reasonable level, and cut back on the biggest operators—the ones who get all the bad newspaper headlines about $100,000 price-support loans from the Government.

Most wheat farmers will buy that kind of a proposal. We know because GTA had some of its fieldworkers interview farmers. We, pass this along to the President and the Secretary of Agriculture for what it is worth, because both say farmers do not want any Government support or regulation. No wonder there is doubt as to whether either the Secretary of Agriculture or the President know what to do about agriculture. That's understandable.

Even the Saturday Evening Post, which has never championed anything even remotely related to the New Deal, and which has never been known to be sympathetic to Government regulation or the farm problem, had this to say in an editorial this week. It asks three questions about farming:

First: How can agriculture become even more productive, as it will, without repeatedly putting farm people through an economic wringer?

Second: Is the family type farm going to be able to maintain its traditional key place in the new kind of agriculture that is rapidly evolving? If so, how?

Third: Must national farm policies continue to be negative in concept, designed only to fight rear-guard action against advancing technology?

If the President and the Secretary of Agriculture cannot find one good idea out of more than 200 farm bills submitted by this Congress, they ought to at least have the courage to submit one constructive idea.

Congress has come up with a sensible answer in a sensible bill. Will the President or his Secretary of Agriculture accept it? That is the big and difficult question confronting Congress and the farmers.

But if enough Democrats stay hitched to the promise their party made to farmers last fall, and just a handful of farm-State Republicans in Congress have enough courage to stand up for farmers instead of holding up the Secreary of Agriculture's hand, farmers can hope for some measure of improvement.

GTA DAILY RADIO ROUNDUP, MAY 18, 1959

There is a severe farm crisis in Washington. It revolves around wheat. Congress and the White House are deadlocked. Farmers know that the Secretary of Agriculture and the White House seem determined to have no wheat legislation that will protect the farmer's income.

M. W. Thatcher, the general manager of GTA, has filed a statement with Members of Congress from the wheat States. It gives the point of view of many thousands of farmers who are the owners of GTA. This is what Mr. Thatcher told the Congressmen:

"Last week the House Agricultural Committee gave the President what he asked for, a bill to meet an impending disaster in wheat. The bill recommended that wheat acreage be cut 30 percent next year and the price support be boosted as much as 20 percent. While this would reduce the wheat surplus there is some question as to whether the price increase is enough to protect family-farmer income."

"But since then there has been too much jockeying around, too much backing and filling, and too much evidence of retreat in Congress. The House Agriculture Committee has recalled its bill. The Senate Agriculture Committee has reported out a bill that is unsatisfactory to farmers and could well play into the hands of the Secretary of Agriculture."

"Congress ought to know how farmers feel. No wheat farmer can willingly accept a big cut in acreage unless he is sure of a substantial increase in the support price to protect his income. Every farmer knows the Senate Agriculture Committee bill will not reduce production by a single acre of a single bushel. It only cuts the farmer's

pay. This kind of a bill is doing just what the Secretary of Agriculutre wants. It is the kind of a bill that will help kill all price supports."

"Farmers in our spring wheat States expect their Congressmen to stand up and be counted. They expect something more from the agriculture committee members than committee-room politics. To say that this bill or that bill will not pass Congress or get by the President's veto, will not satisfy the farmers."

"Farmers expect the House and Senate Agriculture Committees to agree on a sound and reasonable wheat bill that will protect the income of producers and reduce wheat production. Anything less is unsatisfactory. At the moment farmers are wondering whether many of the committee members do not know what they want or are pliable to pressure from the Department of Agriculture."

"To argue that a good farm bill is not politically acceptable is no argument at all. Let the farm committee members do the best job they can and then let Congress decide whether their bill will give farmers a fair break. Then it is up to the President to decide whether or not he will veto a fair break for farmers." "Then the record is there for everyone to see."

This statement by M. W. Thatcher of GTA has been wired to wheat-State members of Congress. Action now in the wheat crisis is urgently demanded by the farmers who own GTA—the co-op way.

Snide Remarks About Wisconsin's "Cow Juice"

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, Walt Brovald, who edits the Cadott Sentinel in my home district, observed in his weekly column that the opponents of my national milk sanitation legislation are hindering their cause by making snide remarks about Wisconsin's prize product, milk. He goes on to tell how milk is now being shipped from Wisconsin to Texas with no deterioration in quality. Under leave to extend my remarks, I would like to include Mr. Brovald's comments in the RECORD:

EVIDENCE REFUTES "TIRED MILK" CHARGE

Opponents to Representative LESTER JOHNSON'S bill which would allow unrestricted movement of milk meeting U.S. Public Health standards to any part of the country are hurting their cause more than helping it, according to reports, by making snide remarks about Wisconsin's "cow juice."

Most vocal of them all is the Maryland-Virginia Milk Producers Association, which said the East didn't want Wisconsin's "tired old milk," and wondered about Wisconsin milk moving to market on bobsleds during winter snowfalls.

JOHNSON had no trouble refuting the tired old milk charge, and cited the Babbitt trucking firm, of Chippewa Falls, as an example of modern transportation methods. Babbitt, who sends seven truckloads of milk to Philadelphia every day, has had only one interruption because of snow in the last 2 years.

You may be as interested as I was to learn, too, that milk trucked from Chippewa County to Texas, even on the hottest of summer days, gains only 3 or 4 degrees temperature during the trip.

Even when, as once the driver had to stop and buy some bags of chipped ice to cover the floor boards of the truck cab to cool the soles of his shoes. Sounds like a whopper, but Dale Babbitt, public relations man for the truck firm, keeps a straight face when he tells the story.

Federal Lunch Programs Can Save Money for School Districts; Recommended for Houston

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. YARBOROUGH. Mr. President, even though the Federal aid program to help provide better lunches to schoolchildren has been going on for some time, there are still some districts which do not participate in the program.

The arguments the leaders of these districts use against the Federal school lunch program have been proved wrong in actual practice, but still they persist. Adults talk their opposition, while children go hungry.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Ron Moskowitz which appeared in the Houston (Tex.) Post for Wednesday, May 6, 1959, under the heading "Houston Use of Federal Lunch Program Backed." Accountant Edwin Bruhl is asking for the exercise of reason by the Houston School Board.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Houston Post, May 6, 1959.]

HOUSTON USE OF FEDERAL LUNCH PROGRAM BACKED

(By Ron Moskowitz)

Accountant Edwin Bruhl said Tuesday he will ask the school lunch committee of the Community Council to recommend to the Houston School Board that it participate in three Federal lunchroom programs.

Bruhl, a member of the committee, will make his opinion known when the group meets at 3 p.m. Thursday in the board room of the National Bank of Commerce.

"This is not anything new," he said. "My opinion has been well known for 12 years and I don't intend to change it.

"I have studied this situattion for 12 years and I have never been convinced that it is not the reasonable thing to do—to get back some of the money we pay out.

"The Houston School Board has consistently refused this aid. Their refusal has not decreased or stopped our Federal taxes, or the programs. Instead, the programs have expanded throughout the Nation—except in Houston.

"It is only sensible for the district to accept it and get the benefits from it. After all, we are paying for it.

"I don't believe in anybody, elected or otherwise, setting themselves up in such a way as to take away from the people something that is given to the people. And that's what the board has done."

The committee has been studying the lunchroom program in Houston and the other 20 school districts in Harris County for months—ever since complaints were received that some children were going without lunch.

For the past 20 years the district has been paying for free lunches for the needy with Community Chest and United Fund allocations. Almost every other district in the county—and almost every large district in the State—pays for its free lunches out of its own lunchroom department funds.

These districts are able to do this because they participate in one or more of the Federal programs designed to better nourish the youth of America, spokesmen say.

Because the Houston district has refused to participate, plate lunches in Houston's secondary schools cost more than almost any other district in the county—and they contain less, recent surveys by the Houston Post have shown.

When the committee meets Thursday, it will be equipped with answers to questionnaires sent out to every district in the county and every large district in the State.

The report shows that only a fraction of these participating districts have had trouble with storage, transportattion or bookkeeping because of participation.

The committee may or may not make a recommendation at this meeting. It may decide to study the program longer.

West Virginia's Industrial Future

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, May 22, 1959

Mr. BYRD of West Virginia. Mr. President, I am sure that every Member of this body is aware of the tremendous industrialization that is taking place in the great Ohio Valley. West Virginia is playing a vital role in that industrialization, and I would like to call to your attention the huge $250 million plant just completed in my State by Kaiser Aluminum & Chemical Corp.

This farsighted organization brought 2,400 jobs to the people of my State and surrounding areas. The firm's decision to move into the Ohio Valley was motivated by proximity to markets, adequate fuel supply, adequate transportation facilities, and available, capable labor.

Kaiser Aluminum has stated that the adaptability of our labor force met the company's most optimistic expectations. This is a tribute to the efficiency and ability of the laboring people of West Virginia.

Many of West Virginia's skilled laborers who, in recent years, have gone to such industrial centers as Akron and Detroit are now returning. Their roots are still in West Virginia, and the continued industrial expansion of our State, aided by such outstanding companies as Kaiser Aluminum, is providing the job opportunities that permit these people to return to their home State.

A more comprehensive picture of what Kaiser Aluminum is doing in West Virginia is contained in an address made

recently by H. B. Benedict, works public relations manager of Kaiser Aluminum, Ravenswood, W. Va., before the Kiwanis Club of Charleston, W. Va. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA'S INDUSTRIAL FUTURE

(Address before the Charleston, W. Va., Kiwanis Club, March 10, 1959, by H. B. Benedict, works public relations manager, Kaiser Aluminum & Chemical Corp., Ravenswood, W. Va.)

Faced with employment, education, financing, and other problems common in varying degrees to all the States, it is understandably easy—in the urgency of the present—to misinterpret these signs in terms of West Virginia's future—and to overlook the tremendous progress of the past.

Almost unnoticed is the fact that West Virginia is a dynamic part of an area which has enjoyed one of the Nation's greatest industrial expansions in this decade.

As a reference point let us examine how much industrialization has actually taken place in this general area in recent years and let's pinpoint this industrialization to a specific area—the Ohio Valley, an area stretching 1,000 miles from Pittsburgh to the Mississippi and say 50 miles on either side. The actual figures are startling and probably unprecedented in the industrial growth of any area in the economic history of the United States.

Since 1950 10 billion—yes, $10 billion—has been spent in industrial expansion including new plants and enlarged existing plants throughout this area. Ten billion dollars of private capital in the 1000-mile-long valley. In no other valley in the world, possibly in no other time in history has so much money—money is energy, materials, and people—been involved in so large a growth.

During the same period industrial investment in West Virginia has been more than $800 million. Eight hundred million has been expended by industry on new jobs in our State.

This probably brings several questions to your mind. Why has it happened? Will it continue?

Let me cite a few factors that are involved * * * the same factors that made Kaiser Aluminum decide to settle in West Virginia * * * then you may draw your own conclusions as to whether or not this growth and expansion will continue—whether or not in the next decades a comparable or even greater growth will occur.

The factors that we shall examine are those that dictate the location of virtually all industries:

Proximity of the largest market.

Advantageous geographical relations in product flow from sources of raw materials through finished goods.

Availability of inexpensive power in proximity to fuel sources.

Availability of labor on both a qualitative and quantitative basis.

Diversified types of transportation.

Availability of easily developed sites.

In all these respects, we will find that West Virginia is singularly blessed.

Let us consider first the factor of proximity to market. Within a 500-mile radius of where we are tonight exists the largest consumer market, the heaviest purchasing power, of any place in the world. The population concentrations of the eastern United States buy more goods of all kinds, consume more goods than any other area of comparable size in the world regardless of population.

Our own case is an excellent example. Within 500 miles—a few days delivery time—lies 70 percent of the total aluminum consuming market in the United States. Of the three basic products we fabricate in Ravenswood—aluminum plate, sheet, and foil—85 percent of the Nation's aluminum sheet market lies within that same magic circle.

Although the figures may differ, the same relative thing is true for almost all goods manufactured and consumed in the United States.

Now look at the geographical considerations in material flow. The elements making up this factor vary from industry to industry, but the same general rules apply to most industries because it is unusual to find the sources of raw materials located near markets.

In the case of aluminum, our source of ore, bauxite, is in Jamaica in the British West Indies. It takes more than four pounds of the ore to deliver one pound of finished product to the consumer—quite an exercise in logistics when you realize that in Ravenswood alone we hope to sell some 340-million pounds of our finished products each year.

But look how advantageous geographically, the material flow is from our standpoint. We ship the bauxite by deepwater vessel to Louisiana where on the banks of the Mississippi River at two locations we have facilities for extracting aluminum oxide from the bauxite, reducing the bulk in half in the process.

This semiprocessed material, aluminum oxide, or as we refer to it "alumina," is the raw material used in the electrolytic cells to produce the metallic aluminum at Ravenswood.

At present we are moving alumina to Ravenswood at the rate of 290 million pounds per year, and soon will double that rate. Ravenswood is linked to our Louisiana operations directly by both excellent mainline rail and navigable river, thus giving us a choice of economical means of transportation.

In our industry we not only pay the cost of raw material shipment but also the cost of the finished product to the customer. It is absolutely imperative then that we have the shortest possible routes to our markets.

West Virginia's portion of the Ohio Valley not only has a navigable river providing access to the north and south, but also is connected with crisscrossing rail and highway systems reaching every point in the magic market circle.

And now with the advent of the St. Lawrence Seaway and West Virginia's tie-in with the Federal Interstate System to the Great Lakes, a port of embarkation closer to Europe than the eastern seaboard is but a relatively few hours distant.

But equally important with the factors of market proximity and transporation is that of power—one of the most important raw materials not only in the aluminum industry but all of the electrometallurgical and electrochemical industries.

Tremendous amounts of power are required to produce aluminum. For example, to operate the reduction plant at Ravenswood our power contract with Ohio Power Co., a subsidiary of American Electric Power Co. calls for 450,000 kilowatts—the largest single private power contract ever negotiated—enough power to provide the needs of a city of more than 1 million population.

What is more important to West Virginia is that the power is all steam generated using coal as fuel. Each pound of product fabricated at Ravenswood represents approximately 10 pounds of coal.

Kaiser Aluminum's decision to lead the aluminum industry in the return to coal generated power is a most important clue to the future of West Virginia. Therefore, let us review the background in some detail.

Electrical power to produce aluminum prior to this decision primarily came from two sources—hydroelectric generation and natural gas.

Until 1948 all aluminum in this country was produced with hydroelectric power, except for some World War II emergency production and one plant in Arkansas.

Before 1940 there was no aluminum production west of the Mississippi River, but the Northwest had huge resources of surplus hydro from such dams as Bonneville and Grand Coulee, plus many favorable undeveloped sites on the Columbia River and its many tributaries.

The first aluminum plant in the Northwest was built at Vancouver, Wash., in 1940. The following year another was built in Longview. In rapid succession three more were built, utilizing the available power to supply critically needed metal for the arms of war. By 1944 the Northwest was producing nearly 50 percent of the total production in the United States.

Expansion of the aluminum industry in the Northwest continued until 1950 when gradually unexpected increases in power demand for home and commercial use, water shortages and slowing of the Columbia River development prevented allocation of further blocks of energy to the industry.

Rising construction costs and difficult financing added to the problems of hydroelectrical development—the industry turned to natural gas in the Southern Gulf States. In 5 years more than one-third of the electrical power used in aluminum production was derived from natural gas.

While gas helped fill the gap between 1950 and 1955, it could not be depended upon for long-range plans of the industry. Its increasing rates indicated it would not be able to remain competitive with coal. The widespread extension of transmission lines also required commitments of large gas reserves for long periods of time.

To gird itself for the almost unlimited horizons in the market for aluminum the industry has been forced to conclude that if there is to be expansion there is only one way to turn—to coal.

Fortunately, coal-based electrical power was ready for the challenge. The advance in the art in design of steamplants has shown such remarkable improvement that it is now possible in the most modern plants to generate 1 kilowatt-hour of electricity from as little as six-tenths of a pound of coal. Through outdoor-type construction, larger generating units, improved combustion, and through the very force of load growth itself the cost of electrical power production in steam-generating plants is following a constantly downward trend.

Reserves of coal have also been reappraised. According to the U.S. Geological Survey of 1950 more than 95 percent of the Nation's recoverable coal still lies in reserve. On the basis of the average annual rate of production in the past 10 years there is enough recoverable coal (50 percent of the total know reserves) to last this Nation for at least another 1,600 years.

In addition to these advantages from the standpoint of fuel costs, remember that the raw material—aluminum oxide—is shipped 3,000 miles from Louisiana, and the finished products shipped east more than 2,000 miles to compete in the magic market circle—all at the producer's expense.

Of course the Ohio Valley's steam power is approximately twice the cost per kilowatt-hour of hydroelectric power, but the reductions in material shipping costs effectively compensate for the difference.

Turn for a moment now to the factor of labor. The picture is equally promising. Again using Ravenswood as an example, we have had more than 80,000 applications for employment. At present we employ some

2,400 persons and we are in an expanding situation.

Our prelocation studies indicated that West Virginia was a surplus labor area, and talks with existing industry in the State at the same time indicated the adaptability of this labor force. We therefore decided to relocate only supervisors and train our own labor force. As you know the aluminum industry is a new one to the area.

There are two interesting points in this connection:

1. Adaptability of the labor force met our most optimistic expectations. We have been highly delighted with the efficiency, and ability of our 90 percent West Virginian work force to learn the relatively complex skills of our operations.

After more than 2 years of operations of portions of our plant, production superintendents report the recently trained mill and equipment operators—most of whom had never seen the inside of an aluminum fabricating facility—within months ran the costly equipment with the skill of 10-year men.

2. We found that many of those West Virginians who had left the State over a period of years to become substantial portions of the labor forces of such great industrial centers as Detroit, Akron, etc., still had their roots in West Virginia and were anxious to return.

In other words, this provides not only a labor pool in the State, but permits drawing on a very vast pool of industrially oriented workers from a wide area. This out-of-State pool consists of not transients but persons wanting to come home. Testimonial to the stability of the work force is the extremely low rate of turnover and absenteeism we have experienced.

One last factor, then, is the availability of sites. Our own site, for example, consists of some 3,000 acres of what was formerly farmland. Better than 2,000 acres is above flood and ideal for future industrial development. Within a few miles of our location lie a score of ideal industrial sites ranging in size from a few hundred to several thousand acres.

There is a trend today in industry to purchase larger and larger sites. Along the Ohio River, the Kanawha, and other tributaries there are literally hundreds of these fine industrial locations—locations in the center of the world's largest market, the center of a vast network of power systems extending from the Great Lakes to the Carolinas, the center of a lacelike network of all the major forms of transportation—the center of a large labor pool. If one believes in the continued economic growth of our Nation, there can be no doubt as to West Virginia's role in that future growth.

Twenty-fifth Anniversary of Federal Housing Agency

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. BOLAND. Mr. Speaker, the 25th anniversary of the founding of the Federal Housing Agency was recently celebrated in my home city of Springfield, Mass.

The notable event was sponsored jointly by the Greater Springfield Home Builders Association, the Springfield Board of Realtors, and the Western Massachusetts Society of Residential Appraisers.

General Counsel Graham W. McGowan of the Federal Housing Administration was the principal speaker at the May 11 banquets.

Under leave to extend my remarks in the Appendix of the RECORD, I include Mr. McGowan's remarks, as follows:

FHA ROLE IN HOUSING IN 1959

(Remarks by Graham W. McGowan, General Counsel, Federal Housing Administration, before the Home Builders of Springfield, Mass., May 11, 1959)

Twenty-five years is not a long time, as history goes. But a lot of history was written in the last 25 years. America ran the gamuts of war and peace, of depression and prosperity, of uncertainty and security.

In short, America crowded what ordinarily might have been the experience of centuries into a short 25 years.

Yet, despite the many events that intervened, many of us still remember 1934 very clearly.

It was a year that was filled with events which were to change many of our lives and our ways of thinking.

The world was inalterably following a path that was to lead to the greatest conflict ever experienced by man.

The Nazis killed Chancellor Dollfus of Austria that year as Hitler began to move in Europe.

Mussolini was preparing to invade Ethiopia.

The Japanese already were in Manchuria.

These were the early warnings of World War II.

In 1934 the depression was at its depth. Drough had hit the Middle West hard and farmers were abandoning their land to the elements.

The Nation's big dust bowl was born and billowing clouds of dust were blotting out the sun for days at a time in many parts of the country.

Those were the days, too, when billowing clouds of foreclosures were blotting out the mortgage market and home ownership throughout the Nation.

Foreclosures reached an all-time high of 252,000 during 1933, and housing starts had dropped to a mere 93,000 annually.

Mortgage money was frozen. The housing industry was flat on its face.

Properties were falling apart for lack of money to pay for repairs.

Millions of construction workers were unemployed because there was nothing to build. Total unemployment stood at 11 million persons.

This was 1934. Most of you can well recall the times. This was when, 25 years ago, Congress passed the National Housing Act, which created the Federal Housing Administration. It was signed into law on June 27 of that year.

FHA was established to insure the loans that private lenders would make to prospective homeowners, and further, to insure loans for repairs and modernization of our then rapidly deteriorating housing inventory.

Today, the concepts embodied in the National Housing Act of 1934, namely making it possible for Americans to purchase homes with a minimum downpayment and low monthly payments, are established practices in home financing.

This Government program of mortgage insurance sparked a revolution in American housing. This new concept led the way to large volume homebuilding and a healthy housing industry. It has brought opportunities for homeownership to over 50 percent of our American families so far, and the percentage continues to increase. It has brought about better construction methods and property standards, sounder financing, scientific appraisal and credit rating methods, more accurate analyses of housing markets and increased reserch in building techniques.

I think most of us will agree that FHA's program of mortgage insurance has been the cornerstone of this revitalized industry. That it succeeded is attested by history—by the fact that time and again the housing industry has shown itself to be one of the most dynamic and stable segments of our country's economy. Last year when recession was the news of the day, our housing industry continued strong. Today, with our economy again showing a noticeable trend upward, our housing industry is leading the way.

This is what FHA and the housing industry, working together, have accomplished.

In summing up these accomplishments, I should like to emphasize that the FHA is entirely self-supporting. Not 1 cent of Government money goes into any part of FHA's operation. In the early days of operation, the Treasury Department advanced a total of $65½ million to pay expenses and to establish FHA insurance funds. These advances were repaid to the Treasury in the fiscal year of 1954, together with interest amounting to $20.4 million.

I might suggest that there is much to be learned from the benefits which have accrued from this type of partnership between Government and private industry.

These accomplishments are of the past. What will we able to say about FHA 25 years from now? How can this partnership create still more home ownership and still better housing for all Americans?

This is a great challenge to the Federal Housing Administration.

Well, I know how not to accomplish it. One way would be for FHA to become a bureaucracy so entangled in redtape that our customers would give up in disgust. Another way would be for private industry to think it could rest on its laurels—or look to the Government to solve every passing problem with which you may be confronted from time to time.

But so much for the negative. To find the positive, I like to look back to 1934, and appreciate the fresh imaginative thinking which was being done in FHA at that time. Nothing was borrowed or borrowable from the past. This was a new program, carved out of new ideas and new concepts.

I like to look back to 1934 because I have found the same feeling among FHA's present 7,000 employees. Even after 25 years, during which time our programs have become well established and enthusiastically accepted by industry and the public, FHA is still staffed with employees who have that same fresh, imaginative approach; employees dedicated to better housing for all Americans

A good example of this imaginative approach, I think, is the administration's proposed trade-in housing program.

This legislation, if enacted, will make it easier for a prospective home buyer to trade in his present home on another which better suits his needs. This program is important to the housing industry because it provides greater flexibility in dealing with trade-ins.

To state the case more simply, FHA hopes to be in a position to make long-term financing available to a realtor or builder on the same liberal terms that are now available to an owner-occupant. It will permit the homeowner to use his equity as an immediate downpayment on another home without having to wait until the trade-in house is actually sold. I hope Congress enacts this legislation for it will benefit all concerned.

It will benefit:

1. The homeowner who needs the cash out of his present home for the downpayment on another home.

2. The real estate broker and the builder who cannot afford to have their money tied

up for long periods of time on trade-ins, and

3. It will benefit the lender because he will now have a Government-insured loan on the most favorable terms during this interim period.

In fact, I hope to see the day when Americans can trade in a house just as easily as we now trade in automobiles. And the closer we come to this goal, the closer we'll come to meeting America's changing and growing housing needs.

FHA knows it has contributed much toward meeting America's housing needs, in 25 years. Today, three out of every five American families own their own homes, due largely to FHA's 203 program which insures mortgages on one- to four-family homes. This program has worked well during those 25 years and could be expected to continue to work well without anyone worrying very much about it. But we in FHA know that this is not enough.

For instance, we have found that there are sections of the country where the benefits of the 203 program are not readily available. Something needed to be done, and we're doing it. We recently launched the certified agency program.

The certified agency program works very simply. FHA certifies qualified lending institutions as its authorized agents in smaller communities that are some distance from FHA insuring offices. These agents act as FHA representatives and have full authority to issue FHA commitments to insure 203 mortgages. Industry people are used as fee appraisers and fee inspectors.

The certified agency program is an excellent example of how FHA constantly reexamines and reappraises its programs—always seeking to extend the benefits of its programs to more and more American families.

Now I want to get into something that I know is very much in the minds of many of you in the housing industry. That is FHA's program for urban renewal and relocation housing—our 220 and 221 programs.

At the outset, I think I should point out to you that the concepts embodied in these two programs are not much different than those in FHA programs that have been proven over the past 25 years. There is no Government money involved in FHA's urban renewal and relocation programs.

Just as in our 203 home ownership and 207 rental housing programs, we provide mortgage insurance for 220 and 221 projects. Private industry does the rest. Private builders do the work, private capital finances the projects.

There has been, I think, considerable misunderstanding on this point. These are not public housing programs. FHA is not in the public housing business.

FHA sections 220 and 221 are specifically intended to provide financing assistance for existing as well as new properties through insurance of mortgages on a range of housing that includes multifamily rental and single-family sales housing.

Rehabilitation of existing dwelling units, when practicable and economically feasible, is receiving special attention.

Another example of the fresh, imaginative approach that has been typical of FHA during its first 25 years, is our master commitment program.

This is a plan that enables homebuilders to use a single FHA commitment for a variety of houses based on a basic design. Under this program, builders will learn in advance how FHA valuations will be affected by additions or deletions in the basic house design.

This will mean more flexibility for the builder and for real estate brokers handling new homes because you will now be able to tell prospective buyers exactly how much each addition to the basic house will cost.

This, I think, is real evidence that FHA continually reexamines its programs and procedures to keep them up to date.

FHA is always sensitive to the changing conditions in the housing field and through continuous reexamination of our programs we find new ways of doing things and new things to be done.

For instance, FHA is now pioneering in housing for the elderly. This is an urgent market.

The population of people over 60 has increased greatly since FHA was first established. So have the needs of these people. Most of them do not want, nor do they think they should be required, to live with their children, as families have done in the past. Many millions of them want to enjoy the dignity of living independently in housing accommodations they can afford and which meet their needs.

FHA is offering a sound mortgage insurance program which is available in both large and small communities.

Most of you are now quite familiar, I am sure, with FHA's new minimum property standards. They became effective last month throughout the Nation on an optional basis, and will become mandatory July 1.

These new standards are the result of 3 years of hard work by the FHA staff and you people in the industry. They represent a recodification of 23 sets of the old minimum property requirements that previously had been used.

FHA's minimum property standards are America's first nationwide building code, aimed at providing better homes through uniform standards. They are a real protection to the American home buyer and provide uniform guidelines for homebuilders.

I would like to discuss with you for a minute or two still another FHA program which some people, I think, have misunderstood. That is armed services housing. We call it "Capehart housing." A good many of these units have been constructed at military bases in Massachusetts and others are being planned.

In this program, FHA cooperates with the Department of Defense in providing the type of housing at our military installations that will make our career officers and enlisted men want to stay in the armed services. This is an extremely important part of our national defense, and is of even more importance when we consider that the training of some of these highly skilled men costs this country about $300,000 per person.

The military, and for that matter the entire country, simply cannot afford to lose these people.

The Assistant Secretary of the Army remarked recently:

"Despite all the wonderful advances that have been made in weapon development and better organization and cooperation throughout our Armed Forces, in my opinion, there has been no progress of more long-range value to the overall strength of this country than the long overdue provision of attractive housing for our enlisted men and officers."

It has been estimated that the drop in turnover among the military services as a direct result of better housing has saved the American taxpayers something over $1 billion.

FHA is proud of the part it has played and is playing in this vital field of housing on behalf of the national defense and honestly believes that this program has been so carefully administered as to have had no appreciable effect on the private market.

And now, my friends, by way of concluding this talk—and it is out of consideration for you rather than myself that I don't make it longer—let me stress these points in closing:

1. As I have already told you, FHA is entirely self-supporting. Those people who use FHA pay for its operation through their insurance premiums.

2. FHA has written about $55 billion in mortgage and loan insurance since it was established in 1934 and now has $26 billion of mortgage insurance outstanding.

3. FHA now has $700 million in reserves which in our judgment is adequate to withstand the most serious economic reversal which can reasonably be expected.

4. While accomplishing all of this remember: FHA has helped make the housing industry one of the strongest and most stable pillar in our country's economy; and more Americans own their homes today than ever before in history.

This is FHA—FHA 25 years ago; FHA today. This is FHA's role in housing in 1959.

A partnership—Government and industry—working together toward the mutual goal of "Better housing for all America."

H.R. 3

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following letter which was received from Charles B. Shuman, president of the American Farm Bureau Federation, and which, I believe, appropriately calls attention to the need for legislation such as H.R. 3:

AMERICAN FARM BUREAU FEDERATION,
Washington, D.C., May 19, 1959.

Hon. HAMER H. BUDGE,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BUDGE: The American Farm Bureau Federation respectfully recommends your favorable consideration of H.R. 3.

The major argument against the bill is that an element of uncertainty would be created with respect to the interpretation of certain Federal statutes where experience has indicated or may indicate that concurrent jurisdiction of State and Federal law is not desirable.

This, however, is something that can be readily and quickly remedied by Congress by the amendment of substantive legislation to define more specifically the relative scope of State and Federal law. (For example, by the time the Congress completes consideration of labor reform legislation, the dividing line between State and Federal au-

thority in this field may have been established with reasonable certainty.)

On the other hand, if H.R. 3 is not enacted, there seems to be no way to clear up the existing uncertainty with respect to literally hundreds of State laws. In view of the extent to which the doctrine of Federal preemption has been applied, the validity of such laws is jeopardized.

The principle that State laws not in conflict with Federal laws remain valid is a traditional and historical concept of our Federal system, which has been subordinated in recent years to the doctrine of Federal preemption.

This bill has been referred to as a "bill to curb the courts." We do not believe it is or should be so considered. It is no more than a rule of construction to be applied by the courts to indicate they should not infer an intent that a Federal law is preclusive unless the Congress says so.

It is our view that if State governments are to continue to have significant authority to enact laws to serve or protect their citizens, if State law is to continue to be a fundamental part of our Federal system, if State sovereignty is not to be swamped by Federal sovereignty—then H.R. 3 should be approved.

May we express our appreciation for your consideration of these views.

Very sincerely,

CHARLES B. SHUMAN,
President.

Berlin—Reunification of Germany

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. COHELAN. Mr. Speaker, in our continuing discussion of the situation in Berlin and in Germany we must constantly return to the long-range view and the question of ultimate reunification of this divided country. Our current efforts to lessen existing tensions cannot be taken out of that perspective. In his most recent article, C. L. Sulzberger of the New York Times points out that there is at least room for confusion about the long-range goal of the Allies. I wish to submit Mr. Sulzberger's article for the RECORD and may I call attention, in doing so, to his comment that there are economic reasons for the Soviets to oppose reunification because East Germany has become an industrial satellite important to the Soviet 7-year plan.

The article follows:

BERLIN—THE FLOWER IN THE CRANNIED WALL

(By C. L. Sulzberger)

GENEVA, May 19.—Khrushchev may hope to discover at this Geneva conference how far the United States is prepared to go on any deal dividing the world into political spheres of influence. Indeed, diplomats presume he might suggest this kind of deal to Eisenhower when he finally meets the President at the summit.

No doubt the Russians are confused about our attitude on such cynical if practical arrangements. When the Berlin blockade was ended by the Jessup-Malik agreement 10 years ago, Moscow understood that accord as implicitly accepting Europe's partition into Soviet and American zones. The Kremlin interpreted our passivity during the East German, Polish, and Hungarian uprisings as confirmation of its view.

For this reason Russia has never been firmly convinced of our desire to reunify Germany, especially when we refuse even to discuss that country's neutrality as a purchase price. Obviously, the removal of the East Germans from the Communist bloc would be a repudiation of what the Kremlin sees as a tacit pact of 1949.

Khrushchev considers German unification impossible for a long time to come. He needs his East German satellite's industrial contribution to the Soviet 7-year plan and he still fears installation of a non-Communist state on the borders of Poland and Czechoslovakia.

THE FRENCH AND BRITISH VIEWS

Furthermore, even if he has doubts about our own desires to reunite Germany, he has fewer doubts about France and Britain. The French talk about German unity but they imply willingness to divide Europe by accepting the Oder-Neisse line as a legal border between Germany and Poland. And the British are not only prepared to accept that frontier; they have given rich hints they are not opposed to a partition arrangement ratifying the Continent's existing ideological division.

Thus Khrushchev can detect lack of harmony in the allied approach. He does not realize that American diplomatic habits and internal political realities make it impossible for us to carve up the map. Not quite sure of our views and suspecting differences between ourselves and our partners, he clearly wishes to probe at this Geneva meeting for the basis of this kind of understanding.

If he cannot get a formula juridically recognizing Europe's division, he would at least like to ascertain what we might be prepared to give for sacrifices on his part. He knows that even Dulles once argued that German unification should be given a higher priority than West German rearmament. Gromyko will surely inquire whether we might agree to a reunited Germany's military neutralization.

But we cannot even toy with this idea. We support a Bonn Government which has maintained electoral strength by distinctly non-neutral support of NATO. We feel if we deserted Adenauer he would eventually be replaced by a coalition ready to make terms with Moscow at our expense.

A NEUTRALIST CHAIN REACTION

Furthermore, if the idea of German neutralization spread through Europe, we would not only weaken our military position at its most vital sector but might find other countries seeking a similar escape: Norway, Denmark, Italy and even France. A neutralist chain reaction, once begun in Germany, could spread to the English Channel.

We must insist on German reunification as a policy. And we cannot afford to pay for such unification in terms of German neutrality. Khrushchev will therefore discover that the United States is committed to its present European policy. This continues to demand German unity even if it remains no more possible than Korean unity.

For Moscow, German unity on any other terms than German neutrality is inadmissible. For Washington, any formal recognition of Soviet control in Eastern Europe, including East Germany, is equally inadmissible. And to end such control by risking the vigor of our principal alliance is even more inadmissible.

One can compare the current negotiation, started over Berlin, to Tennyson's famous poem, "Flower in the Crannied Wall." Berlin is the flower through which the poet, or diplomat, can envision the world. "I hold you here, root and all, in my hand," said Tennyson of the flower, and say the ministers of Berlin, "but if I could understand what you are, root and all, and all in all, I should know what God and man is."

The Realities of Cotton Economics

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. HAGEN. Mr. Speaker, I submit for the consideration of the Members the following article on Mexican cotton planting which appeared in the May 17 issue of the Fresno Bee:

DRASTIC CUT IS REPORTED IN MEXICAN COTTON PLANTING

(By Alva Senzek)

MEXICO CITY.—California cottongrowers will face substantially reduced competition from Mexico on the international market when the crops are harvested next fall, if the current trend toward reduced acreage continues here.

Preliminary figures which started coming in to Mexican agricultural officials here 2 weeks ago indicate that planting is off by as much as 66 percent in some areas, and that it is down nearly 20 percent to date for the country as a whole.

MAY BE HIGHER

Experts predict that by the time the spring planning season ends, the drop may be as high as 35 percent.

In the Mexicali area, a southerly continuation of the Imperial Valley, acreage is down 26 percent so far, from 475,000 to 350,000 acres. Near La Paz, Lower California, the drop has been 60.9 percent, or from 27,500 acres of 10,750.

The hardest hit area has been the Yaqui Valley, Mexico's second largest producing center in the states of Sinaloa and Sonora. There bad weather and a bad crop last year have made it impossible for farmers to pay off last year's loans and, as a result, to obtain new ones. Acreage for the area was down from 582,000 to 335,000.

SHORTAGE OF CREDIT

The down turn has been attributed both to a shortage of bank credit and to apprehension over the possibility of higher subsidies for American growers, which would enable the latter group to undercut Mexican prices on the world market.

Mexican growers are particularly sensitive to fluctuations in the international market since all but a small portion of their crop is grown for export. They sold only 14,000 bales of specialty fibers in the United States for domestic consumption last year, but marketed a large portion of their crop on U.S. exchanges or through U.S. buyers for overseas use.

Mexico was the third largest cotton producing country in the free world last year, producing a record 2,300,000 bales. Buyers expect this year's crop to be a third smaller, or 1,500,000 bales. Acreage is expected to drop from 2,450,000 to 1,975,000.

OFFICIALS DISMAYED

Government officials here have expressed unanimous dismay at the downward trend and have called attention to possible foreign trade complications which the country may face during the coming months. Cotton is Mexico's most important export commodity, making up 40 percent of its foreign trade balance.

Some industry and Government leaders here are blaming the slump on U.S. price support policies which, they say, are taking away the profit incentive from Mexican growers. An equally large group, however, holds the view that Mexico is caught between its own hand-to-mouth tradition of financing its cotton industry and an international

picture in which production is up and demand down everywhere.

Mexican growers do not make a policy of limiting their acreage to what they themselves can finance and, as a result, annually require 1,600 million pesos ($128 million) in credit.

FUNDS NOT AVAILABLE

About 80 percent of this money comes from foreign cotton buying firms which have officials in Mexico, and from private banks. Both types of business naturally are more reluctant than the Government to underwrite marginal farming operations in the face of a possible bad year, with the result that many farmers are currently unable to get funds for seed.

Conservatism is more the policy than ever with the financing firms this year, since there are more than 500,000 bales of cotton as yet unsold within the country. Most of this surplus—in ordinary times no problem for the Mexicans to dispose of—is in the hands of the underwriting firms, not the growers.

The Mexican Government has made an effort to help in the current situation by, 1. Extending extra bank credits to some areas; 2. Lowering the export tax on cotton slightly, and 3. Buying up some surplus cotton on a price support basis. However, most industry leaders agree the help was too little and too late.

IRON CURTAIN PRODUCTION

Mexico's cotton industry also has been affected of late by the entry of the Iron Curtain countries into the ranks of major cotton-producing countries.

Until very recently Japan, for example, bought up 25 percent of the Mexican production each year. Now Japan is cutting back on Mexican orders and reportedly is planning purchases from Communist China. Russian trade missions also have been active in European and South American countries which previously had been good customers of the Mexicans.

A breakdown of the acreage estimates, showing the change in each major producing area, follows:

Matamoros, 800,000 acres in 1958, 700,000 in 1959; Nuevo Leon, 50,000 and 32,575; La-Laguna (Torreon), 225,000 and 300,000; Delicias, 175,000 and 128,250; Juarez, 60,000 and 69,375; Sinaloa, 192,500 and 110,000; Navajoa, 75,000 and 25,000; Ciudad Obregon, 185,000 and 125,000; Hermosillo, 80,000 and 50,000; Caborca, 50,000 and 25,000; Mexicali, 475,000 and 350,000; La Paz, 27,500 and 10,750; others 55,000 and 50,000.

Mr. Speaker, the foregoing article makes several significant points with respect to the direction our cotton program should take. The first significant point is that Mexican cotton production will be radically smaller—and competition for American cotton, therefore, substantially less—because, among other reasons, American cotton is being sold abroad for a lower price, albeit a Government-subsidized lower price. This information would seem to prove the proposition that a lowering of the price of American cotton will permanently increase its market.

A further reason given for the slump in Mexican production is the unavailability of crop financing. This reason is not really a second reason but rather an aspect of our lower pricing policy. Heretofore our high pricing policies have held an umbrella over foreign cotton and synthetic production which justified the utmost flow of finance capital into that production with little or no risk of loss. The removal of that umbrella makes such capital cautious.

I next invite the attention of my colleagues to a second article appearing in the Fresno Bee on date of May 17, 1959:

ACALA 4–42 WINS PRAISE OF OFFICIAL

BAKERSFIELD, KERN COUNTY.—John Turner, the director of the U.S. Department of Agriculture Cotton Experiment Station at Shafter, says Acala 4–42 cotton is a cotton seed developed by and for the California cotton industry.

"The seed bred by the USDA for the California cottongrower and increased and distributed by the California Planting Cotton Seed Distributors, has developed more special features for production on California farms and ranches than any other variety of cotton."

Turner said Acala 4–42 is bred at Shafter, without thought of profit to any seed breeder, individual, or organization. "The only function," he declared, "is to breed the best cotton for this valley and its growers so that they may obtain a cotton which is high yielding, of uniform fiber and strength, and one which has better spinning qualities than any other cotton.

"Acala 4–42 is wilt resistant and is bred for 1 1/16-inch to 1 3/32-inch staple, which has a wider and more general use than cottons of longer or shorter staple."

Turner conducted several tests last year with competing cotton varieties and found Acala 4–42 produced more pounds of lint cotton an acre than three other specially bred cottons. Acala 4–42 produced 1,307.3 pounds lint cotton per acre; Arizona A–44 produced 1,201.1 pounds; New Mexico A–1517 produced 1,112.6 pounds, and Mississippi Delta Pine variety produced 1,170.1 pounds.

Mr. Speaker, this article reflects the fact that by private endeavor and State law California cottongrowers universally produce a wilt-resistant cotton, the fiber of which measures from 1 1/16 inches to 1 3/32 inches, a staple which has a wider and more general use than cottons of longer or shorter staple.

The import of these facts is that without the help of ridiculously high price supports an intelligent group of cottongrowers can improve the quality of their product, its salability, and their net economic return.

Unhallowed Ground at Gettysburg?

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. QUIGLEY. Mr. Speaker, once more the Washington Post has spoken out in defense of Gettysburg Battlefield as a national historical shrine and its preservation in a fitting manner. I can only hope that the Senate, and ultimately the House, will become as interested in our heritage as the editorial writers of the Nation's press. I can only wish that the Senators will read all of the editorials on the matter and see the mail that is coming to Capitol Hill on the subject. May I commend this morning's editorial from the Washington Post to the Senators. It follows:

UNHALLOWED GROUND?

Unless the Senate acts quickly, the site of the most important battle of the Civil War may be irrevocably opened to commercial spoliation. As it is, the slopes of Gettysburg are already partly defaced by a clutter of souvenir stands, gas stations, auto junkyards and motels. Only 100 yards from the cemetery where Lincoln gave his matchless address an industrial plant may rise on land owned by a steel corporation. A way exists to halt further encroachments. The Senate Appropriations Subcommittee can restore $750,000 pared by the House from the National Park Service budget. This is the sum needed to purchase about 425 acres at the battlefield now in private hands, land which otherwise may soon be encrusted with split-level ramblers and outdoor barbecues. Of course it is beyond mortal powers to consecrate and to hallow Gettysburg's ground. But surely the country has a right to expect that Congress will protect these honored dead from the indignity of this kind of mortal invasion.

So, Batista Has a Hart After All

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column, "Notes From Washington," by Ron W. May, Washington correspondent for the Capital Times, of Madison, Wis., for Monday, May 18, 1959—certain references to Members of Congress have been deleted and supplied material is indicated by the use of brackets:

WASHINGTON.—The powerful influence of ousted Cuban Dictator Batista was felt last week in the U.S. Congress.

A special showing of a film denouncing Rebel Leader Fidel Castro was held in the chambers of the House Foreign Affairs Committee. Castro, of course, is the bearded ex-law student who forced Batista to flee to the Dominican Republic last New Year's Eve.

[Seven] Congressmen, with office aids, attended the showing.

How was the program arranged? [One of the Congressmen] said that he understood it was arranged by a Columbia Broadcasting System official named Ed Hart. He had met Hart a number of times recently, he said.

[He] was right that Hart had done the arranging, but not that Hart is a CBS official. He is, in fact, a paid agent of the Batista family trying to put the exile back into the presidential palace in Havana, or, failing that, to obtain for him a visa to live in the United States, where his wife and family now reside.

Last week Hart filed a report with the Foreign Agents Registration Office of the Department of Justice. He said he had received $5,000 from Batista for the following mission:

"To seek the right of asylum for Senor Batista and to correct misstatements of facts and misinformation concerning him; to reunite the Batista family in Daytona Beach, Fla."

In pursuit of these aims he had held "informal conversations with members of the press, radio, and television, Congressmen, Senators, and political figures," and had

written a series of "questions unanswered by Castro" that had been inserted in the CONGRESSIONAL RECORD, although he didn't say by whom.

This column received a call from Hart shortly after the film was shown suggesting that [several Congressmen] would have statements to make about the show.

But Hart refused to identify himself other than to claim he had met this writer about 5 years ago at a Washington gathering. * * * The film shown to the Congressmen was televised nationally by CBS 2 weeks ago, and immediately aroused strong criticism. It was answered on the network last Sunday by Representative CHARLES PORTER, Democrat, of Oregon, and others.

The film, titled "Is Cuba Going Red?" was produced by Stuart Novins. It stated that "What is emerging (in Cuba), in the opinion of Western diplomatic sources, is the best organized Communist apparatus in the Caribbean." It also said that "This Cuban island is today a totalitarian dictatorship."

There was only one mention of the Batista regime, which, top U.S. newsmen have written, murdered [20,000] opponents. This mention merely termed the Batista government "corrupt."

Communists are active in Cuba, according to informed persons, who also say they gained their foothold under the brutal Batista regime. But few objective experts believe the Communists have the upper hand, although they do say that unfair criticism of Castro and his administration by U.S. television and newspapers may help the Reds. * * *

Ever since Milton Eisenhower condemned the friendliness to Latin dictators shown by the administration of his brother, Dwight, this column has been interested.

This interest was boosted by the strong praise of Dictator Rafael Trujillo, of the Dominican Republic, voiced by Representative GARDNER WITHROW (Republican, La Crosse). WITHROW even told the Dominican Congress that if Trujillo had been born in the United States he would be President instead of Ike.

Last year it was discovered that the President's brother-in-law, Gordon Moore, had risen from modest circumstances to riches since 1953, partly through the help of Trujillo. Among other things, Trujillo made Moore an officer of a Dominican shipyard.

Last week an equally startling development was discovered by this column. President Eisenhower's new special legal adviser, David Kendall, was a paid agent for Trujillo when he accepted the White House post.

Furthermore, information has reached the Capital Times that Trujillo, through U.S. agents, has bought a number of Midwestern canning factories, including, possibly, one in southern Wisconsin. The information comes from a Nebraska politician who turned down an offer to scout out good buys in such plants in the Midwest.

Foreign Aid Waste

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, May 22, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Aid Waste Calls for Closer Look by United States," published in the Charleston (W. Va.) Gazette of May 13, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN AID WASTE CALLS FOR CLOSER LOOK BY UNITED STATES

Our foreign economic and military aid to both neutral and anti-Communist nations has been an indispensable tool to implement our foreign policy in checking the tide of international communism.

It has done many sensible things, and it deserves continued support in the years ahead with more emphasis on economic programs.

In fact, former President Truman urges that we should set up a bigger program on a longer basis, instead of cutting it.

On the other hand, our aid program in the absence of realistic planning, wise spending and vigilant supervision has done many foolish things.

As we continue to spend $4 billion every year in 70 countries, needs to police this giant worldwide program are becoming increasingly evident.

Only several months ago, a congressional probe exposed incredible waste in our foreign aid project in a more or less improbable country called Laos which we are committed to build up as a bulwark against communism.

Investigation brought up:

More than five-sixths of the $135 million we have spent there had gone to support an army which couldn't fight.

To beef up this private army we have flooded this primitive country with money and goods it couldn't possibly absorb.

As a result of this stupid policy, corruption and fraudulent currency exchanges openly flourished, thus helping the Communists win a national election with their anticorruption slogans.

Now comes another sample from Laos' sister republic, South Vietnam, which compels us to wonder if Vietnamese bureaucrats are catching up fast with a familiar American practice called "boondoggling"—at the expense of American taxpayers.

The other day we received, among a usual pile of handouts, a bundle of slick magazines—four printed in English and four duplicates in French—from Saigon, Vietnam.

These expensive propaganda publications inevitably draw a rosy picture of military and economic programs in that country with an annual gift of almost $200 million from Uncle Sam.

But then we can't help giving out an exasperated cry: Do these Vietnamese officials want us to read the French version?

Is this an apparent oversight on the part of American-dollar-loaded native bureaucrats too zealous in their anxious efforts to persuade American opinion makers for "more and more dollars"?

Or is this just a sheer Asiatic imitation of our inept policy in Washington?

In either instance, it would be the American taxpayers who have to foot the bills.

Chances are that handouts of this nature are reaching thousands of newspaper offices in this country in an ever-increasing flow only to be thrown into the wastebasket.

When you add up all the expenses for this nonsensical waste, it would certainly amount to a fortune—big enough to feed thousands of hungry Vietnam refugees for a year.

It would be bad enough if the money were merely being wasted, but when it comes to "smothering" us with this sort of exasperation, things are getting downright ridiculous.

We believe it's time for Congress to step up policing, so American taxpayers are kept informed of how their money is spent for what.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

White House Conference on the World Refugee Year

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an address made by my able and distinguished colleague from Pennsylvania [Mr. WALTER] on May 21, 1959, at the White House Conference on the World Refugee Year:

WHITE HOUSE CONFERENCE ON THE WORLD REFUGEE YEAR

Ladies and gentlemen, you will forgive me, I hope, for dispensing with niceties and generalities which the occasion and the setting of this meeting may call for. Instead, I shall take the liberty of submitting to you frankly a few thoughts and a few facts.

My legislative experience in the field of immigration, displaced persons and refugees extends now over a period of some 14 years beginning immediately after World War II. This experience, as well as my modest participation in some international activities related to that field, has taught me that there are several ways of approaching the refugee problem.

First, there is the emotional approach. It usually generates more compassion than action.

Next, there is the oratorical approach producing, by definition, words rather than deeds.

Then, there is the combination of the two aproaches, resulting in the game of numbers and developing into a sort of auction reflected in some recently introduced legislation. Yes, amateurish surveys coupled with the desire to attract public attention, have resulted in the appearance of legislative proposals replete with unrealistic numbers of refugees allegedly desiring to enter this country, numbers bearing little, if any, relation to facts and figures assembled by the United Nations High Commissioner for Refugees and the Intergovernmental Committee for European Migration. In my opinion, it is the emotional approach to the refugee problem, combined with oratorical efforts, which is responsible for the appearance of those unrealistic figures. Having presided over two recent international meetings devoted to the discussion of the refugee problem, I found myself on the receiving end—so to speak—of overzealousness and it is, probably, that experience which makes me a cold realist.

As I look around this hall, I see many people with whom I have cooperated both in this country and abroad in finding ways and means to alleviate the plight of refugees. Thus, addressing this particular gathering, I feel that I may be permitted to urge you not to use either the emotional nor the oratorical concept in your deliberations, as well as to avoid the pitfalls and the futility of the numbers' auction. I know that most of you assembled in this room are able, qualified, and equipped with sufficient experience to approach the problem realistically.

What I have in mind in the first place, is to invite you not to think and plan in terms of what some like to call a definite and a final solution of the refugee problem.

No such solution is possible as long as we live in a world divided between the free and the enslaved.

No such solution is possible as long as freedom and economic opportunities beckon from the free lands to human beings oppressed by tyrannical regimes regardless of the name under which they function.

No "crash programs," no "speed-ups," no "mop-up operations" will wipe out the refugee problem as long as conditions generating that problem continue to exist.

I do not say these things for home consumption only. A few weeks ago, when I had the honor of presiding over a special session of the Council of the Intergovernmental Committee for European Migration in Geneva, I indicated to the representatives of the many nations gathered around the table that the World Refugee Year should should not be misconstrued to be a "mop-up" operation.

In my opinion, no such "one shot" operation is conceivable. Realistic thinking and realistic planning require the awareness that, as long as there is tyranny, misery, slavery and oppression, there will always be human beings who will decide to pull out their stakes and leave their homelands, seeking freedom and economic opportunities abroad.

Sometimes the influx of refugees into the free world is but a trickle. Sometimes it is a mass exodus like the one we witnessed during and after the Hungarian revolution of 1956. But certainly, not even an armistice in the cold war, an armistice based on the fallacy of coexistence of the incompatible—a fallacy of coexistence of slavery and freedom—not even such an armistice will stop the drive of people out from the lands where Orwell's nightmare has become a reality.

With that in mind, I have endeavored to equip the United States with a long-range legal instrumentality which—if wisely used—could contribute to the resettlement of refugees and become an important factor in the widening of international cooperation and partnership of the free nations.

Earlier this morning I introduced in the House of Representatives a resolution, the enactment of which will, in my opinion, give the United States such an instrumentality.

My resolution is based on the experience gained in 1956 and in 1957, when, under one of the provisions of the Walter-McCarran Act, the United States was able to lead the other free nations in providing a safe haven and resettlement for the Hungarian refugees.

In line with this experience, my resolution amplifies the authority vested in the Attorney General of the United States under section 212(d)(5) of the Immigration and Nationality Act to parole into the United States certain aliens, if he deems such action to be in the public interest.

It could be—as it seems to me—that the existing statute is sufficient to permit continuous U.S. participation in providing resettlement for refugees in this country. However, inasmuch as the parole authority now contained in the law is discretionary in nature, and the Attorney General of the United States may not feel that the Congress desired him to use that authority in the absence of reasons which could be deemed to be emergent, the resolution which I introduced this morning states specifically the intent of the Congress by reiterating the discretionary authority already available, and amplifying it through the use of defined criteria of eligibility of refugees for parole entry.

The criteria are patterned upon a well tested definition of the refugee-escapee contained now in section 15 of the act of September 15, 1957, known as Public Law 85-316.

My resolution does not contain any numerical ceilings, nor does it prescribe any termination dates. Its purpose is to give the Attorney General of the United States, acting upon the recommendation of the Secretary of State, a long-range legal weapon with which to operate in coordination with the United Nations High Commissioner for Refugees and the U.S. escapee program under continuous supervision of the Congress.

I am aware of the fact that under my resolution the Congress is actually called upon to express its full confidence that the Attorney General of the United States will use the power vested in him with foresight and care, with the best interests of the United States remaining the governing factor of his decisions. I am hopeful that the resolution, if enacted, will permit the United States to induce our allies and friends to share with us the responsibility for the resettlement of refugees and to recognize that task to be a joint and not a one-sided undertaking.

The Congress will maintain continuous close scrutiny of the parole operation conducted under the terms of my resolution by reviewing reports which the Attorney General of the United States will be directed to submit to the Senate and the House of Representatives. Should the Congress, at any time, decide that the parole operations affecting refugees should be terminated, a simple resolution passed by either the Senate or the House of Representatives will have the statutory effect of terminating the Attorney General's special authority.

Further, and again in line with our experience with Hungarian refugees, my resolution provides for the granting of permanent resident status to refugees admitted under parole after they have been in the United States for at least 2 years. After the adjustment of their status, they will be granted the benefit of the original date of entry for naturalization purposes.

I believe that in drafting my resolution I have succeeded in steering clear of the numbers game, as well as of crash programs originating from the feeling that a deadline must be met.

I believe that I have also given the Department of State the opportunity to negotiate with other governments a correlated and parallel international effort to secure a fair and equitable distribution of the refugees among more nations than those who have so far made the most sizable contribution in this field.

I would feel that I am being remiss in my duty if I would conclude my remarks at this point without leaving one additional thought with you.

Since the end of World War II, the United States admitted 3 million immigrants. Since Hitler's advent to power this country has admitted 3.5 million immigrants. At least 1.5 million of these immigrants could be classified as refugee-escapees as we now define this term in our laws.

What happened to this mass of humanity? We know, of course, that the majority of immigrants who entered our country in the

last two decades, are of a character very much different from the type of immigrants who arrived at our shores around the turn of the century. What is the nature and the extent of the new immigrants' contribution to our economy, to our scientific achievements, to our arts and literature, to our politics, and to our rate of crime? What is the immigrants' contribution to the increase of the population of our prisons? What is the immigrants' contribution to our Armed Forces, our universities, our insane asylums, our orphanages? There is no answer to these questions.

In leafing over old congressional documents, I found that no study of the immigrant in the United States, no study worthy of this name, that is, has been made in the last 50 years. A Commission appointed in 1907 produced reports the size of a good library. That was in 1911 and nothing was done in that field since, except politically inspired reports, unworthy of that name, and propaganda booklets produced and peddled by people with strong self-serving motives of one kind or another.

The 1911 report had a most profound influence on our immigration policy and our immigration legislation. After half a century had passed, it is certainly time to assemble a group of impartial specialists in the various fields fo human endeavor for the purpose of giving this country the benefit of a study answering some of the questions which many Americans are asking before they decide whether our long-range immigration policy should be changed.

There are 100 million more people in this country than there were when the Commission of 1907 was constituted. More than 50 million children have been born in the United States since World War II. By 1970 there will be 210 million Americans, 20 million of whom will be people over 65 years of age.

What is the capacity of the United States to absorb people? Whom and how many immigrants should we admit? Who should they be? What should be the basis for their selection?

I know full well that I could pyramid questions of this sort without anywhere finding the answers.

It seems to me that the initiative for scientific study of immigration's impact upon all facets of life in the United States should most appropriately emanate from you, ladies and gentlemen. In my opinion, it should not be a study undertaken by a governmental agency and it should not be a congressional venture. This is a field where citizens' initiative should take over so that institutions of learning, qualified foundations, and individual experts could work together.

In launching such a study this meeting will leave a lasting, most valuable imprint on the history books of this Nation.

International Educational Exchange Programs With Africa

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mrs. BOLTON. Mr. Speaker, upon returning from my 3-month special study mission to Africa in the fall of 1955, I noted in my report to the Congress that one of our greatest needs, both in Government and out, was information about Africa. Accordingly, one of my recommendations was that educational exchange programs should be stepped up with the facilities of higher educational institutions in this country made available in much larger measure to students from all over Africa. The purpose of this recommendation was twofold—to expand our knowledge of that long neglected continent and to promote mutual understanding and friendship between our peoples.

It is, therefore, particularly heartening to me that the proposed exchange program with Africa for fiscal year 1960 represents a substantial increase over that of previous years. Since the inception of the international educational exchange program in 1949, 111 Americans and 271 persons from 17 African countries had been exchanged through the 1957 to 1958 academic year. In the coming year alone, however, a total of 230 exchanges are proposed. This accelerated program is in keeping with the rapid emergence of much of Africa into freedom and responsibility.

The beneficial results of these exchange activities are numerous, with advantages accruing to both the United States and Africa. For us, the program has resulted in an increasing number of American specialists on Africa, an increase in knowledge on Africa available to the American people, and an increase in interest and study in the United States on Africa.

One has only to review the teaching staffs of area training programs in colleges and universities in the United States and the membership of steering committees for important programs and agencies to realize the great importance of study and research provided by the U.S. Government and private agencies in developing a corps of American specialists on Africa. Competence has been acquired in some of the many African languages, and valuable research conducted among certain African tribes.

Publications resulting from such specialized study and research are increasingly making knowledge about various African countries available to the American people. During the last few years a growing number of magazine articles and even entire issues have been devoted to Africa.

The number of area training programs and courses on Africa in colleges and universities has been greatly expanded. Currently, some 31 institutions of higher education offer area training, research, or course work on Africa at the undergraduate or graduate level.

Discussion groups and seminars on Africa have been sponsored by various groups. An African Studies Association with a membership including 183 scholars and specialists has been established to stimulate research on Africa. Our own Library of Congress is planning to set up an African studies unit, which will compile a monthly list of publications on Africa acquired by American libraries.

For Africa, the international educational exchange program has been profoundly important. It has demonstrated a genuine interest by Americans in their future, and thus contributed enormously to the existing good will between our peoples. Moreover, it has meant needed asistance in health, education, and economic development, together with the training of Africans to assume leadership.

Africa's urgent need for trained teachers is an important consideration in the exchange program. Under the program from 1949 through the 1957 to 1958 academic year, 25 American teachers and 18 from African countries had been exchanged. These activities were supplemented by programs independently carried on by the African-American Institute, the International Cooperation Administration, and by private agencies. In the coming fiscal year an additional 20 teachers are proposed to be exchanged under the program.

Perhaps the greatest value derived from this program is the very real contribution to the development of African leadership. Many of those who come to the United States for study will return to their own countries to enter key positions in government and other areas of national importance.

Certainly these exchange programs have contributed to mutual understanding between the United States and Africa beyond any precise calculation. Close and lasting bonds of confidence and good will have developed between hundreds of Americans and persons from Africa, between anthropologists, athletes, educators, library and museum directors, political leaders, and leaders of women's affairs and organizations. In these programs we have demonstrated to the African people that Americans desire to learn about them, their history, their culture, and their languages. In turn, they have given opportunity to learn about American democracy and institutions at firsthand.

The following chart indicates the proposed exchange program for African countries south of the Sahara during fiscal year 1960:

Country	Grants to Americans	Grants to foreign nationals	Total
Angola		1	1
Belgian Congo	1	2	3
Cameroun		6	6
Central African Federation	2	11	13
Ethiopia		7	7
French Equatorial Africa		4	4
French West Africa	6	6	12
Ghana	3	18	21
Guinea		3	3
Kenya		10	10
Liberia	1	3	4
Madagascar		2	2
Mozambique		1	1
Nigeria	1	24	25
Sierra Leone		3	3
Union of South Africa	4	16	20
Tanganyika		3	3
French Togoland		3	3
Uganda		5	5
Zanzibar		3	3

Armed Forces Day, Altoona, Pa., May 16, 1959

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. VAN ZANDT. Mr. Speaker, my hometown of Altoona, Pa., joined with thousands of other communities in the Nation in paying a well-deserved tribute to our Armed Forces on May 16.

At an Armed Forces Day luncheon prior to a colorful parade, Brig. Gen. William W. Stickney, USMCR, Deputy Director Marine Corps Reserve, delivered the following address:

ADDRESS DELIVERED IN ALTOONA, PA., MAY 16, 1959, ARMED FORCES DAY OBSERVANCE, BY BRIG. GEN. WILLIAM W. STICKNEY, USMCR, DEPUTY DIRECTOR, MARINE CORPS RESERVE

Salutation: I have been looking forward with distinct pleasure to meeting with you good people of Altoona.

It is, of course, most gratifying to me that you are interested in hearing about the overall Reserve picture, and I am most happy to have this opportunity to talk with you about a subject which is not only vital to our country's defense but also strongly connected with our commerce, industry, and economy.

You have requested that I speak in reference to the big picture in Reserve matters, the mission of the Armed Forces Reserve, or the overall policy concept. This, you must realize, is a very large order and would require many hours to properly cover the subject. However, I will try to limit my remarks to a few basic concepts which can be confined to the time allotted for this occasion.

Let us consider for the moment your Reserve and mine. This is not the Marine Corps Reserve, the Army, Navy, Air Force Reserve, or the National Guard. This is our Reserve, the whole ball of wax. We too often think in terms of our own service alone. We sometimes feel that our own particular service is the best, or the only service to be considered. We sometimes speak of our particular service to the detriment of other services. This may be all well and good for competitive purposes or loyalty to one's particular service, but we must all remember that the hand is no stronger than the strength of all its fingers. Likewise, our Reserve is no stronger than the strength of each service. Insofar as we do harm to any finger of the strong hand of the Reserve, we destroy its strength to that extent. It is vital to the future of this Nation that we have a strong and virile Reserve in all components, a well-balanced force in readiness.

As you well know, many hours, days, weeks, and months of devoted effort have been expended during the past few years by many outstanding citizens, military and otherwise, in a concerted effort to find ways and means of improving our Reserve components so that they in turn may better serve the Nation. In this effort many committees, boards, surveys, and reevaluation symposia have been convened, dissolved, and reconvened. What has been the cumulative result of all this monumental effort?

To be sure, gains have been made. Some improvements have been notable. Some rights have been established, and, many privileges have been sought. Frustration has been rampant.

In my opinion, never have so many eminent citizens and outstanding military leaders worked so diligently to obtain so little. Why?

Today, I would like to discuss with you a few basic concepts. A lawyer would call it "horn book law"; a military man would call it "an estimate of the situation"; a Navy man would call it "rocks and shoals"; a marine would call it "customs and traditions of the service."

Generally speaking, the resultant of all of our efforts has been the 1955 amendments to the Reserve Forces Act of 1952. Whether you agree with those amendments is irrelevant. The fate of that act may be academic, at least it is debatable.

Regardless of that, and whatever the results may be, we do know that in a democracy such as ours, the Regular forces can only be a shield, can only man the outer ramparts, can only ward off the initial thrust. By this, I mean no offense to our Regular forces—within them we have many great leaders and thousands of valiant hearts. Nevertheless it is the very nature of our form of government and economic structure to maintain a relatively small protective shield and to create and build a large Reserve to fight and win our wars. This is, and always will be, our tradition.

I believe it to be manifest that this Nation cannot survive without a strong, virile and flexible Reserve. I also believe that it is the duty, not only of the Reserves themselves, but, of every citizen as well, in and out of uniform, to build that Reserve and give it every nourishment necessary to its health. There are those who have said we have failed, but they say not why. If this be so, idle criticism is not what we need—nor are bodies and weapons our only requirements. What we need first and foremost is good old American pride and patriotism. And, what is more, we know that pride and patriotism cannot be subsidized, it cannot be bought and paid for in the marketplace. Dollars will help, but we cannot build a Reserve on drill pay alone nor lipservice at a bargain. Let us look at the record of events during the past decade and see where we find ourselves today. Let us face our problems, good or bad, fairly and forthrightly.

First, let us look at our needs and requirements.

Never has the need for real preparedness, real thinking and self-analysis been so urgent. Now, as never before real and rapid preparedness is of the first priority. This Nation must organize its manpower and its production so that it can transfer easily and quickly from a peacetime economy to a war production effort, take any emergency in its stride and ride out the storm. If this is done, and done now, it will gain for us the initial advantage of any struggle that may be in the offing.

In addition, we must make a very serious study of what future wars will mean and how we will fight them. It is of little use to superimpose new weapons on World War II organizations, and then try to work out the tactical changes involved—we have tried this before and know it will not work.

Any suggestion that the introduction of atomic and thermonuclear weapons is not going to affect the organization of our forces and the tactics of warfare is nonsense. We must examine our organizations and reevaluate our equipment, in order to keep pace with constant changes required in this atomic age.

This reevaluation is also required in our reserve components and our present system of procuring and training our Reserve Forces. The old method has proven itself to be out-of-date.

To successfully fight any war, we need the following essential requirements:

First, we must have outstanding regular peacetime forces, up to strength and ready at all times to act as our shield without any mobilization procedure.

These forces must be trained and equipped in the highest degree. They must be mobile, hard-hitting, offensive troops with an esprit de corps and very highly disciplined. I say "very highly disciplined" advisedly. Somehow in our effort to be equitable we have lost track of the highly important subject of discipline. We just cannot wage a successful war without instinctively disciplined troops. These are the troops and the commanders who must stand firm in the face of the horrors and the terrors of the opening clashes of an atomic war. They will stand firm only if they are highly trained and highly disciplined.

Secondly, we need Reserve Forces, well organized, capable of being mobilized in echelons in depth, each echelon receiving sufficient training in time of peace to ensure that it is ready in fact, and fit to fight offensively or defensively as and when needed.

Thirdly, these forces, Regular and Reserve, must be backed by a sound logistic and movement organization which must exist in peacetime to the degree necessary to ensure success in the opening days of war; and

Lastly, we must have a sound civil defense organization in each State, territory, and large metropolitan area.

For these reasons, I strongly contend that it is our solmen duty to do everything humanly possible to help affirmatively in the building of a strong, flexible, and sturdy Reserve with the will to fight anywhere, and everywhere that need may arise.

These things being true, how do we best obtain the desired results? First, it is my considered opinion that what we need most is a strong and forthright educational program for our citizens, as to the present position of this great Nation; that it is the greatest and strongest Nation in the world and that as such it is incumbent upon us to lead the free Nations in our struggle for peace and the preservation of all freedom loving peoples. This preservation of freedom will largely depend upon our efforts in this direction. In our success may well depend the success of the world, and government as we understand it. In our failure may well depend the failure of world democracy. These are not idle words but fundamental truths for which our forefathers have fought and given their life blood to preserve. So let it be known that these ideals and our very existence are in peril. To maintain them, we need the full loyalty and wholehearted support of every American citizen. If America is worth living for, it's worth fighting, if not dying for as well. I cannot express too strongly the great need of new and powerful concepts in the thinking of the American people if this Nation is to survive. The concept is plain and the need is great.

There is rampant in the world today a sinister force of unbelievers—a gigantic force backed and sponsored by a nation whose rules live in constant fear of the truth—in constant fear that the Russian people will learn the truth about the world without or that foreigners will learn the truth about their world within. A nation whose rulers constantly seek security only in patient but deadly struggle for the total destruction of rival power—never in compacts and compromises with it. With this constant fear of the truth, with this clinging dogma that the outside world is evil and that their inside world shall never be exposed to the clarifying rays of truth and justice, the implications are self-evident. With such a government, whose rulers dare not be guided by the everlasting truth, we will have an uneasy Russian nationalism in which the conceptions of offense and defense are inextricably confused, and armed and equipped with the apparatus of international communism they become more

dangerous and more insidious than could ever be imagined by the ordinary man.

We have here before us a political force which appears to be committed to the belief that with the United States there can be no permanent modus vivendi—that it is desirable and necessary that the internal harmony of our society be disrupted, our traditional way of life be destroyed, and, that the international authority of our state be broken, if Soviet power is to be secure. This political force has complete power of disposition over the energies of one of the world's greatest peoples and the resources of the world's richest national territory. Finally, it is seemingly inaccessible to considerations of reality and truth in its basic reactions. For it, the vast fund of objective fact and truth about human society and history is not, as with us, the measure against which outlook is constantly being tested and reformed, but a great grabbag from which individual items are selected arbitrarily and tendentiously to bolster an outlook already preconceived. The problem of how to cope with this force is undoubtedly the greatest task our diplomacy has ever faced and probably the greatest it will ever have to face. But cope with it we must. And to do this, I sincerely believe that we must see to it that our people are educated to the realities and truths of the Russian situation. I cannot overemphasize the importance of this great truth. I am convinced that there would be far less hysterical anti-sovietism in our country today if the realties of this situation were better understood by our people. There is nothing as dangerous or as terrifying as the unknown. We must instill in all our people the truth, courage, and self-confidence necessary for the greatest possible improvement in the health and vigor of our own society, and, we must put before the peoples of the world a much more positive and constructive picture of the sort of world we would like to see than we have put forward in the past.

Ancient Carthage, with its luxury standard of living, refused to make minimum sacrifices to support Hannibal and did not survive. Cato's relentless chant "Carthage must be destroyed" did not awaken the indolent Africans from their preoccupation of life, liberty, and the pursuit of happiness. They did not believe that Cato, like Khrushchev meant what he threatened. Similarly, Rome itself, entertained with bread, wine, and circuses—and, arrogant in its splendor, did not survive the onslaught of the vandals and visigoths. The technical skill that built her roads and aqueducts, the know-how of her administrators, the glory of her law—none of these assets saved an effete and overcivilized Rome.

The gross national product of Rome did not protect her. The visigoths had no gross national product—only weapons and the will for power. These dismal comments on Carthage and Rome could be repeated for other proud civilizations. Many times in the past, nations with high standards of living have been pushed to the grave by nations with low standards of dying. There is no reason to suppose that history, or providence, will accord any special dispensation to America.

We must admit, as a government and as a people, that we are locked in a struggle with a conspiratorial elite who seem to have perverted every form of human activity to the cause of conflict. This struggle continues today just as surely as it did on the afternoon of December 6, 1941. Even though we didn't know it, the carriers of the Imperial Japanese Navy were converging on Hawaii. The bombs had been loaded, the pilots briefed, the mission assigned, the die cast for our people by war lords on the far side of the earth. We learned then that war starts—not at the moment of the surprise attack—but when the enemy completes his final plans and commits his resources to conflict.

Permit me to read to you a small portion of a paper read before the American Geographical and Statistical Society by Admiral Perry in the year 1856, 103 years ago. I quote: "It seems to me that the people of America will, in some form or other, extend their dominion and their power, until they shall have * * * placed the Saxon race upon the eastern shores of Asia. And I think, too, that eastward and southward will her great rival in future aggrandizement (Russia) stretch forth her powers to the coasts of China and Siam: And thus the Saxon and the Cossack will meet. * * * Will it be in friendship? I fear not. The antagonistic exponents of freedom and absolutism must thus meet at last, and then will be fought the mighty battle on which the world will look with breathless interest; for on its issue will depend the freedom or the slavery of the world. * * * I think I see in the distance the giants that are growing up for that fierce and final encounter; in the progress of events that battle must sooner or later be fought."

As sure as this prophecy has proven itself to date, there now stands on our frontier an Asiatic conqueror. Owing to science, the Atlantic Ocean is no wider than the Delaware. Owing to technology, the Pacific is no broader than Lake Michigan, and the wastelands of the north can be bridged in a few hours flight. And don't think for one moment that we will have time to organize the militia as we did at Lexington and Concord or the Federal Reserve as we did in World War I and World War II. We will be lucky if we have time to get our loved ones into air raid shelters.

Now, with this in mind, let us look squarely at the facts, particularly at the facts of our weakness—from them we may gain strength.

Never have we, as a people, talked so much about equity and privileges and so little about responsibilities, obligations, and duties. In fact, we words "equity" and "privilege" have to many become synonymous. Let us remember that the building up in peacetime of a strong national character is of supreme importance.

This Nation has never accustomed itself to a professional military force. Indeed, we boast of the fact as if it were a cornerstone of democracy.

We still like to think about arousing a military force after the danger is upon us, and about sending the boys back home even before the danger is over—as we did in World War II.

Our fetish for springing to arms in an emergency has prevented us from clearly thinking out our national defense problem, and if the springing has each time proved costly, in life and treasure, we have been thus far willing to pay the price. It has seemed preferable to a large standing force.

Now the new weapons of war have eliminated our choice in the matter. We will barely have time to spring to our air raid shelters in this age of atomic destruction.

Whether we like it or not, security under arms is the order of the day, and as our leaders have told us, may continue for decades or even a century.

It is high time we became more mature about the needs and requirements of our Military Establishment. It is also high time that we started to think about our Reserve as a quasi-professional force instead of a quasi-amateur force. A force which must have the full support of business and industry if it is to succeed.

An adequate and flexible Reserve cannot spring up over night. It requires professional attitude, aptitude, organization, equipment, and training—much training. The history of German military success against the French in World War II clearly reveals the overwhelming superiority of the quasi-professional force when arrived against the quasi-amateur force. Germany did not conquer France with superiority of manpower, in numbers. Germany conquered by virtue of the superior capability of its military force, even when outnumbered.

We Americans take pride in having the best of everything, but we have not demonstrated our pride in achieving and maintaining the world's best Military Establishment or, the world's best trained Reserve.

The test is not in wartime, when patriotism runs high, when our people actually shake with patriotism. The real test is before us today, when we are called upon to support a large professional military force and, an even larger quasi-professional military Reserve, all within our peacetime social structure.

Our support has been shabby, at best; as a nation we have not let our military people feel, Reserve or otherwise, that their efforts are appreciated. We go through the motions, but true respect is lacking. We look down upon the military service as a career, and upon the military reservist as a quasi-professional military man.

We cannot expect men of the necessary caliber to enter the military or its Reserve on a voluntary basis until their neighbors, all of us, look upon the bearing of arms as an honorable occupation, with the prestige which it deserves. We cannot expect to retain men of the required caliber in the military services unless the bearing of arms becomes, in fact, an honorable profession.

We must get away from the trend of thinking that Reserve units are quasi-amateur and insist that they are, and must be quasi-professional units. We must depart from the public conception of weekend warriors, Thursday night soldiers and citizen marines. We must go forward and prove, beyond doubt, that these men are expending their time, energy, and devotion to become quasi-professional men in an honorable and respected profession.

It must be made crystal clear, as it is in fact, that all major wars and struggles are Reserve wars and struggles and that the Reserves have done their part to quell past wars, contained the flame in Korea, and will do so elsewhere. The public must know that they train at home and in the field and are ever ready for immediate employment should the flame of greed or hate touch off a general conflagration.

If this be done, then, the community will see the error of its ways and will be compelled to honor and respect such efforts.

If this be done, then, it is merely basic economics to realize that the best military capability can be procured for the least money by a Reserve Military Establishment which, at least, has a backbone of professional character. It can be shown that the best way and the cheapest way to defend our country is with a professional force and a quasi-professional military reserve. This, of course, goes against the present public concept. It runs headlong into the old theory that each must do his bit and, in the end, must do it whether he likes it or not, and, whether or not he can be made into a capable military man. If the Armed Forces Reserve were actually attractive, if there were some competition to get into it, this situation would not prevail.

A respectable military force, be it Regular or Reserve, can be obtained only if it is believed that the military worker is worthy of his hire.

The one way to get men without regard for their market worth is to draft them, and they will leave military employment at the first opportunity. The one way to keep them in military service is to give them a package which adds up to reasonable incentive and reasonable security. The package may not

parallel civilian life in monetary gain, but the total should compare with civilian experience. The package may consist of direct pay, fringe benefits, and security for the long pull. It must include the respect, honor, and prestige of the civilian community.

As a nation, we will be in the military business for a long time to come. In the tradition of America, we deserve the best military force in the world, with the complexity of new weapons, we can no longer get the best with a quasi-amateur force, especially short-term enlistees nor with a quasi amateur Reserve attitude. And in the long run, a highly professional force with a quasi professional military Reserve is the most economical of all security forces, and an asset to business and industry ratner than a deficit. Business and industry must realiz that it has a great equity in our Reserve structure. It must also be remembered that the members of our Reserve are of, and from, business and industry and that their very membership is for the purpose of protecting that equity and all that it represents.

Civilian understanding and support of the military man is an essential ingredient of our military posture. Such support is, in the last analysis, our finest military asset—part and parcel of our national security.

Credit Unions

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I would like to insert in the RECORD a copy of my testimony before the Banking and Currency Subcommittee No. 3, regarding credit unions:

STATEMENT OF THE HONORABLE LEONARD G. WOLF, DEMOCRAT, OF IOWA, BEFORE SUBCOMMITTEE NO. 3 OF THE BANKING AND CURRENCY COMMITTEE OF THE HOUSE OF REPRESENTATIVES, MAY 15, 1959

Mr. Chairman, I take this opportunity to express my support of H.R. 5777 and related bills, to amend the Federal Credit Union Act, now being considered by this subcommittee.

In my home State there are more than 300 credit unions presently in operation, serving more than 100,000 members. However, only a few of these Iowa credit unions are chartered under Federal law. One of the primary reasons the credit unions in my area prefer to be chartered and operate under the laws of the State of Iowa is that these statutes are far less restrictive than the Federal credit union law, and allow State-chartered credit unions to operate in my area with more flexibility. For instance, the State law imposes no signature loan limitation on credit unions chartered under the Iowa laws. Such limitation is left to the discretion of the board of directors of each credit union. Also, the laws of the State do not specify any limitation on loan maturities, except in the case of real estate loans, in which case the loan maturity limit is 10 years. These State-chartered credit unions are providing invaluable services to the people of my district. Certainly the Federal act should be amended to increase the signature loan limitation from $400 to $1,000 and to increase the loan maturity limit from 3 to 5 years.

To my way of thinking this legislation is long overdue. We are all aware of the numerous changes which have been taking place throughout the economy during the past several years—interest rates have been rising, the purchasing power of the dollar has been decreasing, consumer credit has been on an upward trend as more and more consumer goods become available and more and more American families seek to improve their standard of living. There has been a steady growth in the number of American families who can afford at least some of the comforts once associated with the highest positions in society. The credit unions have contributed their fair share toward this increased number. This cooperative movement is truly a "grassroots" program. People in all walks of life—in schools, churches, manufacturing, and in many occupations—have had their needs and desires met through credit union loans and savings.

We are today faced with the necessity for formulating some sound methods for guiding the continued growth of our economy at a rate which will assure an adequate supply of goods and services at reasonable prices while at the same time preventing inflation. The accomplishment of this goal of economic stability depends upon the assistance of all segments of the economy—the lenders, the industrial producer, the farmer, the distributors, the small businesses and the large. The modernization of Federal credit union legislation can do much to assist in this endeavor, by facilitating the efficient operation of the individual credit unions. At the same time, an increased supply of loan funds would be made available for the provident and productive purposes of low and middle income families and individuals. The self-help quality of these institutions is a refreshing and welcome part of the economic and social scene.

During the 25 years of Federal credit unions, and the even longer period in which some of the State credit unions have operated, these financial institutions have performed a much-needed service. It is because of the real need for the services of these institutions that they have achieved such an enviable record of growth, both in membership and assets. Perhaps the most important factor accounting for this tremendous growth is the credit union's willingness to make loans to individuals for purposes which would not be acceptable to most other lenders—and at interest rates which are usually much lower than the interest charges required by commercial or mutual banks. In summary, these groups have fostered and encouraged thrift through regulated savings and prudent economic management of individual credit and financial resources. Such purposes must be served if we are to maintain a healthy economy which meets the needs of all levels of our population.

In view of the rapid changes which have been occurring in our economy, it is expedient that revisions be made in the structure of credit union operations, such as those contained in H.R. 5777. The losses suffered on unsecured loans made by credit unions have not been out of line with those of other financial institutions. Therefore, an increase in the unsecured loan maximum from $500 to $1,000 is unwarranted, and not unduly risky. Likewise, I believe that investment in shares of central credit unions does not carry with it any undue risk. Rather, it will provide additional dividend income and will make funds available where they are most in demand, following the natural economic course of resources flowing into areas where they can be the most productive.

Still another important proposal made by H.R. 5777 is the extension of loan maturities from 3 to 5 years. This lengthening of the period of time within which loans may be repaid is in keeping with extended periods for home mortgage repayments and other consumer installment purchases.

All of these provisions upon which I have touched, and others contained in the proposed legislation, will facilitate more adequate servicing of the credit needs of millions of individuals. We would be remiss in our duty if we did not furnish these credit cooperatives with all the assistance which can be made available through the revision of the Federal statute to bring its provisions in line with the changing times. There is no question with regard to the Federal expenditures for these cooperatives—they are self-supporting entities, under the general supervision of the likewise self-sustaining Bureau of the Federal Credit Unions. There is no question, either, with regard to the essentiality of the services rendered by these financial institutions. Approval of this proposed legislation will underscore our belief in the basic principls upon which our whole economic and social structure has been built—the perpetuation of the ideals of equality of man, freedom of opportunity and unselfish cooperation.

Facilities and Progress of the Library of Congress in Science

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of the Librarian of Congress, L. Quincy Mumford, before the Science and Astronautics Committee:

FACILITIES AND PROGRESS OF THE LIBRARY OF CONGRESS IN SCIENCE

The purpose of my presentation is to describe briefly the resources and services of the Library of Congress in science and technology.

Without going into historical reasons, the Library of Congress has come to be recognized widely both in this country and abroad as performing for the United States many of the functions of a national library. The Library, as the Government's oldest and largest library, has had from its beginning the special function of serving the Nation through service to the Congress, and its resources and facilities have been extended broadly to other Government agencies and to scholarly and research groups. The Library has been able to discharge its multiple responsibilities because in developing its collections and in providing the tools by which its collections can be used it has taken a comprehensive view of the role it was to play and responded comprehensively to the demands which the Congress, the scholarly community, and the public placed upon it.

The great segment of human knowledge represented by science and technology is an area in which heavy demands have been made on the Library for many years and in which the results in terms of collections and services have been correspondingly great. The Library of Congress has been preeminent in science since 1866 when, by act of Congress, the Smithsonian Institution's complete collection of the memoirs and transactions of learned societies throughout the world and an entire series of the most important scientific and literary periodicals were transferred to it in order that such literature might be more adequately housed and serviced. Since that time the growth of the scientific collections has continued stead-

ily and with ever-increasing pace until, as of June 30, 1958, there were more than 1,486,000 volumes, comprising monographs and serials in the classified collection of science and technology.

This great expansion has resulted from a variety of efforts. The Library continued and extended the foreign exchange program which had been begun by the Smithsonian. Today it draws materials from a worldwide network of more than 17,000 exchange agreements with governments and with private research centers, laboratories, universities, observatories, and other scientific and technical institutions. The annual yield from these sources is nearly half a million books, pamphlets, journals, and other materials in printed, near print, and photocopy form. In the Soviet Union, 151 scientific and technical institutions exchange publications with the Library. When we consider in addition the Communist satellite countries, including East Germany, this figure is increased to 305. The use of the facilities of many U.S. agencies abroad serves greatly to enhance the receipts of the literature of other lands. Through the operation of the copyright law, the Library of Congress is assured that all American publications and many of the foreign ones in the scientific field that are registered for copyright find their way into the national collections. Still other materials in great quantity are constantly received as a result of domestic exchange arrangements, and by transfer, gift, and purchase. Some 750 bookdealers throughout the world, with many of whom the Library has standing orders, provide publications of importance, regardless of language or country of origin. The magnitude of these operations may be seen from the fact that in the last fiscal year the Soviet Union provided through orders placed by the Library of Congress nearly 57,000 pieces and on exchange another 31,000 pieces in all fields of knowledge. The grand total of pieces received from the Soviet Union in that year, on order and through exchange, was 88,256. Exchanges with East European countries, including East Germany, produced 39,808 additional items.

The scope of the receipts of scientific material by the Library of Congress may be judged from the volume of periodical literature coming in from Soviet Russia. The literature of Soviet science and technology and its availability in the United States has received much attention in the press in recent months, but the situation is apparently not very clearly understood.

Contrary to the general impression that little is known of the output of science literature in the Soviet Union, there is a Soviet national bibliography of their book and periodical publications which I belive to be a fair representation of their total output. This bibliography is voluminous and detailed, and itss issues are diligently scanned by members of the Library of Congress staff for use in our acquisitions as well as our bibliographical work.

The most recent volume of the Soviet periodical list that cumulates the output of the 5-year period 1950–54 gives a total number of 1,480 titles in science and technology, including medicine and agriculture. The latest volume of the Monthly Index of Russian Accessions, a publication which the Library of Congress, with support from other agencies, compiles of its own Russian receipts and those of other American libraries cooperating with us, lists more than 900 titles in science, technology, medicine, and agriculture. These represent about 66 percent of all the Soviet journals received by the Library.

In monographic publications we are more selective in our acquistions, since a considerable portion of the total literature published in any country must necessarily be of minor or no importancec. The problem is one of evaluation; and we are constantly striving to improve the quality of our accessions in the broader aspects of Soviet publication. A recent analysis of a limited number of issues of the Soviet national list of books and monographic series indicated that, of more than 5,000 monographic series in the natural sciences and mathematics and in technology, about 2,000—or better than 38 percent—were found among the Library's collections. In the natural sciences and mathematics, we were 49.5 percent complete, while in all other fields of technology our figure was 36.6 percent.

One of the major services to the Nation which the Library of Congress performs, then, is the acquisition of the ever-increasing worldwide output of scientific and technical materials. On this great reservoir the Congress, the executive departments and agencies, industry, the scientific community, and the public draw for their informational needs. That they are able to do so with facility and reasonable speed is due to the second great service performed by the Library—the cataloging and indexing of the materials received. This is a traditional library operation which is at once a highly technical and time-consuming process. For most materials, the Library of Congress printed catalog card serves very well, not merely for the Library's own collections but for the collections of the major reesarch libraries throughout the country, many of which buy or otherwise utilize the cards which we prepare and print. The broad validity of the Library of Congress system of subject classification and the indispensability of the printed card is evidenced by the fact that the service has nearly 10,000 subscribers. The Library also maintains the National Union Catalog, containing cards locating research materials in 700 cooperating libraries in North America; and it publishes this and other catalogs in book form.

To make more quickly and completely available for use certain kinds of material, including acquisitions in science and technology, the Library publishes the following monthly lists: New Serial Titles, listing the periodicals which the Library and some 200 other libraries receive; the Monthly Index of Russian Accessions, the East European Accessions Index, and the Southern Asia Accessions List. The method is much the same for all of these publications. Special indexing is given to each article and, where necessary, the author's name and the article title are translated. Articles on science and technology are listed in a separate section with many subject subdivisions. An extensive subject index is added at the end of the volume. The volume of the Monthly Index of Russian Accessions for the year ending March 1958 covered periodical issues (not titles) totaling 8,929, of which 5,202, or 58 percent, dealt with science and technology. We have already noted that the number of Soviet titles in science, technology, medicine, and agriculture was 905, or 66 percent of a total of 1,368 titles received. During the same year, 5,632 monographs classed in these fields were also received. In the volume of the East European Accessions Index for the year ending December 1958, the number of journal titles listed was 3,856, of which 1,497 were classed as science and technology. The number of issues in all fields was 28,067, while those in science and technology numbered 8,444. The number of monographs received in all subjects was 7,735, while those in science and technology amounted to 2,275.

These specialized bibliographic productions make a formidable contribution to the national scientific effort but they by no means exhaust the contribution of the Library of Congress in this area. Within the limits of budget, space, and its primary commitment of service to the Congress, the Library has assumed responsibility for administering a number of large-scale projects which, on funds transferred primarily from the Department of Defense, provide analyses, abstracts, and other bibliographic services on certain types of literature, including scientific and technical material. Under this bibliographic program, the Library is making available to American scientific and industrial users, through the facilities of the Office of Technical Services of the Department of Commerce, a large volume of Soviet and other East European literature. In the past 12 months, 43,520 abstracts of periodical articles have been prepared, including 8,406 translations of foreign-language abstracts. Since August 1, 1958, a total of 29,947 abstracts has been made available to the Office of Technical Services. This abstracting service at the present time regularly covers 165 foreign journals, 141 of which originate in the Soviet Union. In addition to abstracts, 1,292 reviews in English of foreign-language monographs have also been prepared. Since the subject is often misunderstood, it should be pointed out that, though a considerable amount of translation work is a necessary part of the abstracting service just described, the Library of Congress does not as a normal function prepare or distribute translations of foreign scientific and technical materials as such and at the present time has no plans to do so.

The third great area of service by the Library of Congress in the field of science and technology is its work in reference and bibliography. The focal point of subject competence in this field is the Library's Science and Technology Division, which maintains, on a 7-day-a-week basis, a special science reading room. Established in 1949, the division, with a relatively small staff of subject and language specialists, has an active bibliographic and reference program, and its services are steadily increasing. The total reference services provided to the Congress, to other Government agencies, to other offices of the Library, and to the public, numbered 10,873 in fiscal 1958. From present trends, it appears that the total in the present fiscal year will reach approximately 14,000, or an increase of about 30 percent.

The reference services performed for the Congress in the form of special studies and other assistance numbered 143 in fiscal 1958. Present trends indicate that the number in the current fiscal year will reach 275, an increase of more than 90 percent over the preceding year. Nor is the mere number of these requests truly indicative of the increase either of the service to the Congress or the workload imposed on the staff. In 1 month—March 1959—the scope and length of the studies completed reached a point where they required the equivalent of 4½ man-months of professional staff time. The range of these inquiries and their difficulty is shown by the following examples of the subject covered: "The Effects of Atomic Radiation on Human Beings"; "Jet and Rocket Fuels and Oxidizers"; "Atomic-Powered Airplanes and Rockets"; "Underground Disposal of Radioactive Wastes"; "National Science Policy"; "Alcohol-Blend Motor Fuels"; "Cold-Weather Agriculture"; "The Future of Science"; and, "Toxicology and Uses of Thiocarbonyl Tetrachloride."

The division also has under preparation some 25 major surveys of the literature in various fields of science and technology. Several are being done on contract for the Department of Defense; others are supported by the National Science Foundation. Although most of these bibliographies are produced for and paid for by other agencies with a special need to know, those dealing with unclassified literature are in nearly all cases made available to the scientific community at large. The range of coverage of these bibliographies can be seen from their subjects, which include: "The International Geophysical Year," "Thermal Properties of Metals," "Aviation Medicine," "Industrial Ap-

plications of Radioactive Isotopes," and "Snow, Ice, and Frozen Ground."

The division serves as a collecting and reference center for unclassified technical report literature of the United States and foreign countries. The output of a number of Government agencies and their contractors, including the Atomic Energy Commission, the National Aeronautics and Space Administration, and agencies within the Department of Defense, forms a good part of this literature. In addition to its other activities, the division has a research program in documentation techniques, the objectives of which is to make the Library's science collections more responsive to current trends and needs.

One other service of a very special and significant character may come into being this year. I refer to Public Law 85-931 amending Public Law 480 (1954) authorizing the Librarian of Congress, in consultation with the National Science Foundation and other interested agencies, to acquire with U.S. foreign-owned currencies, publications (including materials in science and technology) from foreign countries; to catalog, abstract, index, translate and reproduce such materials; and to deposit these publications "* * * in libraries and research centers in the United States specializing in the areas to which they relate." This program awaits an appropriation to enable the Library to put it into effect.

The dissemination of scientific and technological information throughout the Nation under this program could have a very significant impact on the availability of research information. That scholars should be able to acquire a knowledge of the existence of articles and books through indexes and catalogs is readily apparent; of equal or greater significance is the ability to gain ready access to publications which appear to relate to a piece of research. Although libraries endeavor to acquire publications from abroad, limitations on funds and the tremendous amount of material available make reasonably complete coverage of foreign research publications an unattainable goal for most libraries. The Public Law 480 program would be a long step toward overcoming this shortcoming.

This brief survey of the resources and services of the Library of Congress in the broad fields of science and technology should serve to demonstrate that, by the breadth of its base, its wide acceptance as an authority in bibliographical know-how, the rich competence and variety of its staff, and its relationships with other institutions and organizations within and outside the Government, the Library of Congress serves as the national library of science. This role of the Library is supplemented and enhanced, rather than detracted from or weakened, by the two other great national library collections, those in agriculture and medicine held by the Library of the Department of Agriculture and by the National Library of Medicine. It has sometimes been suggested, and indeed it has been proposed in legislation, that by transfers of functions from existing libraries and by the accumulation of separate collections an independent national library of science and technology should be created, possibly within the framework of the proposed National Department of Science and Technology. In view of the existence of the three great collections mentioned and their long record of service to the Nation and cooperation in undisturbed harmony with each other, I have gone on record as opposing the creation of another national library of science as not only duplicative and wasteful but impossible to bring into being without many years of concentrated efforts.

In this presentation today I have attempted to point out that the Library of Congress and, by that token, the Nation already have a vast investment—perhaps the largest in the world—in the literature of science, and I believe that science, which in great measure relies for its stimulation and growth on that literature, has an equally great stake in the Library of Congress.

U.S. Technical Cooperation Activities in Public Administration

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mrs. BOLTON. Mr. Speaker, one of the major needs of the newly independent countries lies in the area of improved public administration. The serious lack of managerial skills and government experience in these countries is a critical barrier to economic development, and a potential threat to political stability. Until inefficiencies are reduced or eliminated much will continue to be wasted in terms of manpower and other resources.

Quite often the organization of government agencies is outmoded and cumbersome, with considerable overlapping between agencies charged with related functions. In most underdeveloped countries the governmental employees are poorly paid and inadequately trained in their duties. This condition encourages personal irresponsibility, and occasionally leads to graft and unscrupulous conduct.

Modern concepts of good budgeting have been adopted by only a few of these countries, and governmental administration is uniformly over-centralized. Inadequate facilities exist for training people in the principles and techniques of good management, with the few technological institutes occupying a position similar to our vocational schools. As those persons desiring to be trained in the technical and scientific fields must generally go abroad to study, comparatively few have received proper training in management.

In our technical cooperation program we have recognized these inadequacies and have carried on an extensive program in the area of public administration, always at the invitation of the host country. At the present stage of the program, most of the projects are centered upon problems at the national government level. It is anticipated, however, that appreciation and concern for problems of local governments will increase, and the technical assistance emphasis may correspondingly shift from national to local levels.

One of the most effective techniques for improving public administration abroad has been found to be the participant program. In this program carefully selected officials and technicians are brought to the United States for observation and study of public administration methods. During calendar year 1958 nearly 900 participants, ranging from the highest officials to young persons of ability and promise, came to this country under the program. Some 300 more were sent to other countries for training, many to the Institute of Public Administration at the University of the Philippines, and the American University in Beirut. Many of these persons are expected to assume key positions in their respective governments upon returning home, where their decisions can determine the future course of efforts to improve public administration.

Contracts have been made with some 15 outstanding American universities to assist in some 20 projects in public administration. Most of these are for professional advice and staffing of about 15 business and public administration institutes abroad, established with the help of American universities under ICA-financed contracts.

A partial listing of accomplishments in the public administration program may serve to illustrate the type of projects carried on under the program.

In the Philippines an ICA financed contractor concluded a government reorganization project which produced some 41 reorganization plans, and well-trained Filipino staff in a newly established management service division of the budget commission to put the plans into operation. The commission, assisted by another ICA contractor, completed the installation of performance budgeting for the entire government.

Through a contract with the University of Michigan, an Institute of Public Administration has been firmly established. Instrumental in founding the Eastern Regional Organization for Public Administration, the institute is conducting third country training for many government employees from neighboring countries.

In Pakistan an executive development scheme for members of the superior civil service will bring 2 groups of from 15 to 20 of these top Pakistani officials to the United States for management seminars and workshops at the University of Southern California and on-the-job associations with local, State, and Federal officials each year for 3 years. This training of the top layer of civil servants will prepare the ground for further efforts by the United States to introduce modern management concepts in Pakistan.

The Eastern Regional Organization for Public Administration formed by 10 Asian countries in Manila last summer, is clear evidence of greater understanding of the values and role of modern public administration among countries of the Far East. EROPA will have its secretariat in Manila—supported by a small ICA grant from Far East regional funds—a research, documentation and dissemination center at Saigon—assisted by Michigan State University contract personnel—and a training center at New Delhi.

The Wharton School of the University of Pennsylvania is helping the University of Karachi create an institute of business and public administration. The institute now has a student body of approximately 650 students, including evening school and special students, and has generated great interest in the business community.

The Iranian Government, with the help of ICA advisers, has completed a plan for classification and standard compensation of all governmental employees, and legislation was drafted for the creation of a central personnel agency. More recently, the Government has released a considerable number of excess superannuated employees.

An Iranian Municipal Association has been formed to assist in development of improved municipal administration—one of a number of steps to strengthen government at the grassroots.

Toward the close of calendar year 1958, with the collaboration of ICA advisors, the Iranian Government began a program of decentralization, including the delegation of increased authority and responsibility to provincial and district authorities. The plan is being fully supported by the Iranian Ministry of the Interior. While it is too early to evaluate results, it is significant that the decentralization of what has been a highly centralized government is now seriously being pressed.

Mr. Speaker, these selected programs suffice to demonstrate the valuable work carried on by our technical cooperation program in the field of public administration. While the immediate results of this program may not be so readily apparent as in certain other programs, the long-range benefits will be highly significant.

Replies to 17 Important and Vital Issues by the People of the 15th District of California

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. McDONOUGH. Mr. Speaker, I recently requested the people of the 15th Congressional District of California which I represent to give me their opinion on 17 issues of vital importance to the United States and all its citizens.

The range of these questions was great, covering both domestic affairs and our foreign relations—matters which will affect the future security of this Nation as well as the individual welfare of every citizen.

The response to my questionnaire was immediate and tremendous reaching a total of 51,000 replies in record time, and clearly establishing the keen interest of the people of the 15th District in the vital issues upon which this Congress must act.

In summarizing the replies I received from people in every precinct of the 15th District, it is significant to note that question No. 4—"Should we have strong legislation to curb labor racketeering?"—received the largest "yes" vote with 96.7 percent.

The next question with the highest "yes" vote was No. 3—"Should the House Un-American Activities Committee be retained?"—with 84 percent.

One of the most vital questions was No. 8—"Do you think we should keep American forces in Berlin along with British and French forces—even at the risk of war?"—which received the third highest "yes" vote, with 79.9 percent.

It is a great satisfaction to know that the thousands of people who participated in this questionnaire are so well informed on the current and important issues before Congress as their replies indicate, and it is a pleasure to represent such an intelligent and well-informed constituency.

The following are the results of my questionnaire, which I am sure will be of interest to all Members of this Congress:

[In percent]

	Yes	No	No opinion
1. Do you favor the admission of Hawaii as a State?	78.5	13.1	8.4
2. Do you think the United States should stop making tests with nuclear weapons and the H-bomb?	20.0	68.5	11.5
3. In your opinion, should the House Un-American Activities Committee be retained?	84.0	9.7	6.3
4. In your opinion, should we have strong legislation to curb labor racketeering?	96.7	1.7	1.6
5. Should health and medical benefits be added to social security on a voluntary basis at an increased cost to you?	35.4	50.5	14.1
6. Should postal rates be increased to further decrease the Post Office deficit?	45.1	47.3	7.6
7. In your opinion, should the Federal Government provide financial aid for education?	27.8	63.1	9.1
8. Do you think we should keep American forces in Berlin along with British and French forces, even at the risk of war?	79.9	11.5	8.6
9. In your opinion, does foreign aid strengthen the position of the United States in world affairs?	36.9	49.0	14.1
10. Do you believe foreign aid, other than military, should be reduced?	71.0	20.8	8.2
11. Should our immigration laws be revised to permit a greater number of immigrants to enter the United States for permanent residence?	20.3	71.0	8.7
12. In your opinion, are the present Federal benefits for our veterans adequate?	64.8	14.6	20.6
13. Should educational benefits be extended to veterans who are drafted for peacetime service?	41.3	47.7	11.0
14. In your opinion, should an all-out effort be made to excel Russia in the exploration and control of outer space?	45.1	34.6	20.3
15. Do you favor legislation to curb the authority of the Supreme Court?	57.2	34.6	8.2
16. In your opinion, is Government support for farm prices necessary to maintain a healthy farm economy?	14.9	71.0	14.1
17. Should the expanded use of atomic energy for civilian use be developed and promoted by private industry rather than under U.S. Government control?	68.5	20.3	11.2

Nathaniel Barber Honored

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. WHITENER. Mr. Speaker, I have long felt that our people in North Carolina have enjoyed the finest race relations to be found anywhere in our country. This was further emphasized to me on Friday, May 22, 1959, at a public gathering honoring one of our outstanding Negro citizens.

With the thought that the story of this occasion would be of interest to my colleagues, I am, under unanimous consent, inserting the newspaper account carried by the Gastonia Gazette of May 23, 1959, in the Appendix of today's RECORD:

EX-COUNCILMAN IS HONORED; BARBER PRAISED AS UPRIGHT MAN

Gastonia was a showcase of good race relations last night.

Gathered at Highland High School on the Dallas Highway were 300 people—Negro and white—to pay honor to the first Negro man ever to sit on the Gastonia city council.

And Catholic, Christian and Jew, white and Negro stood up to give verbal praise to the man—Nathaniel Barber.

It was a testimonial dinner in his behalf—for the good he has done for his community.

OLD FRIENDS

His old friends by the hundreds were there, and many of them stood up to say a few words.

Leon Schneider, a Jew and former mayor of Gastonia, said that when he used to look down the council table and see Nat Barber sitting on the left side on the end, "I never saw a Negro. I saw a man."

He pointed out that Gastonia has a lot to be proud of.

"It has had a Jewish mayor (Schneider), a Jewish conciliman (Marshall Rauch), and a Negro who served both as councilman and treasurer. Now, white and Negro Catholic and Christian and Jew meet here tonight. What other city in the South can say as much?"

As others got up to laud Barber, the man who runs the Excelsior Credit Union, largest such Negro organization in the United States, sat in apparent meekness with eyes on the floor.

SPEAKER

BASIL WHITENER, Representative to Congress from this district, was the principal speaker.

He pointed out that for 49 years, Barber has walked uprightly among the people of our county and has carved a mark "all out of proportion to that which could have been expected of him from his humble beginnings. As one of 12 children born to his parents, he has known the life of deprivation and limited opportunity which so often is the crucible which produces leadership in the finer areas of personal and community life."

WHITENER pointed out that even though Barber's economic situation prevented his receiving a high school diploma, he kept this goal before him and after reaching manhood he attended night school until he received the instrument.

Among other things, WHITENER mentioned that Barber is chairman of the Erwin Memorial Park Commission which manages and operates the publicly owned recreation facilities for the Negroes of Gastonia, that he was chosen as Man of the Year for community service by the Omega Psi Phi fraternity in 1953, that he is chairman of the board of stewards of St. Peter's A.M.E. Zion Church, that he served for 6 years on the council of the city of Gastonia.

"In politics," continued WHITENER, "Barber has conducted himself in a manner benefiting the high confidence expressed in him. He has put into practive the fundamental principle which should guide the life of all of us who seek the suffrage of our people."

James W. Atkins, publisher of the Gazette, said that historians—those who dig deep in research back to the dawn of recorded events—have made the statement that no race in history has made such marvelous progress in all lines of human endeavor as the Negro, within a period of less than 100 years since they gained their freedom.

He spoke of the splendid relations between the races here and paid compliment to the honoree, Barber, as city councilman, as business executive, and as civic and religious leader.

OTHERS LAUD BARBER

Others who rose to laud Barber included Mayor Bob Ferguson, E. F. Gallagher, W. Harrelson Yancey, the Reverend A. C. Hunnicutt, Elsie Saunders, and J. Q. Falls.

All of them pointed to the understanding that Nathaniel Barber had helped to establish between races here, to the service he has Jeffers, principal of Highland High.

A plaque in honor of Barber was presented to him. The presentation was made by T. Jeffers, principal of Highland High.

The plaque reads: "Presented to Nathaniel Barber, Gastonia councilman, 1953–59, for outstanding civic service, May 22, 1959."

Toward the end of the dinner, Nat Barber rose to say a few words.

"I have been greatly moved and touched by your expressions of good will and friendship," he began. "The one thing I have learned, and it has been brought home to me most vividly here this evening, is that the true sense of service can best be evaluated by a man's close friends and close associates. This I believe sincerely."

The meeting was presided over by Donald Ramseur, attorney, who headed the committee in charge of arranging the program.

House Underrated

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an interesting letter which correctly states the Constitution written by Eugene Kelly, of 1028 Connecticut Avenue NW., Washington, D.C., and appearing in the Washington Evening Star of May 20, 1959. Mr. Kelly is to be congratulated in exposing the lack of knowledge on the part of some of the columnists and editorial writers in failing to recognize that both branches of the Congress are coequal and neither branch is the upper or lower branch:

HOUSE UNDERRATED

I am weary of constant references to the House of Representatives as the lower Chamber, the implication being, of course, that the House is legislatively inferior to the Senate. Just the opposite is true. The House has more powers than the Senate.

Only the House can impeach a public official. All revenue bills must originate in the House, and the same holds true for appropriation bills.

Similarly, the House is the sole judge of the elections, returns, and qualifications of its own Members (art. I, sec. 5, of the Constitution). The Senate also has the same authority, so that in this respect the Senate and House have coequal powers. But nowhere in the Constitution is there any mention of upper and lower Chamber.

EUGENE KELLY.

The Tragic Drama of Fort Polk

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, our people in Louisiana are greatly disturbed over the loss of Fort Polk located in Sabine and Vernon Parishes. This great Army installation was established as a permanent fort a number of years ago and at the time it was established the State of Louisiana was asked to furnish to the Army for maneuver purposes without charge 7 million maneuver acres of land located in the western part of the State.

When the request was made for 7 million maneuver acres, the State agencies went to work to obtain these extremely large areas of ground for maneuver rights and without charge on the part of our citizens. It is to the external credit of the State agencies cooperating with the parochial and municipal authorities that land was made available by your people. With a loyalty and enthusiasm rarely equaled at any time our people gave unstintingly the 7 million acres of land to the U.S. Government with the invitation that without charge they could use this land for maneuver purposes.

Only a few short years have gone by since this occurred. During that time the fort has been built into the permanent establishment which it was intended to be. A contract for $32 million in Capehart housing was let and work to the extent of millions of dollars placed in this 2,000 unit housing construction project.

Mr. Speaker, tragedy struck with lightning effect. In some cloistered portion of the Polk Building, shielded from outside light and public scrutiny, an order went out to close down this great mechanized base, sorely needed by us in our Defense Establishment. The order took the eagles, so to speak, from the 1st Armored Division, stripping it of course of its laurels and its history and its tradition and ordered the closing of this base.

Local people had spent millions of dollars in construction, had built houses, places to rent, business establishments, places of amusements, and great highways, all because of the prosperity of Fort Polk. The people had voted school taxes and the school boards had let bond issues for the purpose of building schools. The State had put in four-lane highways to the base. The whole community seethed with activity in support of a permanent fort at Leesville, La.

The order of the Department of the Army closing Fort Polk out struck with sickening effect. The economy of this area was paralyzed. Our people were perplexed and dismayed that the U.S. Government would breach its faith to local people who so vigorously offered and gave 7 million maneuver acres to the U.S. Government. The dismay of our people has now turned to anger. Does any government have the right to breach faith with its citizens who loyally support that government by supplying defense needs?

The legislature is now meeting at Baton Rouge, La. It has passed a Resolution No. 6 answering this question, and Mr. Speaker, the copy of this resolution has been sent to me by air mail. I present it to the House that it may be copied verbatim into the CONGRESSIONAL RECORD together with the names of those in Louisiana who voted for this measure.

A solid Louisiana approaches this crisis. No votes were recorded against presenting Resolution No. 6. I hope this administration will act in time to prevent a permanent wrong being visited upon so many people of a great State. I hope that the Department of the Army will still act to reinstate Fort Polk and designate it again to the position of a permanent installation which designation was made at an earlier date. The resolution just passed the House of Representatives, with no opposing votes. The resolution and vote are as follows:

SENATE CONCURRENT RESOLUTION 6

By Mr. Cole and Representative Adams:

Be it resolved by the Senate of the State of Louisiana (the House of Representatives concurring), That,

Whereas the U.S. Army has ordered the closing of Fort Polk, located in the parish of Vernon, La., effective on or about June 30, 1959; and

Whereas the people of Louisiana were assured by the U.S. Army when Fort Polk was established that it would be a permanent installation of the Army; and

Whereas the people of Louisiana, relying on these promises, gave maneuver rights free of charge to the U.S. Army and the State of Louisiana cooperated through all of its various official agencies, particularly the Office of the Attorney General, in obtaining the balance of the maneuver rights for the requirements of the Army free of cost to the said Army, which rights and areas were areas which the United States designated as required for their needs, and which totaled approximately 7 million acres; and

Whereas the scheduled closing of Fort Polk now violates the honor and integrity of the promises and assurances made to the people of the State of Louisiana; and

Whereas based upon the commitments of the United States, the State of Louisiana through its proper officials at an enormous expense to the State and its people set in motion the necessary legal procedure looking

toward the acquisition of the above referred to maneuver areas, which efforts resulted favorably and enured to the benefit of the United States; and

Whereas based on the above referred to commitments and the reasonable assurance of the people of the area involved, enormous debts were incurred, schools were built, sewerage and other public utility facilities were supplied, highways were constructed and improved, bonds were issued, special taxes were voted, and improvements of a substantial nature at an enormous cost were placed on the properties, which would not otherwise have been done, except for the commitment of the United States to the people of Louisiana to make Fort Polk a permanent installation; and

Whereas the peremptory closing of the said fort at the time above set out does violence to the contractual obligations, or quasi-contractual obligations, to the effect that the permanency of the establishment of the fort would be for a period of at least 15 years, and the closing of the fort violates the said obligations and operates to the extreme disadvantage and monetary loss to all of the people of the State of Louisiana: Now, therefore, be it

Resolved, by the Legislature of Louisiana, That the U.S. Government and the Department of Defense be urged to rescind immediately the said order closing Fort Polk and that it continue to be operated as a permanent installation of the U.S. Army in keeping with the commitments of the United States of America, and that a copy of this resolution be transmitted to the President of the United States, to the Members of the U.S. Congress, the Secretary of Defense of the United States, and the Secretary of the Army of the United States, and that the said President and Members of the Congress and the Secretary of Defense and the Secretary of the Army be urged to take appropriate action to have said order rescinded; and be it further

Resolved, That the Attorney General of the State of Louisiana is hereby urged by the legislature to take whatever appropriate legal action he may deem proper and necessary in the premises to carry out the mandates of this resolution.

Read in full.

Mr. Adams moved that the resolution be concurred in.

A record vote was asked for and ordered by the house.

ROLLCALL

The roll was called with the following result:

Yeas: Messrs. Angelle, Speaker; Adams, Albro, Alford, Allen, Altmyer, Aycock, Babineaux, Becnel, Belisle, Bernard, Bertrand, Brennan, Brignac, Brown, A. D. (Caddo), Campagna, Cashio, Cefalu, Cerise, Cheves, Clark F. (Vermilion), Clark, W. P. (Orleans), Collier, Daigre, Deshotel, Diesi, Donaldson, C. F. (Orleans), Downes, Dupont, Dyson, Faulk, Fields, Fremaux, Garrett, Gaudin, Gibbs, Gleason, Gouaux, Gravolet, Gregson, Grizzaffi, Hankins, Haynes, Holt, Jewell, Jones, Kirkpatrick, Lancaster, Leake, Lehmann, Lewis, Matassa, McGittigan, McLain, Munson, Murtes, Myrick, Napper, Peck, Rambo, Rau, Regan, Roberts, Sanders, Seaman, Shows, Smith, J. K. (Caddo), Steen, Sutton, Sylvester, Teekell, Tessier, Triche, Tyndall, Vetter, Vivien, Womack. Total, 77.

Nays: None.

Absent: Messrs. Barranger, Beeson, Broussard, Brown, J. M. (Orleans), Crane, Delony, de Nux, Donaldson, H. E. (Allen), Dugas, Fontenot, Fulco, Gaharan, Jack, Lapara, LeBreton, Martin, Nelson, Percy, Roussel, Smith, B. (Avoyelles), Stinson, Sullivan, Vesich, Wilson. Total, 24.

And the resolution was concurred in.

Prize Short Story Entitled "Isaac" Written by Robert W. Nolte, of Silver Spring, Md.

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. FOLEY. Mr. Speaker, from time to time we have the opportunity to recognize achievements by young people in our country. Today I should like to recognize the achievement of a young man who lives in my district, Robert W. Nolte, who has won first prize in the short story category of the national scholastic writing awards. This fine young man, a student at Montgomery Blair High School, Silver Spring, Md., has written a prize-winning short story entitled "Isaac," which I ask to be printed in the Appendix of the RECORD as a tribute to his outstanding accomplishment. I think Mr. Nolte's short story is indicative of a fine literary and intellectual future for him.

The short story is reprinted here from the Record, one of our fine Montgomery County, Md., newspapers, in the May 14 issue. I commend the story to all my colleagues, and wish to commend and congratulate Robert Nolte on the winning of this fine award:

HERE IS A NATIONALLY AWARDED SHORT STORY BY A BLAIR SENIOR

(By Robert W. Nolte)

The sun beat viciously on his back and drew out his sweat, staining his denims a deep indigo. The baked prairie rustled with heat. He leaned on the wooden crosspiece between the handles of the plow and moved his parched tongue as if wetting his lips. The dry air stung his lungs and its dust clung to his throat. He coughed softly between rapid breaths.

The man was known as Isaac. This tired piece of land and its little worn buildings were nearly all he owned and had been the family heritage from a time he couldn't remember. These things were sacred to him in a way. They were his life and he was their master; they provided all he needed and all he wanted.

Although his land was not great, it was more than Isaac alone could sow in the spring. He plowed the best then and worked on through the summer with the worst, plowing to keep the soil open to rain and air and silently hoping that his earth would somehow become rich. He would watch the rows turned up in the sun like long lines of hands in prayer, watch them when the heat bleached them to a sandy fragility, when the too infrequent rains soaked them to a suggestion of life, and when the storms came in the heat and leveled them and carried them off. Then he would begin again and silently hope again.

Often he would say to himself when the water was low and the crops were meager, "I am strong. I will not run." And this way he lived through drought and through storm and through fire.

The others had left or were leaving. They sought the great cities and the lands where the sun would be pleasing. They sought the lands that grew grass. Isaac would scorn them year after year as the sand piled higher and the crops grew less. But often at night when he tossed sleeplessly and the air hung like a heavy blanket, stuffy and motionless, he would think of leaving. The clutching hands of his sheets held him, grasped him by the sweat of his body, and made him afraid to stay any longer. He stayed and struggled on, however, for daylight would make him believe again, believe in the land, believe in the hope that the earth would be fruitful. The fear of the unknown was strongest of all fears. He would think, "To live here and die here is right. The storms and the sun and Ruth can't change that."

Ruth was getting worse this year and Isaac wasn't sure why. She had known the droughts and the storms for she had lived with them. But now that the dry days had come again, she seemed to be breaking.

"The trouble is, she doesn't know how rough I've got it. She doesn't care. All she ever talks about now is leaving. The fight about adopting that kid really made her mind up. If it was our own we could manage, but there's no sense in taking on more than we can afford. She ought to see that."

The guide reins slapped the mule into motion and on they trudged down the dusty furrows.

Isaac fell again to thought. "She shouldn't be like this. All we do is fight. Every day, more and more. Maybe it's my fault. But maybe it's the sun. No, she can't make me go. I couldn't do anything for work if we did."

The sun at its height and the dusty air forced him out of the field for the noon meal. Unhitching the mule, he led him slowly across the field through the sand-piled gate to the meager shade of the lean-to. The mule eagerly lapped at the water Isaac poured from the precious pitcher into the trough. He licked the rough boards when it all was gone, as his master walked around him patting his side.

Isaac stood in the sun again, staring absently, once more lost in thought. "If she's washed those curtains again * * * I just can't take much more of this." He blinked his eyes and the thought was forgotten. Sweat ran down his face to the point of his chin and he drew his sleeve across his mouth.

The boards of the single step from the ground to the house shuddered under his weight, the quivering planks sending the tops of the sand drifts piled against them tumbling down and down like small avalanches. The doorway opened directly to the kitchen where Ruth stood at the sinkboard.

"Got something to eat, Ruth?"

"Mm-hmm. I was just getting ready to bring it out. Too hot to stay outside?"

Isaac was wiping his hands.

"Huh? Oh, yeah, too hot."

"Too hot for most anything, isn't it?" Her words were clipped, the muscles of her neck beginning to tighten.

"Now Ruth, just a minute. Let's not start already."

"Start what, Isaac?"

"You know what I mean. I'm too tired to fight right now. You always have to start first thing I get in the door."

"You're too tired? You're too tired? Don't I ever get tired? No, it's always you. Well, I'm tired, too! I'm good and sick and tired! I'm sick of your stubbornness and your soft talk and your silly dreams about making something out of that desert out there."

"Now just a minute here." His voice became stronger.

"That seems to be all you can say. It's been just a minute, just a minute, just a week, wait another month for years. Eleven years we've been married, Isaac. Eleven years and look what's happening to me. Look at my hands."

"Ruth."

"Eleven years, Isaac, and we've got nothing, no children."

"That's not my fault."

There was silence.

"Oh, Isaac! Oh, Isaac, how could you?" She talked slowly now, biting off her words. "How could you? Eleven years and no children, no joy, nothing pretty, and it's not your fault? Look at me, Isaac. Look close. I'm becoming an old woman. Just 11 years and I'm an old woman."

"Stop it, Ruth. Stop it right now!"

"No. No, I won't. I ask you to leave, I beg you to leave, and you still hang on. It's killing me, Isaac, it's killing me. I can't take it any longer. I'd rather die."

The momentary fury ebbed as she turned with her back to him. She stared with glazed eyes across the shimmering land past the white window curtains to the blue-gray distant hills. The faraway look was there when her anger had drained away. "Oh, Isaac, I wish we could go, just throw everything in the Ford and go. We could go off down the road to town and honk the horn all the way through and then just go on." She ran her finger across the window ledge and laughed softly, almost to herself, "I can just see them now, Old Man Haplin and the Thomas Sisters and Tommy Spotts at the gas station and * * *." Her continuing laugh died in a painful sigh and she whirled around, her cheeks growing flushed again, her eyes anxious.

"Isaac, give me one reason why not!"

He came awkwardly to her and placed his clumsy hands on her rigid shoulders, quietly looking into her eyes which burned with frustration. When he spoke, his tone was as gentle as he could make it, the same he had used so many times before.

"Ruth, this land was my father's and his father's before that and his father's before that. You know I'd die without it."

"You don't know that I'll die with it."

She gave up and fell sobbing into his arms. Encircling her, he softly rested his chin on the top of her head and his eyes fell on the clean white curtains hanging soft and fresh in the still air.

"Ruth. You've been washing those curtains again. How many times I gotta * * *."

She wrenched herself from him and began beating her fists on the worn drain board.

"Isaac, Isaac, Isaac. Must you kill the only thing left? You will not even allow me to be a woman. You take away everything."

She fled from the room. Arms hanging loosely, a frown on his forehead, plainly confused, Isaac carried his food to the table and sat down to eat. There were a number of things that made no sense to him. She would wash the curtains and wash the curtains and wash them again, no matter how low the water was, and in the evening sometimes she would go to the bedroom to sit and look at herself in the mirror and he would be puzzled. When she got this angry, he really couldn't think straight. So he just closed his ears to her and tried to calm her down until it was all over.

All that the fights did was to convince him more and more that it was right to stay. It was right that he plow the ragged, dusty furrows, sow when the time was right, reap what he could when he could, milk the earth as his father and his father's father had done. It made no difference to each succeeding generation which fought the dust that the land grew poorer with every passing year. It was right to stay.

Isaac rose from the table and walked slowly across the cracked linoleum floor to the open doorway, where he propped himself by his elbow against the frame and leaned there squinting in the glare of the boiling sun on the baked waste land. Somewhere off through the waves of heat he could see the dull-colored hills.

"Those hills," he remembered. "Something like they're a life to her with everything she wants." He could remember her exact words:

"Someday, Isaac, if you will not see my way, I will find what I want in someone else * * * or something else. Then it will be too late, but you will know me." He could remember because she had spoken coldly, not in anger, and looked out to the hills when she said it. Whenever he saw the hills, he remembered.

Although he felt suddenly tired, Isaac forced himself to go out of the door and back to the fields. He led the aging mule past the worn gate, tortured by weather, and down the barren furrow the plow he had left.

"Maybe we could adopt the boy. If he was big enough, I sure could use him here. No, we couldn't afford it."

He hooked up the traces and went back to the plow handles.

"I'm not making her get old. A woman's got to grow old. I don't know why she's the way she is."

Isaac shook his head and then called to the mule and put his weight to the plowstaff, grinding the blade in the harsh soil, turning up an arid, dusty wake. Later on he stopped to rest, panting from the effort. Leaning on the plow and inspecting the creases in his tanned hands, his eyes widened in random thought.

"I guess she's really right. We'll go see about the boy next Saturday." He dismissed the matter from his mind and pushed on, intent on the ground before him, consumed by his exertion.

Late in the afternoon, he felt the moisture on the back of his neck cooled by a faint suggestion of a breeze and he stopped to rest once more.

"Yes, we'll do it. We need some life, something young. Yes, we'll do it."

The breeze was stronger now and the man drove forward with renewed vigor, refreshed by the motion of the warm, breathy wind and the release of the tension inside him. Tiny puffs of dust were lifted in irregular swirls by gusts of wind. Looking out to the familiar hills, Isaac notice a warm, yellow hue he couldn't remember having noticed before. He fought his way down the long stretch to the end of the plot with his eyes fastened on the ground.

When he had straightened up and turned the mule and reset the plow, he happened to glance at the sky. He took a step backward and his eyes suddenly widened.

The orange clouds which enveloped the horizon might have been reflecting the glow of the sun beginning to set on the hills behind him, but his years on the farm belied this to Isaac. The wind in his face and the fighting, turbulent clouds told the story. For all the times he had seen it, the spectacle still frightened him.

Bent and weary, the mule awoke to a danger he sensed in the wind whipping up his ragged mane. His feet shifted uneasily and he backed up, wavering from side to side. Isaac unfastened the mule's traces and took his muzzle ties to lead him back toward the barn. The terrible clouds made the mule shy back, snorting excitedly, pawing the ground.

"Easy there, easy, Jerry, whoa boy! Whoa now!" Isaac fought to calm the excitement and fear in his voice as he urged the animal to follow him. The wind whistling in his wild hair nearly caused the man to panic.

"Steady now. Come on, Jerry. Come on, boy."

The strength of the storm was growing, heightening.

"Come on. Come on, now. Come to me, boy."

The frantic urge to run, run anywhere now that the wind was so great, made the mule jump forward, nearly upsetting Isaac. On they hurried for the broken gate, man and mule, in a desperate lunge, stumbling, tripping, running.

When he saw his wife standing before the little farmhouse, Isaac stopped short. She was wearing her best clothes and was facing the hills, swaying slightly in the wind.

"Ruth? What are you doing?"

He panted from his flight.

"Ruth?"

He came closer, bewildered.

"Get back in the house. There's a sandstorm coming. Will you get back in the house, there?"

She turned her face to him. The wind played with wisps of her hair.

"No. I'm leaving you."

"You're what?"

"I'm leaving. I've had enough."

"That's a sandstorm, I said."

"I'm going."

"Where? What do you mean?"

"It doesn't matter."

They had to yell to overcome the noise of the wind.

"You'll die."

"Yes."

"What?"

"Yes."

"For God's sake, Ruth, get back in the house."

"Goodbye, Isaac."

"Listen to me. We'll adopt the boy. Go back to the house."

"What?"

She said nothing. He had not heard her.

"What?"

She would not answer. Isaac turned and broke into a run. The frantic race ended when the mule was safe in a stall, lathered and panting. Isaac couldn't hear the soft stacatto of the sand on the barn walls because of the wind. He ran to the huge doorway.

The wind tore the heavy door from his hands with a broadside gust and slammed it closed against the frame. When he had fitted the great bar on the hooks to keep it shut, he shielded his eyes and nose and started for the house.

The force of the stinging blast pushed him sideways, but he reached the shelter of a leeward side of the house and slipped around to the front door. The door was wide open, banging madly against the wall. Sand was blowing into the kitchen as the man burst through the doorway, still covering his eyes. He rushed in and fell across the table, too spent to close the door. His lunch dishes, unwashed, flew off with the collision and shattered into fragments which scattered over the floor. Isaac's red rimmed eyes closed and he breathed in deep, groaning sighs. The wind outside thundered in his eardrums.

Realization forced him erect.

"Ruth. Ruth. Where are you?"

From room to room he ran, tearing open the doors. Emptiness greeted him.

"Ruth."

His hands shaking he groped his way to the open door.

"No, oh no."

Isaac's voice fell to a whimper, for he could faintly see the swirl of the dark skirts of a figure stumbling off in the direction of the now indiscernable hills. He started after her but fell forward to the ground with the power of the storm. He clutched after her distant feet and his fingers drew up into sand-filled fists. He threw his head back.

"Ruth Ruth. Ruth." he screamed.

The wild noise of the door smashing against the wall and the titantic roar of the wind overpowered his frenzied cry. The figure was now almost completely engulfed in the howling, swirling sand.

"Ruth."

Public Opinion and the Farm Program

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. McGOVERN. Mr. Speaker, there has been a recent upsurge in anti-farm-price-support publicity from those who have a history of such opposition.

For example, in April the farm Journal published the results of a poll among its readers. This poll purported to show that farmers generally are opposed to price supports.

The Secretary of Agriculture and Newsweek, to name two, have cited this poll as evidence that a large percentage of farmers want lower price supports or none at all. Every Congressman has been made aware of this poll.

Life magazine in its April 16 issue ran a lengthly article appealing to its readers to notify their Congressmen to put an end to farm subsidies, as a means of obtaining a tax cut.

The May 1959 issue of the Reader's Digest contains a diatribe against farm programs.

We all have been exposed to periodic and sustained publicity to the effect that taxpayers are unhappy about farm subsidies. It is important to note, however, that such publicity has always emanated from sources most antagonistic to Government-sponsored farm programs.

I should like to insert in the RECORD the results of a poll conducted under the supervision of Dr. George Gallup, director of the American Institute of Public Opinion at Princeton. These results were widely syndicated and appeared in the May 1 issue of the Washington Post and Times Herald.

One of the questions asked of a cross-section of voters was: "Do you think there is anything for which the Government should be spending less money than it is at present?"

Only 4 percent of the voters answered that farm subsidies were an item for which the Government should spend less money.

Stated another way, 96 percent of the voters do not disapprove of the farm program, but support it and recognize its value to the population as a whole.

There are some significant features about Dr. Gallup's poll as compared to the one conducted by the Farm Journal.

First. Dr. Gallup is a qualified expert in the field of measuring current public opinion, but the Farm Journal is not.

Second. The American Institute of Public Opinion at Princeton is principally engaged in measuring public opinion, while the Farm Journal attempts to mold it. For the past several years the Farm Journal has been chief salesman of the Benson program.

Third. The techniques and methods used by Dr. Gallup are scientifically valid, whereas those of the Farm Journal are questionable at best.

It would be more representative of high-caliber leadership if our public officials, particularly those of cabinet rank, would exercise caution in publicly citing the results of polls and surveys which do not reflect sufficient expertise in the field of measuring public opinion, or which are obviously biased.

A Resolution for Progress in the Missouri Valley

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. McGOVERN. Mr. Speaker, recently the Missouri River States Committee met at Council Bluffs, Iowa, to discuss vital matters relating to our Missouri River development program.

This committee passed an important resolution concerning the need for continuing construction on the Missouri River.

Under unanimous consent I include the text of this resolution in the RECORD:

RESOLUTION ADOPTED APRIL 15, 1959, BY MISSOURI RIVER STATES COMMITTEE AT COUNCIL BLUFFS, IOWA

We, the Missouri River States Committee, consisting of the Governors of the States of Iowa, Colorado, Kansas, Montana, North Dakota, South Dakota, Minnesota, Missouri, Nebraska, and Wyoming, comprising one-sixth of the area of the United States of America, in meeting assembled, do hereby adopt the following resolution:

"Whereas the Missouri River States Committee, created in December of 1941, was organized for the express purpose of securing flood control, irrigation, navigation, power development, and related improvements of the entire Missouri River Basin; and

"Whereas through the efforts of the Missouri River States Committee and other groups, the Missouri Basin project was authorized by Congress in the year 1944; and

"Whereas during the 15 years since that time substantial progress has been made in meeting the objectives of flood control, navigation, water supply, and power development and, to a lesser degree, irrigation, and other improvements; and

"Whereas the orderly development of natural and human resources of the Missouri River Basin is impeded and severely handicapped by the 'no new starts' policy; and

"Whereas said 'no new starts' policy impairs the economic strength of the entire country by preventing the development of natural resources in the basin as an investment in the future welfare and security of the United States as a whole; and

Whereas the construction of planned projects would strengthen the economic base of this region and of our whole country at a time when full development and use of our national resources are urgently needed in the struggle between the free world and the areas of the earth dominated by Communists: Now, therefore, be it

"*Resolved*, That this committee urges the Congress of the United States to implement its authorizations of reclamation and flood control and other projects by appropriating the necessary money for the initiation of said projects; and be it further

"*Resolved*, That this resolution be forwarded by the chairman of the Missouri River States Committee to the Honorable CLARENCE CANNON, chairman of the Appropriations Committee of the House of Representatives of the United States, and the Honorable CARL HAYDEN, chairman of Appropriations Committee of the Senate of the United States.

Special Subcommittee on Oceanography of the House Committee on Merchant Marine and Fisheries

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. McCORMACK. Mr. Speaker, the Special Subcommittee on Oceanography of the House Committee on Merchant Marine and Fisheries, under the able leadership of our distinguished colleague, the gentleman from California [Mr. GEORGE P. MILLER], is making an outstanding reputation. This is clearly evidenced by the wide and favorable publicity on the work that Congressman GEORGE P. MILLER's special subcommittee is doing and the importance of the subcommittee's work, and the serious and constructive manner which the subcommittee has approached consideration of this important field.

In my extension of remarks I include a fine editorial of the work of the Special Subcommittee on Oceanography appearing in the Boston Traveler of May 16, 1959, and also an informative news item appearing in the Boston Sunday Herald of May 17, 1959. Congressman GEORGE P. MILLER and the members of his special subcommittee are to be congratulated in the constructive manner in which they are approaching in the performance of their duties:

[From the Boston Traveler, May 16, 1959]

SUMMING UP AND LOOKING AHEAD

Most of the money and energy the U.S. Government has spent on science in the past few years has been for the lofty purpose of hitching our wagon to a star.

While all this looking upward has brought great progress in rocketry, satellites, moon shooting and outer space research in general, there's one group in Congress that wonders if more of us shouldn't have kept our eyes on the mud.

The mud at the bottom of the ocean and all the salt water around it, they suspect, hold as much—if not more—promise for mankind than the conquest of the universe.

A Special Subcommittee on Oceanography of the House Merchant Marine and Fisheries Committee is concerned lest our national policy leaders may have missed the boat in neglecting the sea to concentrate on space.

In this connection, there are fears that Russia may be outstripping us in oceanic studies.

There is no proof of this, but there is sober counsel from the National Academy of Sciences, whose job it is to advise the Federal Government on scientific matters.

"On the practical side, the problems to be solved concerning the oceans are at least as

urgent as those of space," said the Academy in a report issued in January.

"From the point of view of military operations, there is no comparison between the urgencies of the problems of the oceans and those of outer space.

"The submarine armed with long-range missiles is probably the most potent weapon system threatening our security today. It seems clear that the pressures of establishing effective bases, and of protecting ourselves from attack, are relentlessly driving us into the oceans."

The Academy said that we know less about many areas of the ocean than we do about the moon.

Capt. Henry G. Munson, commander of the Navy's Hydrographic Office, made it somewhat stronger. He said:

"We know little more about the ocean than where it is."

It was against this background that the House subcommittee, under Chairman GEORGE P. MILLER, Democrat of California, began hearings in March.

As witnesses, they are calling as many as possible of the relatively few experts on oceanography in the United States.

While it is a highly technical field in many ways, it is filled with the kind of adventurous speculation that produced Jules Verne's "Twenty Thousand Leagues Under the Sea."

And the tales of gold that have fascinated committee members make the richest pirate's treasure sound like so much pin money.

In every cubic mile of ocean, the salt water scientists say, the volume of gold suspended is worth $93 million.

And that's only one of the many valuable minerals in the water or under it. We haven't an inkling of the extent of oil deposits.

But knowledge of their existence and recollection of the bitter Federal-State battles over offshore oil rights have been enough to raise some knotty legal questions in the subcommittee.

For instance, what do we do if Russia starts drilling for underwater oil just outside our coastal limits?

If, as it seems, present international law offers us no protection against such a possibility, then inner space—or underwater—boundaries are surely as essential as those for outer space.

Pressures for food from rapidly expanding populations may force the issue long before exploitation of oil or mineral resources.

The subcommittee is hearing about methods of fencing off parts of the seas for fish farms. There's little doubt that in the decades to come both animal and vegetable life from the ocean will be more important to human survival than they are today.

And there's no doubt that deeper and broader knowledge of the ocean will be increasingly vital to our defense, weather forecasting and, possibly, even climate control.

While the Congressmen are learning all they can about the scientific channels to be studied they have before them a financial program suggested by the National Academy.

It recommended that Uncle Sam spend $650 million during the next 10 years on basic research—the sort of exploration carried on by oceanographers of several nations during International Geophysical Year in 1958.

Presumably, the Woods Hole Oceanographic Institute and its neighbor on Cape Cod, the Marine Biological Laboratory of the U.S. Fish and Wildlife Service, would benefit under such a program.

The biggest chunk of money, some $275 millions, would go for specially designed ocean research ships. Another $100 million would buy icebreaking submarines and anchor platforms in midocean for scientists.

New shore laboratories to evaluate the findings of basic research ships would cost $90 million and some $56 million would go for surveying and mapping the oceans.

Another $87 million would be used to study the ocean's resources—fish, oil, etc.

And the problems of dumping atomic waste at sea would be studied in projects costing $32 million.

Some studies on radioactive waste will be conducted off Boston and Martha's Vineyard this summer for the Atomic Energy Commission.

One of the House subcommittee's big jobs before recommending any appropriation will be to discover what various Government agencies are already doing in the field of oceanography and to what extent their activities could be coordinated.

Possibility that sea studies, space studies—in fact most Federal research—may be lumped together in a U.S. Department of Science is seen by Senator HUBERT HUMPHREY.

He has filed a controversial bill to consider putting frogmen and spacemen on the same team.

[From the Boston Sunday Herald, May 17, 1959]

OCEANS SEEN AS NEGLECTED BATTLEGROUND—HOUSE COMMITTEE TAKES HARD LOOK AT FIELD OF IGNORANCE

(By Congressional Quarterly)

WASHINGTON.—Congress is taking its first broad look at what many scientists see as a neglected battleground—the oceans.

A Special Oceanography Subcommittee of the House Merchant Marine and Fisheries Committee is doing the looking.

"The first thing we have to do," says Subcommittee Chairman GEORGE P. MILLER, Democrat, of California, "is to find out what is being done now in this field. Only then will we be in a position to make recommendations to Congress."

PICKING OF BRAINS

What the subcommittee has been doing for the past 2 months—and will continue doing throughout the 1959 session of Congress—is picking the brains of the relatively few experts in the oceanography field.

This brain picking gives the committee hearing room the atmosphere of an advanced seminar course. Beribboned Navy officers spread out century-old whaling charts before the student Congressmen to show how marine life can be mapped; earnest scientists talk about how part of the ocean could be fenced off into fish farms; others tell of the untapped wealth in the oceans.

The Congressmen sit entranced as witnesses tell of $93 million worth of gold suspended in each cubic mile of sea water; of rivers 1,000 times mightier than the Mississippi surging in the ocean depths; of mountains and broad plains equal to those on land. The subcommittee recently listened to an eerie tape of the language of the sea—snapping of shrimp, barking of porpoises, and grunting of drum fish.

Visionaries see the oceans, the mother of all life, as the last frontier. They say it is about to be rushed. Yet there are no laws controlling the homesteading of the sea. Are we, lawyers ask, about to enter another era of pirating where fast ships hijack the treasures other ships have dug out of the sea? And what can we do legally if Russia, for example, starts digging for oil just outside our coastal limits?

RUSSIA BIG WORRY

As in the space race, Russia's progress in oceanography worries our experts. The National Academy of Sciences in a recent report said:

"From the point of view of military operations, there is no comparison between the urgencies of the problems of the oceans and those of outer space. The submarine, armed with long-range missiles, is probably the most potent weapon system threatening our security today. It seems clear that the pressures of establishing effective bases, and of protecting ourselves from attack, are relentlessly driving us into the oceans."

Ignorance about the oceans is widespread, Capt. Henry G. Munson, commander of the Navy's Hydrographic Office, told the subcommittee: "We know little more about the ocean than where it is."

What should be done? The Government asked the National Academy of Sciences to make recommendations. The Academy recently summarized its recommendation in the first of 12 reports on oceanography.

It said "the key to the growth of oceanography in the United States lies in basic research—research which is done for its own sake without thought of specific practical applications."

It then urged that the Federal Government spend $651 million over the next 10 years to double the rate of basic research. The money would go for new ships especially designed to explore the seas; fellowships for students of oceanography and financial aid to institutions that teach them; new shore laboratories to sift data gathered at sea, new research tools such as icebreaking submarines and midocean ploaforms, and a program to find out if radioactive materials can safely be dumped into the seas.

RESPONSIBILITY SPLIT

Right now, the work of studying the ocean is spread among several Federal agencies. The subcommittee is trying to decide whether a coordinating committee should be established. But its recommendations to Congress on these and other oceanography problems are not expected to come until late this year.

On the Senate side, Senator HUBERT H. HUMPHREY, Democrat of Minnesota, introduced a bill with broad bipartisan backing to set up a Hoover-type commission to determine if a special Department of Science was advisable. Although the Senate has scheduled no oceanography hearings on its own. HUMPHREY said the Senate should consider establishing a special group to act in concert with the House subcommittee.

He said Congress must not wear blinders in looking into space, but should also concern itself with the inner-space of the surrounding oceans.

Fortieth Reunion of the Billings High School Class of 1919

EXTENSION OF REMARKS

OF

HON. LeROY H. ANDERSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. ANDERSON of Montana. Mr. Speaker, on June 20, 1959, the Billings High School class of 1919 will hold its 40th reunion. This date will also culminate celebration of Western Days in Billings, Mont.

I take this opportunity to extend congratulations and all good wishes to members of the class of 1919.

Lucile Miller Wright, a member of the class, now a consultant in public relations and aviation facilities, who works in New York, will go to Montana to attend the reunion. She has written a poem about our great State which I am including in the CONGRESSIONAL RECORD.

Each member of her class will receive a copy as a momento of the reunion:

MONTANA

(By Lucile Miller Wright)

Lazy, fleecy clouds floating through sapphire skies;
Golden mountains necklaced in diamonds and pearls;
Copper sunsets inviting stately pine trees, sentinels of the forest;
To cast amethyst shadows on canyon wall and valley floor.

Hungry trout make silvery ripples on emerald pools
Where deer, bear, fox, and hare come to quench their thirst.
This is Montana, the treasure State,
Land of shining mountains, symbol of peace, my home.

The "Hot Cargo" Issue

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include, at the request of the writer, the following letter which I received from a constituent of mine:

SAGINAW, MICH., *May 22, 1959.*

DEAR CONGRESSMAN BENTLEY: You are my voice in Congress. I want you to speak. I want you to stand up in Congress and read this letter for the consideration of your fellow Congressmen.

Concerning the "hot cargo" contracts, are you aware that my husband could be forced, at the threat of losing his job, to go into a plant where a strike was in progress and risk his personal safety to deliver his load? Do you realize that his company would be forced to send him through picket lines and forced to discharge him if he refused? Do you realize that my husband is 44 years old come Sunday and we have four dependent children? Have any of you men stopped to think in terms of the individual in drafting this labor bill? Have you carefully considered the effect each and every phase of this legislation will have on each individual driver?

Please do not aim this bill at Jimmy Hoffa. Lower your sites and aim your labor legislation at the truckdrivers. They are the people who will have to live with it day by day.

In Senator MCCLELLAN'S zealous effect to fix Jimmy Hoffa's wagon, do not be carried away to the point where you will lose consideration for the individual and the unworkable conditions you will create for Mr. Average Man.

Do you imagine that factory workers will stand idly by and allow a plant to receive delivery as usual while a strike is in progress? If they can get raw material delivered, and finished products hauled away, they can run their plants on scab labor and we would all be right back where we were before labor even got organized.

Factory workers realize what is at stake. They will have no alternative but to use violence to stop delivery from being made. They must enforce their demands on their employers or their employers will enforce their demands on them. A hungry man will fight and this legislation must not come to pass. I warn you this "hot cargo" issue is a Pandora's box.

Consider long and consider well, for the entire Nation will feel the effects of this legislation.

Sincerely,

Mrs. TONY GRILL.

People-to-People Plan Working

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. WOLF. Mr. Speaker, many times what politicians and diplomats cannot do, artists can do. This is because art knows no narrow boundary or selfish motive. The artist knows the truth of the heart which is a universal truth. Last week the Bolshoi Ballet was in Washington. Those lucky enough to see the art of Ulanova, the great Russian dancer, knew the beauty of art and forgot about a cold war and hydrogen bombs and the Berlin crisis. For at least a few hours those who attended the performance felt a universal kinship and brotherhood toward all men through the wonders of art.

Under leave to revise and extend my remarks I wish to insert into the Appendix of the RECORD an article by Drew Pearson on art as a bridge to better world understanding:

[From the Washington Post and Times-Herald, May 20, 1959]

PEOPLE-TO-PEOPLE PLAN WORKING

(By Drew Pearson)

In the center of the Capitol Theater stage, the fragile form of Galina Ulanova fluttered to the floor in the climax of "The Dying Swan." Out in the body of the theater, 3,426 spectators—the most ever squeezed into the Capitol—paid uproarious tribute.

Scene after scene, dance after dance of the Bolshoi Ballet had brought from staid, conservative, culture-satiated Washingtonians unabashed, uninhibited, tumultuous approval.

Beyond that approval, beyond the record-breaking $37,000 box-office receipts which topped the Metropolitan Opera's $29,000, beyond the ballerinas' quick tour of the Lincoln Memorial and Congress was something more important than art and the appreciation of art.

It was the fact that art can form a bridge between people.

So far diplomats have not been able to bridge the gap between the political animosities of the United States and the Soviet Union; nor have the scientists sitting in Geneva; nor even the heads of states meeting at the summit in 1955. But the lithe beauty of Ulanova's body and face; the suppleness of Susanna Zvyagina in the saber dance; and the rugged, expressive hands of Yuri Faier as he led 70 American musicians and 100 Russian dancers in perfect rhythm—they did what trained diplomats and skilled politicians have not been able to do.

They helped the Russian and American people understand each other.

CULTURE AND COMMUNISM

For the Americans, who applauded the grace and symmetry of the Bolshoi Ballet, began to understand that a determined cultured people had produced it, that a ballet so beautiful could not have come from a nation of state policemen and Communist criminals.

Like wise the Russian ballerinas who toured Washington by bus before their performance knew they were not visiting a nation of hate mongers and wicked capitalists. They wanted to stop rush-hour traffic near the 14th Street Bridge to take pictures of the Jefferson Memorial because it was so beautiful.

And when they were so facinated with the radio sets that described the portraits at the Mellon Art Gallery, they did not appreciate the fact that the founder of the gallery had been an oil-and-aluminum millionaire, Andrew Mellon, architect of the Coolidge-Hoover policy that we must have no contacts with the Communist world.

This did not interest the ballerinas. What they said was: "This is a wonderful art gallery. This is beautiful. It has real art."

Even the relentless anti-Russian heart of old Andy Mellon might have melted had he heard the ecstasy of these modern-day Russians over his gallery.

BOLSHOI BALLET PIONEER

Another man who should have been present to watch the Bolshoi Ballet take Washington is Eddie Dowling, the Irish actor with more gold in his heart than in his pockets.

It was Eddie Dowling who first urged that the Bolshoi Ballet be brought to Washington shortly after Franklin Roosevelt resumed relations with the Soviet Union. Dowling had helped elect Roosevelt in 1932 as head of his stage, screen, and radio committee, and the only thing he asked in return was to be permitted to talk with Soviet Foreign Minister Maxim Litvinov regarding the Bolshoi Ballet.

Late one night at the White House Roosevelt arranged the meeting. Dowling urged Litvinov to improve American-Russian friendship by bringing the ballet to the United States. Litvinov was noncommittal, later sent word the ballet was too busy.

Twenty-five years have passed since then. The Iron Curtain has been lifted. American tourists can now go to Russia.

So, slowly, but irresistibly and effectively, people-to-people friendship is working.

Edward D. Stone

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. TRIMBLE. Mr. Speaker, Edward D. Stone is one of the outstanding architects of our country. The fact is, he has a worldwide reputation as a leader in that profession. Among the buildings he has designed are the U.S. pavilion at the Brussels World's Fair, the U.S. Chancellery in New Delhi, and the Museum of Modern Art in New York.

He is a native of Fayetteville, Ark., and is a credit not only to his State but to the Nation as well. We are indeed proud of him.

Yesterday he was the speaker at the Arkansas State Society meeting. His subject was "The American Way of Life," and I thought his address was very interesting and very challenging, even though we may not all agree with every

detail of his address. I want to share it with my colleagues and am inserting it in the RECORD as a part of my remarks:

THE AMERICAN WAY OF LIFE

(By Edward D. Stone)

I thought I would speak on the American way of life. Since by now I have lived quite a bit of it up, and I am among friends who might enjoy some personal biography.

I was born around the turn of the century in a small town in the Ozark Mountains. The Baptists would say a community of 5,000 souls. Although its name is Fayetteville, the country people always call it the Athens of the Ozarks as the State university is located there.

My grandfather had settled that corner of the State and was an acquisitive old gent and soon owned the land as far as the eye could see. He had five sons whom he educated and it was his wish to educate them and leave them in a position where they would never have to worry about money. They never did.

My Uncle Will studied medicine at Johns Hopkins, came home and operated on a patient who unfortunately died. He, too, became a philosopher and a learned authority on medicine.

My uncle Albert, for instance, went to Yale to study law. He returned but found that he was much more interested in the affairs of the Roman Empire than he was was in the more mundane practice of law. He was given to drinking with the local philosophers and had a saddle horse named Hobson, after the Spanish-American War hero.

Hobson would take him to the philosophical rendezvous, and uncle Albert would be assisted onto Hobson at the conclusion of the evening; the horse knew the way home. I cite this as an example of the simplicity of the American way of life 50 years ago. You can imagine the legal complications if he had to come home in a Chevrolet.

My father was sent to the University of Virginia and he devoted his life to objective meditation and became, in effect, the local encyclopedia.

So that I was raised in a relaxed life among lotus-eaters, and someone has described my environment as "a hotbed of tranquillity." They did not have to catch me to put shoes on me when I went to school—I simply went to school barefooted.

I very often encountered the work of Senator FULBRIGHT'S biographers and profile writers, but I note that they have overlooked a bit of the Senator's pioneering.

His father owned a Chalmers automobile and BILL'S sisters took the car out and allowed the motor to freeze, cracking the cylinders. Mr. Fulbright told BILL he could have the car if he could make it run. So, after tinkering with it for some months and removing the body, BILL was scooting around town on the chassis. I think I can safely say that he was, therefore, Arkansas's first hot rodder.

The first automobile in town was kept in our barn and looked exactly like the buggy even to the whipsocket. This was my first introduction to the mechanical, scientific 20th century.

So I have been through the horse and buggy, the automobile, the air, the jet, and the atomic age, and if the insurance tables are accurate, there is life left in me yet.

Now to cope with the marvels of our age from Lenin to lanolin and golden oak to chrome tubing, and from Hobson to jets, I've had to work out certain rules for myself that enable me to be carefree and barefoot in the atomic age. I will gladly share these rules with you. You may think of them as Stone's don'ts.

1. Don't work too hard. If you find that you do not have enough ideas in an 8-hour day, the chances are your soul needs therapy. You are in need of inspiration, and for that you should look into the eyes of the woman you love, or go to Chartres Cathedral and see the sunrise through the beautiful stained glass windows or sit among the flowers in your garden.

2. Beware of progress. Progress invariably means that you sacrifice something good for something less attractive. A simple example: Twenty years ago we had living rooms 20 by 30; now you can only tell a room from a closet by the hook-strip on the wall. On a Sunday afternoon when you are trying to get back to New York in your car and you are in a traffic jam, this is a good time to reflect on whether progress is really paying off.

3. Don't be modern. Being modern simply consists of closing your mind to 2,500 years of Western culture and proving yourself content to copy the next-door neighbor's glass building, house, chair, drapery and poodle clip. I have two tests by which you can readily determine whether you are modern or not. If you prefer a bent chrome chair to a rocker, or a Cadillac to a horse-drawn carriage, you need therapy. If you are a pulp writer, it doesn't hurt if you know Shakespeare. Remember too, that Chippendale was handy with wood.

4. Go to bat for beauty. If we don't, we're going to find flashing neon signs on the pearly gates when we get there. If a few militant dames can sell this country prohibition, we certainly should be able to do away with neon signs, billboards, roadside honky tonks and used car lots.

5. Don't fall in love with just your idea. If you are jealous of your ideas it is a sign you have too few. Keep an open mind, the janitor's suggestion is probably the best.

6. Don't get in trouble. This fortunately is the easiest of all and simply involves avoiding certain people: the landlord, the doctor, the dentist, the psychiatrist, intellectuals, moriticans, and beatniks.

7. Don't be a moneychanger in the temple. If you're an artist you've earned the right to starve with dignity.

8. Don't talk back to your wife—because she is smarter than you are. H. L. Mencken said in the twenties that no man would make any decision without first talking it over with his wife, because she was a creature of super intelligence. If I had listened to him I would have saved myself some 25 years of exhausting research.

9. Don't be too worthwhile. Always keep a few character defects handy. People love to talk about your frailties. If you must be noble, keep it to yourself.

To elaborate on the idea that we should go to bat for beauty, I am told that man is the result of his heredity, his education and his environment. The sputnik shook us out of our complacency regarding education and I think this is the ideal group to launch a sputnik regarding our environment.

I suggest that you start with the highways and countryside. Long ago the Government made the farmer realize that it was unprofitable to plow the land down the hill and let it wash away, and our forests have been protected by legislation. But I know of no laws which prevent us from despoiling our beautiful, physical heritage. We do everything rapidly in this country and I think that in 30 or 40 years, we have converted it from the most beautiful country into one of the ugliest.

An English observer visiting this country stated that he noticed a firm determination on our part to pave our countryside with car lots, beer cans, billboards, and honky-tonks in order that we might whiz by in a lemon-yellow Cadillac and contemplate the ruins.

Someone else has said that in this era of prosperity and over-abundance, we seem to be able to afford everything but beauty.

When I was in Harvard in the 20's, Cape Cod was a fabulously beautiful remnant of colonial life with charming village greens, stately elms, and picturesque fishing villages. This is long since gone. It is a forest of billboards and no longer an exquisite reminder of the past.

When I came to New York in 1929, which, by the way, was not an auspicious time to start a career, Long Island was a park. Now, with the square miles of little boxes, it is also gone, so that the motorist goes 50 miles before reaching the open countryside.

All highways should, first of all, be free of billboards and hamburger joints and all tree-lined. Recently a high official of the automobile industry recommended that all trees be cut out along the highways as a menace to motorists. Assassination is not the solution. Perhaps the car manufacturer could eliminate 4 feet of vulgarity from the length of his car and spend the money creating destinations for the motorists.

The Democrats always say that if a Republican is elected to office, grass will grow on Main Street. Of course, this is exactly what should happen. It is wrong that when a man purchases a full-length chinchilla coat for his wife on one side of Main Street, he should risk his life in crossing to get her an emerald necklace on the other.

France, which was a comparatively uninteresting country physically, has, through man's effort, become one of the most beautiful countries in the world, largely due to its tree-lined roads, its compact, charming villages. It is very comparable, in the balance of agriculture and industry to our Middlewestern States, but can you imagine anybody voluntarily going to Iowa, Indiana, or Ohio, such a long distance, to view the shambles.

It seems to me that we need the phenomena of Presidents like Washington and Jefferson. Maybe their roots were so recently and so deeply in the British Empire, maybe that explains their conduct. But they were truly well-rounded individuals. Their response to their environment makes them special heroes to me. Men like Washington, for instance, could have a vision of a city like Washington. He actually implemented the plans, and here it is today, a living city, a monument to his wishes. Jefferson too, aspired to find ways of enhancing his environment. The University of Virginia is his contribution. But I haven't seen any thread of great interest in any of our succeeding Presidents, with the exception of Theodore Roosevelt, who was interested in everything.

In conclusion, what we need are guardians of the physical destiny of our country. First of all, we should have a Cabinet official, in a foreign country he would be called Minister of Culture, here this might be suspect, so I suggest we call him Secretary of Environment. In the lower echelon, a counterpart should exist in each State capital and in each principal city.

We have spent some 300 years pioneering and developing our country and in perfecting a democratic system of government. We now should be ready to embark on a great cultural period in our lives.

If it be true that all great periods of history were only great because of the art they produced, I hope that it can be said by future generations that our time was the period of a great cultural renaissance in the 20th century.

Wartburg College Choir To Tour Europe

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. GROSS. Mr. Speaker, on Friday, May 29, the Wartburg College Choir will leave Waverly, Iowa, for a 5-week tour of

Europe. I am proud to say that this fine liberal arts college, owned and operated by the American Lutheran Church, is located in my district.

The Wartburg Choir is recognized as one of the very finest singing groups in America, and I have every confidence that these young people will prove to be excellent good will ambassadors for the State of Iowa and the Nation. Director of the choir is Dr. Edwin Liemohn. One of the foremost college choir directors, he also has won eminence as a composer and arranger of a cappella music.

Mr. Speaker, as part of my remarks I desire to include the choir's itinerary for its European tour:

May 31: Departure from New York International Airport.
June 1: Arrival in Amsterdam, Holland.
June 2: Amsterdam, Holland.
June 3: Utrecht, Holland.
June 4: Heerlen, Holland.
June 5: Muenster, Germany.
June 6: Wuppertal-Barmen, Germany.
June 7: Sightseeing at Cologne and Bonn, Rhine River Valley.
June 8: Neuwied, Germany.
June 9: Heidelberg, Germany (auspices of American military).
June 10: Stuttgart, Germany.
June 11: Munich.
June 12: Fuerth, Germany.
June 13: Coburg, Germany.
June 14: Fulda, Germany.
June 15: Kassel, Germany.
June 16: Bremen (tentative).
June 17: Schneverdingen, Germany.
June 18: Lueneberg, Germany.
June 19: Hanover, Germany.
June 20: Preetz, Germany.
June 22: Soerup (tentative).
June 23: Travel to Copenhagen, Denmark.
June 24: Roskilde Cathedral, Roskilde, Denmark.
June 25: Haderslev Cathedral, Haderslev, Denmark.
June 26: Hamburg, Germany.
June 27, 28: Travel to Oostende, Belgium.
June 29: Cross channel to Dover, England. Arrive at Hothorpe Hall, Theddingworth/Nr. Rugby, England.
June 30: Corby, England.
July 1: Leicester, England.
July 2: Bradford, England.
July 3: Market Harborough, England.
July 4: London.
July 5: London.
July 5: Departure for New York.
July 6: Arrival in New York.
July 7: Arrival in Waverly.

Meat Imports Skyrocket

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. DORN of South Carolina. Mr. Speaker, the Livestock Producers' Association of South Carolina last year adopted a resolution opposing the extension of the so-called Reciprocal Trade Act. The cattlemen of my State were farsighted. They were looking to the future.

Now, Mr. Speaker, here is an article which appeared in the Lancaster, Pa., Livestock Reporter of May 18, 1959:

MEAT IMPORTS SKYROCKET TO ALMOST TRIPLE TOTAL RECEIVED 2 YEARS AGO

Importation of meats from foreign countries into the United States during March were almost triple those received during March 1957, according to tonnage figures complied by the U.S. Department of Agriculture.

During March 1957, red meat tonnage received amounted to 24,842,551 pounds and during March 1958, the amount rose to 50,263,854 pounds. During March of this year a total of 71,489,148 pounds were received.

New Zealand imports have almost doubled since last year. Top exporters of meat to the United States were Argentina and Australia with New Zealand in third place.

Fresh and cured beef and veal accounted for most of the increase in meat importations. In 1957, the United States imported more than 3 million pounds of fresh beef and veal and last year about 18 million pounds were imported. During 1959, the tonnage amounted to 32,370,345 pounds or almost half of the entire March importation.

Two years ago the importation of fresh beef and veal amounted to about one-seventh of the monthly total as compared to almost 50 percent of the volume during March.

The legislative committee of the American National Cattlemen's Association is working in Washington, D.C., to curb rising imports of beef through tariff laws and labeling of imported beef.

Cooperstown Again

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. STRATTON. Mr. Speaker, the Nation has been saddened by the death yesterday of our distinguished former Secretary of State, John Foster Dulles. Mr. Dulles' passing brings home again with renewed emphasis the urgency of increasing our endeavors, both at the private and the public level, in our battle against cancer, the dread disease which now has taken from our midst one of the great architects of the present diplomatic structure of the free world.

Because of the importance of every step taken in the fight against cancer, Mr. Speaker, I am proud that a great new step forward has been taken by one of the leading cancer research institutions in the Nation, located in my district, the Mary Imogene Bassett Hospital in Cooperstown. The work which the Bassett Hospital has been doing in my district has been recognized throughout the Nation and the world.

In view of the new cobalt 60 radiation unit which has now been added to the facilities of the hospital and is being put into operation to continue the fight against cancer, I am happy to include the following editorial comment which appeared in one of the leading newspapers in my district, the Otsego Farmer, of Cooperstown, N.Y.:

COOPERSTOWN AGAIN

Cooperstown has become unique for so many things that we have a tendency to become somewhat blase about anything new.

We cannot but wonder what the impact of an announcement such as was made this week by the Mary Imogene Bassett Hospital would have been if, for instance, the community had nothing to brag about.

"The new cobalt-60 radiation unit will be open for inspection May 16," says the announcement in part, "* * * there will be a brief description of current radiation studies and an address by Dr. Charles G. Zubrod, clinical director of the National Cancer Institute of Bethesda, Md."

This could be equivalent to the shot heard round the world, for those who can foretell the possible practical results of this device, and this intensive medical study at Cooperstown, which has already attracted worldwide attention.

That Cooperstown, represented by the keen medical staff at the hospital, should have such an important part in the fight against one of nature's worst scourges, should not go unnoticed. While admittedly experimental, the use of this unit has already demonstrated that it holds promise for alleviating ills that afflict untold numbers of people around the globe.

We certainly are not competent to predict the possible results of what will be unveiled at the Mary Imogene Bassett Hospital on Saturday, but we cannot fail to recognize that it is important, and that Cooperstown is very much in the vanguard in this as, it has been in many other programs which have attracted national and international attention.

Pennsylvania Is a Farm State to the Tune of $3 Billion

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Sunday Independent, Wilkes-Barre, Pa., May 24, 1959:

THIS IS A FARM STATE TO TUNE OF $3 BILLION

HARRISBURG.—Pennsylvania is a great agricultural Commonwealth although it usually is regarded as an industrial State.

Its 119,000 farms and their buildings, equipment, machinery, livestock, and crops in 1958 were valued at more than $3 billion, representing a larger capital investment than either mining or the manufacturing of primary metals.

Although Pennsylvania ranks 32d in total area and 32d in acres in farms, it ranks 14th among all the States in cash receipts from farm products, placing value of production per acre on Pennsylvania farms above the national average.

Cash income from marketings from Pennsyvania farms amounted to $788,647,000 in 1958 or 5 percent more than the $752,439,000 in 1957. Cash income from all livestock and livestock products in 1958 amounted to $607,831,000, including poultry and eggs; income from crops totaled $180,816,000.

GOOD CLIMATE

Climate and rainfall are favorable to grassland farming in Pennsylvania. The farmland of the State is so situated as to permit the cultivation of a great variety of crops, since the elevation ranges from practically sea level to 3,000 feet and the crop-growing season from 80 to 207 days. This range makes possible the general cultiva-

tion of fruits, vegetables, cereals, and grasses. Pennsylvania is a State of family size farms, the average being 102 acres, about 40 under cultivation; the remainder is mostly pasture and woodland. Of approximately 13 million acres in farms, 6 million acres are improved or cropland.

Pennsylvania farms produce, on the average, more wheat per acre than Kansas, Oklahoma, or any other Midwest Wheat Belt State. Pennsylvania leads all other States in the production of ice cream, murshrooms, cigar leaf tobacco, sausage products, scrapple, pretzels, nursery-grown Christmas trees, apples, stategraded for processing, spring and fall fall spinach, and in the value of crops grown under glass. The State leads in the number of farmers' retail markets, bakeries, carbonated beverage and still drink plants.

In addition, Pennsylvania has the largest apple processing plant in the world, the largest grape juice plant in the world, the largest package ice cream plant in the world, and the largest farm show building in the world under one roof. Pennsylvania was the first State to pass meat inspection laws and first to establish livestock sanitary service.

One Pennsylvania county (Lancaster) ranks first among the Nation's 3,000 counties in value of farm products grown without aid of irrigation, first in the value of farm crops used by farm households, and first in tonnage of cigar leaf tobacco produced.

LEADING DAIRY STATE

Pennsylvania is an outstanding dairy State. Over 6,500 million pounds of milk are produced annually. Dairy products bring in approximately 41 percent of all farm cash income, totaling $320 million in 1958. Pennsylvania ranks fourth in number of milk cows and fifth in volume of milk produced (1958), fourth in income from dairy products and fourth in value of milk cows. Since World War I the average milk production per cow has increased more than 50 percent and is now over 7,000 pounds per year.

Pennsylvania is a leader among the States in poultry and eggs. In 1958 the total farm cash income from this source was $175,306,000. The State then ranked first in farm cash income from chickens, except broilers, second in income from eggs, third in total farm cash income from poultry and eggs, third in value of chickens on farms, fourth in number of farm chickens raised and in number of eggs produced, fourth in number of chickens on farms and ninth in turkeys on January 1, 1959. Nine Pennsylvania countries are among the 100 highest in poultry sales in the United States and 14 are listed among the first 100 in number of chickens on farms.

Pennsylvania in 1958 ranked 5th in the United States in the production of maple sugar and sirup, 4th in sour cherries, 4th in peaches, 5th in grapes, 3d in clover and timothy hay, 11th in potatoes, 6th in commercial apples and all cherries, and 7th in all tobacco.

HAY A LEADING CROP

Hay was the leading crop in Pennsylvania in 1958, the 3,828,000 tons produced being valued at $101,442,000. Corn was second in value with $82,996,000, followed in order by wheat, oats, commercial truck crops, potatoes, tobacco, barley, commercial apples, and peaches.

Cattle and calves on farms January 1, 1959, led Pennsylvania livestock values at $399,801,000; the 1,039,000 milk cows and heifers 2 years old and over being valued at $294,037,000. The State's 21,735,000 chickens were second at $33,689,000 followed by hogs, horses and mules (work stock), sheep and lambs, and turkeys, in that order.

The importance of the State's livestock and poultry industry is emphasized in the fact that 77 percent of all gross farm income is derived from the sale of livestock and poultry, and their products, including milk and eggs.

INVENTED IRON PLOW

Farming in Pennsylvania dates back more than 250 years. Until the early 1800's it was largely subsistence farming, little more than supporting the farm families that tilled the soil. Up to the time of the Civil War (1861–65) the increasing demand for farm products from rapidly growing cities and towns required farmers to produce more food in larger quantities. Mechanization started with invention of the iron plow by Joseph Smith, Bucks County blacksmith, in 1800. In the next half century came mowing machines (1822), the first reaper (1831), threshing machines 1832), the steel-toothed hayrake (1850), and the first steam tractors (1855–58).

As the State's agriculture expanded the Pennsylvania State Agricultural Society was formed in 1851; it obtained a charter and an appropriation of $10,000 from the General Assembly in 1855 for establishment of the Farmers High School (now the Pennsylvania State University); the recording of crop production statistics started in 1866; the Pennsylvania Agricultural Experiment Station was established in 1887; the State department of agriculture was set up in 1895; the Agriculture and Home Economics Extension Service began in 1914; the first Pennsylvania farm show was held in 1917 and organization of countywide soil conservation districts was authorized by legislation approved in 1945.

Baltimore's Educator: Dr. John H. Fischer

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. FRIEDEL. Mr. Speaker, none of us would deny that the future of our great Nation lies with its young people. It is an equally well-recognized fact that those who educate our children and prepare them for adult manhood and womanhood are bound to have as great an impact upon them as do their parents and spiritual leaders.

The city of Baltimore, the sixth largest city in the land, is, indeed, very fortunate to have had as its superintendent of schools a native son who is a product of the city's educational institutions. These include the Maryland State Teachers College and the world-famous Johns Hopkins University. I say Baltimore is fortunate because this man has, during his tenure in various capacities with our city's excellent educational system, clearly demonstrated outstanding ability, a broad tolerance, and profound wisdom in dealing with Baltimore's primary and secondary school population. At the same time he has constantly increased the levels of the standard of teaching and of the city's schools.

This truly outstanding man I refer to is our own Dr. John H. Fischer, whose efforts and achievements have attracted such national attention that Columbia University's teachers college has named him as dean.

As a result of this honor, the city of Baltimore will lose Dr. Fischer's invaluable services, but the Nation as a whole will gain. To say that we most reluctantly release him and that we shall miss him very much is to state the obvious. However, Baltimore cannot be selfish since Dr. Fischer's special qualifications will enable him to guide the destinies of many of the country's future educators in his new and wider field of endeavor.

In recognition of Dr. Fischer's achievements, Mr. John L. McClay, general manager of the Westinghouse Broadcasting Co.'s television station WJZ–TV in Baltimore, paid him the following well-earned tribute:

Hello, I'm John McClay, general manager of WJZ–TV. Within a few months the people of Baltimore will lose a good friend. Dr. John H. Fischer, our superintendent of schools, has resigned so that he may become dean of the world-famous Teachers College of Columbia University. While regretting his departure, most Baltimoreans will feel a sense of pride in knowing that a man born, educated and trained in Baltimore, has been elevated into a position of national prominence.

We at WJZ agree with Columbia University's obvious conclusion that John Fischer is one of the country's best school superin- rather talk about what Dr. Fischer has done tendents. We could support this conclusion by citing the honors bestowed upon him by his fellow educators. However, we would rather talk about what Dr. Fischer has done right here in Baltimore, where he steered our school system though 6 years of crisis.

During these years, Dr. Fischer never lost sight of the goal of quality, even while quantity—a floodtide of new students—was the pressing problem. His administration more than tripled the number of secondary schools offering accelerated courses for bright students. This was achieved without compromising Dr. Fischer's basic belief that all children, the slow as well as the bright, must be offered the maximum in educational opportunity.

Yet Dr. Fischer has not gone along with the extremists who believe that the public schools should solve every problem that faces a child. To quote his own sensible words: "The school is a prominent and powerful institution, but it is not the home, the church, the social agency, the youth group or the police department."

Public education has always been subject to unreasonable pressures, often from people who are stirred up by the latest newspaper headlines. A few years ago, when the fear of internal communism was rampant, there were many who insisted that in a school there should be no mention of the word "communism," except with a sneer. Dr. Fischer rejected this viewpoint. He said: "If we persist in teaching that communism is to democracy as black is to white, the student will find it difficult, if not impossible, to understand the gains of communism in the last two decades." These remarks, we believe, scored a point for those who hold that communism must be fought with knowledge, not ignorance.

After the first Russian sputnik was shot into orbit, there was another public outcry; this time for more scientists. In the excitement of the moment, a proposal was made to the Baltimore school board that science teachers be given extra pay for supervising science clubs after school hours. Dr. Fischer, again, cool is a crisis, opposed the suggestion, unless the same extra pay was offered to teachers of language, literature, or history clubs. His decision not only salvaged the morale of the nonscience teachers, but reminded everyone that all the components of a liberal education are essential to a free society.

When the school board made the momentous decision to desegregate all the schools without delay, Dr. Fischer immediately made it plain by his deeds as well as his words that he believed the board's decision was the right one. Although he is, by nature, a gentle person, he quickly got tough with the adult rabble rousers and the small minority of pupils who attempted to block the peaceful integration of the races. Because he acted decisively, the spread of bigotry was nipped in the bud.

We at WJZ think there is a basic reason why Dr. Fischer has been an outstanding leader. In the midst of the public hue and cry for better schools, almost everyone is pushing a pet idea. Dr. Fischer has the ability to look at each of these ideas calmly and thoroughly before making a decision to accept or reject it. Even more important, he can stand back and take an impartial look at his own pet ideas. This, we believe, is real wisdom.

There is only one John Fischer, but we know that the school board, in its search for a successor, has a model in our departing superintendent. He leaves Baltimore with the best wishes of all of us at WJZ and, we feel sure, with the warm gratitude of the city he served so well.

Editorial Tributes to the Late New York State Assembly Speaker, Oswald D. Heck

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. STRATTON. Mr. Speaker, last week in my home district there passed from the scene suddenly and well before his time one of the most important leaders in government in New York State, Oswald D. Heck, speaker of the New York State Assembly. Speaker Heck, who had served in this important position longer than any other man in history, for a period of 23 years, had long occupied a position of great leadership in the State government. He had identified himself frequently with forward and progressive legislation, and during his years of service to the State he came to be respected and admired not only by those in his home city of Schnectady who knew him well, but also by men and women throughout the State, regardless of party.

Speaker Heck's passing will leave a great void in our State which will take many years to fill. I know that the sympathy of all of us is extended to his wife and family in their heavy loss.

Under leave to extend my remarks, I desire to include three editorials from newspapers in my district, one from the Schnectady Union-Star, one of the newspapers in Mr. Heck's hometown; one from the Amsterdam Evening Recorder; and one from the Gloversville Leader-Herald:

[From the Schenectady Union-Star, May 21, 1959]

"MR. SPEAKER" OUTSIDE; ONE OF US AT HOME

Although he never realized his ambition to be Governor, Oswald D. Heck probably knew more about State government than anyone else. More than 20 years as speaker of the assembly, the post next to the governorship in importance and influence, gave him knowledge of and insight into how the State operates that could be acquired only by long exeprience and participation in it at high level. Because the speaker is a behind-the-scenes operator and not an executive, Mr. Heck's contribution and his influence over the past quarter century cannot be measured. Much that was credited to someone else he initiated or approved. Much that rightly was not approved resulted from his veto. His colleagues respected his fairness and conscientiousness, and officials in the executive branch of State government—Republicans and Democrats—knew he was on the level. While politics made up much of his life, he was never lacking in convictions and several times took the floor of the assembly to voice them strongly. His career in Albany reflected credit on the community that term after term sent him back, to establish a record for tenure as speaker.

To Schenectady County he was more "Ozzie Heck" than "Mr. Speaker." Here he grew up, here he went to school, here he practiced law, here he lived. His honors and position in public life never affected his relations with lifelong friends and those he made in later years. Inherently modest, he never let what came to him outside give him a big head. For one thing his sense of humor wouldn't permit that to happen.

Schenectady County has lost, at altogether too young an age, a citizen of distinction. The State of New York has lost a public official of experience, judgment, wisdom, and courage.

[From the Amsterdam Evening Record, May 23, 1959]

LIFE OF SERVICE

As speaker of the assembly, a position next to the governorship in importance and influence, Oswald D. Heck managed to enjoy the respect and affection of members on both sides of the party aisles. Jolly and companionable by nature, he was deeply serious about matters which involved the welfare of his State, and in the art of politics he had few, if any, peers.

Like so many men in public life, Ozzie Heck did not live to fulfill his fondest ambition to be Governor of New York State. But as he watched over Governors come and go, he compiled a record of achievement and friendship rare in these days of power politics.

Hic contribution as a public servant cannot be measured by usual standards, for speaker of the assembly is a behind-the-scenes sort of position. But the fact that on innumerable occasions others received credit for his accomplishments never bothered Ozzie. He accepted this as part of the political game.

We regret that Ozzie Heck never became Governor, for he would have made a fine one. But we can be grateful that for 23 years we had the benefit of his devoted service to our State.

With his passing at the untimely age of 57, we have lost a public official of experience, wisdom and courage. The pair of shoes he leaves on the hill in Albany will be hard to fill.

[From the Gloversville Leader-Herald, May 22, 1595]

OSWALD D. HECK

The cause of good government suffered as acute a blow as did the Republican Party in the untimely death yesterday morning of Oswald D. Heck, speaker of the State assembly for a record 23 years.

"Ozzie" wielded great power in State government and managed to push a number of worthwhile programs through the assembly in the face of strong opposition. His greatest influence, of course, was among upstate Republicans. Had his ability and his knowledge of State government been more widely publicized in New York City, he might have realized a dream of becoming Governor of the State.

Filling the vacancy left by Assemblyman Heck's death will not be an easy chore. The sepaker knew how to get things done. His power of persuasion was something to behold. His political acumen was outstanding. And he was a grand fellow on top of everything else. He will be missed.

Spry Lame Duck

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. FULTON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Roscoe Drummond:

ADMINISTRATION RETAINS ITS VIGOR

(By Roscoe Drummond)

For what was supposed to be a "lame-duck" second term, the Eisenhower administration is continuing to show itself, at least at two important points, to be remarkably spry—hardly lame at all.

The theory of the critics of the 22d amendment—and I think that on longer experience they will probably be proved right—is that a President who is prevented by law from even the possibility of running again will inevitably limp through his second 4 years, losing influence and prestige and hard-pressed to get top-grade people to take top-grade appointments.

Perhaps Mr. Eisenhower retains his second-term political influence because he was not elected as a political person.

What is increasingly visible today is: (1) That the President's popularity with the voters continues to mount, and (2) that the Eisenhower Cabinet, as the administration moves toward the end of its second term, is younger, more vigorous, and at several points abler, than the Cabinet which first came together.

A series of Gallup polls since November shows that Mr. Eisenhower's national prestige has recovered steadily from the 1958 Republican congressional defeat. Today 61 percent of the voters say they approve the way the President is doing his job—and this majority approval is distributed across every major section of the country.

As to the Eisenhower Cabinet, two developments this past week add to its strength and resilience.

One is the appointment of Thomas S. Gates, Jr., the absolutely topdrawer Secretary of the Navy who was about to retire, as Deputy Secretary of Defense to fill the yawning hole in the Pentagon created by the passing of Deputy Secretary Donald Quarles. Gates has been on the job since 1953 and to keep him in the administration in this new post is an achievement and an asset.

The other development, similarly heartening, is the announcement by Secretary of Defense Neil McElroy that he is "adjourning" all plans to resign this fall. This means that his departure is put off until at least next January and he might very well stay on the job to the end. This would be most desirable.

How desirable? Well, what do you think would be the effect if a mammoth cor-

porate enterprise, at least as large as General Motors, Ford, and General Electric combined, had new management every 2 or 3 years and that every new president was without any previous experience? It would be disrupting, productive of delay, and confusing. The Department of Defense is a vaster enterprise than these three corporations combined and it has had six different men at the top over a 12-year period—Forrestal, Johnson, Marshall, Lovett, Wilson, and McElroy. And hundreds of changes at the second and third levels. The McElroy-Gates team is a good one and it is devoutly to be hoped that nothing breaks it up before there is a change of administration.

On balance it seems to me that the Eisenhower Cabinet is stronger today than when the President took office in 1953. Without making any person-by-person comparison, the major changes brought either equal or greater ability to the departments: McElroy for Wilson at Defense, Mitchell for Durkin at Labor, Seaton for McKay at Interior, Rogers for Brownell at Justice, Anderson for Humphrey at the Treasury, etc. It remains for Herter fully to prove himself.

But this is certainly not a lame-duck Cabinet.

There is still no evidence that the Republican Party is inheriting any of Mr. Eisenhower's popularity. While the President has been gaining 9 percent since November, the Republican Party has lost 2½ percent since its low point of 43.5 in the last election.

This leaves one conclusion at least: The popularity of the Democratic Party does not insure the election of a Democratic President and the unpopularity of the Republican Party does not prevent the election of a Republican President.

Tobacco Imports Mushroom

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. DORN of South Carolina. Mr. Speaker, imported tobacco leaf reached the highest point in 1958 in approximately 30 years. So far this year, imports from two of the largest foreign suppliers, Turkey and Greece, are up 20 percent and 28 percent, respectively. From all indications, tobacco imports this year will be the highest in the history of our country.

I warned the House time and time and time again during consideration of extension of so-called reciprocal trade this very thing would happen. Of course, as night follows the day, the American tobacco farmer will be forced to plant less and less and it will cost the American taxpayer more and more in price supports.

Mr. Speaker, the following is taken from a statement I placed in the RECORD last year when extension of the reciprocal trade bill was being considered:

Eric Johnston's committee is out over the country trying to drum up support for his completely bogus foreign-trade program. The American farmer is a particular target for false slogans, innuendoes, and fear psychology. They do not dare tell the American people that foreign exports are falling off except where we are paying the other country to buy our goods. They do not dare tell the American people about the hundreds of thousands of jobs that could be added to those presently engaged in foreign commerce through a truly mutually advantageous reciprocal trade program.

A desperate attempt is being made by Eric Johnston, Charlie Taft, and company to mislead, bamboozle, and hornswoggle the American tobacco farmer. This present attempt smacks of sheer chicanery and fraud in that in a few years they will do the same thing to the tobacco farmer and the tobacco industry that they have already done to the cotton farmer and the textile industry.

While trying to fool and temporarily brainwash the tobacco farmer, the ICA, under the table and behind the tobacco farmer's back in the secret recesses of distant lands, are teaching the people the art of American agriculture with the American taxpayer's dollars. I might remind the American tobacco farmers that this same Mr. Taft is listed as an official in the International Cooperation Administration. Their policy is to play one industry against the other, to play one segment of agriculture against the other until their nefarious scheme of growing our crops takes roots all over the world in foreign lands.

We are exporting less tobacco under Johnston and Taft's policy of "trade for the benefit of foreign countries" than we did in the year 1920.

I might remind our tobacco farmers that the millions of employees of the coal, oil, lead, zinc, plywood, and textile industries could purchase millions of pounds of tobacco and smoke the cigarettes if they could be placed on full time with time and a half for overtime which they formerly enjoyed before Johnston, Taft, and company started all their one-world treatment.

Inefficiency in the National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. PUCINSKI. Mr. Speaker, I wish to call attention of the House today to a penetrating report regarding the National Labor Relations Board, which has been written by Mr. Carleton Kent, chief of the Chicago Sun-Times Washington bureau, and which appeared in the Sun-Times on Friday, May 22.

Mr. Kent has written a comprehensive analysis of a report prepared by one of the Nation's top management consultant firms, McKinsey & Co., regarding present operations of the National Labor Relations Board. It should be pointed out that McKinsey & Co. were hired by the NLRB to make this management survey.

It is my firm belief that Mr. Kent and the Chicago Sun-Times have performed a great service in bringing to public attention the deplorable conditions which apparently exist within the National Labor Relations Board. I hope that every Member of Congress will read this excellent analysis by Mr. Kent because I am confident that we can better understand the cause for much labor-management unrest which can be traced directly to the National Labor Relations Board, the agency which was supposed to minimize upheavals in labor-management relations.

I read the Sun-Times account of the McKinsey & Co. findings with particular interest and gratification because this devastating report merely confirms what I have been saying before my own committee, the House Committee on Education and Labor, ever since our hearings began on labor-management reform legislation.

I have stated repeatedly that many of the problems and abuses related by the McClellan committee and by other sources could have been to a great extent eliminated or alleviated if the NLRB was doing the job it was intended to do. And I submit that the breakdown in relations between employers and decent labor unions can in many instances be traced directly to the total inefficiency of the National Labor Relations Board.

I might add that I have personally read the McKinsey & Co. report, and I think that Mr. Kent did an outstanding job of analyzing this very complicated document.

I hope that after the Members of this Congress have had an opportunity to read this highly critical analysis of the NLRB, they will join me in demanding a full-scale investigation of that agency's conduct and procedures. It appears to me that we can find the answer to many problems confronting this Congress in respect to proposed labor-management reform legislation by first compelling the National Labor Relations Board to carry out its responsibility to the highest level of efficiency.

The National Labor Relations Board affects the lives of millions of American working people and the very survival of thousands of American business institutions. We can all safely conclude from this report that because of the dissension and seemingly aimless drifting of the NLRB as it is now constituted, both legitimate labor and decent industry have suffered untold hardships.

I hope, also, that any investigation of the National Labor Relations Board by an appropriate committee of Congress would go into the substantive matters of the Board and attempt to ascertain how some of the decisions, which have created havoc and misunderstanding in labor-management relations, have been arrived at.

Mr. Speaker, the Sun-Times account of the McKinsey & Co. report as prepared by its Washington bureau chief, Mr. Carleton Kent, follows. I hope that my colleagues will read it carefully. I hope further that they will agree that Mr. Kent's analysis can well serve as the basis for a demand of a full-scale investigation of the National Labor Relations Board and its present operations:

[From Chicago Sun-Times, May 22, 1959]

NLRB RIFTS, INEFFICIENCY, BACKLOG BARED IN REPORT

(By Carleton Kent)

WASHINGTON.—A devastating report made for the National Labor Relations Board pictures it as torn with dissension and drifting rather aimlessly in a swelling tide of labor-management controversies it is supposed to settle.

The report was made early this year by a management consultants firm, McKinsey

& Co., which the NLRB hired to help improve its production after a Supreme Court decision made it clear the Board's cases were going to increase by about one-fifth.

FALLING BEHIND

The Sun-Times has been able to obtain exclusively a copy of the 198-page report, which the board charged with policing the Taft-Hartley Act received in January, and which for obvious reasons it has closely held.

In general, the McKinsey report says that the agency was steadily falling behind what was required of it even before the prospect of an additional 20 percent of cases involving labor disputes was added to its workload by the Supreme Court's decision in the Guss case.

The report said the agency has no firmly established personnel policies governing hiring and firing, promotion and transfer, the keeping of record or of tabs on its employees to promote consistent production, and great gaps of any clear lines as to who has responsibility.

The Court ruled that Congress had preempted for the NLRB all jurisdiction of labor disputes in interstate commerce, which meant the Federal agency had to take over responsibility and many cases State labor boards theretofore had processed.

In fiscal 1958 the agency received 16,748 cases. About 15 percent of these finally came up through narrowing channels for the Board's attention and a final decision.

This is a statistic from the NLRB itself.

TELL TIME LAG

The McKinsey report emphasizes that the average elapsed time for the Board to reach a decision on C cases, which are the more complex cases involving complaints of unfair labor practices, was 444 days in the same period—and 555 days for the more involved ones.

In other words, unless the contesting parties abide by the decision of an NLRB regional office, they must figure that it will take at least 18 months to settle their case.

On this point, the report cites testimony last year by Board Chairman Boyd Leedom that: "It is doubtful if a decision given after such a lapse of time [in this instance it was 2 years] and after expenditure of considerable money in legal costs, was anything approaching a real remedy for the unfair practices involved."

In fiscal 1958 the Board got 9,200 C or complaint cases, and 7,400 so-called R cases, which are much simpler ones involving essentially only the question of whether a union is entitled to be recognized as a plant's collective bargaining agent.

Yet the McKinsey report shows that in the same period, the 16 to 18 legal assistants in the office of each of the 5 NLRB members who do the groundwork for final decisions, spent 65 percent of their time on the easier R cases.

The result is inevitable: That the backlog of the more involved C cases keeps growing, the report makes clear—and the time required to decide them keeps on mounting.

The report remorselessly lays the blame for delays, which affect millions of American workers, clear across the NLRB's haphazard structure and set of practices.

It begins with the basic split built into the Taft-Harley Act of 1947, which sought to separate the powers of the General Counsel and the five Board members.

COUNSEL FINAL AUTHORITY

The Counsel was to have final authority, on behalf of the Board, to investigate charges, issue complaints of unfair labor practices, and to prosecute them before the Board.

He also was to have general supervision over all attorneys except Trial Examiners and the Board's own legal assistants, and over the officers and employees in the regional offices.

The Board's role was thought of as similar to a court's in most respects, since it had to rule on the cases brought before it, and to seek compliance with its decisions.

But it also had some administrative operations—establishing recruitment, transfer, promotion, and firing policies, developing programs and budgetary requirements for its quasi-judicial activities, and determining the agency's organizational structure.

ACT ISN'T SPECIFIC

However, the act wasn't specific about who had control of housekeeping operations involving personnel, overall budgeting, and the development and analysis of its program "established the groundwork for duplications or conflicts," said the McKinsey report.

Washington long has been familiar with the feuding between the General Counsel and the Board over who has power to do what. The new report gives a classic instance of it.

It sets forth that last year the agency's first request to the Budget Bureau for its fiscal 1959 funds was prepared without the participation of the General Counsel or his representatives, although they are responsible for spending the bulk of NLRB funds.

This meant the Budget Bureau had to call for a thorough review of the agency's workload. And the McKinsey report adds: "This in turn adversely affected operations because it rekindled disagreements over responsibilities within the agency for reviewing and approving administrative actions. * * *"

ASKS SINGLE EXECUTIVE

For what it is worth to Stuart Rothman, confirmed by the Senate last week to succeed Jerome D. Fenton as NLRB General Counsel, the McKinsey report proposes the General Counsel be made the single executive officer.

He would develop and execute the agency's administrative program, subject only to final policy review by the Board.

McKinsey contends this would be a foundation on which to build an efficient organization and wipe out all its current deficiencies.

But it recognizes this will take an act of Congress, mentions that similar efforts to solve the NLRB bickering by legislation have come to nothing, and contends that even without this the agency can still do a great deal to improve its performance.

NLRB UNFAIR TOO?

In one of its criticisms, McKinsey & Co. comes very close to accusing the NLRB itself of an unfair labor practice.

It notes that since its study was made, "some progress has been shown"—and lists as one evidence of this the establishing last fall of hurry-up time targets for processing cases.

To comply, field employees put in more than 14,000 unpaid overtime hours, with the result that the average age of cases in their field offices was reduced from 60 to 50 days.

But it adds, drily: "The agency cannot plan on such contributions indefinitely."

MEMBERS BLAMED

Much of the blame for inefficiencies was laid directly at the door of the five Board members.

For instance, it charges:

"Nearly as much time is now required to circulate a proposed decision to the other four Board members as is required for the original preparation of the decision by the legal assistant originally assigned to the case."

But most of the legal assistants who prepare the cases catch it too.

The report says the Board members agree that "most staffs include a substantial portion of legal assistants who are not proficient."

The McKinsey report recognizes many of these assistants were inherited, and says no significant effort is being made to develop better supervisors, and no organized effort for systematically developing legal assistants or removing those who are consistently poor performers is apparent.

MEDIOCRE PERFORMANCES

And, driving home its point, it concludes: "The Board cannot afford poor or mediocre performance from legal assistants. It risks the chance of issuing ill-prepared decisions and adds excessive time to the processing of cases."

Putting up with poor performance in the Board office is spread throughout the agency's operations, the McKinsey report says, because there is no definite standard of what is acceptable performance, and from failure to demand results.

Depletion Allowance for Perlite

EXTENSION OF REMARKS

OF

HON. THOMAS G. MORRIS

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. MORRIS of New Mexico. Mr. Speaker, if it were possible for everyone to study all of the aspects of our Revenue Code I am sure that the phrase "depletion allowance" would not connote something undesirable. We have all read of late the term "tax giveaway" or "outright subsidy," so perhaps it is well to recall that we have had a depletion allowance in one form or another for nearly 50 years, and if such an allowance were not in the best interests of the land the Congress would have voted it out of existence long ago. This section of the revenue code has been periodically changed or modified until today the allowances are pegged equitable to known values of material and limited so that they cannot become excessive. A majority of the areas of controversy have been settled in the courts and we have a good workable law. Perhaps one of its best features is that it leaves in the hands of the Congress the periodic determination of just compensation in any particular area and rectification where considered appropriate without disturbing the body of the law or affecting other materials. Adjustments can be accomplished by changing the percentage depletion allowance for a group of materials, or by moving a particular material from one group to another.

A case in point is perlite, a relative newcomer to the field of expandable aggregates which have become of such commercial importance. Their uses now range from building construction, throughout industry, and into farming. When the benefits of depletion were extended to perlite in 1951 it was a new mineral whose real commercial use extended only over 5 years. At that time there was not sufficient data at hand, or operating experience to show exactly where perlite would fit into the field of expandable aggregates. The depletion

allowance was therefore quite properly established at a conservative 10 percent and then maintained at that level in the Revenue Act of 1954. Since that time the uses of perlite in its original and newer fields have come to closely parallel those of vermiculite, diatomaceous earth, fuller's earth, bentonite and gilsonite, each with a 15 percent depletion allowance. It is in no way intended to convey the impression that these materials enjoy an inordinate allowance as it is realized they may well be operating under difficulties themselves. Nonetheless, this difference in percentage allowance coupled with certain operational problems peculiar to perlite, has made competition on an equal basis impossible.

To one of our industrial States a small change in the depletion allowance of a material is of minor importance. In all probability it will result only in an eventual small variation in the cost of some finished product. To a mining State, however, a small change in percentage depletion compensation for one of its mining industries can be of great and continuing importance. It can spell the difference between success or failure of a relatively new enterprise. It can determine the rate of growth of a well-established one with its effects on local employment and wealth of the State. In fact it can determine whether or not a material will continue to be mined year after year or will eventually be abandoned for lack of new sources. Therefore, today I have introduced a bill to amend the Internal Revenue Code to provide a percentage depletion allowance of 15 percent for perlite.

Hoffa Must Be Stopped

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Rockford, Ill., Register-Republic of May 22, 1959, entitled "Hoffa Must Be Stopped":

HOFFA MUST BE STOPPED

Senator JOHN MCCLELLAN, chairman of the racket-investigating committee which exposed the abuses of responsibility of James R. Hoffa, Teamster president, should get solid backing for his request that Congress meet Hoffa's threat to call a nationwide general strike. MCCLELLAN said he will soon introduce a bill to apply the antitrust laws to unions which have the capacity to strangle the Nation's commerce and transportation.

Hoffa made his threat in defiance of the American public. He would not merely be straightening out employers for once and all, as he told a Longshoremen's Union meeting in Brownsville, Tex. Instead, Hoffa wants to throttle the entire American economy just to prove his power.

The Teamster leader is on record for proposing actions which defy Government. He is working for a nationwide transportation federation of teamsters, longshoremen, maritime workers, and airfreight handlers. He tried to organize New York City policemen—but had to back down. Now he has defied Congress, which has a legitimate right to adopt legislation to curb the monopoly power of labor.

The AFL–CIO expelled the Teamsters' Union in 1957 on charges of corruption, after the McClellan committee had brought out numerous violations of trust by Hoffa and some of his lieutenants. Even George Meany, president of the federation, lost no time in serving notice that Hoffa could not count on the AFL–CIO's support for a nationwide strike.

Laws putting organized labor under the antitrust statutes which apply to business and industry are needed to prevent men like Hoffa from trying to carry out their threats. Hoffa must be shown that he is not bigger than the U.S. Congress or the public. He can be cut down to size if laws are passed to prevent him from carrying out his defiance.

Textile Men Get Strauss "Payoff"

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. WOLF. Mr. Speaker, the nomination of Lewis Strauss is about to be confirmed or denied by the Senate. This matter is not one which should be considered as an ordinary confirmation nor is the Senate likely to consider it in this way.

Mr. Strauss is a man of strong conservative conviction. But this is no reason to vote against Mr. Strauss. On the other hand, it is clear that Mr. Strauss is not a man of high principle as has been suggested by his public-relations-minded supporters. He has dealt in falsehood, smear, and chicanery. He has alienated the Joint Committee on Atomic Energy with his high-handed actions when he served as head of the Atomic Energy Commission. He has alienated and maligned many of the leading members of the scientific community. His relations with the Congress are at a new low because of the half truths he told before the Senate Committee on Interstate and Foreign Commerce, and because of his smear of the great chairman of the House Appropriations Committee, CLARENCE CANNON.

These are reasons enough to reject Mr. Strauss' nomination, and it is my personal hope that a majority of the Senate will also feel that these are reasons enough to reject his nomination. The tortuous twists and turns that the Strauss affair has taken are pointed up in today's article in the Washington Post by the distinguished columnist, Drew Pearson. Under leave to revise and extend my remarks, I wish to have this article inserted into the Appendix of the RECORD:

[From the Washington Post and Times Herald, May 25, 1959]

TEXTILE MEN GET STRAUSS "PAYOFF"

(By Drew Pearson)

The day before the Senate Commerce Committee voted on his confirmation, Secretary of Commerce Lewis Strauss made a political payoff to three Senators—PASTORE, of Rhode Island, THURMOND, of South Carolina, and COTTON, of New Hampshire—who helped salvage his one-vote victory. The payoff had to do with stricter controls on foreign textiles, especially Japanese.

However, one payoff backfired so badly that it made JOHN PASTORE, the bounding little Democrat from Rhode Island, hit the ceiling and almost change his mind about voting for Strauss. What made PASTORE mad was that Senator LEVERETT SALTONSTALL of Massachusetts, Republican, not PASTORE, Democrat, was permitted to announce the creation of a new governmental textile agency.

The whole inside story illustrates the ruthlessness with which Senate votes are sometimes bartered in a tough confirmation battle, and how such a battle can undermine an administration's foreign policy.

Here are the unrevealed highlights:

Because U.S. military bases in Japan are so important, the Eisenhower administration has refused to put mandatory controls on Japanese textile. Instead, Japan itself has imposed voluntary controls.

Because Admiral Strauss' confirmation as Secretary of Commerce is personally important to Strauss and politically important to Eisenhower, the White House agreed to a special agency to investigate textile imports, with expected stricter controls on Japanese products later.

Ex-Governor Tom Dewey, of New York, former candidate for Persident, accepted a fee of $100,000 a year to push Japanese textiles in the United States. Dewey is the man primarily responsible for nominating Eisenhower in 1952, and still has great influence at the White House. Dewey, incidentally, accepted the fee 1 day after the White House announced formation of the special agency on textiles.

Therefore, two prominent Republicans, Dewey and Strauss, will be battling on opposite sides of the textile fence.

Admiral Strauss' backstage buttonholing among textile Senators began some time ago. It was aided by certain big textile firms, notably Burlington Industries, of North Carolina. In the middle of the Senate hearings over his confirmation, Strauss took a quick trip to Greensboro, N.C., to address a textile meeting where Spencer Love, chairman of Burlington Industries, called the Senate hearing an unwarranted "political vendetta."

Prior to that, Strauss dropped in on Senator THURMOND to talk textiles, told how he began his business career as a salesman in the Carolinas, how he had used his influence to set mandatory controls on oil imports into the United States. The implication was that he would do the same for the textile industry.

At about the same time Strauss had promised the three textile Senators on the Commerce Committee that he would do his best to establish their proposed Interagency Board to consider the problem of textiles.

When a group of New England Governors called on Ike to urge such a Board, the President turned thumbs down. Such a Board, he told Gov. Christopher del Sestro, of Rhode Island, would establish a wrong precedent.

However, as the time approached for the Commerce Committee vote on Strauss' nomination the President began to shift.

The committee vote was due May 19. On May 18, Under Secretary of Commerce Fred Mueller, righthand man to Strauss, went to the White House. The votes of two textile Senators, PASTORE, of Rhode Island, and THURMOND, of South Carolina, next day were essential. COTTON, of New Hampshire, a Republican, would vote for Strauss anyway. But the two Democratic textile votes meant the difference between total defeat or partial victory.

Next morning, just before the Senate committee voted, Senator PASTORE read in the newspapers that the special textile committee was to be formed. This was what he had been working on for a long time. But PASTORE was not pleased. Quite the opposite.

For who should make the announcement but a Republican—Senator SALTONSTALL, of Massachusetts.

PASTORE finally curbed his resentment and went into committee to vote for Strauss.

The Barn Still Leaks

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the RECORD an editorial entitled "The Barn Still Leaks" which appeared in the Washington, D.C., Post last Saturday.

As the editorial points out, the United States desperately needs a realistic farm program. We have needed it for many years.

The reason we have not been able to solve the farm problem, even make a realistic approach to a solution, is that it has been made a political football. Until all political considerations are set aside and economic realities be our sole guide, we shall never find a solution.

Where is the farm program which the Democrat Party, who control this Congress by a substantial majority, has so vigorously talked about? We need less talk about what should be done. We need action.

The editorial follows:

[From the Washington Post, May 23, 1959]

THE BARN STILL LEAKS

Whatever happened to all the Democratic plans to deliver farmers from the clutches of Ezra Taft Benson? Here it is corn-planting time and there is still no sign of the Humphrey-Talmadge farm bill which was supposed to have been ready by last February. The best that the Democrats have been able to do so far is to come up with differing House and Senate versions of wheat legislation. Neither bill would do more than put still another patch on the roof of a hopelessly antiquated barn. As the Democrats kept reminding farmers both before and after the elections last fall, the United States desperately needs a realistic farm program.

Under either the bill approved late last night by the Senate or the bill awaiting approval by the House, farmers would be given an opportunity to choose between higher support prices accompanied by further reductions in acreage allotments and lower support levels with fewer or no restrictions on planting. In the past farmers have usually decided to take high support prices even though they mean acreage restrictions. Up to now it has been possible to grow more on fewer acres by pouring on the fertilizer, and there is every reason to believe that this will be the outcome down on the farm of the wheat proposals now before Congress.

The tardiness of the wheat legislation, which must be enacted by June 1 to be effective in the 1960 crop year, is yet another indication of the difficulties that the Democrats are having with their farm recommendations. It certainly is much easier to stick a political pitchfork in Secretary Benson's back than it is to draft an alternative program. Indeed, the wheat bills would not even be before Congress of the wheat surplus were not getting so far out of hand. Even before the 1959 harvest has got underway the United States has enough wheat in storage to take care of all domestic needs for 2 years.

The amendments to farm legislation in both the Senate and the House to limit the amount of Government payments that any person may receive also are questionable expedients. The root of the farm problem is the encouragement of surplus production through Government subsidies, not the size of payments to individual farmers. Likewise, the attempt in the House to force the sale of more surplus commodities in the open world market is a largely meaningless gesture.

Nor do the farm program ideas of Democrats outside of Congress seem much more fertile than the withering seedlings on Capitol Hill. The rhetoric of a pamphlet on the farm problem published recently by the Democratic Advisory Council is cloyingly self-righteous, but the council's conclusion that production payments may be the answer—and such payments seem to offer some advantages over the present program—is disappointingly vague. Perhaps the council ran out of forthright words after it described Secretary Benson's personality as peculiarly perverse.

The essentials of a workable program, it seems to us, must include some markedly different approach to price or income support so as to discourage production for Government storage bins and at the same time to furnish incentives to farmers to increase the Nation's supply of meat and other commodities which consumers want. Production payments may prove to be part of the answer. If Democrats would expended as much energy in trying to work out a sensible alternative farm program as they have used in taking potshots at Secretary Benson, however, the undeniably staggering farm program might be closer to a solution than it is today.

Distinguished Educator Retiring as President of Central Michigan College

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. CEDERBERG. Mr. Speaker, one of Michigan's best known and distinguished educators is retiring from the presidency of a college, the affairs of which he administered for 20 years.

Central Michigan College at Mount Pleasant, Mich., and in the 10th Congressional District, will lose the services of a devoted man when the resignation of Dr. Charles L. Anspach becomes effective on July 1. However, deeply imbedded on the campus will be the inspiration woven into the school's fabric by the character of Dr. Anspach and by his devotion to everything that contributed to the advancement of the college.

Under the direction of President Anspach, Central Michigan College rose in stature to the point where the Legislature of the State of Michigan has just enacted legislation granting the school university status, effective June 1.

Not only has Dr. Anspach given unstintingly of his time and effort to foster the growth of Central Michigan College and strengthen the character of its students, but he has found time to participate in the civic affairs of the community and of the State.

Dr. Anspach's sterling qualities of mind and heart coupled with his warm, outgoing personality and sparkling sense of humor have caused him to be very much in demand as a speaker.

In Dr. Anspach's 20 years at Central Michigan College the school grew from an enrollment of 2,284 to 7,247; its faculty more than doubled to nearly 300; and its physical plant value multiplied from $4 million to $28 million. The campus itself increased from 50 to 235 acres.

Research and special studies have been emphasized with the college receiving well over $400,000 from a number of sources including the Fund for Advancement of Education, Atomic Energy Commission, and Dow Chemical Co.'s National Science Foundation.

Dr. Anspach could have continued as president of the new university, since he is several years from the mandatory retirement age, but true to his makeup he expressed his feeling that the new university should have a younger man at its helm as the school moves into a new status.

Although we in Michigan are sorry to be losing the active services of Dr. Anspach, we are pleased that he has agreed to remain as president emeritus. I am also glad that he has indicated his intention of remaining one of my constituents in the 10th district because I value his counsel and enjoy his companionship during the occasions when our travels bring us together.

I join Dr. Anspach's friends—and they are legion—in wishing him and his charming wife, Mary, many happy years of retirement.

The Effort To Destroy Williams Is Backfiring

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. RABAUT. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I place an article by Gould Lincoln as it appeared in the Washington Sunday Star under date of May 24, 1959. The article follows:

THE EFFORT TO DESTROY WILLIAMS

(By Gould Lincoln)

The fight in Michigan to obliterate politically the State's 6-term Governor—G. Mennen Williams, Democrat—by his Republican opponents and certain large corporations is not panning out. Recent developments, however, have shown the politi-

cal venom at the bottom of Michigan's financial plight, which has been widely advertised by Governor Williams' enemies. For example, a telegram sent by officers of the Michigan Manufacturers Association to all 22 Republican members of the State senate, congratulating them on their opposition to Governor Williams and his attempts to obtain new tax money to pay the State's bills, salaries, and wages. This extraordinary message, which seems as politically unwise as it could be, went to the homes of the State senators; it was explained, so that it would not be lost in the welter of mail received at their offices. It read: "This goes to every Senate Republican as an expression of appreciation for the Michigan Manufacturers Association for the united stand you have taken in the people's struggle with the Governor over taxes.

"You have him over the barrel for the first time in 10 years. Keep him there until he screams 'Uncle.' God bless each of you." The telegram was signed by the State manager of the Michigan Manufacturers Association, John C. McCreary, and the association's Lansing (State capital) representative, Joseph H. Creighton. Republican State senators admitted they had received the telegram, but said they regretted it had been sent. Nevertheless, it points up Governor Williams' contention that the action of the Republican-controlled State senate—and indeed, the legislature—has been directed by partisan politics rather than by the best interests of the State.

LEGISLATURE HAD WARNING

Governor Williams insists the legislature has had full warning for a long time that the State would be in grave financial difficulties if something was not done to bring in more tax revenues. He has recommended new tax legislation, and continues to do so. The Republicans have stalled, and they have come up with their brand of tax-producing legislation—which, in a few words, consists of raising the 3-cent sales tax to a 4-cent tax, although the increased penny tax is called a "use tax." This is to get around a State constitution provision that sales taxes shall not exceed 3 cents. But even this proposed increase in the sales tax would not bring in more than $108 million, which is short some $92 million of what is needed to put the State on a solvent, long-range basis financially.

Governor Williams has proposed a graduated State income tax and a State corporate profits tax. He contends the people in the low income brackets are now paying about 20 percent of their incomes for the sales and other State taxes, while those in upper brackets get off with as little as 6 percent. He believes, he says, in placing the needed tax increases on those better able to pay.

The State legislature has so far been deadlocked over tax legislation. The Senate put through the Republican bill (there are 22 Republican Senators to 12 Democratic). The House, which is split politically with 55 Republicans and 55 Democrats, has rejected the bill. And there the matter stands. The Republican Senate also will not agree to legislation to permit the Governor to use any part of the $50 million trust fund for veterans—which is available for cash needed now to meet payrolls, although the money is practically lying idle. And a payday June 1 is rapidly approaching. Available funds have been almost exhausted.

EFFORT TO BLAME GOVERNOR

The Michigan financial situation has been widely exploited, with an effort made to saddle all the blame on Governor Williams. The State has been called a welfare state. It has even been charged that it is a bad place for industries to settle. Many of the criticisms come from outside the State. All of which has finally roused the ire of Michiganders.

The upshot of the tax situation may result in a compromise, with the Governor getting much of what he has demanded. And when steps have been taken, his friends insist he will come out of the ruckus as a determined and successful leader.

The opposition to Governor Williams has stemmed from a desire to weaken him and his party inside the State. It seems to be failing. There appears also to be a determined effort by certain big interests to ruin the Governor as a national figure and kill off whatever chance he may have for a Democratic presidential nomination next year.

If and when the financial situation has been cleaned up, and Governor Williams has won his point that more revenues are essential to operate an efficient State government and its necessary services, this effort, too, will have failed. Fortunately for the Governor, this showdown has come as early in the year as it has.

The charge that Michigan is a welfare State is met by figures showing that in the matter of spending for so-called welfare services Michigan stands 34th among all the States. It is spending $16.30 per capita for these welfare services, whereas, for example, California is spending $29.09, and Oklahoma $47.73. These figures are, the Williams supporters say, taken from the U.S. Census reports. Also, the charge that Governor Williams has taken Michigan into the welfare State class is answered by the fact that all the legislation, all the laws, for social services have been passed by a Republican legislature during his six terms in the State House.

In early 1933, after Franklin D. Roosevelt had been elected President and Republican President Hoover was still in the White House and trying to get a Democrat-controlled Congress to do something to save the United States from ruin, certain Democratic leaders told him they had Mr. Hoover over the barrel and where they wanted him. They declined to do anything.

This was politics of the worst kind for the sake of the country, although it helped the Democrats to retain power for 20 years. The only difference in what the Republicans are attempting in Michigan today is that it may boomerang.

The Lesson of the Lake

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. BROYHILL. Mr. Speaker, the whole meaning of Memorial Day has experienced a long process of growth. It no longer refers to one period of strife or to one region. It is less narrow in scope than in times past and therefore has become more meaningful. As we honor our war dead, we should at the same moment devoutly raise our supplication that such sacrifices will not again be necessary.

Mr. Speaker, an awareness of the problems of our age prompts me to ask unanimous consent to have printed in the CONGRESSIONAL RECORD an editorial from the May issue of the Trailways magazine:

THE LESSON OF THE LAKE

It was a bright, sunny afternoon in late May.

The two small boys sat close together on the shore of the lake. Held tight in each boy's hand was a long string, and attached to the end of each string was a model sailboat.

From time to time, one of the boys would yank hard on his string and pull his model sailboat quickly toward him. Then he would let the string out again and the little craft would move slowly toward the middle of the lake.

After an hour or so, the second boy became restless. He seemed no longer interested in the bobbings of his sailboat; his grip on the string grew weaker.

Just then, a violent gust of wind came up. Rippling across the lake, it snapped the string right out of the boy's grip. Helplessly, he watched as his model sailboat sped out of control toward the other side of the lake.

The first boy had held tight to his string. When the gust of wind came up, his sailboat moved also, but he was able to keep it under control.

One boy kept his boat; the other lost it.

The 30th of May is Memorial Day. Taps will sound once again in Arlington National Cemetery just across the Potomac River from the Nation's Capital. Americans the world over will pause to honor those, who in the hour of darkest danger, held tight to their string of beliefs and saved their ship of state.

The lesson of the lake is obvious.

Our Nation is at peace today; our guns have been long silent. But all this could change, for looming dark on the horizon is an ever-increasing threat to our liberties. That threat is world communism, and like the violent gust of wind on the lake, it can rise up without warning to challenge our strength.

As we await this Memorial Day, let us remember to hold ever tighter the strings of our liberty. Let us be ready for that violent wind—now and always.

Tobacco and Lung Cancer

EXTENSION OF REMARKS
OF
HON. JOHN J. RILEY
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. RILEY. Mr. Speaker, by permission of the House, I herewith quote an article by Dr. G. Wilse Robinson, Jr., appearing in the Bulletin of the Jackson County Medical Society and subsequently carried in the Kansas City Star.

The terrible scourge, cancer, has frightened us all, but in the search for truth as to the cause of cancer—particularly lung cancer—let us keep our feet on the ground:

ANOTHER VIEW: LUNG CANCER WILL KILL YOU IF SOMETHING ELSE DOESN'T

(By Dr. G. Wilse Robinson, Jr.)

Dr. Alton Ochsner is quoted in the March edition of Reader's Digest as condensed from Today's Health March issue as follows: "I am convinced that every heavy smoker will develop lung cancer unless heart disease or some other sickness claims him first."

I hope Dr. Ochsner has been misquoted, but I am sorry to say I am afraid he has not. Dr. Ochsner, a great surgeon and a great scientist, has been riding his scientific hobbyhorse for several years now and I am sure that he is very sincere in his belief that heavy smoking does cause carcinoma of the lung. Dr. Ochsner is entitled to his belief as is any physician in any matter involving etiology and treatment of any disease. Anybody who has been around as long as I have has heard

a lot of ideas. Some lived and some died very quickly because they did not work out. But no one denied anyone the right to express himself. I sincerely hope that this will always remain true. This is the only way we can advance.

But such a statement as quoted above is ridiculous. I will make it correctly. Everybody, smokers and nonsmokers, will die of lung cancer if they live long enough. Or in a field I know a little more about, I am very sure that everybody will die of a cerebrovascular accident of the brain if they don't die of something else first. And any cardiologist knows that everybody will die of heart disease if they don't die of some other disease. There is no limit to the list and naturally the laws of chance from fire, traffic, and falls will eventually catch up with everybody.

The purpose of this discussion is not to enter into the cigarette controversy, although there are many eminent scientists who do not agree with Dr. Ochsner in his opinions about cigarettes and lung cancer.

I just deplore hearing that a great physician has permitted himself to so engage in a purely scientific discussion in such a way as to exceed all the bounds of scientific restraint that he should leave the laboratory and enter into the public press with a purely scare statement that if analyzed is medically ridiculous.

Lung cancer is a major medical problem, as is all cancer and so many other serious illnesses, and as far as the person who dies from them, minor medical problems are also serious I know of not a single one that has ever been solved except in the laboratory or in the clinic.

Medical history is full of statements made in the public press about this disease and that illness. Never have these statements advanced the health of our people or medical science.

People, especially American people, don't scare easily—only the neurotic and the borderline psychotics. These are already stirred up about all kinds of sickness. One more won't hurt them.

But there are a lot of intelligent people in this country and some are pretty important. These people are going to read this statement and they will react to it as I did. What a silly thing to say. And does it prove anything? Of course not.

So we take it on the chin again. The practice of medicine has once more been presented to the thinking public in the light of sensationalism, not as a matter of scientific judgment.

We physicians base our request for respect from the public on our ability to be objective scientists within the limitations of our knowledge. We are scientists, not purveyors of rash statements.

I sure wish Dr. Ochsner hadn't said it.

Address on Memorial Sunday of Mayor John B. Hynes, of Boston, Mass.

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, Hon. John B. Hynes, mayor of Boston, in his Memorial Sunday address on May 24, gave emphatic and timely warning of the danger to our country of the Soviet threat, and of the need for great efforts and sacrifice by an aroused public to meet the challenge.

He urged the need of American leadership, and warned against propaganda decrying the aid we give to the free nations of the world "who must be helped if they are to resist the economic pressures and military posturings of the Soviets."

Mayor Hynes spoke at the annual memorial services at the Veterans Memorial, Mount Hope Cemetery, Boston, sponsored by the mayor and by the Suffolk County Council, American Legion.

In extension of my remarks, I include his forthright and eloquent address, as follows:

ADDRESS ON MEMORIAL SUNDAY

On this day, in these peaceful surroundings, our thoughts and our memories hearken back to those who have departed this world, and who enjoy, we pray, the blissful rewards of the world without end.

More particularly do we, on this day, think of those who answered our Nation's call in time of crisis, and left home and fireside and loved ones, to give battle in the cause of justice and freedom. To those, the brave and the true, we—our country—will always be in debt.

From time immemorial men have marched off to war convinced that the outcome of that war would be the beginning of uninterrupted peace in the world. Many a man in this last resting place and in other cemeteries throughout the world went to his Maker, while life was still young and sweet, firm in the belief that his sacrifice and the sacrifices of his comrades, would bring men and nations to their senses, and forever outlaw conflict and war.

What must be their feelings, these gallant men of yesteryear, as they look down upon a world which is today an armed camp, and which could, overnight, become a raging inferno laying waste most of the world and most of the peoples of the world.

What kind of madness can it be, they must wonder, when nations are furiously at work devising, designing, constructing weapons of war of terrifying power and potency almost beyond the mind of man to comprehend.

What can the world be thinking, they say, when it makes feverish preparations to destroy itself, and draw the curtain of darkness and oblivion over that which God has created and only God has a right to destroy.

Our answer must be that our country today—even as in all the days since our birth as a nation—seeks not to conquer or destroy, but seeks, as it always has, to preserve peace, to preserve man's God-given rights, to preserve the world.

It is for these reasons that our country must spend much of its substance, call many of its young men to service, and be able to counteract, implement for implement, weapon for weapon, bomb for bomb, the potential might of that mighty force in the world which denies that man has a right to be free; which denies that man has an imperishable soul; which denies that man has any God-given rights, and which scoffs at and denies that there is a Creator, a God of all the universe.

This ungodly tide which has overrun so much of the world, is not to be taken lightly. In the air, on land, on sea, and beneath the sea, it has developed an arsenal of devastating destructive power which—unless matched by the forces of freemen—will result in the complete domination of the world by the Soviets, and the critical maiming of present day civilization.

While we complain about high prices for the things which make for luxurious living, while we embrace the godess of materialism and look for more for doing less; while we cry out against, and even try to evade, the payment of taxes, the Soviet Union holds the noses of its people to the grindstone; allows little or no luxuries; provides only the bare necessities for its workers, and controls the hours of labor and the scale of wages, and all in the cold, deliberate, devilish purpose of out-arming and conquering the world.

World domination has been the aim of the Soviets since the days of Lenin. It is the basic doctrine of communism. It was no different under Stalin. It is no different under Khrushchev, who only a few weeks ago, in a spirit of bravado, told the people of West Germany, free Germany, that he could wipe their part of Germany off the face of the world with no more than eight bombs.

Let us not deceive ourselves, the awesome power of the Soviets is not a figment of their imagination. It is terrifically real. It must not be underestimated. It must be checked.

Who will check it? Who will make the stand for all that is right? Who will prevent a world of desolation? Who will prevent this world from becoming a citadel of paganism and atheism?

Unless we, our Nation, take leadership in the fight against evil, we, too, shall find ourselves in the web of the monster who will devour us.

The time may be shortly here when we must get along with less of the niceties of life: work harder and produce more: and give more to the national effort if we are to keep faith with those who have gone before us and those who will come after us.

If our city burned to the ground because we did not want to pay the cost of an efficient fire department—if epidemic took the lives of countless people because we would not pay the price of a good health department or maintain the facilities of a good hospital—we would moan and beat our breasts in regret.

How then would we feel if—because of an insatiable desire for more of the world's goods, we should wake up some morning—if we could wake up at all—to find that the world we know is no more.

Let us not be mollified or deceived by propaganda decrying the aid we give to the free nations of the world, who must be helped if they are to resist the economic pressures and military posturings of the Soviets.

If we won't help them, who will? How long can they stand their ground without our aid? Let us not be lulled into a false sense of security by those who would have us believe that all is right with the world, and there is really nothing to be concerned about.

Before the last world war the people of Great Britain were persuaded to believe that the antidote to hitlerism was some sort of detached pacifism. What a fearful price the British people paid for that fallacious reasoning. And what fallacious reasoning it is for us to think that modern sovietism is less cunning, less brutal, and less an enemy of freedom than was hitlerism.

We must not let ourselves believe that distance gives us protection. No longer is that so. It is far better that we know the stark truth and face up to it even if it means a period of grimness and self-denial. Is that not better than being on our knees begging for the mercy that would not be shown us?

These are serious thoughts. These are serious times. The free world is on the threshold of serious decisions. Let us on this day—give serious contemplation—to the grave possibility of what could happen when madmen, godless men, hold the trigger to the head of humanity.

America must give less thought to luxurious living—and more thought to actual survival.

May God help us and direct us—and save us from ourselves—and inspire us to keep faith with the heritage of the past as we journey into the future.

The Dangers of Inflation

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. CURTIS of Missouri. Mr. Speaker, recently I inserted in the CONGRESSIONAL RECORD a letter written by a citizen of St. Louis on the subject of inflation.

I now wish to call to the attention of my colleagues the keynote address of William A. McDonnell, president of the chamber of commerce, given Monday, April 27, before the chamber's 47th annual meeting in Washington, D.C.:

ADDRESS BY WILLIAM A. MCDONNELL, PRESIDENT, CHAMBER OF COMMERCE OF THE UNITED STATES, AND CHAIRMAN OF THE BOARD, FIRST NATIONAL BANK IN ST. LOUIS, ST. LOUIS, MO.

This particular annual meeting is one we are all going to remember no matter how many others we attend in the future.

Since we last met, two new States have joined our Union of Republics, and have added two more stars to our flag.

Alaskans and Hawaiians have been knocking on the door of statehood for many years, and this year, when the time was ripe, the American people opened the door and welcomed them into the family federation.

The substantial majorities by which the Congress approved the admission of Alaska and Hawaii undoubtedly reflected a popular will to welcome them with open arms.

Let us hope that the significance of these momentous events simmers down to those peoples of the world who waver in their thinking in the present global struggle for the minds of men. It might give them pause to remember that no people ever clamored for admission to the Union of Soviet Socialist Republics.

The past 12 months as president of the national chamber have been for me a challenging and stimulating experience. I wish each one of you could have shared it with me. It would have renewed your faith, just as it has renewed mine, in the high purpose of American businessmen and women.

My duties have taken me to every section of this country and also to Canada, Mexico, and Hawaii. I have talked with and to many thousands of business and professional men and women. Furthermore, my duties have brought me close to the Washington scene, where I have had the opportunity to observe at short range the workings of our Federal Government, especially the legislative and executive branches.

As a result of these observations and experiences I have arrived at two firm convictions concerning the domestic, or internal, problems which confront this Nation. One has to do with economics and the other with politics.

One is an old belief of mine which has merely been confirmed. The other is a new conviction, and it constitutes for me a change of opinion.

You will note I am speaking of domestic, or internal, problems. Our international problems are great and we all recognize their magnitude. Paramount as those problems are, however, I think we can take pride and comfort in the fact that there is little disagreement among us concerning our approach to them. I think there are two reasons for this:

The first is that we have confidence in those we have placed in authority.

We are fortunate to have, at this particular moment in our history, the right man at the right time in the White House.

I believe that the overwhelming majority of all men of good will in this Nation—regardless of political affiliation—will agree that this is true.

The second reason that we as a Nation are united in our approach to our foreign problems is that we have learned to live with international crises. Anyone who doubts this has but to read the record of recent years: 1948, Berlin Airlift; 1949, Chinese Nationalists overthrown; 1950, South Korea invaded; 1951, Oil crisis in Iran and Tibet invaded; 1952, Iran crisis continued, and Farouk of Egypt overthrown; 1953 and 1954, Indochinese crisis; 1955, Formosa; 1956, Suez, Cyprus, Algiers, Jordan; 1957, Middle East crisis; 1958, Iraq, Lebanon, Quemoy; 1959, Berlin crisis.

And we may be sure that when the present crisis is past there will be others. Yes, we have learned to live with crises. We have acquired the wisdom, the courage, and the maturity to look danger squarely and calmly in the eye without flinching or backing away. I am confident that as we continue to seek peaceful solutions of international problems, we will not compromise principles. For us, the days of appeasement are over; we have learned how to call a bluff.

So much for that. And now I want to get back to our domestic problems about which I feel better qualified by training and experience to speak.

The old belief of mine which has been confirmed as a result of my experiences during the past year, is that the number one long-range domestic problem in this country is inflation. I thought that was true a year ago when we were at the bottom of recession. I am more convinced than ever that is true at this time when the recession is virtually over.

We also have other domestic problems, some of a serious nature. The problem of unemployment, for instance. The unemployment figure stood at 4,362,000 as of mid-March.

Of course, in a democratic society such as ours, where people have freedom of choice as to if and when and where they will work, full or 100 percent employment of the labor force is impossible, if not actually undesirable.

A condition where everyone is working, whether he wants to do so or not is found only in totalitarian states.

In a democracy there will always be a certain amount of what economists call frictional unemployment—people who are unemployed through choice or through illness or else are in between one job and another. But even allowing for that rather substantial group, there are probably about 1½ million people today who are ready, willing, and able to work who can't find jobs.

This is not good. That's a problem that must be solved. Personally, I think it will be pretty largely solved by the end of this year, as the recovery proceeds. At the moment, however, it is unsolved, and it is a problem worthy of our deep concern.

Then, too, we have problems of housing, of education, of urban redevelopment, of depressed areas, and of racial integration. We have the farm problem, and that's a honey. Our Government has $9 billion invested in agricultural commodities which it acquired from farmers under our price-support program.

Where are these commodities? Why, we have them in storage. Storage costs alone are over a million dollars a day. Those costs, plus insurance and interest upon the amount invested, amount to over a billion dollars a year.

We have these commodities in storage because we don't know what to do with them. If we sell or give them away in this country, we simply multiply the percentage of the next crop we must buy to support the prices. If we sell or give them away in foreign markets, we damage the economies of friendly neighbors and allies in the cold war.

It is true that some of these surpluses are being disposed of in the foreign market under constructive programs, but this has not resulted in a solution of the overall problem, and our friends who have agricultural commodities to export are not at all happy over what we are doing.

If we should burn these farm products or dump them in the ocean, we would make ourselves the laughing stock of the whole world. The Soviet Government would want nothing better for propaganda purposes.

Yes, we have problems but among our domestic problems, inflation ranks first. Why? Because without a stable currency a capitalistic system of free enterprise cannot endure. It can last for a while but ultimately it will go down. Inflation and democracy are not congenial bedfellows. The pages of history are replete with the records of free peoples who lost their freedom because of inflation. Time and time again freedom has been won by blood and lost by handouts of the people's own money—handouts usually financed by depreciation of the currency. In the days of old Rome, these handouts were called bread and circuses. In modern times they go by the more euphemistic term of social welfare.

In our time we have seen inflation pave the way for Hitler, Mussolini, and Mao Tse-tung. Whenever these examples are cited, however, there are always those who say: "Well, of course, those situations in Germany and Italy and China were very bad but they were cases of runaway inflation. Nothing like that can happen here. The most that can happen to us is a creeping inflation and that's not such a bad thing. In fact, a little inflation is good for the economy." It is even being said that a rise of 2 to 2½ percent a year in the price structure would constitute a wholesome stimulant to the economy.

Well, all right, let's take a look at a case of creeping inflation. Let's take a look at France. France has not suffered from a runaway inflation but it has had a steady and presistent depreciation of its currency over a long period of years.

I hold in my hand a 1,000-franc note. When I was a soldier in France in 1918, I held a commisison as captain of field artillery. My pay was $200 a month and I was paid in francs. The rate of exchange was 5 for the dollar and I received 1,000 francs every payday. If I were being paid $200 a month today in France, I would receive 98,741 francs. The franc today is worth just a fraction over 1 percent of what it was worth in 1918.

In other words, this piece of French money which was once worth $200 in our money, is today worth a few cents over $2.

In one corner of this French banknote, which bears a beautiful colored picture of Cardinal Richelieu, is the warning that anyone who counterfeits one of these notes will be sentenced to hard labor.

But the 1,000 francs which were once worth $200 are worth so little today that a counterfeiter would starve to death making these bills.

If the same fate should befall the dollar—if it should become worth only 1 percent of what it is worth today—a suit of clothes which now sells for $100 would cost you $10,000.

Any one of the so-called low-priced American cars with minimum trimmings would cost you $300,000.

A social security check for $100 would buy 2 pounds of hamburger, and $100,000 in life insurance would purchase room and board for a widow for approximately 1 year.

I do not need to tell you what would happen to our democratic institutions under the impact of such a depreciation of our currency. We are all familiar with what has happened in France. The Government has changed 27 times since the end of World War II, and this last time they had to rewrite the constitution, and give the Premier virtually dictatorial powers.

There is an example of creeping inflation. There is an example of what a 2 to 2½ percent a year increase in the price structure can do to your money. It is true that the costs of two World Wars, plus the military campaigns in Indochina and North Africa were the main cause of inflation in France. But the depreciation of the franc was greatly aggravated by the additional load of social charges and price-supporting subsidies in which the French people indulged. And I am sure that down through the years the leaders of French minority groups advanced the same arguments to condone inflation and to justify deficit financing as we are hearing today in this country, viz:

"A little inflation won't hurt us.

"Price stability is a false demigod.

"Bookkeeping must not come ahead of human needs.

"Let's not make a fetish out of a balanced budget or become obsessed with the value of the franc.

"We must think first of social security and the welfare of the people."

The French have finally learned the hard way that social welfare and old-age security purchased at the cost of inflation are neither the welfare of the people."

And yet with that example staring us in the face, there are powerful groups in this country advocating increased Federal spending of every conceivable kind, most of it for nondefense projects. It is being said that a program of a balanced budget—of living within our income—is reactionary and unimaginative; that the bold and dynamic approach to our problems is to spend and spend regardless of fiscal consequences.

It is even being said that the cure for inflation is more inflation—that the only way to bring about full production and full employment is by a massive infusion of Federal money into the economic bloodstream—a quack economic remedy we tried in this country from 1932 to 1940, and which resulted in a miserable and costly failure.

Our Federal Government has operated in the red for 23 of the last 28 years. The deficit in the present fiscal year, which ends June 30, will be almost $13 billion, with increased expenditures of a nondefense nature mostly to blame.

Largely as a result of these fiscal procedures the dollar has lost 52 percent of its purchasing power in the last 20 years. In other words, we have a 48-cent dollar today compared with what we had in 1939. And if we keep on going as we have been, we will have a 35-cent dollar 10 years from now and a 25-cent dollar in another 10 years, and a 10-cent dollar a little further down the line. What we need in this country today is the assurance that if you buy a life insurance policy or a Government bond or any other kind of fixed investment today you will get back in the future the same 48-cent dollar you put in.

We hear on every hand the so-called liberal spenders that it is the duty of the Government to provide for the welfare of the people. That is true, but you do not achieve welfare by fiscal irresponsibility. The greatest benefit any nation can provide for its people is a stable currency.

In other words, the greatest "Federal aid" measure Congress could give the people of this country would be a stable dollar.

That would prevent further inflationary theft from those with fixed or lagging income.

It would benefit those who depend on social security.

It would protect the value of our savings accounts and insurance policies.

It would encourage thrift and the formation of investment capital which is the foundation of a free enterprise system.

It would enable business to expand more boldly and so provide more jobs.

In a word, a stable dollar would protect the little people—the very ones who are hurt the most by inflation—and—ironically—the very ones who are supposed to be helped the most by the so-called Federal aid programs.

Now—if you stay around Washington and Capitol Hill very long, as I have during the past year, the thing about inflation that impresses you most is that everybody is against it—at least professedly so. Everyone is for economy in government provided it doesn't affect his particular hobby, subsidy or advantage.

Last fall I appeared on a program with a U.S. Senator whose political hobbyhorse is Federal housing. I spoke on the subject of inflation. The Senator followed me, speaking on housing. He said: "I couldn't agree with the preceding speaker more. We must put an end to all this profligate spending which is depreciating the purchasing power of the American dollar. We must reduce our spending to bring it in balance with our income, but why take it out on housing?"

Indeed, Senator, why take it out on housing? Why take it out on farmers, or veterans, or depressed areas, or schools, or community facilities.

Everybody is in favor of economy in Government so long as it doesn't affect them. As the Choctaw Indians say: "Everybody smoke peace pipe—nobody inhale."

I have referred to inflation as a domestic problem. In fact, it is more than that. It has international overtones, becauses if we do not control inflation we may lose the cold war by pricing ourselves out of world markets. Every nation in the free world is watching us to see how we face up to this problem—to see whether we have the commonsense, the courage, and the self-restraint to meet it resolutely and squarely. And on more than one occasion in recent months our friends abroad have politely hinted that any nation incapable of fiscal self-discipline is incapable of free-world leadership.

Well, if inflation is our No. 1 domestic problem, is there anything we can do about it? Yes, I think so. Inflation is not inevitable. Inflation is not a natural economic phenomenon, and it can be controlled. But how? The answer to that question leads me to the second conviction at which I have arrived as a result of my experience as president of the U.S. chamber.

This conviction is a new one for me; it represents a change of opinion on my part. It has to do with businessmen and politics. For most of my business life—in fact, all of it up to a year or so ago—I believed very strongly that a businessman should have nothing to do with politics other than giving financial support to the party of his choice and voting on election days. I believed that politics was for the politicians, and that if a businessman allowed himself to get mixed up in politics his business would be hurt.

I have changed my mind. I was wrong. I have concluded that businessmen must get into politics if we are to preserve our free market system. I have concluded that, if we do not become politically active, we as a nation are going to legislate and spend our way into state socialism, and businessmen won't have any business left that they can call their own.

Politics is not something apart from business. It is part and parcel of business. Politics is the art of government, and government affects everything we do in business. Under our present system of taxation, which was arrived at through political action, Government is a senior partner in every business endeavor. The thousand and one statutory rules and regulations under which we do business are the result of political processes. Furthermore, all of these rules and regulations are administered by the political party in power.

The United States is a republic, but we function on the basis of a highly democratic process. Our society is composed of many groups—many interests—economic, geographic, racial, and social.

It was obviously presumed by the authors of our Constitution that a distillation of decisions by these many forces would result in wise programs—programs designed in the best interests of the Nation as a whole. It was also assumed that each group would exert a positive and effective influence in the formation of political decisions.

Well, it has not been working out that way, at least not in recent years, because members of many groups, and our group in particular—the business management group—have not fulfilled their political responsibilities as citizens. We have been leaving it to George.

If businessmen are to have the kind of government which is fair to the business community—a government of limited powers—a government which preserves the integrity of the dollar and the free market system—if we are to have that kind of government, businessmen must do two things:

First of all, we must do our best to mold public opinion in favor of that kind of government by the dissemination of economic intelligence through every avenue available to us.

Secondly, and what is equally, if not more important, businessmen must participate more actively in the realm of practical politics.

Too many businessmen are overcome by political timidity. And when we do get up enough courage to make a political effort, we spend our entire time at the place where laws are being made rather than at the more important point where lawmakers are being made.

Too often our sole political objective is to resist legislative proposals made by others, rather than to help elect men who will support the kind of legislation which we would like to see adopted. We spend so much time trying to put out fires, that we have no time left to prevent them.

We must roll up our sleeves and get to work at the precinct and county levels where the candidates are being chosen. We must quit thinking of politics as a dirty word. Politics is not a dirty business; it is the very essence of democracy.

Any businessman who insists that he is not interested in politics is like a drowning man who says he's not interested in water. We are in it up to our necks and we had better learn how to swim and to swim effectively. The price we pay for the rewards of living in a democratic republic is participation.

I am not suggesting that all businessmen and all of management personnel go into politics as candidates, or take up politics as an avocation to the exclusion of other outside interests.

The important thing is that as a group, the management community should provide its share of political leaders.

Well, where do we start? The place to start is at the local level—that's where elections are won.

How do we start? By learning something about the workings of politics—the political process—a subject about which most of us are woefully ignorant.

To help businessmen acquire that knowledge, the Chamber of Commerce of the

United States—as you know—has developed an action course in practical politics. It is nonpartisan. In its development we had the assistance of leaders in both parties. It is not antilabor—in fact, it has been praised by some labor leaders.

The program was launched on February 5 of this year. Since then in less than 90 days 852 business firms, chambers of commerce, and trade associations have ordered a total of 3,653 sets of the booklets to be used in the course, and 901 copies of the "Discussion Leader's Manuals."

While we are off to a very auspicious and encouraging start in this program, it will not succeed unless it has the enthusiastic blessing of top management. We must encourage our junior officers and supervisors to participate just as we encourage them to take part in community chest drives and other civic activities. Turning it over to our public relations department and then forgetting it won't do the job. This is a job for all management personnel. And, of course, after we have acquired the basic knowledge of politics, we must put that knowledge to work. Knowledge without action is of little practical value.

It is a long-range program. We expect no sudden miracles, but I am convinced that if the businessmen of this country adopt and use this program of political participation as a continuing policy of business management, and by precept and example encourage other groups to do so, we will have better Government in this country, and the free market system will be preserved.

Raymond Moley, a distinguished observer of the American scene, capsuled the idea not long ago when he said that "our generation has achieved a miracle of productivity, of efficiency and inventive genius. Its abundance is far beyond our needs and almost beyond our wants.

"But all this may pass * * * if we neglect our basic political institutions. Busy with the material things we are creating, we forget the preservation of those values which give meaning and purpose to life and which in the long run determine material progress. The political institutions we have inherited seem to us so excellent that we foolishly assume that they need no attention and support. In enjoying the excellence of the fruit, we are blind to the care of the tree."

And Mr. Moley might have added that if we neglect too long the care of the tree, the fruit will become bitter.

Our business is business—but our business is also public affairs—politics, legislation, and government—and there is no escape from that responsibility if we are to preserve our system of free enterprise.

It is said that as Benjamin Franklin walked out of Convention Hall in Philadelphia, after signing the new Constitution of the United States, someone asked him, "What have you given us?" and he replied, "A republic, sir, if you can keep it."

That was in 1787. We have kept it thus far. Can we continue to keep it Yes; if we pay the price. That price is eternal vigilance and active participation in public affairs. Will we pay the price? I think we will.

Carriers Vital to U.S. Strength

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego (Calf.) Union of May 21, 1959:

CARRIERS VITAL TO U.S. STRENGTH

The resumption of bombardment in the Formosa area points anew to the need of a strengthened carrier force. There is only one quick way in which the United States can apply force, or the threat of force, at trouble spots in Far Eastern areas and that is with big carriers and their long-ranging aircraft.

Without the Seventh Fleet and its carriers, how long could the Chinese be restrained in the Formosa Strait?

The Seventh Fleet must support U.S. policies throughout vast areas of the far Pacific—along a 3,5000-mile front from Vladivostok to Indonesia and on into the Indian Ocean area.

The Navy at present has only 14 attack carriers. Five are deployed overseas, five are held in readiness, and four are in overhaul and training. Two generally are deployed with each fleet but three are needed on duty at all times with the Seventh Fleet because of the ever-present threat of the Chinese Communist Air Force. And it takes 14 days for a carrier to get from the west coast to the Far East.

The 14 carriers are a mixed lot. Only four are of the modern *Forrestal* class. Two are converted *Midway* class carriers of World War II design, and the remainder are converted *Essex* class ships of World War II construction.

The *Forrestal* carriers now are the only ones on which heavy modern jet aircraft are fully operational. And such big ships aren't built overnight. A new carrier, which a House subcommittee threatens to force out of this year's budget, could not, even if finally approved, join the fleet until 1964.

When all the carriers for which money has been appropriated are built, the Navy still will have only 10 modern carriers, and believes it needs a minimum of 14.

The Navy has been an aging one, as so many admirals have warned. As each new *Forrestal* class carrier joins the fleet she replaces an obsolescent World War II carrier. The replaced ship joins the antisubmarine force and a still older CVS is decommissioned.

The main striking force of 14 carriers, remains constant, as does the antisubmarine force. Yet the enemies' capabilities at sea and in the air increase. The Russians have more than 450 submarines and today they are the second greatest seapower.

There is only one lesson to learn from the Chinese excursions in the Far East, and the Russian threats to Berlin and in the Middle East—the Communists will continue to probe for all weaknesses.

As Adm. Arleigh Burke, Chief of Naval Operations, remarked, "If they find a weakness, they'll try to cash in on it."

How To Do—Rural or Area Development

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to what is being done in the field of a national rural development program.

Some days ago, a national conference, with representatives from 34 States, was held at the Jackson's Mill 4–H camp at Weston, W. Va., in the nature of a workshop aimed at correlating the activities of the several States in this field of endeavor to improve our natural resources, with special attention being given to the development of our rural areas.

At this time, Mr. Speaker, I desire to include in the RECORD an address delivered at this conference by True D. Morse, Under Secretary of Agriculture, who is in charge of this program now being carried out by the Department of Agriculture. Mr. Morse's remarks follow:

HOW TO DO—RURAL OR AREA DEVELOPMENT

(Address by True D. Morse)

The success of the rural, resource, or area development approach has been gratifying. A foundation has been established on which to go forward with widespread activities of increasing effectiveness.

Work is moving ahead in over 30 States and in Puerto Rico. Development action has spread, in less than 3 years, far beyond the original 60 pilot or demonstration counties and areas. We have been told of work underway in some 200 counties.

This does not include the pioneering community and area development activities which have helped point the way for the present enlarged program. Recognition needs to be given to all such development work. It is all part of the total effort which is being made to enlarge the opportunities for low-income families and entire rural areas.

There are over 1,000 counties, about one-third of all counties in the United States, where there are serious underemployment, low incomes, and unsatisfactory levels of living.

There are about 2 million farms producing 90 percent of the farm products marketed. They include the larger more prosperous farms.

The billions of dollars of Government expenditures for price supports and stabilization are primarily for the products of these farms. By comparison, there is a bare trickle down of aid to the farm families—on small low-income farms—who are most in need.

There are some 2.7 million small-scale part-time and residential farms. They produce a mere 10 percent of the farm products marketed.

Price-support outlays for these farm families are comparatively small, meager millions compared with the billions of dollars being spent by law on the production of the larger more prosperous farms.

Most of the 2.7 million farm families have low or inadequate incomes. Levels of living are below average. There is widespread and acute underemployment.

Price supports have not—and cannot—solve the economic problems of the small farmers. In fact, such price-support laws have increased the problems and burdens of thousands of small farmers already hard pressed for income and an adequate level of living.

Living within the same areas of low-income farms—and assocociated with the farm families as neighbors in the country and in the towns—are even larger numbers of rural nonfarm families, which likewise have low incomes, underemployment, and often low levels of living.

As a whole, this is a major weakness in the total resources and economy of the United States.

Human resources are being neglected, wasted, and underemployed.

Natural resources are not being developed and employed adequately.

President Eisenhower has pointed out such facts repeatedly in his 1954 farm message and later statements.

The Joint Congressional Committee on the Economic Report said in January 1956: "The existence of areas of low economic activity seriously retards the rate of national growth, and is in itself a significant cause of self-perpetuation of low-income, underemployed groups. The goal of achieving full utilization of our national resources—land, labor, and capital—will never be attained as long as these geographic pockets of continuing economic depression persist."

The way to largely overcome this serious and widespread national problem is through development programs. That is what brings us together in this school or "How-to-do-it Workshop." That is our challenge.

You as State leaders—and workers at the grassroots with this age-old and tough problem—will be going back to the 32 States and Puerto Rico represented here—to help in training other leaders and workers. The success of this conference will depend largely upon the extent to which you go back to your various States and areas and assist in conveying how-to-do-it-ideas and methods to other leadership.

How to do rural, resource, community, or area development has been shown by—

1. Numerous studies, including congressional studies and investigations of the family farm; and

2. Hundreds of community activities and pilot or demonstration county and area programs.

Now the emphasis is on action. We must push ahead.

More income is the top goal. Top because more dollars will help families buy more education, health and other needs.

More income can and is being achieved to a major extent by increased off-farm and nonfarm income. The Congressional Joint Economic Committee said in February 1958 there is "need to develop local nonfarm resources and otherwise assist farm-reared people who have poor opportunities in agriculture to earn income in other ways."

Farm families, on their own, have reached out for such off-farm and nonfarm income. It is the largest single source of income—bringing in more than $1 out of each $3 which they receive.

How to do it. Just look at the results where people team up for county area development programs.

New and expanded industries, factories, businesses and service enterprises—each new job generates the equivalent of another—so the payroll and income buildup accelerates.

Tourist, hunting, fishing, and recreational activities are big business in America. They are an important cash crop which rural areas are cultivating. Forests, hills, mountains, parks, streams, and lakes are being developed to attract and hold this rapidly expanding business.

Another cash crop or new payroll being attracted is retired people and others seeking country homes. They have money to spend and help create more prosperous areas.

Farms are made more productive. Forests are improved. Processing and marketing are developed. More local demand for farm products results as the economy is built up and people in an area have more income with which to buy.

The new rural America that is emerging is good for America. It is good for people to live on the land—out in the country. Certainly it is good for low income farm families to be able to continue to enjoy their farm homes and yet have adequate incomes for health, education, and general welfare, such as most American enjoy.

More and more farm people who have their homes on farms, especially small, low-income farms, are commuting to factories, offices, and other employment in the towns or cities. They have taken lessons from their city cousins and discovered that roads and highways can be traveled in both directions to more income and higher levels of living.

The most extensive highway building program in history is under way—and will speed this development.

Mixed-income communities are replacing what were once only farming areas. Some are calling them diversified income areas.

Businessmen, farmers, and other leaders know how important it is to have diversified income. When drought disaster or low yields strike farming, incomes from off-farm employment continues to bring in cash. When factories close down—or workweeks are shortened—it is good to have continuing farm income and produce for the family.

More broadly based and diversified area economies are good for the future stability of America.

Education—and total "development of agriculture's human resources"—rank at the very top. Every area can go into action on this—and increasing numbers are.

Vocational education is urgently needed to serve effectively the new rural America—the diversified income areas. Vocational instruction is being adjusted and broadened. Instructors in trades and skills are in demand.

The Family Farm Subcommittee, House of Representatives, 84th Congress, said: "Since two or three out of four rural youngsters are destined to settle into urban and industrial employment, the vocational education of rural schools definitely should embrace elementary training in urban pursuits. This applies especially to areas of small farms, since these are the sources of the largest youth migrations to urban employment."

The Joint Congressional Committee on the Economic Report (Senate and House) 84th Congress, said: "It is apparent that a threefold approach is required to meet other aspects of the problem of chronic labor underemployment in low-income farm areas:

"(1) Encouragement of off-farm employment by development of new industrial locations within the area;

"(2) assistance of farm families willing to migrate to other areas and who possess definite job opportunities in the new location;

"(3) provision for greater opportunity for rural people to obtain training for nonfarm occupations * * * to improve the education of farm people, to make training in industrial skills available to them, and to overcome obstacles faced by people who wish to make the transition from farm to nonfarm work.

"Success in this effort would have most direct impact on noncommercial farm families."

Does your county or area or State offer "horse and buggy" vocational education, or is it modernized for the new rural America already upon us?

Education beyond the high school is being pushed by development committees. President Eisenhower's Commission pointed up the urgent need. Estimates indicate that the work force of 1975 will be composed of 75 percent more professional and technical workers, 45 percent more craftsmen, and 25 percent fewer laborers than in 1956.

Low income rural areas are rich in human resources. These fine boys and grils primarily need encouragement and kindly guidance to get them started into colleges and universities. There are unused scholarships, grants and loan funds—and people and organizations are ready to help.

Action. Let's push ahead to help get the boys and girls to stay in school—and then go on to education beyond the high school. We will be helping to fill the shortage of scientists, engineers, teachers, doctors and nurses—and helping bright young people escape what may be a lifetime of low incomes and limited usefulness. It is a major way to help build a stronger America.

Better health has been among the first and most vigorous action programs. No county or area need wait to push ahead.

Report after report shows stepped up inoculations against disease. The reports show more X-rays. Health clinics and hospital facilities have been installed—improved diets, water supplies, sewage disposal and sanitation have come through local people actively working with available medical and health associations and State and Federal agencies and departments.

How to do it. Let's look again at what the congressional committees have had to say.

The Family Farm Subcommittee said: "Democracy finds its meaning in the community. Programs for economic improvement can be put into effect far more quickly and beneficially in organized rural communities. Local initiative and cooperation are imperative in programs directed at improving the economic position of the family farm."

The joint congressional committee said: "The Federal Government must assume a positive role, but we do not believe that responsibility for further constructive action lies with the Federal Government alone. To meet the problems effectively will require the concerted efforts of all segments of our national life—all levels of government working with labor and management and private community groups and organizations."

The President, in sending the report to Congress that resulted in the rural development program approach, said (April 1955): "The essential cooperative nature of the undertaking is clear. The recommended program is cooperative as regards individual and group action, as regards private and public agencies, and as regards agencies at local, State and Federal levels * * *.

"A many-sided attack is essential.

"We must open wider the doors of opportunity to our * * * farm families with extremely low incomes * * * for their own well-being and for the good of our country and all our people."

How to do it.

1. States have formed rural, resource, or area development committees—with broad representation.

2. Counties or areas have development committees—with project or subcommittees as needed.

3. There is a national committee at the Under Secretary or Subcabinet level. This committee for rural development program represents Department of the Interior; Department of Agriculture; Department of Commerce; Department of Labor; Department of Health, Education, and Welfare; Small Business Administration; and Council of Economic Advisers.

Dr. Harry J. Reed, former dean of agriculture at Purdue University, is the coordinator.

4. A wealth of people and organizations stand ready to help any area that wants to make more rapid progress.

In June 1958, prominent representatives of more than 150 private organizations met in Memphis, Tenn., to discuss the program with officials of 31 land-grant colleges and universities and State and Federal personnel representing 44 agencies.

5. All organizations, groups and agencies need to be brought together in a coordinated working relationship to get maximum county or area development.

(a) There needs to be a study and inventory of the resources of the county or area.

The favorable along with the limiting factors need to be determined.

(b) The next step is to draft a development program. It should show specifically the activities and enterprises adapted to the area—those with most potentials, such as crop and livestock enterprises; businesses and industries; tourist, recreation, or residential potentials; health, education, religious, and character building needs, etc.

(c) Get general agreement among the area leadership, organizations and agencies on the development program to be undertaken. Specific goals may be desirable.

(d) Establish committees for each project or activity—with definite responsibility fixed on the logical agencies and leadership. For example:

Dairying: Dairy industry representatives, farm organizations, extension service, banks, etc.

Forestry: Private and public foresters, forest service, soil conservation service, etc.

Industry: Chamber of commerce, power and transportation companies, Department of Commerce, Small Business Administration, etc.

Tourist and recreation: Chamber of commerce, service clubs, park administrators, foresters, travel bureaus, game and recreational organizations, etc.

Health: Doctors and health officials, medical and health organizations and agencies, including those working on dietary problems youth clubs, etc.

Education: School officials and education leaders, labor, and education department and agency representatives, extension service, etc.

Other development projects and activities.

(e) Hold regular meetings of the county or area development committees to review progress of the various projects and activities, assure coordination of work, and to project plans and goals ahead.

6. Get action on all fronts where the leadership has agreed that progress is possible on a sound basis for the future. This action could include for example:

(a) Better farming situations for those who should continue in farming.

(b) Additional employment opportunities for underemployed farm people.

(c) More tourist, and recreational income.

(d) Additional sources of incomes for farm families and other rural people needing higher incomes.

(e) Adjusted and expanded educational opportunities.

(f) Better health facilities and services and more use of dietary and health measures.

(g) More adequate religious and character-building activities.

(h) Financial management programs, including retirement plans.

There will be increasing assistance for rural area development work. For example:

Congress, in 1955, changed the law so the Farm Credit Administration could make land bank loans to farmers located where they have opportunity to obtain supplemental employment.

Congress, in 1956, changed the law so the Farmers Home Administration could serve more effectively low-income farm families by loaning to farmers with off-farm employment. Additional loan funds were made available.

Congress, in 1956, in amending the Defense Production Act, inserted in the law "it is the policy of the Congress to encourage the geographical dispersal of the industrial facilities of the United States."

Congress, in 1958, in the National Defense Education Act, provided for guidance, testing, and counseling in both rural and urban schools; and area programs of vocational training for highly skilled technicians.

Congress, in 1958, made the Small Business Administration permanent, and gave it greatly enlarged lending and management assistance authority. In a recent 6 months the Administration made 394 loans totaling some $27 million to small businesses in rural areas.

The Department of Labor is carrying forward four experimental programs in Arkansas, Kentucky, Tennessee, and Wisconsin to determine how to serve more effectively farm families and others in rural areas with aptitude testing and guidance and employment services.

The President has established a Cabinet-level Federal Council on Aging. The Congress has authorized a White House Conference on Aging to be held in January 1961. There are many elderly people on small farms.

Area assistance bills are pending in Congress. The President has recommended such legislation on a limited basis.

Concern for farm families and people—not just cotton, corn, cattle, or hogs—that is the challenge that is before us.

The Nation is deeply indebted to you and those working with you in charting the way to more widespread prosperity for farm and rural people.

Some say these low-income farm families and areas are a social problem—not a farm problem. It is, however, a problem of families. All can agree that it is a deep-seated and chronic economic problem—with human values at stake.

At stake are the social stability and the spiritual and cultural values of rural areas that have helped make our Nation great.

At stake are future opportunities for fine boys and girls.

At stake is the future strength of America.

Of such is the challenge of rural or area development programs.

California Eagles Vocational Training Center at Catania, Sicily

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, members of the Fraternal Order of Eagles in California, under the dynamic leadership of Past Worthy State President Charles J. Fracisco, have come up with another first.

In the true spirit of Eagledom, they are extending the hand of brotherly love to the unfortunate youth of strickened, war-damaged Italy.

One of the outstanding agencies in Italy is its Boys Town. Quite recently Princess Pacelli, niece of the late Pope Pius, visited the United States in its interest. This gracious lady was an excellent ambassadoress in leading the cause of underprivileged youth who need vocational training and guidance.

The California Fraternal Order of Eagles in keeping with the high traditions of that great fraternal organization, has undertaken the sponsorship of a school at Catania, Sicily, to train young men as machinists and radio and television specialists.

Worthy State President Harry Wetherald and Emeline Michler, president of the State Auxiliary, are giving their full support to Chairman Charles Fracisco, of Livermore, who is sparkplugging the drive.

The following is taken from the official publication of FOE, the Eagle, for July 1959:

CALIFORNIA EAGLES START THEIR OWN EUROPEAN SCHOOL, YOUTH VOCATIONAL TRAINING CENTER AT CATANIA, SICILY

Inspired by the sensational success of Eagle-sponsored youth training centers in West Berlin and Naples, California aeries and auxiliaries have set out to establish another vocational and trade school in Catania, Sicily—strictly a California only project.

California is the only State which has adopted such a program as a purely State Eagle effort to bring direly needed trade education to underprivileged youngsters in a foreign land, thereby helping to bring about sorely necessary person-to-person good will among the peoples of the world.

The California-Catania project is being handled in cooperation with CARE, American-sponsored international relief organization, as are the other two Eagle-sponsored schools, one at Eagle Haus in Berlin, the other at Casa Materna in Naples.

Strongly urged by State President Harry Wetherald and Emeline Michler, president of the State auxiliary, sufficient commitments have already been made by California Eagle units and individuals to practically insure that the Catania project will be a whopping success. Wetherald is honorary chairman of the campaign. Directors of the campaign include Charles J. Fracisco, chairman, Judge John J. Molinari, C. C. DeYoung, Victor Lamanuzzi, Gus Sorci, Joseph Baudino, Victor Corsiglia and California State Secretary William J. Fitzgerald.

Directors have circularized their friends, Eagle units and other organizations, and report an amazingly enthusiastic response.

This will be the first school in Sicility training machinists. Other firsts are courses in the field of radio and television assembling and repairing. The children who will be enrolled in the California Eagle-sponsored school will be orphans, abandoned youngsters and children from the squalid slums who would otherwise be without an opportunity to learn a trade and thereby bring opportunity of the dignity which comes with being self-supporting. By establishing this school, California Eagles are helping these youngsters to help themselves.

All contributions are tax-deductible. Checks should be made out to CARE and sent to one of the various directors of the project, to the local Aerie or to California Eagle House Committee, Eagles Club, Livermore, Calif.

The Villaggio del Fanciullo "Exelsior" in the city of Catania is Italy's Boys Town, patterned much after the famed institution founded and guided by the late, great Eagle, Father Flanagan. It is located in one of the most picturesque seaside resorts in the city, with a superb view. There are 135 boys already enrolled in the Italian Boys Town and in addition, 80 boys will come to the Eagle-sponsored school as day students.

The school will be located in a newly constructed wing of the school proper. It is emphasized that the instruction will be offered to those who need it most—youngsters who would otherwise not be able to learn a trade and become self-supporting. They are poor children without other opportunity to obtain a technical and vocational education. Other expansion is planned at the school, much of it through the generosity of humanitarian-minded citizens of Italy.

Grand Worthy President Andrew Halloran has expressed the hope that other States will follow the lead of California. "I think all of us in the Eagles may well be proud of the training centers we have already established as a national organization work-

ing on a national basis," he said. "California Eagles may be particularly proud for having successfully gone out on their own in this magnificent program which will do so much good for the youth of Italy. I only hope that more State aeries will do the same. It is impossible to overemphasize the good we are doing through these so very worthwhile projects. We are doing much in this way to cement international friendships, now and in the future."

Says California State President Harry Wetherald, "We are proud of the fine cooperation of the aeries in this State and their members. Their excellent response to the appeal for an Eagle house in Catania has made it possible for California to pioneer in this sort of activity as an official State aerie project."

Social Security Coverage for Self-Employed Physicians

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. WALLHAUSER. Mr. Speaker, on Wednesday of last week, I introduced a bill, H.R. 7295, designed to provide coverage under the Social Security Act for self-employed physicians.

The bill, which is designed to break through a long-existing bottleneck that has stymied such legislation in past Congresses, would—

First. Grant the right of election of coverage to present self-employed physicians.

Second. Automatically cover all persons who enter the field of medicine as self-employed physicians after enactment of the bill into law.

As we all are aware, self-employed physicians now are one of the few groups in the Nation not covered under the Social Security Act, and it is my belief that acceptance of the proposals contained in my bill could overcome the difficulties that have prevented extension of coverage to the medical profession.

Two major reasons are attributed for the failure to bring self-employed physicians under the Social Security Act. One is the opposition of some in the medical profession to compulsory coverage. The other is the opposition of the legislative and executive branches of Government to elective coverage because of long-established social security policy.

My proposals call for a slight shift in the two positions so that a compromise can be reached.

Under my bill a presently self-employed physician would have to choose whether or not he or she wanted to participate in the social security program by the due date of his or her second income tax year after enactment of the bill. A signed declaration of noncoverage, which would be necessary under terms of the bill, would be irrevocable.

Thus, those presently self-employed physicians desiring social security coverage for themselves, their wives, and their children could obtain it, while those opposing it would not be forced to accept it. This could answer, at least in part, the objections of those sternly opposed to compulsory coverage.

In the case of those who are to become self-employed physicians, they would be automatically covered by social security from the start of their practices. In most instances, this would mean a continuation of coverage they have had while employed in hospitals or other types of public and private employment.

Because this proposal would mean that all self-employed physicians eventually would be covered by social security, just as are members of other professions and other working men and women, it might well provide a means of compromise for those opposed to elective coverage.

Unless there is a complete change of attitude by the opposite parties in this matter, an insistence upon complete elective or complete compulsory coverage can mean automatic defeat for any effort to give social security protection to the many in the medical profession who desire it. I do not believe we should shut the door in the faces of those physicians and their families.

Possibly because my late father and my late brother were members of the medical profession, many physicians have contacted me since my election to the Congress last year and asked that I take what I consider the necessary steps to give them the social security coverage now enjoyed by a vast, vast majority of working Americans.

I believe my bill will accomplish that purpose in the shortest possible time.

In closing, I would like to cite a recent poll of the Essex County Medical Society in New Jersey to indicate the number of physicians who want social security coverage. In that poll, the members of the society, many of whom live in my congressional district, were asked: "Are you in favor of compulsory social security for physicians?" A total of 1,209 replies were received and the tabulation was: Yes, 822; no, 377; and undecided, 10.

New York Democratic Delegation Urges Nuclear Powered Carrier To Be Built at Brooklyn New Yard

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the New York Democratic delegation in the House of Representatives:

The New York State Democratic delegation expressed keen desire to have built at the Brooklyn Navy Yard a nuclear super arcraft carrier. The Brooklyn Navy Yard has the expertise, skilled labor, and facilities to build this nuclear-powered supercarrier.

Carriers have proven their worth many times since World War II. Whenever the United States and its allies were faced with threats to their mutual security on foreign soil, our aircraft carriers were alerted and prepared to cope with the crisis. They were used successfully in local conflicts in Quemoy, and Matsu, Korea, Lebanon, Jordan, etc. The old conventional type of aircraft carriers have become obsolete becaues of their shorter runways. Longer runways are required to accommodate the latest jet aircraft.

Billions of dollars are being poured into outer space research and development. Aircraft carriers should be a matter of deep concern for our defense and offense. They are a lost closer to us and of more immediate need. A supercarrier would be used as a missile launcher. It would have a decided advantage over missile bases, which are stationary. The aircraft carrier would be a mobile base and could easily elude the enemy's lethal weapons. Its own array of jets would be a protective curtain.

It is estimated that a nuclear carrier will cost between $370 and $390 million, but its cost could be amortized over the years. There would be a great saving of fuel space and fuel costs.

As Vice Adm. John T. Hayward stated in a recent telecast, not only are jet bombers here to stay, but in time they will be equipped with the latest missiles. Our mobile aircraft fleet will be needed to bring them within range of the vital targets within the enemy's home borders.

We believe that we must not only plan ahead but must make firm all facets of our lines of defense. Aircraft carriers today are in the forefront of that main line of defense. A delay of a year or two means a delay of 5 or 6 years in obtaining a carrier prepared to defend us.

VICTOR L. ANFUSO, CHARLES A. BUCKLEY, EMANUEL CELLER, JAMES J. DELANEY, ISIDORE DOLLINGER, THADDEUS J. DULSKI, LEONARD FARBSTEIN, JAMES C. HEALEY, LESTER HOLTZMAN, EDNA F. KELLEY, EUGENE J. KEOGH, ABRAHAM J. MULTER, LEO W. O'BRIEN, ADAM C. POWELL, JOHN J. ROONEY, ALFRED E. SANTANGELO, SAMUEL S. STRATTON, LUDWIG TELLER, and HERBERT ZELENKO.

Westmoreland, Kans., Welcomes Oregon Centennial Wagon Train

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. PORTER. Mr. Speaker, the Oregon centennial wagon train is rolling across country. Under leave to extend my remarks in the RECORD I include an editorial which first appeared in the Westmoreland, Kans., Recorder and was reprinted in the Drain, Oreg., Enterprise. Westmoreland residents, who are represented in Congress by my friend and colleague, the Honorable WILLIAM H. AVERY, were wonderful hosts to the wagon train members. An editorial describing this event was written by Doc Maskil:

WAGON TRAIN CAPTURES IMAGINATION OF NATION

(By Doc Maskil)

If you weren't one of the three or four thousand folks who crowded into Westmoreland Tuesday afternoon and evennig to see the wagon train bound for Oregon, you missed something.

Maybe there were those who couldn't see much to it. Maybe there were those who looked at the wagons and the teams and the fellows who were letting their whiskers grow and the women in calico and wondered why everyone was making such a fuss over a bunch of grownups playacting like that, but we feel sorry for them, if they did. They missed what the rest of us saw—the pages of history turning back a hundred years, when the unbroken prairie stretched as far as the eye could see, and the white tops of the prairie schooners moved across the plains into the unknown, led by the hope of a better life.

You missed something if you didn't see them. You missed something if you didn't half close your eyes and multiply the seven wagons by tenfold, until the entire slope from Rock Creek to the top of the rise was covered with wagons bedded down for the night, as oldtimers contend they have seen it.

It's easy to pick holes in a balloon, but then it isn't pretty and bright any more, but just a mess of soggy rubber. But just for a moment, let's do it.

The 2,020 miles isn't much of a trip, even with a team of mules hitched to a wagon. We used to ride that far every year taking the cows to pasture. These folks are availing themselves of some modern conveniences, and they're not having to scrounge around for food and water.

But that's not because, as one of the fellows put it when talking to the crowd at the high school, they wouldn't like to do the old-fashioned way. But where could you find a buffalo chip? And how can you take a bath in a nearby stream with folks along the way watching your every move?

Maybe it isn't so much, after all. Maybe the folks, back in Oregon, who didn't see how much could come of it were right after all. But the folks who said that were the practical heads, they weren't the dreamers that the rest of us are. They didn't know that we would close our eyes and see, not this wagon train, but the hundreds of rolling wheels that cut the deep ruts in our prairies a century ago.

Be that it may, we don't know of any publicity stunt, pure and simple, that has caught the imagination of a Nation such as this wagon train has done. Even the most ardent supporters of the idea admit it has attracted attention beyond their wildest dreams.

The Oregon Legislature put up $1,700,000 to see that their centennial goes over, and somehow, an item allowing $25,000—about enough to buy a pretty decent house—was slipped in for wagon train retracing the Oregon Trail.

That $25,000 is the bargain of the century. The publicity we've given in this paper alone would have cost them a good many dollars, but, in turn, they've done a lot for Westmoreland.

Even with the $25,000, they had trouble. Any town could put up $1,650, and get its name put on a wagon—that would be enough to buy the wagon, the team, and the food for the trip out. But only seven towns in all Oregon could see how it would do them any good. "Who's going to notice a few wagons going across the country?" the promoters were asked. "No one is going to pay any attention."

It was even worse with the daily newspapers. The publicity men working on the idea had to beg for a few lines in the paper, and then were often refused.

"Just you wait," the unbelievers were told. "Just you wait until we're 2 months out. Then you'll be sorry."

It didn't take long. When they hit Westmoreland, only a little more than a week on the road, every daily newspaper in this territory was making daily reports on their progress, and when they reached here, a reporter from an Omaha newspaper made the long trip to tell of their stop here. Radio and television stations in Oregon were giving news of the train three times daily, and the daily newspapers were frantically wiring for news.

But as far as the folks in the wagons are concerned, while they appreciate the publicity they are getting, they figure it would be well worth the time they are donating if they didn't get a line in the papers.

"The original pioneers were killed off by Indians, by cholera, by the dangers along the route," exclaimed one of the party, "but we're being killed off by kindness."

If kindness is killing them off, Pottawatomie County did its share. "We didn't know there were folks such as you have in the county," one of the travelers said. "If I ever move from Oregon, I'm coming here to live."

Westmoreland, as we said in our opening sentence, greeted the group with between 3,000 and 4,000 people in the half day and evening they were here, climaxed with a program, the annual Farmers' Night, sponsored by the Westmoreland Community Service Club, and by a square dance following, sponsored by the Westy Saddle Club.

It was a big day. When we first talked with the publicity man, he assured us the wagons would lay over a day at St. Marys in order to delay long enough to fit in with Westmoreland's plans, and then, when he learned the size of the town (400) his jaw dropped a little. "When we first rode into town," one of the drivers said, "I said to myself, 'Well, here's for a quiet day. I never was so wrong in my life.'"

Cars from Nebraska, Oklahoma, Missouri, and many counties in Kansas fought for parking positions along the streets, with everyone wanting a look at the wagons.

If you missed it, you shouldn't have. It was a wonderful experience, a big day.

Section 318 Amendment Is Not Necessary for VHF Translators

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. MAGNUSON. Mr. Speaker, on April 13 the Federal Communications Commission announced that it would proceed with the licensing of VHF television translator facilities, to enable many isolated communities throughout the country to receive satisfactory television at a reasonable cost, provided the Congress enacts two amendments to the Communications Act of 1934.

I wish to commend the Commission for taking, at long last, what appears generally to be a sensible approach to this problem.

By requesting amendments to the Communications Act, the Commission has tossed the ball to Congress, and I hope that Congress speedily will enact such statutory amendments as are necessary to permit the Commission to proceed.

The first amendment requested by the Commission would amend section 319 of the Communications Act of 1934. That section now prohibits the Commission from granting licenses to any facility which was constructed without first receiving a construction permit from the Commission. Without such an amendment, the Commisison could not license the many hundred VHF translator facilities now in operation in most of the western States.

The proposed amendment to section 319 is embodied in section 2 of H.R. 6471, a bill introduced by the Chairman of the House Committee on Interstate and Foreign Commerce. I fully support this amendment and hope that it is enacted well before the adjournment of the first session of the 86th Congress.

The second amendment requested by the Federal Communications Commission applies to section 318 of the Communications Act. The language of the proposed amendment, as drafted by the Commission, is embodied in section 1 of H.R. 6471. I do not feel that this proposed amendment is necessary or desirable; in the proposed form it clearly is irrelevant to the VHF translator problem and goes far beyond it.

My views on the proposed amendment to section 318 are supported, I feel, by a recent exchange of correspondence I have had with the Federal Communications Commission. So that my colleagues in the House may be more fully informed on this issue I have set forth below my letter to the Commission of April 27 and the Commisson's reply of May 6:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 27, 1959.

Mr. JOHN C. DOERFER,
Chairman, Federal Communications Commission, New Post Office Building, Washington, D.C.

DEAR MR. DOERFER: I wish to take this opportunity to commend you and the other members of the Federal Communications Commission for your decision of April 13 to proceed with the licensing of VHF television translator stations upon the enactment by Congress of technical changes in the Communications Act of 1934.

From my reading of the public notice issued on April 14, I feel the Commission has taken a generally sensible approach to this somewhat difficult problem.

You certainly may count on my support in the House of Representatives for enactment of the requested amendment to section 319 of the Communications Act. As a matter of fact, a similar proposal was included as section 2 of my bill, H.R. 3737, which I introduced on January 29, 1959.

I am somewhat puzzled, however, by your request for an amendment to section 318 of the Communications Act. In that connection, I have two specific questions which I should appreciate having your answers to.

First, I should like to know why you feel that any amendment to section 318 is necessary. From what I can learn from reading your public notice and from talking with members of the staff, it is my understanding that you contemplate requirements for the operation of VHF translator stations which are essentially similar to your requirements for operation of UHF translators. The UHF translator rules were issued almost 3 years ago and under those regulations, I believe some 200 licenses have now been granted. If an amendment to section 318 was not necessary in the case of the UHF translators, it is difficult for me to understand why an amendment is necessary before VHF translator rules can be issued.

Second, assuming that some logical justification exists for amending section 318 at all, I should like to ask if it is not true that the amendment you have proposed to Con-

gress is considerably broader than is necessary to accommodate the proposed VHF translator operations. I have examined H.R. 6471 and S. 1741 which embody your proposed amendment. These bills, if enacted, would empower the Commission at is discretion to waive the statutory operator requirements for all broadcast stations. By waiving the existing statutory requirements for all broadcast stations, the proposed language goes far beyond the announced intention of achieving a technical amendment supposedly necessary to accommodate just the tiny VHF translators. In view of this, I should like to know if the Commisison would have any objection to confining the proposed amendment solely to the operation of VHF translator stations.

Sincerely yours,

DON MAGNUSON,
Master of Ceremonies.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D.C., May 6, 1959.

Hon. DON MAGNUSON,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MAGNUSON: Your letter of April 27, 1959, addressed to our Chairman, John C. Doerfer, arrived during his absence from the city on official business.

We appreciate your commendation and support for the proposed amendments to sections 318 and 319 of our act in connection with extending VHF television service (47 U.S.C. 318, 319).

The Commission felt that it could appropriately authorize translator stations and probably also the booster stations without having an operator on duty, but that it would be advisable to remove any possible doubt on this point by appropriately amending section 318. Present section 318 was enacted in 1934 and has not been amended since. However, in the meantime there have been wide technicological improvements improvements in broadcast operations. In the Commission's judgment it is appropriate to amend section 318 to dispense with the statutory requirement of an operator in the broadcast services, letting rules and regulations provide for the varying requirements necessary to protect the public interest. Specifically we would prefer to have the amendment to section 318 broad and not confined solely to the operation of VHF translator stations, although we initiated it primarily for them.

We appreciate your interest in our efforts to solve these problems and hope if there is any further assistance we can render you will not hesitate to call on us.

Sincerely yours,

ROSEL H. HYDE,
Acting Chairman.

The Dominican What?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Sam Romer, Minneapolis Tribune staff writer, which appeared in a compilation of Mr. Romer's articles in the Minneapolis Morning Tribune from April 6 through April 18, 1959:

WILL THE COMMUNISTS TAKE CUBA?—TRUJILLO RULES LAND OF BIG LIE

(By Sam Romer)

The Dominican Republic is the country of the big lie—and Rafael Trujillo is its spokesman.

The biggest lie, of course, is the very title of the country. Despite its formal trappings, it is no more of a republic than was Mussolini's Italy or Hitler's Germany.

In common fashion with other Latin American governments, the Dominican Republic boasts of a written constitution which provides for individual liberties and guarantees of freedom.

In truth, the constitution is a paper document, ignored by the men who are sworn to enforce it and the people it is pledged to protect.

Capital punishment was abolished by constitution in 1924—but a 1947 book named 134 victims of Trujillo's terror and Jesus de Galindez, the Spanish author of "The Era of Trujillo," pronounced this number too little.

Trujillo's victims died by unexplained accidents, by police shooting while trying to flee, by suicides accompanied by farewell notes written by semi-illiterates.

There are few signs of open terror now within the country itself but Trujillo's power to exact revenge extends far beyond the borders of his nation.

Galindez, who wrote his scathing indictment of Trujillo as a doctorate thesis for Columbia University, disappeared from his New York apartment before the book was published; he has not been heard from since.

Gerald Murphy, the North Dakota-born pilot who was accused of flying the kidnaped Galindez to Trujillo's ranch, vanished in Ciudad Trujillo when the investigation of Galindez' disappearance got too warm.

A month later, the Dominican authorities announced that a fellow-pilot had been arrested for Murphy's murder and had committed suicide in remorse.

Andres Requena, a Dominican author, was killed in New York after he published a novel which described Trujillo's paradise as a cemetery without crosses.

HISTORY A LA CARTE

The big lie of the Dominican Republic rewrites history and ignores the present.

Trujillo's most recent biography, distributed to visiting newspapermen, records without a blush that "the police are gentle, quiet and simple and carry no weapons."

Every street corner in downtown Cuidad Trujillo is witness to this lie—it is commmanded by a policeman, armed with revolver and trucheon.

And army officers, even when off duty and at social affairs, are never without the holstered revolver.

The rewriting of history goes on continually.

Trujillo's biography now refers to his early military training with the U.S. marines (during the 8-year period of American occupation of the country before 1924) as the first step of a complete plan by which the young visionary prepared to save his country from the domineering Yankees.

It recites as if it were fact how Trujillo as a lieutenant defied marine orders and hoisted the Dominican flag as a symbol of the nation's dignity; it adds an account how the young lieutenant exchanged shots with a Marine detachment which attacked a post he commanded.

These are good stories and certainly will interest future historians. Although they occurred almost 40 years ago, it is the first time they have come to light.

FACT VERSUS AUTOBIOGRAPHICAL FACT

Unfortunately, the Dominicans published in 1956 the official military biography of Trujillo—a detailed account which even includes photostats of such documents as a scribbled memorandum ordering his first physical exam.

The military biography doesn't even hint that Trujillo defied court-martial by disobeying orders and fighting off a Marine attack in order to preserve the patriotism of an occupied people.

The Dominican Republic is a police state in which the individual comes under continual surveillance by the authorities.

The average tourist reportedly has his photograph taken, full-face, as he enters the country—some persons explain this as an X-ray search for hidden weapons.

The tourist also will find that his American news magazine is taken from him at customs, then returned—but any page referring to the Dominican Republican is neatly sliced away.

A newspaperman seeking an interview with a prominent Government official tells the soldier guarding the palace that he will return for an answer that afternoon; 2 hours later, a presidential inspector visits him at his hotel, although he did not leave word where he was staying.

In driving through the countryside, the motorist slows to a complete halt every few miles—there is a foot-high bump in the road. At some of them, a policeman steps forth from nowhere, records the motorist's name and license number.

Dominicans call these bumps policemen lying down.

THE PEOPLE'S CHOICE

They have regular elections in the Dominican Republic—conventions, endorsements, and campaigns.

The last election was in 1957 when Hector Trujillo, the generalissimo's brother, ran for reelection. A national convention of Dominican journalists met during the campaign and unanimously voted endoresment of the ticket.

The newspapers reported the action as indicating a landslide for Hector's reelection.

It was. Some 1,265,959 votes were cast and every single one of them was for Hector.

This is a far better record than the Russians have ever been able to roll up.

Of course, Rafael Trujillo always has done well in elections. In his first campaign in 1930, he was elected by an outpouring of 223,851 votes. An American diplomat then noted sourly that this "greatly exceeds the total number of voters in the country."

A MAJORITY PARTY

Although the constitution provides for the widest freedom for political action, there is only one political part in the country—the Dominican party. No one apparently wants to start another.

It is a party which should excite the envy of any normal machine politician worried about primary challenges and ward club dissents.

Trujillo is named in the party's constitution as its chief; the constitution then gives him the power to name the party chairman, authorize all expenditures, veto all committee decisions, object to candidates and punish disloyalty.

"The authority of the chief," it adds, "is undiminishable and untransferrable."

As if this were not enough, it provides that all elected officials must submit signed but undated letters of resignation before taking office; when the letter is put into effect (often without the official's knowledge), the congress fills the vacancy by choosing another nominee named by the party leadership.

RELIGIOUS FREEDOM

Galindez notes that the only individual liberty guaranteed by the constitution which has practical application is that promising religious liberty.

Although, a Roman Catholic country, there apparently is full religious freedom for both Protestants and Jews.

But even this has its drawbacks. A Jewish civil engineer from New York, in the Dominican Republic to help build one of Trujillo's proud public works, complained to a friend that he felt compelled to attend synagogue services for the first time since he was a child.

"After all, Trujillo built the synagogue," he explained. "And they tell me it's healthy to attend."

H.R. 3460: The TVA Bonding Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. BROOMFIELD. Mr. Speaker, although it is too late for the House to take further action on the matter of H.R. 3460, the TVA bonding bill, yet I hope that our colleagues in the Senate will take note of an editorial from the Detroit Free Press and on article from the Detroit News on this very important subject. The indirect use of Michigan tax dollars to lure industry out of our State is very much resented, and rightly so. It is my opinion that many other States are faced with the same problem, and that tax-free TVA competition is preventing these States from realizing the full potential growth to which they are entitled.

[From the Detroit Free Press, May 9, 1959]

ITS FULL FACTS CARRY A SHOCK

Diligently steered by its Democratic majority, the House has passed a bill which would enable the Tennessee Valley Authority to expand its public power facilities by issuing bonds.

Unless the Senate greatly alters the measure, or declines to pass it, President Eisenhower almost certainly will veto it. If he does, it is about equally sure that not enough votes can be mustered to override him.

Backers of the measure aren't much dismayed at this prospect. In fact they're reported to rather like it. The veto, they think, might be made into a public power versus private power issue for 1960—something to demonstrate that Republicans are on the side of avaricious utilities while Democrats are strong for social legislation.

The administration, any administration, better be against public power—with the exception of providing it as a public service where electricity can't be had except under a subsidy arrangement.

For the more of it there is, the less is your chance of ever seeing a tax cut. And here in Michigan the less your chance is of holding a job.

The job aspect comes from the fact that industries naturally favor areas where power is cheap. It is cheapest where a great part of the bill is spread on the whole public, instead of it all coming as an individual bill against the actual user of electricity.

Really, it's a double belting of the tax payer—for not only does he subsidize the users of public-power electricity by covering much of the cost, but unlike the private utility the public power operation makes no tax contribution of its own to the public Treasury. The other taxpayers have to make up for that, too.

In the case of TVA, with which power was originally to have been incidental to a commendable waterway and reclamation program, the Nation's taxpayers have contributed $1,967 million, much of it in order that communities within reach of its lines may advertise lower electricity rates.

Michigan's share of this subsidy has been about $100 million.

And it has cost Michigan jobs as well as dollars. Take the specific case of a Ford Motor Co. glass plant. According to an analysis of public power's record for taking jobs out of Michigan, TVA's cheaper power was among factors which caused Ford to choose Nashville, Tenn., as the plant site.

Detroit Edison campaigned strenuously to have it here, but had an almost impossible row to hoe. It would have had to charge Ford $1,250,000 for the glass plant's electricity. According to the study, it could be had in Nashville for $700,000.

And, according to a clipping from the Ford Rouge News, the Nashville plant would provide 2,500 jobs—jobs that might have been available to this area's workers.

The study names Holley Carburetor and American Metal Products as other Detroit area industries that have put facilities in range of TVA's bargain power.

Nor does it do to say that the solution is to have public power everywhere. If it costs so many scores of millions to subsidize just the power sold at less than cost by TVA, what would the burden be if the taxpayers had to make up the difference all over the Nation?

So this is the background, the real operation of social legislation congressional Democrats hope to make use of as a campaign issue, even if they can't put it across this year. It will, of course, be labeled as enlightened.

Michigan's people ought to demand that all Michigan Representatives and Senators clearly state their stands on a measure that can take still more jobs away from Michigan workers, and further reduce the chance that those who do continue to have employment will ever see their tax burden lightened.

So, too, should the groups named by Governor Williams to keep Michigan industrially dynamic.

[From the Detroit News]
(By Jay G. Hayden)

WASHINGTON, May 11.—An issue that is sure to be exploited by Republicans in northern industrial areas was emphasized when the House of Representatives voted, 245–170, to bolster electric power production and marketing by the Tennessee Valley Authority.

Specifically the measure would authorize TVA to sell up to $750 millions of bonds for expansion of its powerplant, without reference to the President, Congress or any other Federal authority.

President Eisenhower certainly will veto the measure if it passes the Senate in present form. But it may be that the astute majority leader of the Senate, LYNDON B. JOHNSON, of Texas, will head it off to avert a certain bitter split in his party looking to next year's presidential and congressional elections.

The issue at stake was clearly indicated when 31 Democrats, nearly all from northern industrial regions, joined with 139 Republicans in voting against the bill. Debate centered largely around the claim that cheap TVA power, heavily subsidized by the Government, was being used to entice northern industries to move southward.

New England led the Democratic opposition with seven out of eight representatives of that party from Massachusetts, Connecticut an even split 3–3, and Rhode Island two votes solid against the TVA expansion. Five Democrats from Pennsylvania joined all Republicans in that State in voting "no."

Only one Democrat from New York joined the opposition, but nine Republicans from in and around New York City issued a statement declaring "it is almost unbelievable that the Democratic Congressmen from New York State voted with their leadership to allow the TVA, with its cheap utility rates, an undue advantage over the business concerns of the city and State of New York."

JOHN LESINSKI, the one Michigan Democrat who voted against the bill, said be opposed it because Tennessee propagandists had come to Detroit in attempt to lure Michigan industry to their State with promises of cheap electric power.

Representative THADDEUS MACHROWICZ, who surprisingly refused to vote either way although he was present, explained that he believed direct bonding power for the TVA was a good approach but he was disturbed that people in the TVA are soliciting Michigan industry.

Representative WILLIAM S. BROOMFIELD, Royal Oak Republican, declared:

"We in Michigan certainly are having our trouble with TVA. We, who have paid taxes to create TVA, are now in the rather embarrassing position of having this agency come in and take away jobs from our workers."

Southern Democrats lined up almost unanimously in favor of TVA expansion, but there was just a suggestion of conflict even in that quarter when of the two Southern States developing most swiftly, Florida cast three votes and Texas two against the measure.

Industrial progress in Florida and Texas has been wholly without benefit of Federal bounties, but those States increasingly are paying the Federal taxes which have gone to subsidize TVA.

It is most important to note that Democrats from the Far West, which enjoys many similar public utility preferences, voted solidly for the TVA bonding power, and that the scant seven Republicans supporting the bill came mainly from that section.

SEEK HIGHER INTEREST

A companion piece of the fight over bonding power for TVA is President Eisenhower's recommendation in his budget message that the 2 percent interest rate on U.S. Treasury loans to the Rural Electric Cooperative Administration, be raised to match what the Government pays on its borrowing.

It was brought out in that connection that well over 90 percent of American farms have been electrified, with results that RECA borrowing now goes largely into providing services to city and small town folks in competition with private utility companies.

Just last week the Senate voted to sustain, but the House narrowly overrode, veto by President Eisenhower of a bill which would have taken from Secretary of Agriculture Benson authority to pass on loans by the Government to rural electric locals.

The bill now passed by the House is the same idea, applied to the capitalization of TVA expansion.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. WIDNALL. Mr. Speaker, this past weekend I read with interest editorials on the housing bill just passed in the House of Representatives. I have

asked leave to extend my remarks in order to include editorials from the Newark Evening News, the New York Times, and the New York Herald Tribune, all dated May 23, 1959.

I would like to particularly call the attention of the House to the New York Times editorial, as I feel that in its views concerning the conference, it clearly recognizes the overall picture and the sincere views on both sides that must be compromised to enact an omnibus housing bill. In both the New York Times and New York Tribune editorials there was full recognition of the need for fiscal responsibility, as expressed by President Eisenhower and the administration. It is my hope that the bill as finally written will give concrete evidence of fiscal responsibility on the part of the Congress.

As the New York Herald Tribune editorial states:

It can be said that unless the Government's economic behavior rests on some kind of balance between revenues and spending, the new houses that are built, if any, will be built on sand.

The editorials follow:

[From the New York Times, May 23, 1959]

THE HOUSING BILL

The liberals in the House have scored a notable victory on the big and complicated housing bill. For the most part, the product of their labors is in the public interest—urgently needed authority for such important domestic programs as slum clearance and low-rent housing for families displaced from slums. But the victory may be short-lived if the President, as he has strongly indicated, feels he must veto the bill on the ground of excessive cost.

The President's position is based on a fully justified sense of concern about the condition of the Federal budget, present and future. Nearly every week that passes in the money markets in New York illustrates the problem created for the Treasury by the present level of spending and receipts.

The problem will soon be less severe, as revenues rise with the vigorous recovery in the economy. But the President understandably fears that built-in upward pressures in the budget, augmented by the sort of future commitments that are contained in the housing bill, will postpone indefinitely the debt reduction and tax revision he feels are urgently necessary.

Here is a clash of priorities even more than of objectives. The Democrats in Congress quite rightly feel that the mandate of last year's election was not for retrenchment in such programs as are contained in the housing bill. Indeed, the Nation, and particularly the Nation's cities, need the programs.

The President is not against the program as such and most Democrats are not against fiscal prudence in the economic conditions of the present. But the two sides' sense of what is needed first and most produces a divergence of major proportions.

Is there no possibility of reconciliation? There may not be. And yet the housing bill still must pass through a final, and crucial stage, in which some approach may be made toward accommodation. The peculiar circumstances of the House and Senate bills produce the possibility of a final bill containing substantially smaller spending authority than the total in either individual bill.

Thus the conferees could eliminate the new programs of direct Federal loans for housing the elderly in the House bill and of loans for college classrooms in the Senate bill. They could accept the lower Senate totals for college housing loans and direct housing loans to veterans in rural areas. Without cutting the near-term authorization of 35,000 units of public housing the conferees could cutback on the 4-year duration of the program which is in the House bill.

If the conferees make a genuine effort to meet the President halfway they could legitimately ask the same of him. An impasse would not be in anybody's interest. The final chapters in the housing story still contain the possibility of an ending that, if not entirely happy for anyone, at least leaves the couple getting along with each other.

[From the New York Herald Tribune, May 23, 1959]

HOUSING NEEDS FIRM FOUNDATIONS

This country has never been richer or its people more prosperous. Yet richness has brought its own problem, and one of these is the failure to provide proper housing for an expanding population. In some cases, slums are more widespread than they ever have been. And with each rise in the number of citizens, there must be more and more new houses.

The problem can be simply stated but not the remedy. The House of Representatives has just passed a huge liberal housing bill calling for the expenditure of at least $2.1 billion, a sum far larger than what the administration believes can be squared with a balanced budget. The bill would provide $1.5 billion for slum clearance, or urban renewal in the official phrase, to be spent over 3 years. The administration has recommended a similar sum to be spent over 6 years. Another feature of the House bill, not covered by the $2.1 billion figure, is the erection of 145,000 public housing units over the next 40 years, at a cost of $3.7 billion. The administration opposes this provision on the logical ground that 110,000 of the public housing units authorized 10 years ago have not yet been built.

It is difficult, of course, to decide what housing is necessary and what is not. Ideally, everyone should have the dwelling he is content with, if such a thing were possible. But it can be said that unless the Government's economic behavior rests on some kind of balance between revenues and spending, the new houses that are built, if any, will be built on sand.

[From the Newark Evening News, May 23, 1959]

THE HOUSING BILL

Congress is set upon a budget-busting housing bill that President Eisenhower most certainly will find unacceptable. Acting on the proposition that economy does not begin at home, Democrats and urban Republicans in the House overwhelmingly put through a comprehensive measure that exceeds administration requests for slum clearance and public housing.

The Democrats say the bill will cost $2.1 billion. The administration, which futilely offered its own moderate $1.6 billion measure the previous day, figures that the prevailing measure will take $5.8 billion over the next several years. The House bill now goes to conference with the Senate which earlier voted to spend $2.6 billion on the housing program.

Major differences between the House and administration proposals are in the spending for urban renewal and public housing. The White House contended that new public housing was unnecessary. Of the 810,000 units authorized 10 years ago, 110,000 are still unbuilt. But the House bill adds 140,000 units.

Urban renewal is of special interest to Newark, which is short of funds for its redevelopment projects. The House has provided $1½ billion for nationwide slum clearance for the next 3 years. But the administration recommended spending $1,450 million over 6 years.

While Democrats in the House have scored a clear-cut victory, the 261–160 vote for the housing bill indicates that they may lack the required two-thirds majority to override a Presidential veto. On a relatively minor measure, the Rural Electrification Administration bill, the House last month sustained Mr. Eisenhower's rejection.

It must have been a time for a bit of soul-searching for economy-minded Representatives before going along with the housing bill. They had to weigh a balanced Federal budget against the demands from back home. The determining factor may have been the knowledge that back home is where the votes are.

Cross Country With the on to Oregon Cavalcade—III

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. PORTER. Mr. Speaker, the daily account of the on to Oregon calvalcade by Rudy Roudebaugh, of Drain, is published by the Drain (Oreg.) Enterprise. The third installment appeared in the newspaper on May 14. Under leave to extend my remarks in the RECORD I include it herewith:

WAGON PIONEERS REWARDED FOR HARDSHIPS OF TRAIL

The weather has been anything but ideal for an outdoor camping trip using a horse-drawn covered wagon for transportation, according to Drain representative on the Oregon wagon train, Robert "Rudy" Roudebaugh. More than ample compensation for the discomforts of pioneering on the 2,020-mile Oregon centennial sponsored trip are the gifts, dinners, friendly reception, and enthusiastic cooperation given the seven wagons and 23 Oregonians retracing the historic Oregon Trail.

Rudy was pictured in a three-column photo on the front page of Marshall County News of Marysville, Kans., April 30, with Tex Serpa, wagonmaster, and Mrs. Ernest Mutschler, 96-year-old Leonardsville, Kans., pioneer. Her father once rode a covered wagon across the country to settle in Leonardsville. This is typical of the wide coverage given the wagon caravan by news media.

A day-by-day report on what's happening at the wagon train from the viewpoint of the driver of the Drain covered wagon, Rudy Roudebaugh, follows:

"May 5: Been up since 4:30 a.m. It rained 3 inches last night and still raining this morning. Dan sure has a cough and doesn't eat very good. 8:31 and haven't got started yet. Janell is still asleep. We are in Hebron. A man is trying to trade horses.

Mine seems to be going downhill. 8:46 here we go. The delay was a wagon that had to be greased. They should be greased at night. I grease mine every night as soon as we make camp. Looks like Janell is going to sleep all day. 9:32 Little Blue Springs Creek water is running down the bank. 10:53 at Deshler (population 1,200). The highway goes within half mile of the Oregon Trail here. The children are all out to see us, and look through the wagons. Janell is still asleep. The horses

seem to handle pretty good this morning. 11:08 and we are on our way again. The Deshlers Brownie Broom Co. gave each one of the wagons a whisk broom and large broom for the whole camp. 11:20 Janell is finally getting up. 12:12 we are pulling out to feed horses and have lunch.

"12:48: We are ready to roll again. Dan ate only half of his grain, Daze ate all of hers. It has stopped raining but still cloudy. 1:06: I see a schoolbus ahead so we will have more company. Ruskin is about half mile off the highway (population 220). Here come two more buses. Janell is driving now and I'm going to try and get some sleep as I have to stand watch tonight. 2:40: We have arrived at camp. Daze is going to have new shoes put on this evening (front feet). Well, I have my wagon greased and ready to go in the morning. Black clouds are coming in from the southwest. We made 21½ miles today. I guess we must have brought the rain to Nebraska."

BRIGHT, COLD, AND WET

"May 6: The sun is out bright today and the cold wind is out of the northwest. It rained 3 inches last night. We have 21 miles to go today. 8:30: We are underway. We are second in line this morning. Someone seems to be having trouble with their mules. We are heading west on highway. Only got the left front shoe on Daze last night. 9:25: Now we are going north. Nelson is 4 miles away. We are heading right into a north wind and it's chilly. Janell walked at least 5 miles today. 10:13: At Nelson (population 810). Here come some saddle club riders to meet us. They sure have lively horses. They have a big welcome sign for us. They also have the streets roped off for us.

"Here comes the school band and also all the other students are out. The band played about 10 songs for us. We also had television people out here for us. 11:15: We are going to leave now with the band leading us out of town. Janell is doing the driving through Nelson. 12:06: Stopped for lunch and fed the horses at a little old country school, Bethel. Oh yes, the chamber of commerce fed us our lunch today. 1:08: We have 5 miles before camp. That will make 21 miles for today. The wind has gone down some. 2:32: We are at camp 8 miles north of Nelson on the James ranch. The chamber of commerce is coming to take us to town for dinner and showers.

"May 7: The sun is out bright this morning. Gwen James, age 6, is riding in our wagon with Janell. She is the daughter of the farmer we stayed at last night. 8:59: We are on our way. We just seen the longest freight train I've seen in a long time, 131 cars with 3 baggage cars and coach. 10:45 and we are in Fairfield in front of the grade and high school. Dan and Daze each got one shoe on their right front foot last night. It's clouding up and it looks like it's going to rain again. We started out with a little girl and ended up with two more. They were freshmen schoolgirls from the same farm. 11:25: We are on our way to Minden where we will spend the weekend. And then only 50 miles to my hometown of Lexington. We have been on good roads today. 11:48: We have stopped for lunch at the Jake Lindeman farm. Both Dan and Daze have eaten their grain today. 1:00: It looks like rain, hot and cloudy. 3:07: Camped at Heye Bukr farm at Glenvil, right on the county line between Clay and Adams Counties. My horses have lost so much weight I had to buy new collars again. 7:55: We just had dinner here at camp and talk about people, they are all over the place. You can look down the road for a mile and see cars parked."

ON THE OLD OREGON TRAIL

"May 8, 8:02 and ready to roll. Believe it or not Janell is up this morning. Boy, Daze is raring to go. The weather is cloudy and an east wind. 9:09: Crossing the Little Bule River. 10:10: Minden is 31 miles away. We were on the old Oregon Trail for about 6 miles today. The rest has been rock and gravel. Janell went back to bed. 11:55: We have stopped for lunch. Dan and Daze ate all their feed and drank their water. 12:05: Three school buses from Bladen to see us. 1:23: Roseland (160 population). Same reception as all the other places, glad to see us and wished us luck. I'm really enjoying this trip and that goes for Janell. Tell everyone hello from us both. When I pass out the letters from Drain to the schoolchildren I'll have their teacher look Drain up on the map and plan on coming out here and see us. Janell has gone into Hastings to see the municipal museum. I'm here alone in my wagon catching up on my writing.

"May 9: Two men from Gothenburg came to see me last night and we had a real visit. I guess I better say they were old school friends. We were all given a gift of a lap desk last night. It rained all night and looks like rain all day today. We will camp at Helen Babels farm tonight. We will be in Minden about 2:30 at the fairgrounds. It's 7:55 and we are ready to roll. Janell is rereading the Drain newspapers and your letters. 8:25 and we are 17 miles from Minden. It has stopped raining. 9:39 Kearney County. 10:32 at Norman (population 70). 10:56 Going to have myself a cup of coffee. I carry some right with me.

"Boy, Daze is really on the ball and wants to get going. 11:58 Five miles from Minden. We are going right on in as its raining and cold. 12:12 We are about to Minden and I see some saddle horses coming to meet us. 1:14 Arrived at Minden (population 2,120). We had dinner last night at Kearney. The chamber put it on. My mother was there and took Janell home with her for a few days in Lexington, Nebr."

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 23, 1959, and statement on the farm program:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MAY 23, 1959.

A bill, H.R. 7007, to authorize appropriations to the National Aeronautics and Space Administration (NASA) for salaries and expenses, research and development, construction and equipment, and for other purposes, came before the House for the first time by the new Committee on Science and Astronautics. Controversy immediately developed by precedent, procedure, and economy-minded Members, because of the suspension of rules procedure which permits only 20 minutes' debate on each side, pro and con. For these reasons: (1) A new committee's first authorization bill; (2) no printed hearings; (3) $580 million involved; (4) space, a new, complicated and interesting subject matter; (5) section 4 placing space appropriation separate from the independent offices of Government—the opposition developed (including myself). It passed 294 to 128. There are many unanswered questions the committee could have answered if regular debate had been permitted.

The agriculture appropriation bill of $3,939 million brought on the usual heated debate. Activities (some necessary) are—research, disease and pest control, meat inspection, soil conservation, marketing services, school lunch, soil bank, commodity stabilization, REA, crop support loans (loans farmers need not repay)—and special activities, including international wheat agreement, emergency famine relief, Public Law 480 ($968 million) and bartered material for stockpile. The usual recriminatory charges were hurled respectively by those blaming the farm situation on not enough or too much Federal aid and control. The principal amendment demanded by Republicans placed a top limit of $50,000 on crop loans. Some support loans run into five and six figure amounts, even over a million. Actually, most beneficiaries of the program will not be affected. In 1958 on all crops there were more than 700,000 loans, but only 1,229 in excess of $25,000. The amendment passed 262 to 165 (ALGER for) despite heavy Democrat and House leadership opposition. Someone should ask who is for the small farmer?

To me, the American legislative something-for-nothing tragedy is embodied in this bankrupt farm program, which no amendments, no matter how brilliant can change. The farm subsidy program should be repealed. Although the economic dislocation of such sudden termination has prompted the administration's endeavor to gradually eliminate these supports, despite political opposition, we need to get back to first principles (see attached farm program views).

The housing bill, S. 57, brought on the year's biggest and most controversial debate. The Rules Committee's 6-6 tie blocking the costly Democrat housing bill from House consideration was broken when the leadership agreed that a much less costly Democrat substitute bill could be presented by HERLONG, of Florida. This bypassed even considering the administration bill. All three, the Democrat leadership bill ($5,800 million) the Herlong substitute ($1,300 million), and the administration bill ($1,600 million), agreed on extending the FHA loan insurance authority by $10 billion. The Democrat leadership bill included also: (1) 140,000 new public housing units; (2) $400 million for college housing loans; (3) $100 million for elderly housing loans; (4) $1,500 million for urban renewal for 3 years; (5) raise FHA mortgage amounts and duration and lower downpayment; (6) continue and expand Federal national mortgage insurance secondary (FNMA) loan market. The substitute bill differed in three ways: (1) striking out public housing; (2) cutting down urban renewal to $600 million for 2 years; (3) placing the spending under the Appropriation Committee's control instead of direct Treasury payout. One hundred twenty-nine Republicans and sixty Democrats joined to support the substitute, but were beaten 233 (including 19 Republicans) to 169. Then the Democrats successfully beat Republican efforts to reduce the amounts and to eliminate public housing. Joint efforts resulted in keeping the spending under Appropriations Committee control 220 to 201. Other amendments approved included one to permit hotels to be part of urban renewal.

Amendments defeated included: (1) To cut out public housing (a coalition of Republicans and some beaten Democrats); (2) to make public housing bonds taxable; (3) no discrimination in public housing because of race, color or creed. My efforts were directed to (1) replacing the costly bill by the substitute; (2) eliminating public housing;

(3) cutting down urban renewal amount and challenging eminent domain's constitutionality; (4) challenging the validity of the premises justifying Federal subsidies; (5) eliminating tax-exempt status of public housing bonds.

The bill passed 261 to 160 (ALGER against) and now faces a veto. If vetoed, the big spenders will have killed a housing bill for the second time.

THE FARM PROGRAM

(Statement by Hon. BRUCE ALGER, of Texas)

The farm problem is your problem. Think not? Consider for a moment:

Do you pay taxes? If you're the head of that average family we keep hearing about, you shelled out over $75 in taxes last year just to support farm prices or to funnel money directly to farmers.

Do you eat? One of the things your own tax money bought you was the privilege of paying higher prices for your family's groceries than you should have.

Are farmers your customers? No matter how you make your living, all business suffers when the sizable farming segment of our population faces lost markets and lower income. Indeed, the farm problem is everybody's problem.

Before dreaming up any answers, let's consider some fundamental questions—like what is a farm? About 2 million farms (and that's only 44 percent of them) account for about 90 percent of all U.S. farm products sold. These farmers get most of the Government aid too, but how much they've been aided by it is open to question. On the other hand, 2.7 million farmers (56 percent of the total number) raise less than 10 percent of our farm produce. Price supports have meant less than $100 extra per farm to them, and these are the fellows who are up against it. They need new income—not Government handouts.

Why the huge surpluses? Because of World War II. Facing record needs for food and fiber, Congress guaranteed farmers high price supports as a production incentive, and in this hour of need farmers came through with the greatest output per man in history. This was good for them and good for the country. But after the war, Congress continued these price support incentives, for reasons too obvious to dwell upon, and farmers continued to produce at record levels. Who wouldn't?

With crops far greater than could be marketed at these prices, Government-owned surpluses mounted. Tighter acreage controls were more than offset by technological advances in farming, and surpluses continued to pour in. 1958 saw huge overproduction again despite lowest acreage allotments in 40 years and reduced price supports. Since 1953, Mr. Benson has striven mightily to move these price-depressing Government-owned stocks—he has disposed of over $16 billion worth—but he might as well be trying to empty White Rock Lake with a bucket during a steady rain. Today, the Government has about $9 billion invested in surplus farm products—far more than we had in 1953. It's costing the taxpayer about $3 million a day in just storage and interest charges.

Where are we now? Today the efficient American farmer is like the fellow who said he could handle his enemies but who prayed for deliverance from his friends. After 25 years of politically motivated aid programs, here's what we've got:

1. Farm income down $2 billion. These huge surpluses, created by the very laws aimed at propping up farm income, hang over the market and have actually depressed farm income.

2. We have spent $18 billion tax dollars to support prices and no end in sight. Terrific cost of farm program is building resentment against farmers, and it's not their fault.

3. Automatic surpluses inevitable under present law. We spend billions to sell and give away surpluses, but, by law, price supports must be maintained at levels too high to move the crop, encouraging surplus production again.

4. Government controls shackle farm progress—abolish efficiency, 40 percent of cotton acreage allotments amount to less than 5 acres—three-fourths of burley tobacco growers each permitted 1 acre or less. Efficient farming on this basis impossible. A ceiling (and a low one) is thus set on farmer's opportunity to progress.

Cure-alls by the bushel: Another surplus we have created is in programs and schemes to save the farmer. Each day's mail here brings its quota of plans. Some call for more and higher price supports, some for a two-price plan (high at home—cheap abroad) and some for direct handouts to farmers. All that I have seen, it seems, would create as many problems as they might solve, and contain the seeds of self-defeat.

Some simple facts: (1) All political attempts to solve this essentially economic problem have failed; (2) the small farmer, who really needs help, has benefited but little from price support programs; (3) Government's legitimate role should be to help farmers help themselves through research, educational, and marketing programs; (4) nothing has ever worked so well as freedom.

Does freedom work on the farm? With price supports and controls, U.S. cotton acreage today is about one-third of what we planted in 1930, while world acreage is up. We have lost our markets at home and abroad to foreign competition and synthetics. Meanwhile, back at the ranch unsupported and uncontrolled beef producers are thriving and beef consumption (56 pounds per person in 1951) had soared to over 85 pounds per person by 1956. The only commonsense farm program is one based on freedom for the farmer—freedom from quotas, freedom from controls, yes and freedom from stultifying high price supports.

The administration and Secretary Benson have tried manfully to free the farmer from Government controls, to return to him free choice in managing his own farm and to return his produce to a free marketplace. At best, the transition would take time, for the present situation isn't the farmers' fault, and sudden economic dislocation wouldn't benefit anybody. However, Benson keeps plugging away at getting started in this direction, bitterly opposed at every step.

The issue will eventually be resolved by you, the voters. As I said, the farm problem is your problem too.

What Strange Ideas Reds Have on Peace

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. FEIGHAN. Mr. Speaker, a very thought-provoking and a brief, clear, and realistic analysis of what the Communists mean by peace appeared in an editorial in the Cleveland News on May 20.

The Cleveland News, as always, presents sound, objective views in its editorials. I recommend the reading of this editorial.

Under leave granted, the editorial is inserted herewith:

WHAT STRANGE IDEAS REDS HAVE ON PEACE

The Communist committee that annually picks the winner of the Lenin Peace Prize must have known which side its bread is buttered on when it chose Soviet Premier Nikita Khrushchev for the 1958 award. Tass reported that Khrushchev was honored because as an "outstanding public leader and statesman," he worked "for the benefit of peace" and "embodied in a most full and striking manner the peaceable policy" of the Soviet Union and the Communist Party.

This is the same Khrushchev who liquidated tens of thousands in the Ukraine like vermin, according to his own testimony; who ordered the butchery that broke up the Hungarian revolt; who directed the doublecross and murder of the two Hungarian rebel leaders; who supports and condones Red China's policy in Tibet and the shelling of the offshore islands; who recently told American visitors that "we Russians will exterminate you."

Is this what wins peace prizes in the Soviet Union? Then Joe Stalin, Adolf Hitler, and Al Capone deserve some medals.

Agricultural Dependence on Oil May Lead to Famine

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, in the break-neck race to arm this country, we are inclined to lose sight of the fact that we are rapidly depleting a very important resource that has become indispensible in our present economy.

America is rapidly becoming a nation that lives on wheels and it takes gasoline to make those wheels go round.

Many facets of our economy are presently dependent on petroleum, not the least of which is agriculture.

In the University of California clip sheet for release on May 9, is an article by Dr. Raymond B. Cowles, professor of biology, which I include in these remarks. Dr. Cowles' article is timely and thought provoking:

AGRICULTURAL DEPENDENCE ON OIL MAY LEAD TO FAMINE

LOS ANGELES, May 9.—America's highly organized and efficient food production system paradoxically may be helping to lead us to famine.

So points out Dr. Raymond B. Cowles, professor of biology at the University of California, Los Angeles.

Petroleum is the life's blood of agriculture, he notes. It flows through the tractor that pulls the plow, the harvesting machine, the jeep that herds the cattle, the truck that delivers food to the market, and the plane that dusts the crops. In short, the internal combustion engine is the factor that enables 15 percent of the Nation's population to feed the entire United States and parts of the rest of the world.

Unless some unsuspected new energy source is discovered, the rapid depletion of our petroleum resources is a quick way to famine, the UCLA biologist says. Our agricultural system would not be able to do this job even with limited petroleum. It would take several decades to breed necessary draft animals to replace farm vehicles. Their food consumption would also be a problem.

Atomic power is not practical for relatively small farm vehicles because of the heavy shielding necessary. Battery-powered electric vehicles involve scarce metals.

The only answer to the problem in sight is to limit the population to such a degree that food resources could be converted to alcohol for engine fuel.

Colonization of other planets has been suggested as a solution to the world's overpopulation problem, Dr. Cowles notes. "In time it would take all the known iron resources to provide spacecraft to convey India's annual surplus population to the nearest possibly inhabitable planet," he points out.

Classics of Democracy

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an article from the Denver Post of May 18, 1959, by the eminent columnist, Roscoe Fleming, as follows:

MASS PUBLISHING OF CLASSICS A MUST

(By Roscoe Fleming)

Five years ago Congressman BARRETT O'HARA, of Chicago, found that there were no copies anywhere available in the world on a grassroots level of the books in which our forefathers found their inspiration.

Not even the Constitution nor the Declaration of Independence had been translated into languages that could be read and understood by the people in awakening lands and as hungry for democratic inspiration as were our forefathers.

He said not even "The Federalist" has been translated into more than two or three languages, and that this had been only in limited editions now out of print.

"We * * * had been building up the military strength and the economic stability of the nations joined with us in the cause of democracy. But we had not been reaching into the minds and hearts of the people.

"We were losing that fight while * * * in every bookstall in every language at prices within reach of everyone, were the words of the architects of the ideology of communism."

So O'HARA asked hundreds of people for suggestions as to what should go into a list of all-American books to be sold cheaply to the peoples of the world in their own tongue.

He got encouragement both from private and public sources—from the Book Publisher's Council and the U.S. Information Agency.

By now at least a few of the classics that explain what America is all about and the nature and inspiration of our liberties, have been translated into foreign languages of which you may never have heard but are spoken by millions of people, such as Gujerati and Telugu. Books are on sale in many countries in the language of the country.

The list includes "The Federalist," several collections of Ralph Emerson; one book by John Dewey; Learned Hand's "The Spirit of Liberty"; several by and about Thomas Jefferson; several by and about Abraham Lincoln; De Tocqueville's "Democracy in America"; Henry Thoreau's "Walden"; Mill's "Essay on Liberty," and two about Woodrow Wilson.

(I still think that some modern works should be included such as Gerald W. Johnson's "Incredible Tale," or one of the late great liberal Elmer Davis, but maybe those can come later).

The books have been translated and published under all sorts of auspices, and at an extraordinary range of prices. For example the "Federalist" in French costs $9.60 and in German, $7.41. Most, however, sell for less than $1 in our currency, although considering the economic level of most of the countries, that still represents a considerable sacrifice for most people.

O'HARA makes his report proudly and he has every right to. This is a needed enterprise that would never perhaps have been undertaken without him.

But he points out that Congress has never appropriated for this program specifically, and that without subsidy the voice of democracy will remain too still and too small to match the ideological roar of our opponents.

Their state presses and state stores pour out the books that argue for communism, by the millions and in scores of languages. And if they can't sell them, they give them away. We are still trying to match a calliope with a penny whistle.

More power to O'HARA. And may Congress decide that men's minds are worth battling for, too, along with their stomachs, and their ambitions to be somebody.

P.S.—By the way, how long has it been since you read one of these?

Senator Kennedy's Remarks at United States-India Conference

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. BOWLES. Mr. Speaker, earlier this month on May 4 and 5, the Committee for International Economic Growth sponsored a highly significant conference here in Washington on the subject of "India and the United States, 1959."

References have been made previously here in the Congress to the contributions made at the conference by a wide cross-section of outstanding commentators on Indian-American relations.

Among the most eloquent and effective of the speeches delivered at the conference was one entitled "The Bases of U.S. Interest in India—Its New Dimensions" by the distinguished junior Senator from Massachusetts, the Honorable JOHN F. KENNEDY.

Senator KENNEDY's interest and concern for the future of free India has been enormously heartening to all of us who feel as he does, that India's success or failure will determine the future of freedom in Asia.

In his conference speech, Senator KENNEDY demonstrated again, as he has on many occasions in recent years, a succinct and imaginative grasp of the economic, political, and strategic role of India in Asia. I think that speech admirably reflects the kind of leadership which Senator KENNEDY is devoting to this subject, both in his legislative capacity in the U.S. Senate, and in his outside contribution to public awareness of this vital question.

Under leave to extend my remarks I include the text of his speech as follows:

THE BASIS OF U.S. INTEREST IN INDIA—ITS NEW DIMENSIONS

(Remarks by U.S. Senator JOHN F. KENNEDY, Democrat, Massachusetts, Conference on India and the United States, 1959, sponsored by the Committee for International Economic Growth, Washington, D.C., May 4 and 5, 1959)

No struggle in the world today deserves more of our time and attention than that which now grips the attention of all Asia. I am not referring to the unhappy tide of events in Tibet, where the world is being shown once again that man's eternal desire to be free can never be suppressed. Nor am I referring to the intermittent hostilities that endanger the Formosan Strait, or the truce lines in Korea and Indochina. I am referring to another struggle equally fierce but less obvious—less in the headlines but far more significant in the long run.

And that is the struggle between India and China for leadership of the East, for the respect of all Asia, for the opportunity to demonstrate whose way of life is the better.

The battle may be more subtle than loud—it may not even be admitted by either side—but it is a very real battle nonetheless. For it is these two countries that have the greatest magnetic attraction to the uncommitted and underdeveloped world. It is these two countries which offer a potential route of transition from economic stagnation to economic growth. India follows a route in keeping with human dignity and individual freedom, with only haphazard assistance from this country. Red China represents the route of regimented controls and ruthless denial of human rights, with considerable aid from the U.S.S.R.

It should be obvious that the outcome of this competition will vitally affect the security and standing of this nation. But do we fully realize how it is coming out? Both China and India began their development efforts at about the same time—1950. They started with similar economic structures, similar standards of living and similar problems of skilled labor and natural resources. Actually India had some advantages—in transportation and trained personnel, for example.

But the harsh facts of the matter are that in the last decade China has surged ahead of India in most sectors of its economy. Its gross national output has expanded about three times as fast. In terms of industrial capacity, investment, education and even household consumption China has slowly pulled up and now moved ahead. Its food production has nearly doubled, while India's has increased by less than 50 percent. By the most authoritative estimates, at present levels of agricultural growth, India will have by 1965 a food production deficit of over 25 million tons, a gap which cannot be filled by any foreign aid or domestic rationing program.

In steel production, China has moved from a position of inferiority to marked superiority. In 1950 China produced as much steel as Great Britain did in 1880. By 1958 China has moved to a point of productive superiority in steel to modern Great Britain today—and is making equal growth in coal and other major ingredients of national

strength. Chou En-lai declared at the party Congress this past month: "It took us only 6 years to achieve in steel production what took Britain more than 50 years."

Since 1952 China has tripled the number of engineers and technicians in its industries and added 4 million workers to its skilled labor force.

Last year, China's rate of economic growth was at least three times as high as India's. Perhaps her official figures which claim to have doubled both agricultural and steel production may be discounted—but the fact remains that they are based on a hard record of fact compared to the sagging performance in India—and this is the record which has great appeal to those nations uncertain of which route they should follow.

Within the last year the Chinese have produced their first automobile. Within the next year they may have launched their first earth satellite. Even more seriously, they may well begin to take their place among the select company of nuclear powers. And perhaps equally significant for the future is the fact that China has become a major trading nation, not only in southeast Asia, where she is gradually supplanting Japan, but also in the growing trade movements to Europe and Africa. Indian primary products such as manganese ore and oil seed, for example, now suffer heavily as a result of China's price competition. Red China is now able to repay its loans from the Communist bloc, while India is not only in need of considerable further assistance, but has been forced to drastically reduce its foreign exchange reserves to meet its investment gap.

For the first time in modern history a government appears to have found a way—however brutal its human defects—which appears to solve the problems of large peasant underemployment and labor surplus. The mobilization of the unemployed mass of Chinese rural workers through economic communes, cottage industry, small pig-iron schemes and all the rest is an achievement whose political and intellectual impact is less developed areas is bound to be immense.

For the ambitious goals and growth of both the Russians and the Chinese are major political influences throughout the newly awakened world. The sturdy confidence of the Red Chinese is measured against the uncertainties of the Indian Government. The Chinese leader, moreover, boasts that within the next year China will make still further leaps into the future. He promises that the total value of agricultural and industrial output will rise by as much as 40 percent in 1 year. He hopes, for example, to raise coal output by 110 million tons in 1959 alone.

Even if these hopes cannot be fulfilled, in India—by contrast—targets are wavering. Hopes are set upon maintaining a real rate of growth of only 2 to 3 percent. This year the Indian population will rise. Increased agricultural output may not even feed the nearly 8 million new mouths of India's exploding population this year. It is in this setting that we consider this challenge, not by playing down and depreciating the very real physical achievements of China, but rather by determining to match these achievements in India by a real record of performance consistent with our ideals and democratic methods.

For the struggle is not over, and the potentialities for gain in India are still great. In the Chinese language, the word "crisis" is composed of two characters, one representing danger, and one representing opportunity. The danger now is clear. But let us also make the most of our opportunities. For if they are lost now, they may never come again.

India's population represents 40 percent of the uncommitted world. It is larger than the total populations of the continents of Africa and South America combined. Unless India is able to demonstrate an ability at least equal to that of China to make the transition from economic stagnation to growth, so that it can get ahead of its exploding population, the entire free world will suffer a serious reverse. India herself will be gripped by frustration and political instability, its role as a counter to the Red Chinese will be lost, and communism would have won its greatest bloodless victory.

So let there be no mistake about the nature of the crisis—both the danger and the opportunity. And let there be no mistake about the urgency of our participation in this struggle. It is not enough that we participate on a crash basis, for temporary relief. We must be willing to join with other Western nations in a serious long-range program of long-term loans, backed up by technical and agricultural assistance, designed to enable India to overtake the challenge of Communist China. The tool for this program can well be the Development Loan Fund.

I have joined with Senator FULBRIGHT in proposing that the operations of the Development Loan Fund be stabilized and its scale increased by placing it on a 5-year basis with authority to loan up to $1.5 billion a year. If by next year we can build up the resources of the Development Loan Fund to this level with assurance of continuity, then the United States will be in a position to exercise real leverage on the economic growth of the less developed countries and to give international leadership in the common efforts of the free world. We should embark on these reforms not at some indeterminate date in the future, but this year when there are real opportunities to seize.

Our assistance thus far has been limited to emergency aid to meet immediate crises and existing shortages. We have not met the requirements essential for long-range economic growth—nor have we alleviated the harsh realities which India faced a year ago. Her population continues nearly to outplace her economic development, her shortage of foreign exchange continues to increase, and a general loss of hope and morale continues to spread.

This is the critical year for India. This is the year when the second 5-year plan will prove to be either fruitful or futile. This is also the year when the third plan beginning in 1961 will be designed. This is the year, in short, when India must appraise her future and her relations with the rest of the world.

I do not say that India could not tread water for a few more years before going under. But this is the year the Indians need confidence that they can plan major efforts for long-range progress with some assurance of substantial, long-term assistance from the Western World.

Our aid should, of course, be based upon sound criteria and productive investment. But let us remember economies need time to mature. Our own Nation, in the days of its youth, sold railroad bonds to the British and other Europeans—and these were long-term—40- or 50-year—debentures. With the growth of our productive capacity, we gradually became a creditor nation with the ability to repay these foreign investments. There is no question that the Indians, given proper assurance and assistance, could do the same.

Many of the other governments in Asia and the Middle East are now balanced precariously on the wall of indecision between the East and West. Of course, an adequate program of aid to India is no magic persuader—nor is it a panacea for all of India's difficulties. There is no such solution for these tough problems. The barriers are great. The political and ideological dilemmas are many.

But I am confident that we can recover the initiative, that we can give a doubting world the realization that we—and not Russia and China—can help them achieve real stability and growth.

In short, it is our job to prove that we can devote as much energy, intelligence, idealism, and sacrifice to the survival and triumph of the open society as the Russian despots can extort by compulsion in defense of their closed system of tyranny. We can give a convincing demonstration that we have not a propaganda or crisis interest but an enduring long-term interest in the productive economic growth of the less developed nations.

This year, all over the Western World—and practicularly in an impressive Washington ceremony last month—we commemorate a notable anniversary, the founding of NATO. Whatever its handicaps may be today, this unique and historic association of free nations in a community of effort demonstrated that alliances can prosper on positive, as well as negative, goals.

Let us bear that decision in mind today. For, just as in 1949 the historic front was in West Europe, so in 1959 the gateway to fresh achievement lies in Asia. As Russia cast her ominous shadow across the horizon of our hopes during the last decade, so in the next decade we must take measure of a new power—China, whose mounting strength is the cardinal political development of this area.

How will we meet the challenge of the next 10 years, between now and 1969? Will we be reminded of a lost journey which ended with the fall of Prague in the spring of 1939, or the new vitality of the democratic alliance which was formed in the spring of 1949?

The answer lies in part in congressional action, along the lines I have indicated, on the Development Loan Fund, our best tool for aiding long-range capital development. But the job should not and cannot be done by the United States alone. We need—as we needed 10 years ago—another historic effort in international collaboration—among the capital exporting nations in the world and India herself.

That is why Senator COOPER and I have recommended the creation of an international joint mission to India to work out with the Indians an accurate appraisal of their needs over the life of the third plan, to weave together the various aid programs of the Western nations, and to give both assuarnce and incentive not only to the Indians but to democratic leaders throughout the underdeveloped world, to demonstrate to them, and to enable them to demonstrate to their political followers, that there is a democratic way of achieving economic development as an alternative to the forced mobilization of men and materials. Once again, the free world can unite on a positive program with positive goals—instead of hanging together only out of fear of evils which we all oppose.

Coalitions of free states impose strains and sometimes handicaps, particularly in a period of peace and apathy. The allies of the U.S.S.R. and China, on the other hand, are rarely critical or uncooperative. They are at the very least silently, if grudgingly, submissive. But in a time of crisis, a free alliance finds unity and strength, even in the free exchange of ideas—while the Red satellites in a time of crisis are sources of anxiety, uncertainty, and trouble.

The situation in India is today a crisis, and it is an opportunity to demonstrate Western unity and strength. The moment is ripe for giving new meaning to the Atlantic community and relating its peaceful enterprises to the aspirations of the uncommitted world. If the President and Congress give new momentum to our foreign assistance program, then we can expect with reason that the nations of the Common Market and the Commonwealth will also give realization to a larger effort of their own. Both the Sec-

retary-General of NATO, Mr. Spaak, and the world spokesman of the Common Market, Mr. Monnet, have underscored in recent months that the great issues facing the member nations lie outside Europe and preeminently in the underdeveloped areas.

The creditor states of Europe are deeply involved in India's future, as are Japan and other potential members of this common enterprise. Our task now is to harness all of the resources of these nations more effectively, and to work out with the Indian Government the most effective method in participating in their developmental plans.

If the aid which India has received from all sources should remain at its current level, the increase in national income would barely outstrip population growth, bring no significant decreases in unemployment, increase the alarming deficit of food grains, and require sharp curbs on private enterprise in that economy.

If, however, foreign investment in India from all sources can rise to a figure of about $1 billion a year, then we can foresee with some confidence a growth in Indian income in the range of 25 to 30 percent as against a 10 to 12 percent growth in population. Unemployment might be reduced. Provided India takes vigorous measures of agricultural reform, food supply might finally outpace the increase of population, and the private sector of the economy would again reflect the dynamism which it exhibited at the end of the first plan.

But it is not enough merely to provide sufficient money. Equally important is our attitude and our understanding. For if we undertake this effort in the wrong spirit, or for the wrong reasons, or in the wrong way, then any and all financial measures will be in vain.

I have spoken here today about India's race with Red China. We want India to win that race. We want India to be a free and thriving leader of a free and thriving Asia. But if our interest appears to be purely selfish, anti-Communist and part of the cold war, if it appears to the Indian people that our motives are purely political, then we shall play into the hands of Communist and neutralist propagandists, cruelly distort America's image abroad, and undo much of the psychological effect that we expect from our generosity.

We ought to return to the generous spirit in which the original point 4 program was conceived; stress our positive interest in, and moral responsibility for, relieving misery and poverty; and acknowledge to ourselves and the world that, communism or no communism, we cannot be an island unto ourselves. That alone would do justice to the innately decent motives from which most Americans do support foreign aid.

There is considerable talk these days in Washington about distinguishing between military and economic assistance, and emphasizing the latter. I join in that endeavor, and consider it of major importance to the success of this program. But there are other distinctions which must be made—distinctions which are important to public understanding of the issues—and important to the self-respect and sensitivity of recipient nations.

Let us distinguish between lending a helping hand to countries—such as India—which are carrying forward their own development and, on the other hand, underwriting the entire economies of such vital but shaky areas as South Korea, Formosa, and south Vietnam. In one case, we are providing the all-important missing link in a total development effort, but in the other, capital development is only an incidental part of overall budget support.

Secondly, let us distinguish between aid shipments that are geared to the needs of the recipient countries, and those which are more geared to our domestic needs to dispose of agricultural surpluses. Certainly food shipments for famined relief in India and Pakistan are worth while, but where foreign needs and domestic embarrassments do not happen to coincide so nicely, we should not subordinate needs of the recipient country to our domestic political conveniences.

Finally, let us distinguish between foreign aid needed to prop up a faltering friend and aid which is part of a comprehensive, long-range foreign economic policy.

Foreign aid is important to most underdeveloped countries; but for some of them the real life-and-death question is markets for their export commodities; compared to that foreign aid receipts are often desirable incidentals. Many underdeveloped countries, if they had to choose between foreign aid and stable markets, would choose the latter.

The one commodity nations, such as Bolivia and Ghana, are particularly affected by our business conditions and market policies, but even nations such as India are concerned about the economic cycle in this Nation, about our plans for commodity stabilization, and about our hopes for reciprocal trade agreements with more predictable tariff procedures.

All of this, by way of attitude and action, can be done, and must be done.

The free world cannot shame Russia and China into freedom, but it can inspire democracy to enrich its own freedoms. Freedom's banner will be vindicated or lost not by the test of military strength alone, but by the purity and passion of our commitment to democracy, by our dedication to the advancing hopes of new nations, and by our determination to provide that freedom can lift the haggard burden of poverty from desolate lands. We have not yet conquered the frontiers of fear. But neither have we yet fully explored the horizons of hope.

Poison In Your Water—No. 81

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Santa Barbara (Calif.) News-Press of September 30, 1958, entitled "Montecito Sewage Problem Growing":

MONTECITO SEWAGE PROBLEM GROWING—ONE HUNDRED PERCENT GAIN IN SEPTIC TANK FAILURES SINCE 1954 REPORTED

Faced with a 100-percent increase in septic tank failures in Montecito since 1954, the area's only solution is a community sewer system, Dr. Joseph T. Nardo, county health officer, said in a report released today.

The report was release by Montecito Citizens for Sanitation, which is campaigning for passage of the $1,765,000 sewer bond issue in the October 7 election.

INSPECTIONS

"Records indicated," the report states, "that during the first 6 months of 1954 approximately 100 inspections were made by the sanitation staff in the Montecito area as the result of complaints that individual sawage installations were overflowing. During the first 6 months of 1958 over 200 such inspections were made."

Dr. Nardo, commenting today on these figures, pointed out that there are many instances of overflowing septic tanks that are not reported to the health department because either the owners pump them out immediately or the neighbors have septic tank problems of their own and don't want to report on their neighbors.

"Soils of poor porosity and underground seepage from springs are primarily responsible for the malfunctioning of septic tank systems in the Montecito area," the report continues. "Along with poor soil conditions, the increase in population density and subsequent increase in the amount of sewage discharged into the ground may be responsible for the increased amounts of water encountered underground at shallow depths."

ALARMING INCREASE

"During the past year there has been an alarming increase in underground spring action and in the amount of static water encountered when test holes were drilled in septic tank systems.

"It is our opinion that the only solution to the problem is a sewer system. We therefore urge and recommend that immediate plans be undertaken for the sewering of the area with an adequate community system, thereby eliminating an existing health hazard."

Spain and NATO

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. GAVIN. Mr. Speaker, after my tour of U.S. military installations in Europe during the latter part of 1957, I stated in my report to the Armed Services Committee that Spain should be invited to join in the North Atlantic Treaty Organization.

Objections to her entry into NATO are, in my way of thinking, based on feeble reasoning. Those quarters from whence objections come might well indulge in some introspection for the purpose of determining whether their national effort and sacrifice might be increased in compensation for the military potential of Spain which is not now fully available to the NATO partnership.

In the final recommendations in my report, I stated: "The United States make stronger representations for the admittance of Spain into the North Atlantic Treaty Organization."

I wish to insert in the RECORD an editorial I noted in the Friday, May 22 issue of the Washington Evening Star in support of Spain's entry into NATO:

SPAIN AND NATO

For various reasons, none of them persuasive, a few members of the North Atlantic Treaty Organization still oppose Spain's entry into the alliance. But President Charles de Gaulle has announced that France—which used to be bitterly against the idea—now favors such a move, and this may lead, at long last, to favorable action.

In any event, as a matter of political and military commonsense, there can be no doubt that Spain belongs in NATO. Already a member of the United Nations, and of a number of economic and other organizations designed to strengthen Western Europe, it

has all the qualifications for full participation in the alliance. Not the least of these, of course, is the fact that the American air and naval bases on its territory are of vital importance to the defense of freedom. Further than that, regardless of the extravagant and often stupid criticism that has been leveled by outsiders against Generalissimo Franco, his country and its fine people continue to be one of the world's strongest bulwarks against the menace of Red aggression.

Back in 1949, a U.N. majority acted, in keeping with all this, by rescinding the General Assembly's sorry and essentially fraudulent 1946 decision (a decision supported at the time by our own country), aimed at isolating the Franco Government by ending diplomatic contact with it. That egregious error should now be rectified completely by a unanimous NATO vote to admit Spain into membership.

Resolution by the State of Texas Commending Dr. Henry A. Holle

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. THORNBERRY. Mr. Speaker, Dr. Henry A. Holle, a distinguished Texan who is a native of Brenham, Tex., which is in the 10th Congressional District, which I have the privilege to serve, enjoys an outstanding record in the public health program of our Nation and our State.

After having received his degree of doctor of medicine from the University of Texas Medical School, he served in the U.S. Public Health Service for many years, and was granted a leave of absence to serve as commissioner of health of Texas, where he rendered outstanding service.

I take pride in the fact that the Senate of Texas, on April 23, 1959, adopted Senate Resolution 435 as an expression of high regard and esteem for Dr. Holle, and commending him for his valuable service to the State of Texas.

Under previous consent I insert the resolution in the RECORD:

SENATE RESOLUTION 435

Whereas the Texas State Commissioner of Health, Dr. Henry A. Holle, recently tendered his resignation in the midst of derogatory statements about him which appeared prominently in public news media; and

Whereas this distinguished doctor of medicine received his education in the Brenham public schools, Texas A. & M. College, and the University of Texas Medical School; and

Whereas Dr. Holle has risen to international eminence in his chosen profession, having served with the U.S. Public Health Service in responsible positions for many years in this country and abroad; and

Whereas Dr. Holle requested a leave of absence from the U.S. Public Health Service in order to accept the post of commissioner of health in his native State of Texas some 5 years ago, through a sense of obligation to his fellow Texans; and

Whereas during Dr. Holle's period of service in Texas, the State health department has broadened its services to the people and has greatly increased its professional and administrative efficiency, largely through this capable doctor's ability and devotion to duty; and

Whereas the new headquarters buildings of the State department of health reflect the planning and vision of Dr. Holle as well as the confidence reposed in him by succeeding members of the Texas Legislature and other officials of the State; and

Whereas much of the criticism voiced against Dr. Holle has decried his association with an agency of the Government of the United States of America, an honorable circumstance more deserving of praise than censure by his fellow Texans and fellow Americans; and

Whereas additional criticism has concerned alleged technical violations on minor points about which Dr. Holle had previously, with great conscientiousness, obtained competent legal advice and counsel; and

Whereas no charges of malfeasance in office have been directed against Dr. Holle, but many unkind and unsubstantiated remarks have been made about him: Now, therefore, be it

Resolved by the Senate of the State of Texas, That this honorable body hereby desires to place on the public records its high regard and esteem for Dr. Henry A. Holle; and be it further

Resolved, That the Senate of Texas hereby officially commend Dr. Holle for his valuable services to the State of Texas; and be it further

Resolved, That a copy of this resolution be transmitted to Dr. Holle as a token of the esteem in which he is held in this historic legislative chamber.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Death of C. R. Hallmark, of San Angelo, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "C. R. Hallmark, Prominent Banker, Civic Leader, Dies," published in the San Angelo (Tex.) Standard Times of April 27, 1959; and also an editorial entitled "Recognition," relating to Mr. Hallmark's untimely death, and published in the San Angelo Standard Times of April 28, 1959.

Mr. President, this good citizen was a grand gentleman, a true Texan, and a real American, who devoted a lifetime to the best interests to his community, State, and Nation.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the San Angelo Standard Times, Apr. 27, 1959]

C. R. HALLMARK, PROMINENT BANKER, CIVIC LEADER DIES

C. R. Hallmark, a vice chairman of the board of the First National Bank and a civic leader here, died at 5:45 a.m. Sunday in St. John's Hospital after a brief illness. He was 78 years old.

A former president of the bank, Mr. Hallmark entered the hospital Friday for medical treatment after becoming ill at the bank on Wednesday. His death was attributed to double pneumonia.

Funeral services are to be held at 4 p.m. Tuesday at the First Baptist Church with the Reverend James B. Leavell, pastor, officiating. Burial is to be in Fairmount Cemetery under the direction of Johnson's Funeral Home.

BORN IN BELTON

Mr. Hallmark, born November 25, 1880, near Belton in Bell County had been associated with the First National Bank, oldest financial institution in San Angelo, since March 25, 1907. His parents were George Washington Hallmark and Rebecca Clements Hallmark, both native Texans.

Educated in Bell and Coryell County public schools, Mr. Hallmark later completed a combined course in bookkeeping and banking and in 1904 was employed by the L. Miller General Merchandise Store at Orange.

His work with the Miller store was that of general office worker, a job calling for the handling of payrolls of several lumber and paper mills.

While in Orange he became proficient in handling large sums of money and 3 years later he came to the First National Bank as a bookkeeper.

FIFTY-TWO-YEAR SERVICE

A banker here for 52 years—longer in the business than any banker here now—Mr. Hallmark became cashier of the bank in 1923 and 10 years later, he was named a vice president.

The First National Bank, established July 29, 1882, has had only six presidents and Mr. Hallmark was the fifth. He succeeded the late George E. Webb as president after Mr. Webb's death in September 1936.

Other presidents of the bank were: Leasel B. Harris, who helped organize the bank, which was originally the Concho National; Philip C. Lee, W. H. Godair, whom the late Mr. Webb succeded in 1896, and William J. Reed, president at tihs time.

Mr. Hallmark retired as president of the First National Bank March 6, 1959, after Michel T. Halbouty, Houston banker and oilman, purchased 70 percent of the bank's stock for $1,025,000.

REED IS PRESIDENT

Succeeding Mr. Hallmark as president was William J. Reed, former executive vice president and cashier of the Continental Bank & Trust Co., at Houston. Halbouty became chairman of the board and Mr. Hallmark and Clarence R. Webb, who had been exectuive vice president and chairman of the board, were named vice chairmen.

Once Mr. Hallmark had established himself in the banking business he turned his attention to civic work and other enterprises.

As president of the First National Bank, Mr. Hallmark was one of three trustees of the Fairmount Cemetery Trust, a nonprofit organization set up for perpetual care of the cemetery. Presidents of the other two national banks here, Weldon Jones of the San Angelo National, and Claude Gibbs of the Central National, are the other two trustees. At Mr. Hallmark's death the trust held more than $300,000, the money being invested in bonds and first mortgage real estate loans for the benefit of the cemetery.

Mr. Hallmark was appointed a member of the board of the San Angelo Independent School District in 1923 and served as secretary of the board for 13 years.

ORGANIZER

He was one of the organizers and served as treasurer of the Western Reserve Life Insurance Co., which was established here. The firm later moved headquarters to Austin and later was purchased by the Great National Life Insurance Co. of Dallas.

At the time Mr. Hallmark became an employee of the First National, deposits totaled around $1 million. Deposits at the close of business March 12, 1959, the last call from the National Comptroller of the Currency, totaled $17,033,862.54. Loans last March 12 totaled $4,896,268.49. In 1907 the bank personnel numbered only 6; today there are around 55 employees.

The First National grew steadily under Mr. Hallmark's direction. The present building, which has housed the bank since 1905, underwent several remodeling jobs, each one providing for an expansion of facilities.

It was also under Mr. Hallmark's regime that the bank purchased the home and lot of the late Mr. and Mrs. N. M. March, 138 West Beauregard Avenue, as a prospective building site. The property was purchased in December 1956 for $150,000.

BIRD HOME BOUGHT

Halbouty, shortly after purchasing the First National last month, exercised an option on the George J. Bird home, just east of the West Beauregard site, purchasing it for $96,500, thus giving the bank a quarter block.

Mr. Hallmark also served as a member of the San Angelo Parks Board for 14 years and was a member of the Knights of Pythias and the Masonic Lodge.

Mr. Hallmark and Miss Bessie M. Day were married October 9, 1907, and have made their home here since. In the 1936 flood their home, at 532 West Beauregard Avenue, was lost to the raging waters of the North Concho River. The Ranch House has since been built on the property. The Hallmarks resided at 404 South Washington Street.

Mr. Hallmark is survived by his wife, a daughter, Mrs. Brown Shield, of San Angelo, and one brother, Q. M. Hallmark of Killeen.

[From the San Angelo Standard Times, Apr. 28, 1959]

RECOGNITION

To spend 52 years at one job is something of a rarity in a changing world. To spend 26 years as the head of a bank, one of the cornerstones of a community's economy, commends additional recognition.

The late C. R. Hallmark not only wrought these records with the First National Bank here, but he found time to take his place on the school and parks boards and to enjoy the fellowship of the Kiwanis Club. There his mates say he frequently came up with surprising humorous and pithy comment on varied projects of the organization.

That he devoted himself to the affairs of the bank in a way to beget the confidence of the community is in itself a worthy recognition. To be the president of a bank makes one at once something of a community adviser and a steward of the funds of other people. In such a job a man assumes the responsibility of leadership, and banks, by nature of their services, are under heavy pressure to provide it.

Racing Change

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. BEALL. Mr. President, we Marylanders are justly proud of the way in which horse racing has flourished in our State and of the men and women who have been responsible for the exemplary way in which the sport has been conducted. One of the persons to whom is due a major portion of the credit for the health of Maryland racing during recent years is Mr. D. Eldred Rinehart, of Smithsburg, Md., whom I feel privileged to number among my closest friends. As chairman of the Maryland State Racing Commission, Eldred Rinehart utilized the same qualities of leadership, understanding, and perseverance which made him a personal success, to add immeasurably to the stature of racing in our great Free State. Re-

cently, as his term expired and a new State administration named a replacement, the Evening Sun newspaper, of Baltimore, commented editorially on Eldred Rinehart's service, and I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Evening Sun, of Baltimore, Md.]

RACING CHANGE

No convincing reason was offered at the last session of the legislature for abolition of the present three-man Racing Commission and its replacement with a five-man group. Now that Governor Tawes has made his five choices to fit out the new arrangement its underlying motive becomes even more obscure.

Two of the present commissioners, Mr. Shuger and Mr. Chewning, are retained for extra terms. Three new members—Mr. Jackson and Mr. Cuccia, with Mr. Livie to serve as chairman—are being added. The net of it all is loss of Mr. D. Eldred Rinehart, the present chairman, who has proved himself a most effective force for the good of Maryland racing.

None of the Tawes additions shows much promise of making up for the Rinehart loss. To be sure, it might be too much to ask of a practical Democrat like the Governor to keep Mr. Rinehart, who happens to be the Republican State chairman, at the head of this important agency. Still, it is leadership on the commission which counts and only its chairman has the opportunity to lead. Mr. Livie, though a man of good standing, has not hitherto shown high qualities on this score.

The Government's Exchange Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a summary of a talk given before representatives of the New York Department of Education on April 21 by John W. Harrold, of Ellenburg Depot, N.Y.

This is, I believe, an unusually lucid description of one aspect of our governmental exchange program.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

A REPORT ON THE 1959 SEMINAR IN COMPARATIVE EDUCATION HELD IN FRANCE, BELGIUM, AND THE NETHERLANDS

(By John W. Harrold, Ellenburg Depot, N.Y.)

(A summary of a talk given before representatives of the New York Education Department in Albany, N.Y. on April 21, 1959)

During the past decade many thousands of students, teachers, university professors and research scholars have participated in and contributed to the International Exchange Service program of the U.S. Department of State. This year, for the first time, school administrators in the United States were given an opportunity to share in this program. With funds provided under the Fulbright Act, selected supervisors and administrators of elementary and secondary schools participated in the Seminar in Comparative Education held in France, Belgium, and the Netherlands during the months of February and March 1959. It was my privilege to have been a member of this group of American educators.

The basic purpose of the program of the International Exchange Service is to increase good will and understanding between the people of the United States and the people of other countries. The Seminar in Comparative Education contributed to this objective by sending 20 school administrators from various parts of the United States to live for 2 months in Europe and to study and discuss problems in the field of education with many people in the countries visited. The seminar included lectures on elementary, secondary, and university education; discussions on the teaching of foreign languages, science and mathematics; conferences with national and local educational officials; visits to schools of different types; and, contacts with the social and cultural life in the countries visited.

In each of the countries visited we were warmly welcomed and treated with the highest degree of kindness and respect. We worked with many persons and made many friends. Since returning home I have written some 130 personal letters expressing my appreciation to various individuals in Europe who helped to make our trip a most educational and valuable experience. Most of us were invited into homes of different people, to eat with them, to observe their way of living and to discuss life in our respective countries. Reports I have received from other members of the group indicate that all 20 of us have been asked many times to tell our friends and public groups about our experiences and our observations. I am convinced that the seminar in comparative education has contributed much to increasing goodwill and understanding between the people of the United States and the people of the countries visited.

During our all too brief 2 months in Europe we saw, we heard, and we did many things. In spite of our numerous and varied experiences, I am sure that no one of us would qualify as an expert on any phase of European life or problems. However, being steeped in the American way of life, all of us soon came to recognize that in Europe the social status of the family is a dominant factor in determining the educational opportunity of the children. This caused us to inquire about the occupations of the fathers of the 20 Americans who were in positions of more or less importance and who had been selected from over 500 candidates to represent the United States in this new program. Here is what we found: Our fathers were a barber, a blacksmith, a carpenter, six farmers, a grocer, a day laborer, a librarian, a mechanic, a merchant, a minister, a pharmacist, a postmaster, a shipping clerk, a shoemaker, and a teacher. It was our conclusion that few, if any, of us would ever have had an opportunity to be in the positions we are in today if we had been born in and lived in the countries we visited.

As a result of our experience each of us returned with varied impressions and perhaps many of us have new and greater understandings. These are some of the general observations I would make:

1. Our educational horizons were broadened. Never again will we see our own schools, and education in general, through the same eyes as before.

2. We observed the close relationship between the history, the culture, and the social values of a country and its educational system—something that, because we were so much a part of it, we had not seen so clearly in America before.

3. We marveled at the high priority given to education both by the people in general and by the actions of their governments.

4. We recognized the importance and the value to the people of Europe of the classical and cultural subjects taught in their schools.

5. We observed the demanding of high standards of achievement from the primary grades through the university and noted the many who fell by the wayside.

6. We have a greater appreciation of the contributions of the European peoples to our own heritage.

7. Many of us returned with ideas for some shift in emphasis, for some experimentation, for some subject or program innovations.

8. We agreed that it is impossible to transport a system of schools from one country to another country.

9. We have a greater appreciation of the efforts of our own schools to develop in students self-reliance, critical thinking, ability to reach conclusions, to make judgments and a capability of working together rather than acquiring knowledge just for knowledge sake.

10. We have a deeper conviction of the many accomplishments of the schools of America—a revitalized faith in America education and a renewed awareness that it is a fundemental source of strength of our Nation.

11. We are more fully aware of the vast work being done by the United States in the various countries of the world to create goodwill and understanding among the peoples of the world.

12. We came away with a deeper understanding of the countries we visited, with an appreciation of different types of school systems that had many points of excellence, and with a feeling of personal admiration and friendliness toward a people who have courageously rebuilt from the destruction of war and its aftereffects and at the same time have coped with problems of growth, economics, education, and the preservation of freedom that confronts all nations.

The Responsibility of Business in Public Affairs

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. MUNDT. Mr. President, I ask unanimous consent that a speech delivered on May 20, 1959, by William C. Stolk, president of the American Can Co., before a manufacturers association meeting in Chicago, be printed in the Appendix of the CONGRESSIONAL RECORD.

In this excellent speech, Mr. Stolk has done an outstanding job of highlighting the vital need for American businessmen to take an active and interested part in public affairs. I am greatly encouraged by this presentation, for I have long urged businessmen, both small and large, to devote a portion of their energies to the area of public affairs.

American business contains a vast storehouse of administrative know-how; American business is the foun-

tainhead of American ingenuity; American business is the best schooled group in the world as to the practical advantages of a free enterprise economy to all citizens in a representative republic. This know-how and experience should be, indeed, must be, utilized in the intelligent selection of public representatives and in the formulation and development of sound public programs and policies which are in harmony with the fundamental and formative concepts of this Nation.

I commend Mr. Stolk and the American Can Co. for taking the lead in encouraging business personnel to participate in public affairs and practical politics, and I earnestly hope, for the well-being of this Nation, that this speech will receive the thoughtful attention of a great many American citizens.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RESPONSIBILITY OF BUSINESS IN PUBLIC AFFAIRS

(Address by William C. Stolk, president, American Can Co., at the 45th midyear meeting of the Chemical Specialties Manufacturers Association, Chicago, May 20, 1959)

Having been in the sales end of business most of my life, your invitation to be here today is not only an honor but a real treat. There could be no greater pleasure for a salesman than an invitation to sell his bill of goods before several hundred fine customers and equally fine prospective customers—without interruption.

Despite your generosity, I will avoid talking about insecticides, disinfectants, waxes and polishes—and, of course—cans, though the temptation to do so is strong. It would be wonderful to discuss with you new developments, new products, and new markets, and to paint a picture of a great and glorious new future we might share together.

This I would do if it were not that I have become so deeply concerned—as have many other businessmen—with the ominous outlook facing our country. If things continue to go the way they have, there is real reason for serious doubt that we, as a nation, have a glorious future in store for us.

I came here to sell—but not containers. If any businessman has not already been sold, he needs to be sold on the absolute need and urgency to participate in public affairs. My goal today is to convince you of the need for your participation in this vital area and for your help in encouraging, stimulating, and helping your managers, your business associates, and your friends to do likewise.

We, as businessmen, have been working vigorously and conscientiously to increase productivity, cut costs and provide a firm basis for a constantly improving standard of living. But people in increasing numbers are discovering that while we have been busy developing, financing, producing, and marketing new products and services, powerful forces have been working at least as diligently to develop, finance, produce, and market ideas that are seriously undermining our political and economic system.

Standards are being lowered, ideals are being downgraded, character is being weakened, and our Constitution is—in effect—being rewritten. The freedoms now becoming popular are: Freedom from care; freedom from effort; freedom from responsibility; and freedom to get without having to give.

The public is being hoaxed into believing that the Nation can consume more than it produces, that our standards of living can be increased by restricting output and reducing hours of work, and that the good life is a life of irresponsibility.

Efforts are being made to convince the public that the way to have booming prosperity in this country, improve living standards, and withstand the threat of annihilation by Russia—is to forget the balancing of the budget, maintain existing tax rates, increase government expenditures, hamstring business incentive and initiative, build a larger and more powerful Central Government, and move further and further along the road toward socialism.

Some politicians in government, in labor unions, in our two great political parties, and—sad to say—even in our educational institutions have been promoting concepts, ideas, and legislative actions which will surely rob the public of a substantial part—if not ultimately all—of its bank savings, series E bond savings, life insurance protection, pension rights, and other property values.

These same politicians are promoting the idea that business is suspect, that big business is particularly bad, that anything which is good for an employer could not be good for an employee. They are coldly contriving to break down public confidence in and respect for business, particularly big business. This despite the fact that business, and business alone, makes possible the goods and services used by consumers, the income used by tens of millions of people to support their families, and—both directly and indirectly—the great bulk of Government income.

To my mind, we businessmen, individually and collectively, have become much too refined for this day and age. We have striven too hard to seek universal acceptability for ourselves, as well as for our products.

We have devoted too much effort toward attempting to find areas where we can agree with other business managers, with labor leaders, and with Government. We have made too little effort to think about, and speak out on areas of disagreement with labor leaders, with Government, and even among ourselves. We must not, of course, confine ourselves to the purely negative exercise of saying "we are against what you are for." But in order to make clear to everyone what we stand for, and why, we cannot avoid taking an open position against schemes that are designed to overturn the things we seek to advance. For example, as we speak out to support and promote the continuance of a free competitive market for goods and services, we have to oppose the ideas of those who want to see all business management directed by some combination of Federal bureaucracy and union "trusteeship."

Business managers have assumed that, in the area of public affairs, their responsibilities to society are adequately discharged by making a financial contribution, once every 2 years, to the party of their choice and by contributing to the support of business organizations which take stands on legislative issues. This may have been adequate in the dim past—but certainly not in the recent past, and assuredly not now.

You and I and other businessmen, as corporate executives, must give more personal attention to our unique opportunity to exercise the art of leadership—to fulfill our unique responsibility as managers of human resources. As corporate executives we have great opportunity to demonstrate and promote sensible ideas and constructive actions for the common good. Let me be specific: I believe that the economic realities, and the social and political principles, that have operated to achieve success for the American Can Co. as a corporation, are the same realities and principles that have operated to achieve success and prosperity for every employee—in our business, in your business, and for every citizen.

As corporate executives, you and I stand at the head of groups of employees who can and will judge, firsthand, whether our management ideas make sense and deserve their agreement and support. When our own people learn firsthand from us what we stand for—and when they decide for themselves that they agree with us—we will have accomplished our principal duty of leadership as corporate executives.

This, however, is not the end of our task. You and I, and other businessmen—as individuals—must, in order to be good leaders and good citizens, become politically sophisticated. We must, as individuals, personally participate in the job of helping to select, nominate, and elect able people to public office.

If we fail to do so, we can look forward with certainty to the day when the corporation will become obsolete and the Government will become absolute.

Because we—in the American Can Co. management—are so strongly convinced of this, we decided some months ago to do something about it.

We decided we were not going to be passive and thus be a party to permitting our country to be lead, unobstructed, into intellectual, moral and financial bankruptcy by a relatively few, highly vocal people—people who are either selfish, shiftless, power-hungry, well-intentioned but misguided, or are proponents of another kind of political and economic system.

Here, briefly, is what our company is doing in an effort to help preserve and strengthen our economic and political institutions.

We at American Can Co. have laid out a four-part program. Some of the parts are already in action, others are in the make-ready stage. Let me emphasize that no part of our program is a one-shot project or a temporary campaign. All four parts are designed for long-term action, from now on. We wish we had started them years ago.

Part 1 is to inform, equip, and encourage everyone in our management organization to lead out and speak out on the business facts that have a direct bearing on the economic and social well-being of our own company, our own people, and of the Nation. And by "everyone in our management organization" I mean our people at every management and supervisory level from the front office to the shipping dock.

Part 2 of our program is to make sure that every employee, and his family and his neighbors, gets from us, both face-to-face and in writing, a continuous flow of facts and viewpoints to round out his understanding and make it possible for him to reach judgments based on all of the truth rather than only part of it. We are constantly on guard not to underestimate our people's intelligence, or overestimate the amount of information they already have.

The third part is to give our managers the opportunity to study political processes and learn the art of practical politics. Our purpose here is to give our managers, and through them all employees, genuine encouragement to participate actively in personal politics—on their own time and at their own expense, in their own precincts and wards, through the party of their individual and personal choice.

The fourth part of our program is to give elected officials, through our management organization, our mangement views on important national issues as they come up for consideration in pending legislation.

The first two parts of this program do not require anything different in the way of organization structure or operating techniques. This is not to say, however, that these parts will operate by themselves without careful planning and constant attention, from the chief executive on down. Several months ago I tried to summarize this area of our

current program to our entire management organization, in the following three sentences:

1. Let us extend our principles of sound and successful management to provide an increasing initiative to lead out and speak out, in our plants and offices and in our communties, on the affairs that control the welfare of our business and the economic, social, and political climate in which we live.

2. Let us take constant stock of our management decisions and actions, to be sure that our practices and actions are always consistent with our principles.

3. The task remaining, then, is to exercise both personal and corporate leadership, in talking and writing to people to get them to think straight—to make the right choice under sometimes difficult circumstances.

The third and fourth parts of our current program—encouraging personal political action, and putting our management viewpoint on national issues on record with Congressmen—are brand new activities in our company. I want to take a few moments to describe how we are going about serving our apprenticeship in these new ventures.

Our decision to participate much more actively and aggressively in public issues and personal politics was made some months in advance of the 1958 elections, although not in time to make an effective contribution to a better understanding of the major issues involved. We did, however—through a personal letter sent to the home of each one—urge our 50,000 employees to register and vote.

During the second half of 1958, we also sent a series of letters to all of our top management people explaining the purposes of the program and soliciting their support. We asked 153 of these men—managers in plants and offices across the country—to act as official spokesmen for our company and establish direct relationships with the 153 Congressmen and 52 Senators representing the areas in which our facilities are located.

This group was asked to make themselves known to their legislators, to invite them to their plants and offices, and to discuss subjects of mutual interest. In addition, we wrote to the Senators and Congressmen telling them of our new policy of taking a much more active interest in public affairs, of our desire to be of service to them, of our plan to provide our employees with an increasing body of economic facts, and of our intent to speak out on important issues and to study legislative results.

It would be heartwarming to you and even inspiring, to read the substantial number of replies received from Members of Congress which expressed warm approval and enthusiastic endorsement of our purpose. These letters were about evenly divided among Republicans, Democrats, liberals and conservatives.

We are not yet well enough equipped or experienced to be articulate on all important national issues before this session of Congress. So as a practical matter we are limiting ourselves this year to such critical matters as a balanced budget and sound fiscal policy, the encroachment of Government controls over business, and an effective labor law. On each of these, we have considered the problem and have taken a company stand on what we believe is right and what we think Congress should do.

These positions are documented in detail based on our analysis of the need to favor or to oppose proposed legislative actions. They are being given to every one of our top management people. Our positions are also being made known to middle management and all other employees through our normal communication channels.

The 153 managers selected as spokesmen for the company are asked to study these carefully formulated views, and then to make their conclusions known to their legislators. We, of course, expect that all of the others in top management, acting as responsible managers and public-minded citizens, are also studying our views and communicating their analyses to their Congressmen—on an individual and personal basis. We hope that eventually all 50,000 employees, their families and their friends, will join us in articulate support of the same objectives.

Needless to say we appreciate that, to the extent corporate managers confine their communication of ideas to legislators, their influence is limited. We want and expect our managers also to express themselves, on important issues to their management associates, to other employees, and in public. We want and expect them to help others to understand the fundamentals of sound business, sound government and to enlist their support in working toward the common good.

We expect to be successful in helping our employees to gain an understanding of the kinds of legislation which will further the interests of themselves and their company, as well as the welfare of the country. But we know that we, as managers, cannot stop there. Management must also offer employees an opportunity to learn how to translate knowledge into forceful and constructive action.

For this reason we are currently testing out, at several of our facilities, a course designed to provide citizens with a basic understanding of the art of practical politics. This is a course prepared by the U.S. Chamber of Commerce which brings together 12 to 20 people for a 2-hour discussion, once a week, for 9 consecutive weeks. It is expected that those taking the course will be sufficiently well informed to exert a healthy and beneficial influence on politics in their precincts and wards.

How fast and how far we can go in offering this opportunity to an ever-increasing number of our employees will be determined on the basis of the results of our tests.

Nevertheless, we are firmly convinced that if our political and economic system is to survive—perhaps, even if our Nation is to survive—a very much larger number of citizens must actively work to aid in the selection of good candidates for public office, to nominate them, and to elect them. This being so, management has a definite responsibility to help provide its employees with opportunities for political education. We, in the American Can Co., are fully committed to bearing our fair share of this responsibility.

The payoff from all this educational effort will come only if and when knowledgeable people actually support the cause of good government with their own personal effort—using their own time and money. Thus a vastly increased number of people must be encouraged, stimulated, and urged to work in their own precincts and wards for good government, through the party of their individual and personal choice. We intend to provide this incentive.

This is really all we should do. Because the decision to work or not work to promote the cause of good government must, of course, be left to the individual's personal conscience.

In conclusion I want to quote Thomas Jefferson. He said, "I know of no safe depository for the ultimate powers of society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome direction, the remedy is not to take it from them, but to inform their discretion through education."

If and when your management, our management, and other business managements are well on the way toward discharging these important responsibilities to our employees, our companies, and our country, in the field of public affairs, the people will, we can be sure, become enlightened, and—as Thomas Jefferson phrased it—exercise their control with a wholesome direction.

Permissible Radiation Level May Be Too High

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. YARBOROUGH. Mr. President, Lauriston S. Taylor, the head of the National Committee on Radiation Protection, which sets permissible radiation-exposure levels, has said that if the entire population is involved, the current levels might be too high.

I respectfully wish to call this statement to the attention of my distinguished colleagues in the Congress and to all those interested in the problem of radioactivity. When those who set the permissible limits say that they have set them too high, resulting in 200,000 cases—the first generation of tangible, inherited defects—it is time that somebody set safe limits.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Edward Gamarekian which was printed in the Washington Post and Times Herald for Sunday, May 24, 1959, entitled "'Permissible' Radiation Level May Be Too High, Expert Says."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"PERMISSIBLE" RADIATION LEVEL MAY BE TOO HIGH, EXPERT SAYS

(By Edward Gamarekian)

The head of the national committee which sets "permissible" radiation-exposure levels stated yesterday that these levels "might be too high" if the entire population were affected.

Although the National Committee on Radiation Protection has not officially announced what its recently revised "permissible" doses are, its chairman, Lauriston S. Taylor, quoted figures during a WTOP-TV "City Side" program which indicate that the 30-year dose of 15 rems to the reproductive organs now includes the radiation from fallout and atomic wastes as well as the radiation from medical X-rays and radioactive substances normally present in the earth, air and drinking water.

As previously defined, the dose was understood to include only the effects of fallout and atomic wastes dumped into the air, water and ground from atomic power reactors and other sources.

A rem is a unit of radiation exposure. A dose of 3 to 4 rems is acquired by the individual in a generation—30 years on the average—from the radioactive thorium and radium present in nature. The average dose from X-rays is about 5 rems per generation.

GENERATION DOSE DEFINED

Taylor said his committee may come up with a recommended dose for the overall population instead of the average individual. He gave a figure of 14 million rems per million people as a generation dose. This would average out to 14 rems per person but

would permit part of the population to receive more than the average if others received less.

Taylor recently collaborated in the writing of a chapter in a book published by the Atomic Energy Commission which states that a radiation dose to the reproductive organs of 15 to 60 rems per generation would double the rate of genetic damage now suffered by the American population.

In numbers this would mean that "perhaps 200,000 cases of tangible inherited defects would occur in the United States in the first generation, rising slowly to some 2 million cases per generation at equilibrium."

The chief author of the chapter is Walter D. Claus of the Biology and Medicine Division of the Atomic Energy Commission. Copies of the book "Radiation, Biology, and Medicine" (Addison-Wesley)—were given to delegates from all nations attending the Atoms-for-Peace Conference in Geneva last September.

SEES NO REASON FOR ALARM

Taylor, who is chief of the Atomic and Radiation Physics Division of the National Bureau of Standards, said during the broadcast yesterday, "I personally would like to see the causes of fallout removed."

But, he added, "it is with us, and we'll have to do the best we can to live with it. I don't think the fallout problem has reached the point where we should worry to the point of becoming neurotic about it."

The interview by a panel of newsmen covered the effects of radiation on the living as well as the effects on future generations.

Racial Segregation

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Time for Individual to Set Own Covenant in Racial Struggle," published in the Saginaw (Mich.) News of April 26, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME FOR INDIVIDUAL TO SET OWN COVENANT IN RACIAL STRUGGLE

Call it conscience. Call it guilt. Call it, yes, fear—fear for the social future of this community. The day has arrived when to postpone longer an open stand on the issue of a racially segregated Saginaw is no longer tolerable.

This is one of the most crucial issues to be faced in the history of this community—because it calls for individual decision, personal courage and a moral fortitude capable of standing against hostile reaction which must be anticipated at the outset as inevitable.

For pushing this decision off dead center, the Saginaw News commends the General Assembly of the Presbyterian Church, U.S.A., which adopted what it terms "The Covenant of Open Occupancy."

Its broad terms encompass the full scope of segregation as practiced in residential, on-the-job, and educational discrimination. It is a challenge to Christian conscience and an admonishment to the church sessions of this denomination to endorse the covenant and to urge active support of the membership.

Saginaw Valley Presbyterians pledged themselves to promote the aims of the covenant, with special emphasis on its provisions opposing racial discrimination in housing. The following day, the Saginaw County Council of Churches acknowledged the dynamic challenge of the covenant and added its own endorsement with recommendation that the principles be studied by all member churches and other groups.

The News no longer can stand on the comforting and comfortable appraisal by our friends among Negro leaders here that "the News is not a crusading newspaper but its sympathies are well understood." Segregation continues. Problems grow more acute. Pressures on restricted housing in restricted areas deny to almost all of our finest Negro citizens the social opportunities and surroundings to which their economic and intellectual attainments entitle them.

To hang back longer on the premise that we are part of a nationwide pattern and cannot help the Negro citizen to break out of his congested ghetto until greater numbers of Americans demonstrate their readiness to put aside the prejudices of race and color is no premise at all. There is no such thing as a "national movement" except as it is implemented locally by successions of local citizens.

By now, some readers will be registering horrified amazement at the implications of what all this suggests. Let us say here, that we have never written with more sober awareness of a position taken in these columns.

It is intended, quite frankly, to stimulate thinking and to unsettle consciences about this problem to the point that, within this community, some enlightened citizens will "make their covenant" and stand with the churches and this newspaper in support of a rational program of constructive action.

The Saginaw area is far from being in the posture of a pioneer in racially integrated living. Pennsylvania and New Jersey, to name two States, have enjoyed marked success in the development of integrated suburban projects. At last 50 other privately built interracial housing projects are on record in the Nation.

And for an insight into the action procedures of white residents to stem a hysterical tide of distress selling which had been encouraged by the blockbusting tactics of opportunistic real estate firms—read "When Negro Moves Next Door" in the April 4 issue of Saturday Evening Post. It is an inspiring and hopeful report of enlightened neighborhood conduct in the suburbs of Baltimore, Md.

Saginaw's Negro citizens have made few ventures toward locating in the city's solidly all-white neighborhoods, or in its modern suburbs. Obviously this reflects, at least in part, a rather ironclad policy of prohibition effectively enforced by our real estate businesses and lending institutions.

The practice is not to be condemned—unless each of us is prepared to condemn himself. What has gone before and still prevails is in keeping with the tradition of prejudice and fear. During early unsuccessful efforts to gain financial backing for an interracial housing development in Bucks County, Pa., a mortgage company officer turned down the developer with these words: "Fellowship isn't our business. Making money is."

Fortunately, much ice has been broken elsewhere among lending institutions since the soundness of mortgage loans both for new developments and for gradual mixing of all-white neighborhoods has gone forward.

An excellent opportunity for concerted community effort in this direction is presented in the urban renewal area of northeast Saginaw. This 470 acres can become a model of gracious living if properties are offered to potential home buyers in a normal market. We believe that two restrictions should be imposed to insure such a development. First, a minimum price floor barring to the area construction of mass crackerbox houses. Secondly, insistence on an agreed ratio of Negro and white owner occupants.

This project can do little to alleviate the segregated status of the Negro community if it is thrown open only to Negro families. As one of their thoughtful members has said, "If the present pattern of racial segregation is used to relocate the displaced families—on this urban renewal site—it can only mean that a new ghetto will be established."

Discussion and decision should be arrived at on these points well in advance of any property sales, so that everybody understands what conditions must apply. The issue is important enough that, if necessary, Federal authority will be invoked to insure that Federal funds are not permitted to help perpetuate patterns of segregation and discrimination in homebuilding.

This new area represents the first hope for development of homes which would appeal to the higher social-economic groups. It must not be exploited in any way to undermine the best chance this town has to crack its self-made segregation wall.

In taking its stand, the News warns that it will be as militant in its opposition to "pressure group" tactics of minority peoples as it is prepared to be in support of the churches and other groups who pledge their preparedness to work for an end to segregation and the crushing burden it imposes on those who cannot escape it.

The ugly fact is that discrimination in housing is one of the most undemocratic practices in American life today. It is time that we here in Saginaw spoke openly of our feelings. It is time that we began meeting in small groups of mixed races to express the practical problems to be met and to search for practical solutions. Trustworthy examples of local communities more courageous than ours can be drawn on freely.

Once the shock of actual undertaking has been experienced and conquered we will be on the way toward quieting fears for Saginaw's future as a city of "old people, Negroes, and Mexicans." And in reversing an undesirable trend we will surely stand taller in the eyes of our fellowmen and in the private estimate, each of himself.

Education for the Age of Science

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. WILEY. Mr. President, we recall that recently President Eisenhower's Science Advisory Committee issued an 18,000-word report entitled "Education for the Age of Science."

The report, I believe, contains a great many thought-provoking views on our progress in science and education that should indeed be required reading, not only by Congress, but by the American people.

Among other things, the Advisory Committee recommended:

First. Americans should attach greater value to intellectual excellence;

Second. Every school and college should reexamine its curriculum to make sure that it is giving adequate challenge to the intellectual capacities of its students;

Third. The Nation should do far more to enhance the prestige of the teacher and provide him with more effective support;

Fourth. The country should move further toward adapting educational programs to the widely varying competence of students and seek especially to meet the need sof the most gifted students;

Fifth. We should improve our scientific education at all levels, attempting to give greater understanding of science to the nonscientist, as well as to discover and stimulate more individuals who have the talents to become scientists and engineers.

The report by the Science Advisory Committee has made an outstanding contribution to American thinking on the problems and challenges of educating enough scientists and engineers to meet the needs of the Nation now, and for the future.

The report, I believe, should stimulate a new look at our overall educational program.

We recognize, of course, that the Nation must maintain a balanced system of educating individuals, not only in the field of science, but also in economics, sociology, the arts, the humanities, and other fields.

In addition to specific recommendations for meeting the challenge in science and engineering, the report contains thought-provoking philosophical ideas on training in these fields.

I ask unanimous consent to have excerpts of these ideas published in the Sunday Star, as well as a list of the outstanding individuals who served as members or consultants on the panel of the Advisory Committee, printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PHILOSOPHICAL IDEAS ON SCIENCE TRAINING

Americans do not really think that educated people are dangerous or silly—yet the terms "egghead" and "intellectual" are not always terms of approbation.

A successful, democratic society * * * must have millions of well-educated citizens who can comprehend what the specialists and leaders are proposing.

Women * * * constitute an enormous potential resource for research, scholarship, and teaching which we have not even begun to tap.

To be able to think beyond the press releases and publicity statements, to understand the background of national debate requires a greater comprehension of space problems than that provided by science fiction or the comic strip.

Though the star athlete may remain a hero, it is now evident that an even deeper recognition ought to be given to the scholar.

In school or college, learning to think must take precedence over learning to run or swim or drive a car.

There is much more to learn than there was 100 years ago, and, hence, the learning process must be made more efficient at every level. Time is precious.

Teachers' salaries should be increased to the point where the teacher does not have to work on other jobs to eke out a living.

Democracy does not require that everyone go to college. By accepting such a shibboleth we can only debase the significance of a college degree.

Under no conditions should able young people be forced to discontinue their education at any level for economic reasons.

It serves no purpose for the professional man to be critical of high school or any other teaching, unless he himself is prepared to take steps to help improve it. Indeed, it is irresponsible.

Television, a teaching medium of great potential power, has never been adequately studied by those persons who might learn how it could most wisely be used.

Whatever medium is used, science must * * * be made as interesting to the bystander as it is exciting and inspiring to the scientist. Citizens will not submit themselves to adult education in science simply as a response to bugle calls to duty.

The liberal arts faculties must insist that in these days the general baccalaureate degree should not be granted with less than 2 years of science.

Draftsmen, designers * * * and technicians of many kinds are essential to industry and to the engineering profession. These occupations deserve greater dignity and prestige.

For this Nation to graduate less than 650 Ph. D.'s per year in engineering, as was the case in 1958, is to imperil it.

SCIENCE PANEL MEMBERS

PANEL MEMBERSHIP

Dr. John E. Burchard, dean, School of Humanities and Social Studies, Massachusetts Institute of Technology.

Dr. Henry Chauncey, president, Educational Testing Service.

Dr. Caryl P. Haskins, president, Carnegie Institution of Washington.

Dr. Frederick C. Lindvall, chairman, Division of Engineering, California Institute of Technology.

Dr. James A. Perkins, vice president, Carnegie Corp.

Dr. Alan T. Waterman, director, National Science Foundation.

Dr. Dael Wolfle, executive officer, American Association for the Advancement of Science.

Dr. Jerrold R. Zacharias, professor of physics, Massachusetts Institute of Technology.

Dr. Lee A. Dubridge, president, California Institute of Technology (chairman).

PANEL CONSULTANTS

Dr. Harold B. Gores, president, Educational Facilities Laboratories, Inc.

Dr. S. C. Hollister, dean, College of Engineering, Cornell University.

Dr. Frederick L. Hovde, president, Purdue University.

Stephen White, director of the film division, Educational Services, Inc.

Robert M. Briber, technical assistant to the panel.

COMMITTEE MEMBERSHIP

Dr. Robert F. Bacher, professor of physics, California Institute of Technology.

Dr. William O. Baker, vice president (research), Bell Telephone Laboratories.

Dr. John Bardeen, professor of electrical engineering and physics, University of Illinois.

Dr. Hans Bethe, professor of physics, Cornell University.

Dr. Detlev W. Bronk, president, the Rockefeller Institute.

Dr. Britton Chance, director, Johnson Foundation (biophysics), University of Pennsylvania School of Medicine.

Dr. James B. Fisk, president, Bell Telephone Laboratories.

Dr. George B. Kistiakowsky, professor of chemistry, Harvard University.

Dr. Edwin H. Land, president, Polaroid Corp.

Dr. Emanuel R. Piore, director of research, International Business Machines Corp.

Dr. Edward M. Purcell, professor of physics, Harvard University.

Dr. Isidor I. Rabi, professor of physics, Columbia University.

Dr. H. P. Robertson, professor of physics, California Institute of Technology.

Dr. Glenn T. Seaborg, chancellor, University of California.

Dr. Cyril S. Smith, Institute for the Study of Metals, the University of Chicago.

Dr. Paul A. Weiss, member and professor, the Rockefeller Institute.

Dr. Jerome B. Wiesner, director, Research Laboratory of Electronics, Massachusetts Institute of Technology.

Dr. James R. Killian, Jr., Special Assistant to the President for Science and Technology (chairman).

Michigan—Her Heritage and Destiny

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. McNAMARA. Mr. President, this past week, we celebrated Michigan Week in my State.

Sunday, May 17, opening Michigan Week, was designated as Spiritual Foundations Day. It was marked by a sermon on "Michigan — Her Heritage and Destiny" delivered by Rev. Allan Zaun, of the Jefferson Avenue Presbyterian Church, in the Old Mariners' Church in Detroit.

His sermon was so much to the point on a number of subjects that I ask unanimous consent that the text be printed in the Appendix of the RECORD.

I also ask unanimous consent that preliminary greetings by Gov. G. Mennen Williams on that occasion be printed along with the sermon.

There being no objection, the sermon and greetings were ordered to be printed in the RECORD, as follows:

MICHIGAN—HER HERITAGE AND DESTINY

(Sermon given by Rev. Allan Zaun, Jefferson Avenue Presbyterian Church, Spiritual Foundations Day Opening of Michigan Week, Old Mariners' Church, Detroit, Sunday, May 17, 1959.)

This is a day of gratitude and of challenge—of gratitude for the truly wonderful heritage which has been bequeathed to us as citizens of this great State of Michigan, and of challenge because of the exciting opportunities and tasks which lie before us if

we are willing, under God, to possess that heritage, and to fulfill our destiny.

I. HERITAGE

Every great fact, movement, or person has behind it some adequate cause or causes. To contemplate the history of our great State is to recognize immediately that many dedicated persons have given their lives for it—not only in battle, but in the forests and fields, the mines and the factories; the classroom, pulpit, and courts of law.

Indeed, wherever human endeavor has been significant, there a real contribution has been made to Michigan's wealth, both material and spiritual.

Vast and opulent though our material resources may be, the real wealth of this States lies in the abilities and love of its people offered in glad allegiance to the furtherance of our common interests.

The vitality of a people depends in great measure on their faith in realities that are deeper than the concerns of making a living or of finding distraction in pleasure. Men are strong and honest and unselfish as they have faith in Almighty God.

The Scriptures speak very clearly of the need of spiritual foundations for any important enterprise:

"Except the Lord build the house, they labor in vain that build it; except the Lord keepeth the city, the watchman waketh but in vain" (Psalms 127: 1).

What is said of the city and the Nation in God's word is equally true of a State, as we understand it today:

"Blessed is the nation whose God is the Lord" (Psalms 33: 12).

"When it goeth well with the righteous, the city rejoices" (Proverbs 11: 10).

"Open ye the gates, that the righteous nation which keepeth the truth may enter in" (Isaiah 26: 3).

"Where there is no vision the people perish" (Proverbs 29: 18).

Our religious inheritance here in Michigan is rich and deep, made more valuable because of the variety of streams which have flowed into the river of faith. The French traders and their devoted priests, coming with Cadillac in 1701; the beloved Father Gabriel Richard, in the early years of the 19th Century; and the Reverend John Monteith, the vigorous, and valiant Presbyterian, representing a strong Protestant ministry during the same years; and then our Jewish brethren, coming with the ancient splendors of the religion of Israel—all these as well as other traditions, have brought us a heritage that is worthy, indeed.

John Monteith preached his first sermon in Detroit in the Council House on Sunday afternoon, June 30, 1816, taking the text, "Behold, I bring you tidings of great joy which shall be to all the people." This was an appropriate text, for the congregation resembled that of the day of Pentecost (which day, incidentally, we celebrate today), for in that early Detroit congregation that day, there were Methodists, Presbyterians, Congregationalists, Baptists, Episcopalians, and probably many without any denominational affiliation.

A happy condition of involvement in the total life of the community and of religious cooperation characterized these early days—John Monteith was close to Governor Cass, General Macomb, and other men of influence, and likewise he and Father Gabriel Richard were on hospitable terms. They often called on one another, dined, and consulted together.

No one group has a monopoly on the effective contribution it made. To the Methodists goes the credit of establishing the first Protestant Church in the Territory, and to the Presbyterians for founding the first in Detroit.

If the first need of a great and magnificent structure is that it have deep foundations, then surely we gladly acknowledge that our fathers in the faith thrust their foundations down to the fundamental bedrock of trust in God and dedication to His truth.

II. DESTINY

1. Our prime task as Christians is to be concerned about the vitality of our religious witness.

Our duty and joy are to proclaim that God is Sovereign Lord. He holds the destinies of mankind in His strong, wise, and loving hands. The prophets of Israel proclaimed the righteous judgment of God, evil in ecclesiastical and political life was rebuked, and the gracious offer of forgiveness and reform was held forth.

There was never any hesitancy to relate the high ethical demands of religion with the problems of everyday life in government, economics, the home, and other areas of individual and social activity.

The luxury of careless criticism is one we cannot afford. The faults are not in organizations or institutions, but in us as individuals who comprise them. It is our honesty, neighborliness, diligence, and vision—based upon an abiding faith in God and the revelation of His Son Jesus Christ—that determines the kind of contribution we are going to make to responsible citizenship in this great State.

In our religious witness we shall be as broad and understanding as possible, without compromising particular aspects of truth which seem valuable to us. We shall compete only in goodness, and even in good works it is sometimes better to cooperate rather than to be inefficiently competitive.

2. Another task confronting us is that of maintaining private and public education at the highest possible level.

The church, historically, has been interested in education, not only of the mind, but of the spirit. "The fear of the Lord is the beginning of knowledge." While the churches have fostered their own schools in order to inculcate more adequately the principles of the Gospel, religion has always had a high stake in public education.

We have spoken of the Reverend John Monteith. It should be remembered that in addition to his religious endeavors he was also the first President of the University of Michigan, founded by Judge Woodward. Later moved to Ann Arbor and reorganized, the great university began to prosper under the wise management of Isaac Crary and the Reverend John D. Pierce.

It is significant to note that the University of Michigan was the first successful State university in America. Other States quickly adopted the plan, and now it is virtually universal in this country.

In State-supported schools the majority of our young people receive their education. Along with academic competence in the various disciplines of science and the arts there can be, without any involvement in sectarian religion, the presentation by precept and example of the basic elements of character and responsible citizenship.

We shall determine to use our best efforts for the support of the public schools at all levels, by adequate financing, by our participation in parent-teacher groups, and by informing ourselves of the goals and progress of our schools.

3. Another concern of Christians should be that of the conservation of the natural resources of our State. Because "the earth is the Lord's and the fulness thereof," the gifts of nature are to be used for the benefit of all the people. The treasures of field and forest, the lakes and streams, are to be developed rather than exploited, in the service of our people. We have a stewardship responsibility, a trusteeship, so that all may benefit—and this always in a spirit of gratitude to God who created these treasures.

They were here when we came upon the scene; we did not create them; they were given to us by God. Therefore let us use them wisely and transmit them improved and augumented to those who shall follow us. May they bless us because of our forethought and unselfishness.

4. A fourth concern of Christians is to encourage the cooperative efforts of capital, management, and labor in our industrial economy.

There is no point in our taking sides, for basically we are all on the same team. We ought not to confront each other as enemies but as partners in a significant enterprise. Michigan is justly famed for its large place in the industrial heartland of America. Here are available in abundance the skills of men and machines.

To capital and management the gospel says that "the laborer is worthy of his hire." To labor the divide word is "a workman that needs not to be ashamed," "not slothful"—and to all of us to seek to serve the Lord in our vocations.

The church must no claim to have the solutions to our economic problems, but it does proclaim, on the authority of her Lord, that persons are prime, that work has dignity, that covetousness and greed are wrong, wherever they are found.

Let capital, management, and labor look upon each other with mutual respect, and work together for equitable solutions—so that every person able and willing to work shall find employment. This is the scandal of our time, that for too many there is no place for their skills of body and mind. Let us never become complacent about this, for it is a sin against humanity.

5. Finally, we face in this great State of ours the challenge of racial brotherhood, so that the skills of all our people may wisely be utilized.

Intelligent, sensitive people have been agonizing about this for a long time. Recently, however, under the responsible conviction that time is running out, we are facing with new urgency our problems and opportunities in this area. I think that we here in Michigan can be justly proud of our record in the fight against racial and religious discrimination in the field of employment. The approach, in the Fair Employment Practices Commission, of which I am privileged to be a member, is that of persuasion and conciliation, rather than of legal coercion. Laws and penalties affect our actions but something deeper is needed to affect our attitudes—education and a spirit of brotherly love are needed. Let it be said to the shame of the church that she has not always practiced racial brotherhood. She has made noble pronouncements and large protestations of understanding, but in practice the prejudices of Christians are too often narrow, cruel, and un-Christian. We are failing to follow our Lord and the life of the early church.

Confessing our sin, determining to do better, let us open our minds to information, and our hearts to understanding and Christian love.

CONCLUSION

John Foster Dulles, our esteemed former Secretary of State, who has literally given his life in the service of his country, gave an impressive address in October 1953, at the 150th anniversary of the First Presbyterian Church of Watertown, N.Y., where his father had been pastor for 16 years. His words on that occasion bear repeating here, in part:

"The churches today provide the principal means of drawing together the men, women, and children of our land and of bringing to them knowledge of the faith of those who have gone before, so that today's faith is a contagious and vital force.

"As our churches, synagogues, and other places of worship thus carry an even greater share of vital responsibility, they should be strongly supported by all our citizens, for they all profit from the institutions which faith inspires.

"Sometimes we feel that we are indeed compassed about by a great cloud of witnesses. Each of us knows that, in terms of loved ones who have gone before. We know it as we have read the great Book of Faith and as we are taught the lessons drawn from the story of the great prophets and disciples from the past.

"Let us maintain spiritual communion with them. Let us draw faith and inspiration from their lives. Let us act as we know they would want us to act. Then we, in our turn, will run with steadfastness the course that is set before us. Then we will play worthily our part in keeping alight the flame of freedom."

The conclusion of the matter is that in the light of our noble heritage we stand on the threshold of an even greater destiny. Our State of Michigan is one of the richest among our 50 States in total industrial and agricultural output—ranking seventh, as a matter of fact. How wonderfully we have been blessed.

Shall we rise to the challenge in the light of our equally great spiritual heritage? Varied and wonderful has been the inheritance bequeathed to us by those noble souls of many faiths who have given their lifeblood that we might be the benefactors of what we now have.

The answer is simple, embarrassingly direct and simple—as individuals we must rededicate ourselves to Almighty God, and resolve that in every aspect of our lives—in government, the shop, the school, the home, the church, the factory—we shall make our personal influence count for righteousness. We shall, and do, band together in groups for the furtherance of our common objectives, but ultimately it is up to us as individuals.

The Psalmist cried out in a moment of hesitancy and fearfulness, "If the foundations be removed, what shall the righteous do?" The answer is, "Dig deeper." Human foundations may shift, but the Divine one is still there. "No other foundation can any man lay than that which is already laid in Christ Jesus."

"I am but one in the vast multitude of the world, but I am one. I can't do everything, but I can do something.

"What I can do, I ought to do, and what I ought to do, by the grace of God, I will do."

May God bless our beloved State of Michigan and may we love it and live for it, that here where we are may be the nearest place we know to the Kingdom of God on earth. "Thy will be done on earth—in Michigan—as it is in Heaven." Is that an impossible dream? Jesus didn't think so.

Let us pray.

Dear Heavenly Father—In a spirit of gratitude for all which Thou hast bestowed upon our beloved State and us, we would face the exciting possibility of our destiny. Grant that we do not miss that destiny, which is to become Thy sons in Christ. Through the same Jesus Christ our Lord. Amen.

SPIRITUAL FOUNDATIONS SUNDAY REMARKS AND GREETINGS BY GOV. G. MENNEN WILLIAMS, OLD MARINERS' CHURCH, DETROIT, MICH., MAY 17, 1959

Representing the people of Michigan in their governmental capacity, I am happy to participate in this Spiritual Foundations Sunday program and bear witness to the people's deep and abiding faith in God the Father of us all, in whom "we live, and move, and have our being" (Acts 17:28).

In our American system of government we believe in the separation of church and State; but this does not mean we believe in the separation of the State from God and morality. Quite the contrary.

As we said in our very first constitution, as well as in our present one, "religion, morality, and learning being necessary to good government and the happiness of mankind," it now seems eminently fitting and proper that we begin our Michigan Week celebration with a tribute to our spiritual foundations.

Now only is it fitting and proper that our ideological foundations be spiritual but it is historically true that Michigan's very beginnings were consecrated by the work of missionaries of God of all faiths who had the courage to come to a raw and forbidding country beset with savages to preach the word of God and help develop the blessings of church and civilization.

We have recognized our dependence upon the Almighty for his bounty to us in our constitution's preamble, which says: "The people of the State of Michigan, grateful to Almighty God for the blessings of freedom, and earnestly desiring to keep these blessings undiminished to ourselves and our posterity, do ordain and establish this constitution."

Indeed, the good Lord has been kind to us with spiritual and material blessings. We have been a State of churches and synagogues. We have been a State of homes and family fellowship. We have been a State that has valued morality and civic virtue, and we have recognized that all these things come from God. With Saint Augustine we have recognized—"without him, we cannot; without us, he will not."

The State has been blessed with physical resources and beauty that have helped make us the fastest growing State in this part of the country and one of the three fastest growing big States in the Nation. It is not without ample reason that our State motto is—if you seek a beautiful peninsula look about you. Here man has encouragement to commune with nature and the God of all nature.

The resources that our good lands and waters possess and the contributions of the people called here from every clime and kindred have made our State a good one in which to live to do our business and to bring up our children. Our State is the sixth richest in the land and our schools are among the very best.

We have gone from strength to strength and we will go from strength to strength. Basically it will not be the economic power of our factories, the riches of our lands or waters, or even the many skills of our peoples that will guide up to ever better days. It will be that most important of all strengths and resources, the spiritual foundations of our people that will permit us to find favor before God and our fellow men.

So on this Michigan Week's spiritual foundations Sunday, as Governor of the people of Michigan, I join you humbly and with profound belief in paying tribute to our spiritual foundations and in rededicating ourselves to the God of our fathers who has brought us to the blessings of this day and will bring us to the joys of the world to come.

The Gold Outflow

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of RECORD an article from the May 22 issue of Newsweek by Henry Hazlitt, discussing the outflow of gold from the United States, a situation of growing concern in the battle against inflation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GOLD OUTFLOW

(By Henry Hazlitt)

Last year the United States lost the record amount of $2.3 billion of gold. The outflow slowed down in the first 3 months of this year to only $92 million. But in April and the first 2 weeks of May it rose to $197 million for the 6 weeks.

It is sometimes said that any concern about the present outflow of gold is premature. The reasons given are that, even though the U.S. gold stock has declined from its peak of $24.6 billion in 1949 to its present level of $20.2 billion, this is still a tremendous sum and more than half of all the monetary gold in the world. It is also contended that this loss of gold is actually healthy because it makes for a sounder distribution of gold reserves and strengthens the currencies of other countries.

Any complacency about the situation, however, is unwarranted. Though some $20 billion is still held in the United States, it is not, strictly speaking, owned by the United States. The "free" gold supply is comparatively small. The notes and deposits of the Federal Reserve banks are required by law to be backed by 25 percent of gold. As of May 6, this called for a gold cover of $11.7 billion, leaving the Treasury with only $8.5 billion of "free" monetary gold.

(It is also instructive to recall that if Congress had not reduced the reserve requirements to only 25 percent as a "war" measure in 1945, and had kept the previous requirements of 35 percent gold reserve against deposits and 40 percent against notes, the amount of "free" gold today would be only $2.5 billion.)

WHAT THE THREAT IS

As against the Treasury gold holdings, banks in the United States already have short-term liabilities to foreigners totaling $16.6 billion. So if foreigners really elected to withdraw their deposits and short-term assets in gold, and could do so through their central banks, the situation would become very serious.

One of the explanations most frequently offered for the loss of U.S. gold in the last 16 months is a deficit in the balance of payments with the rest of the world. This explanation confuses cause and effect, and suggests the wrong remedies. The chief reason for the outflow of gold is distrust of the future of the American dollar, brought about by our inflationary policies. These policies also cause the deficit in the balance of payments. Unless we have the sense and courage to halt these inflationary policies in time, the withdrawal of gold could become accelerative.

FOUR POSSIBLE STEPS

Discussing this subject in Newsweek of December 22, 1958, I listed a few specific steps we should consider to restore confidence in the dollar. I repeat the substance of them here, with some change in emphasis and detail:

1. The Federal Reserve Board should definitely abandon the effort to make money artificially cheap by open-market purchases, further reduction in reserve requirements, and similar measures. Firm interest rates will not only discourage the withdrawal of foreign balances but stop encouragement to credit expansion.

2. The administration and Congress should take dramatic steps toward slashing the deficit and balancing or even overbalancing the budget. They should do this not by increasing taxes still further (which would

only act as a deterrent to production) but by slashing unjustified expenditures. Swollen veterans' aid and the whole farm subsidy and price-support program are obvious candidates for the ax.

3. It makes no sense to continue and even to expand an enoromous foreign-aid program when our problem is already inflation, excessive Government spending, the loss of gold to foreigners, and a deficit in the balance of payments. Our military-aid program should be much more selective. Our economic-aid program, which rests on dubious socialistic assumptions, should be discontinued. Particularly ill-timed is the pending subscription of some $1.3 billion by our Government to the International Monetary Fund, which operates on questionable monetary assumptions.

4. Revise the Federal legislation and NLRB decisions that enable labor leaders to force excessive wage rates on employers and tend to price our products out of world markets.

Visit the United States, See South Dakota

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. MUNDT. Mr. President, the President of the United States has proclaimed the year 1960 as Visit the United States of America Year. The purpose of this program, of course, is to encourage foreign visitors to come to our shores.

I would go one step further, by not only inviting our friends from overseas to visit the United States of America, but also by encouraging the American people to make 1960 a year in which they will visit areas of the country which they have not visited before.

In calling attention to the visit America program, I want to mention my home State of South Dakota, and, in particular, to cite what one famous American citizen said about our State.

He is the late Frank Lloyd Wright, world famous architect, who described a visit to South Dakota in a letter to his friend, Robert D. Lusk, publisher of the Huron Daily Plainsman. Mr. Lusk published this letter shortly after Mr. Wright passed away.

Mr. President, I ask unanimous consent to have the article from the Huron Daily Plainsman printed in the Appendix of the RECORD, because I think it portrays most graphically one of the scenic wonders of this country which I am happy to invite Americans from all our States to visit.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AFTER 1935 VISIT FRANK LLOYD WRIGHT LAUDED BEAUTIES OF SOUTH DAKOTA

(EDITOR'S NOTE.—Frank Lloyd Wright, noted architect who died recently at the age of 89, was extremely impressed by the beauties of South Dakota in a trip to the State in 1935. He graphically described his impressions in a letter to Robert D. Lusk, publisher of The Daily Plainsman, and the letter later was printed in a book, "Frank Lloyd Wright on Achitecture," published in 1941. The following is a reprint of that letter.)

(In this letter are ideas which should add new layers of meaning to Wright's constant use of the words "nature" and "natural." His imaginative response to nature, as shown here, stands with our best traditional literature of travel and topographic description.)

To ROBERT D. LUSK, *the Evening Huronite, Huron, S. Dak.*

DEAR BOB: Speaking of our trip to the Big Bad Lands, Black Hills, and Spearfish Canyon. I've been about the world a lot and pretty much over our own country; but I was totally unprepared for that revolution called the Dakota Bad Lands. From Mitchell, Paul Bellamy was driving a fair 70 over the brown Dakota prairie to reach the Bad Lands before sunset. About 4, afternoon, something came into view that made me sit up straight and look at Bellamy to see if he saw what I saw. "Oh," said he, "you've seen nothing yet." But I had. What I saw gave me an indestructible sense of mysterious otherwise—a distinct architecture, ethereal, touched, only touched with a sense of Egyptain, Mayan drift and silhouette. As we came closer a templed realm definitely stood ambient in air before my astonished "scene," loving but scene-jaded gaze. The streamline working on a vast plateau of solid cream white clay, something like "calichi," had sculptured this familiar world into one unfamiliar but entrancing.

Endless trabeations surmounted by or rising into pyramid (obelisk) and temple, ethereal in color and exquisitely chiseled in endless detail, they began to reach to infinity spreading into the sky on every side; and endless supernatural world more spiritual than earth but created out of it. As we rode, or seemed to be floating upon a splendid winding road that seemed to understand it all and just where to go, we rose and fell between its delicate parallels of rose and and cream and sublime shapes, chalk white, fretted against a blue sky with high floating clouds; the sky itself seemed only there to cleanse and light the vast harmonious building scheme.

Of course I am an architect and that ride through the land of pure line and evanescent color affected me strangly. Here was the element, architecture, cut of the body of the ground itself, beggaring human imagination, prostrating the simplicities of man before the great cosmic simplicity. Reverence, yes, awe. Deep satisfaction, harmonious like great music drifted over the senses until a new sacred realm was born of light, delicate color and ever-changing but immaculate form wherein not even the senses could touch bottom, top, nor sides of its vast repose.

Here, for once, came complete release from materiality. Communion with what man often calls God is inevitable in this place. It is everywhere around him and when the man emerges to the brown plateau and looks back, as I did, the sun now setting, a pale moon rising in darkening rose and blue sky as rays of last light drifted over, linking drifting water lines of dark rose in pallid creamy walls, gently playing with the sky line, with mingled obelisks, terraces, and temples more beautiful than thought, eternal, who knows, a strange sense of inner experience will come to him of a crisis in his perception of what he has termed beauty. He will leave that place a more humble, seeking soul than when he went in to this pure appeal to his spirit. He will know baptism in its higher than sectarian sense.

Let sculptors come to the Bad Lands. Let painters come. But, first of all, the true architect should come. He who could interpret this vast gift of nature in terms of human habitation so that Americans on their own continent might glimpse a new and higher civilization certainly, and touch it and feel it as they lived in it and deserved to call it their own. Yes, I say the aspects of the Dakota Bad Lands have more spiritual quality to impart to the mind of America than anything else in it made by man's God.

I turned to Bellemy and finally said, "But how is it that I've heard so little of this miracle and we, toward the Atlantic, have heard so much of the Grand Canyon when this is even more miraculous?"

"Oh," said he slyly, "we are not on the through line to the coast."

"Never mind," I said, "all the better eventually." And we drove on to the famous Black Hills which the fame of Borglum's work had already brought to my attention.

Next day, Bellamy again at the wheel, from fine little Rapid City, well set in low hills (what could not that town do for itself if it knew how to live accordingly), several of us drove up another finely laid-out road that seemed to know what the region was all about, through scenery I had often heard of as beautiful. But a more flesh and blood kind of beauty. The beauty that apepals surely to a human being because he is human and brother to the tree and respects individualistic rock formations. Here they are great but not too great. All has the charm of human scale which many great western scenes lack, and invites the wanderer to enter into the spirit of it all and rest. No home for man the Rocky Mountains; no, nor perhaps the Bad Lands, yet; but an ideal home; these Black Hills. Do not think from this that the Hills are unexciting. They are exciting but they stir a different region of the soul; we call it the heart probably. There are stone needles, stone spires, stone piles and stone artificial lakes, tall beautiful pines, wooded gorges, more free standing and sculptured rock masses in nature's own style than one has ever seen before grouped in one area. So it seems fitting that some hand of man should brush aside the realistic veil of stained weathered rock and let the mind of man himself envision his own greatness and his fate alongside the titanic handiwork of nature.

Human nature, let us hope to eventually nature's higher nature, found its hand for this is Gutzon Borglum's masterhand and the face of the great leader of his country. The noble countenance emerges from Rushmore as though the spirit of the mountain had heard as human prayer and itself became a human countenance. The countenance haunts you as you ride * * *; winds and falls with you as freight through depths of pine woods; huge rocks standing about you, themselves statues of a more elemental thought than Gutzon Borglum's: The cosmic urge.

We passed by a quiet land-locked lake (Stockade Lake) that seems to be there with a manmade white sand shore to invite you to get out and stay and rest and drink in the breath of the pines as the breezes print themselves on the surface of the placid water. This Black Hills country has charm, inviting you to get out and go about or stay about. It is a lingering kind of human satisfaction for the soul, hungry of a tired body, the recreation of any jaded mind compelled to live by the abacus, money.

You may think all this the feeling of the moment, a mood, and because I was in good company. But no. I am an old soldier of the spirit, a veteran in time, place, and man. I could not be mistaken. Go and see.

We wound on upward to Sylvan Lake, a gem spot in the hills where South Dakota plans to entertain her guests. It may be that South Dakota sees a body of water so seldom that her citizens overvalue it for the lake is artificial and small, but what a setting. Here a sweeping mountain resort, with the lake as a vignette seen below, could be as masterful a thing of the kind, woven in with the great rich rock and tree foreground, framing the vistas of this spot; another and a higher kind of nature understanding well

and loving the earth from which it springs, loving it too much to imitate it.

Harney Peak loomed to one side. Turning from the little rock-defended, rockbound lake your gaze travels away along blue ridges ornamented by great rock piles to distant blue mountain tops, as far away as the human eye can go beneath the clouds. Round about you, rugged strengths, forest depths, primeval earth at best; well, an architect is speaking.

There was a hotel there once but nature disposed of it in her inscrutable way, for cause. It was ugly.

Notwithstanding the expenditure of riches, so far, there were wonders left for tomorrow. And Spitz, as I felt like calling him by now, came with Ted Lusk's car to drive me to Spearfish Canyon. I felt a little dull toward Spearfish. I had seen two marvels unique in the scenery of the world. I felt headed in for an anticlimax and said so. The boys said, "No." These South Dakota boys by now had me where I believed that they knew their stuff. They couldn't have built those superb roads in the Bad Lands and Black Hills if they didn't know.

So I patiently waited and visited with Spitz as we rode away. We stopped at Homestake, of which everyone has heard, and saw how a primitive gold mining operation has been turned over to the power of the machine and remains primitive just the same. The resources of machinery couldn't change the original steps or even the original way of mining except to cut down the manpower involved.

By afternoon we got in by Spearfish, a mountain torrent beginning a canyon 26 miles long. Not very interesting at first, I had seen so many; the Western States are full of them, as everyone knows. The road here is haphazard as hazard was and is none too good. "Spitz" drove well, fortunately. And the stream itself was something but after a half hour things began to happen. We would be headed straight for gigantic white walls trabeated in ledges from which pines sprouted and grew in precisely the manner of the pictorial dreams of the great Chinese landscape painting of those great periods, and they were mostly landscapes, can see the character of the Spearfish ensemble.

Great horizontal rock walls abruptly rising above torrential streams, their stratified surfaces decorated (it is the word) with red pine stems carving stratified branches in horizontal textures over the cream white wall, multiplied red pine trunks and the black green masses of the pines rhythmically repeating pattern, climbing, climbing until the sky disappeared or was a narrow rift of blue as the clear water poured over the pebbles or pooled under the heavy masses of green at the foot of the grand rock walls.

Well, here was something again different. As different as could be from Bad Lands or Black Hills or anything I had actually seen, a stately exposition of what decorated walls on enormous scale can do and be. These Chinese predicted it and depicted it. This continued for miles and miles without palling or growing in the least stale. We drove out, finally, and turned away from Spearfish town to get back, two architects drunk with primal scene painting, to Gutzon Borglum's little dinner. A third type of earthly marvel was now added to the two. All unique and unparalleled elsewhere in our country.

But now came an unexpected experience. That drive from the Canyon "Spearfish" to Rapid City. Does anyone who knows California and Arizona know that in the softly modeled brown surfaces of South Dakota binding these three wonders together is a terrain greater in charm than any to be found in either? A sweep of modeling and a tender color (it is early September) and a variety of aspect matchless anywhere?

No, I shall be burned for a heretic when I make the statement. But I should be thanked as a prophet and hailed as a discoverer by the jaded public who have seen everything and stick to the through lines. The greatest scenic wonders of the world I know now are touched on grand safe highways but not on railroads. My hat is off to South Dakota's treasures and the men who made them.

We got back in time for Gutzon's little dinner where some Rapid City folk were gathered together to welcome a stranger. He, Gutzon Borglum, of course, is master in more than one medium. The way he handled his dinner, the guests (among them Congressman Harry Gandy), and handled me too, was a masterpiece. Ask anybody there. Gutzon broke down. I like him for it, and anyway, I like those South Dakota folk; I want to see them all again sometime if I can.

Go to South Dakota, but drive there. It is so near to us all and yet I never knew, nor had ever heard much about its southwestern treasure until Gutzon Borglum went out there to work and Senator Norbeck invited me to see it.

I hope the noble inheritance, for that is what it is, won't be exploited too much and spoiled as lesser beauty spots in our country have been spoiled and will not continue to be marred by the nature imitator with his rustic effects, piled boulders, peeled logs, and imitation of camp style primitive gable buildings. Nature seeds from man not imitation but interpretation. It is quite another story, as you may learn.

Lake Michigan Water Diversion

EXTENSION OF REMARKS
OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article entitled "Ike Believed Ready To Veto Water 'Steal,'" written by James M. Haswell and published in the Detroit Free Press of May 24, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE BELIEVED READY TO VETO WATER "STEAL"—CANADA PROTEST STIFFENS POSITION OF LAKES STATES

(Some wonder why there's so much excitement over Chicago's proposal to take 1,000 cubic feet of water a second from the Great Lakes. A thousand of anything doesn't sound like much.

(But consider this: In a year 1,000 cubic feet per second is enough to cover the entire 920-square-mile Chicago Sanitary District with water more than 6 feet deep. Its about 2½ times the district's yearly rain and snowfall. That's a lot of water.

(In this article, Writer James M. Haswell explains why Lakes States—and particularly Canada—fight the "water steal.")

(By James M. Haswell)

WASHINGTON.—Michigan has gained a powerful ally in the fight against Chicago's water steal.

Senators on both sides of the issue recognize that Canada's protest note this year sets the stage for a rousing Eisenhower veto if a bill permitting additional diversion reaches the White House.

President Eisenhower vetoed bills like this in 1954 and 1956 but this year he has a good new reason:

Canada has a big stake in Great Lakes navigation and power—relatively greater than the United States has.

And this time Canada has chosen to make its views official as well as frank.

"The Government of Canada," it said, in an April 9 note, "is opposed to any action which will have the effect of reducing the volume of water in the Great Lakes Basin."

But persuading Congress and the President to overrule the Supreme Court's 1930 Great Lakes edict isn't the only water diversion issue in Washington.

There are other four issues:

The Supreme Court in 1930 promised Chicago that after 1938 it could take 1,500 cubic feet of Lake Michigan water per second and flush it down the Chicago drainage system into the Illinois-Mississippi Waterway.

Nobody is seeking to change this.

Chicago is asking for 1,000 cubic feet per second more water, however, for a trial year to determine what it should seek permanently.

This bill is now in the Senate Public Works Committee.

In its 1930 ruling the Supreme Court authorized Chicago to take unlimited amounts of Lake Michigan water for domestic use, and dispose of it down the Illinois-Mississippi Waterway.

Chicago's citizens and industries now use 1,800 cubic feet per second, lowering the levels of Lakes Michigan and Huron 2 inches.

Michigan and other Great Lake States are asking the Supreme Court to appoint a special master to review the situation, and recommend changes in the 1930 ruling.

This ruling is not a fixed one—change is possible.

The Michigan view is that Chicago ought to return domestic pumpage to the lakes after proper sewage treatment as other Great Lakes cities do.

U.S. Solicitor General J. Lee Rankin notified the Court April 14 that he now agrees in part with the protesting States.

He would have the Court name a special master to look into new and future diversion questions.

When President Eisenhower turned down the 1956 Chicago water bill he suggested the Army Engineers determine exactly what effect various diversion proposals would have.

This Army report forms the basis for current diversion arguments, both in Congress and in Supreme Court briefs.

The report says that diversion of 1,000 cubic feet per second permanently would mean lowering the average levels of Lakes Michigan and Huron an inch over 15 years. Chicago's diversion since 1938 has lowered the lakes 2.76 inches, it said.

But since 1945 Canada has diverted 5,000 cubic feet per second from the Albany River Basin into Lake Superior and the International Joint Commission has allowed this to spill over into Lakes Michigan and Huron, the Army says.

This has raised the Michigan-Huron level 4.44 inches, and produced a net gain of 1.68 inches.

Thus Canada's diversion into the Great Lakes has more than compensated for Chicago's diverison out of the Great Lakes.

The Army found that lowering the lake levels an inch would mean lake shipping could transport 330,000 fewer tons of cargo a season through the St. Clair-Detroit River channels, the high-water years in with the low-water years.

This would mean a yearly shipping loss of more than $360,000.

It also found the lessened volume of water reaching the St. Lawrence would mean up to $2 million a year hydroelectric power loss to plants in Canada and New York.

In his Supreme Court brief, Michigan Attorney General Paul L. Adams discussed the effect of diversion on harbors and recreation facilities. There are 100 improved harbors in the Great Lakes area, he said, and low water tends to nullify the expensive improvements.

Low water also damages unimproved harbors used by pleasure craft. And it depreciates investments in commercial summer resorts, and private sports areas, private summer cottages, etc.

Low water is a continuing injury, he said, to the welfare and prosperity of people in Michigan, Wisconsin, Ohio, and New York.

Low water does extensive damage to fishing and hunting grounds, spawning beds, and open marshes which are the natural habitat of extensive and valuable wildlife, Adams said.

In the same sense it damages public investments in parks, camping grounds, and fish hatcheries.

State Conservation Director Gerald Eddy is on record as saying that low water will dry up excellent hunting grounds, and that only a few inches of lowering may work damage that will continue for 15 years.

During the House debate several speakers argued that it makes no sense to spend $146 million to dig the navigation channels of the upper lakes deeper, and at the same time permit Chicago to lower the water levels by diverting more water.

The Government's Exchange Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. FULBRIGHT. Mr. President, from time to time I receive letters from U.S. and foreign students who have received grants under the Government's exchange program.

These letters are a real testimony to the contributions made by this program to better international understanding.

I ask unanimous consent that there be printed in the Appendix of the RECORD several recent letters I have received from recipients of these grants.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CHAPEL HILL, N.C.,
May 10, 1959.

Senator WILLIAM FULBRIGHT,
Washington, D.C.

DEAR SENATOR: As a visiting scholar to the United States from the Netherlands, I shall soon return to my home country. I was awarded a travel grant under the act with your name.

This is to express how much I appreciate to have had the opportunity to have been in this country for more than a year and to thank you for the way you have promoted such visits.

Not only for the very valuable sake of science—statistics in my case—but also for that of human relations in general, such an exchange cannot be recommended enough.

I must confess that the one-sided view on the United States which I had acquired in a country that spiritually is much nearer to yours than many others in this divided world, has been changed and that in a more favorable sense.

Although this does not mean that we (I am accompanied by my wife and two children) would approve or prefer everything we have found here, we are impressed by a lot of things.

Besides the material wealth we hold as most striking features; the great freedom (unfortunately sometimes abused, or withheld in practical situations), the spread of real culture, the cordiality and hospitality of the people, the close connection of politicians and officeholders with their electorate, and finally, the opportunity for almost everybody to rise to a level according to his abilities.

We do not pretend that after our stay here we know everything about this country, but we know there are many admirable things, and we hope to tell that to our countrymen.

With best wishes for the continuation of your beautiful task.

Very sincerely yours,

L. C. A. CORSTEN.

UNIVERSITÉ DE BORDEAUX,
FACULTÉ DES LETTRES
ET SCIENCES HUMAINES,
March 12, 2959.

The Honorable J. WILLIAM FULBRIGHT,
Senator from Arkansas,
The Senate, Washington, D.C.

DEAR SENATOR: It seemed to me that you would welcome an informal account of activities concerning my Fulbright grant as visiting professor in social psychology. We spent the first semester at the Université de Rennes, and have just arrived here for the second.

My official duties involve teaching case-discussion, role-playing, and group dynamics techniques. All involve active participation by the students. They explain, discuss, argue, and try out possible solutions. Analysis, diagnosis, and understanding of problems in human relations is stressed. In my opinion, these courses are particularly appropriate to the ideals for which you conceived this program. Process and goal are essentially democratic.

My French students are enthusiastic and responsive. At the Sorbonne, where it was an honor to give a brief series, American psychology was rated highly also. However, teaching is only part of the picture.

At the université, mine is an "open door" policy (no political pun intended). My office door is open most of the time. Students, faculty, and townspeople have found an open ear and an open mind. They borrow my American books, journals, and newspapers.

On and off campus speeches and appearances have been numerous and varied. They have concerned various aspects of psychology, education, science, and counseling. Unfortunately, too many know only the unpleasant side. My contribution, thpugh a drop in the bucket, has exposed the other side. The French have accepted this. They stand for fair play just as we do.

A number of personal contacts with French negro students led me to wangle a talk for the African Students' Association. After a presentation involving history and current events; they peppered me with loaded questions. It was rough going and I didn't know what the score was until the end. Then, they all came up, shook hands, and insisted on walking me home.

We have gained too—a deeper appreciation and understanding of the French people, politics, art, history, and everyday life. As you have guessed by now, this is a most rewarding and challenging year. Undoubtedly, some things were loaded in my favor. For example, my courses and talks are 100 percent in French, which reaches a wider audience. My U.S. Navy service in France during World War II has opened many doors. Then too, my wife has learned French and this has widened social contacts with French people. In addition, the Fulbright Commission, the U.S. Information Service, and the State Department have been very helpful in many ways.

However, the scientist within me raises a note of caution. Undoubtedly, some of these favorable reactions were due to novelty, humor, and color (my own color slides of scenery and university life in the United States of America). However, there remains a genuine conviction that some people have really listened, some have changed, and others have, at least, begun to ask important questions. One thing is certain—anytime a Frenchman who has been Fulbrighting in the United States of America talked to me, he was full of enthusiasm and praise.

If someone were to ask me what is most important conclusion you can draw from this experience, this is what I would say:

There is no substitute for personal, face-to-face contact. Films, newspapers, books, etc., can achieve only limited results. You can only really reach people by listening to them, exchanging points of view, trying to understand each other. In my opinion, we need more personal exchanges with more different peoples of the world, and on every level.

In conclusion, do you have any general or specific question that I might answer? If there is anything I can do, please let me know.

Sincerely,

LEONARD A. OSTLUND,
Fulbright Visiting Professor in Social Psychology on Leave From, Kent State University, Kent, Ohio.

MANILA, PHILIPPINES,
March 27, 1959.

Hon. WILLIAM FULBRIGHT,
Senator, Washington, D.C.

DEAR SENATOR FULBRIGHT: Please permit me to express my gratitude to you for having initiated this system of extending financial aid to foreign students. I was one of the Filipino Fulbright travel grantees for the year 1956–57. The travel grant enabled me to accept the Ida H. Hyde fellowship given by the International Federation of University Women through the American Association of University Women.

I came to know the American people, their family life and their honored traditions. Upon my return I was appointed head of the department of nutrition at the Philippine Women's University, Manila.

I hope and pray that Our Lord gives you a long and happy life and that He continues to sustain and bless the American people.

Sincerely yours,

ANGELINA ALCARAZ-BAYAN, M.D.

UNIVERSITY OF DAYTON,
Dayton, May 8, 1959.

Senator WILLIAM FULBRIGHT,
Chairman, Senate Foreign Relations Committee, U.S. Capitol, Washington, D.C.

DEAR MR. FULBRIGHT: Being one of the beneficiaries of your foreign policy, thanks to a travel grant, I want to express to you personally my deepest gratitude, especially in this 14th anniversary of the armistice of 1945.

You gave me, and to many other students, the chance of our life, to appreciate your big country and to help to our level to the world peace and international understanding.

Since I arrived in the United States in September 1958, I have been able to see the considerable influence and prestige you have acquired in the international and national political milieus.

Hoping that some constructive elements to a world peace and coexistence will result from the Geneva talks, I am, dear Mr. FULBRIGHT,

Very respectfully yours,

JEAN REMY.

Bureau of Land Management and U.S. Forest Service Operations in Western Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. NEUBERGER. Mr. President, many people in my State have been concerned over recent discussion of the proposal to consolidate Bureau of Land Management timberlands in western Oregon under the U.S. Forest Service. Both of these agencies are outstanding in their field, and they are staffed by able and dedicated men and women.

Mr. Eric W. Allen, managing editor of the Medford (Oreg.) Mail-Tribune, has written a thoughtful and analytical editorial in his paper of May 17, 1959, which discusses in detail the proposed amalgamation. Mr. Allen cites the fact that many county officials in our State would be seriously alarmed if the revenue distribution from Oregon and California lands, of 75 percent to county governments and 25 percent to the Federal Government, were shifted to the Forest Service basis of just the opposite—25 percent locally and 75 percent federally. the Oregon and California distribution, under the Bureau of Land Management, has historical reasons which justify it, because these lands are quite different in origin from those which comprise the bulk of the national forests.

It is my opinion that many of my colleagues will be interested in the informative discussion written by Eric W. Allen, and I ask unanimous consent, Mr. President, that his editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Mail Tribune, Medford, Oreg., May 17, 1959]

BUREAU OF LAND MANAGEMENT AND FOREST SERVICE

(By Eric W. Allen)

The proposal currently in the news, which would place administration of Oregon and California forest lands of the Bureau of Land Management under the administration of the Forest Service, is not a new one. It keeps popping up from time to time.

According to A. Robert Smith, our correspondent in Washington, the proposal probably will have tough sledding, for the reason that Fred Seaton, Secretary of the Interior, is opposed to it.

(The Bureau of Land Management is part of the Interior Department; the Forest Service is part of the Department of Agriculture.)

There are valid arguments on both sides of the proposal.

One of the State's best-informed men on the subject is Charles A. Sprague, who as an editor, as a former Governor of the State, and as a member of the Oregon and California advisory committee, has been closely informed on the problems of the Bureau of Land Management in Oregon for many years. He concludes that:

"* * * The gains from the Bureau of Land Management's intensive management outweigh possible savings in overhead. However, good forestry will prevail whether the merger is made or not, because of the public demand for it."

He is undoubtedly correct in that conclusion. But some heated arguments can be generated about the proposal, just the same.

For instance, the Bureau of Land Management sells timber on a cruise basis—that is, Bureau of Land Management foresters mark the trees to be cut, and set a price for them as they stand. The Forest Service sells on a scale basis—or an actual measurement of the board feet of lumber as the logs come out of the forest by truck.

Some loggers prefer one method; some another. And in any meeting of lumbermen it's possible to stir up a discussion over the merits or demerits of each.

Another factor, probably even more important to the smaller lumber operator, is the fact that most national forest land is in fairly large blocks, while Oregon and California lands are to a large extent scattered in intermingled ownerships, many of them in fairly small plots. As a result the Bureau of Land Management tends to offer a larger percentage of smaller sales than the Forest Service—sales which the small logger can afford to bid on.

Both agencies, as Governor Sprague points out, are dedicated to good forest management and silviculture, and both, as they gain experience and are provided with necessary funds, are doing an increasingly good job.

Because of the patterns of ownership, the Forest Service has worked out its system of ranger districts, with men living in the area where they work, while Bureau of Land Management personnel usually is concentrated in the immediate area of the district office, driving out to the field when necessary.

The Forest Service is dedicated to multiple-purpose use of the forests. The Bureau of Land Management, a more recent comer to the field of forest management, only now is working more and more toward this ideal, but does not have the facilities to do the same job in some fields, such as recreation, that the Forest Service does.

One principal reason why the proposal will meet opposition, particularly in the 18 Oregon and California counties of western Oregon, is the fact that while both agencies turn part of their land revenues over to the counties, they do it under different formulas.

Revenue from Oregon and California lands goes to the counties in which they are located on a basis of 75 percent to the counties, 25 percent to the Federal Government. (In recent years, the counties have allocated one-third of their 75 percent to construction of access roads and reforestation. The remaining portion has no strings to it, as to how counties may use it.)

Revenue from Forest Service lands go 25 percent to the counties and 75 percent to the Federal Government. The counties' portion must be used for school and road purposes.

One can readily see, therefore, why the Oregon and California counties would fight tooth and nail against any proposal which threatened the substantial source of income which the Oregon and California lands represents. In Jackson County, for instance, it is the Oregon and California revenues which have made the levying of a tax for county purposes unnecessary recently.

An administrative reorganization, placing Oregon and California lands under Forest Service administration, would not affect the distribution formula, for that is provided by law. However, it might lead Congress to reconsider the formula—something that gives Oregon and California county officials the shakes just to think about.

In addition, it would create a major disruption in the Bureau of Land Management office here, for the Medford district office devotes a major part of its activities to Oregon and California lands, less to other Bureau of Land Management responsibilities. It would also cause an upheaval in the administration of the Rogue River and Siskiyou National Forests, which would be faced with a tremendously increased job virtually overnight.

As nearly as we can determine, no decision has yet been made, despite rumors published in an upstate newspaper that the proposal has "already gained official sanction and will be instituted as of June 1, 1959." This rumor, almost certainly, is wrong, for such a reorganization plan must be submitted to Congress 60 days before becoming effective. If it wishes, Congress can veto the suggestion within that period of time.

If it is to be done this year, it will have to be done soon, because of the 60-day limitation.

Because of the controversial aspects of the plan, we will be somewhat surprised if it is undertaken, soon, anyway.

Observance of Law Day, May 1, 1959

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. BEALL. Mr. President, in Europe, May first is a political holiday. It is used for demonstrations and parades by certain firmly oriented political groups.

In America, May Day is marked as a happy rededication to our democratic way of life. Seriously, even solemnly, but happily and freely it is observed in America as Children's Day, as Law Day, as Loyalty Day. Various groups and organizations emphasize their own ideals; there's no fixed and firm pattern to tell us how to rejoice or how, indeed, to rededicate ourselves to our American way of life.

Parent-teacher groups and many women's clubs and church groups emphasize our American concern for child welfare. The American Bar Association calls for the observance of Law Day on May 1. Veterans organizations call the day "Loyalty Day" and pledge again their devotion to the flag under which they have served our country.

Some groups combine all these approaches. It is good to know that in our schools throughout the Nation May 1 is happily observed as Law Day, Children's Day, Loyalty Day.

Typical of these programs is one held in Eastern High School in Washington, D.C. Here, a public-spirited principal, Mr. Lynn Woodworth, himself a veteran of two world wars, gave the students a chance to hear Mrs. Milton Dunn, the very able president of the District of Columbia League of Women Voters, an organization which wisely and continuously in daily practice observes Children's Day, Law Day, and Loyalty Day in their splendid study programs—programs supplemented by constructive

community action. And, he gave them something more, he had the police officer who works with the school in its citizenship program speak also. Officer Murray who has won the respect of teachers and students of this school gave them his daily message—but this time from the school's rostrum.

Because these addresses are a fine example of what goes on, of what our schools give our children, by way of example, I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF OFFICER GEORGE MURRAY OF THE METROPOLITAN POLICE FORCE GIVEN ON LAW DAY, MAY 1, 1959, AT THE EASTERN HIGH SCHOOL, WASHINGTON, D.C.

"Fame is vapor; popularity an accident; riches take wings; those who cheer today will curse tomorrow; only one thing endures—character."

This quotation from one of the foremost newspapermen of America, Horace Greeley, captures the spirit of the ideas I wish to present to you this morning, for I believe that good character is the basis of good citizenship. What makes for good character also makes for good citizenship. A person who possesses the traits which are the cornerstones, the foundation, of good character, cannot help but be a worthwhile citizen. Let's examine the parts of good character to see how they relate to citizenship.

First, a person of upright character respects the rights of others. He is always aware of the other fellow—no matter what the situation. He constantly puts himself into the position of his associates, and tries to understand their point of view. Not only does he respect the rights of individuals, but he also respects the property and belongings of others.

Secondly, a person of upright character is honest with himself. If he makes a mistake he doesn't brood over it. He sets his sights on tomorrow, and promises himself that he won't make the same mistake again. He doesn't rationalize, or make excuses for himself. He faces this complex personality, which is himself, truthfully and hopefully. He does not take a detour around problems, nor does he withdraw from them by feigning illness or resorting to escapes, like alcoholism.

No matter who you are, or where you are, you have problems. Everyone does. Life is one problem after another. "Shut the doors and sit in your house, yet trouble will fall from the skies," says a Chinese proverb.

Often we tend to exaggerate our problems. "I cried because I had no shoes, until I met a man with no feet," goes an old saying. Our worry over some minor problem or setback sometimes seems ridiculous in comparison to the courage shown by others with serious problems. It takes strength of character to keep our perspective and maintain the third distinguishing sign of a healthy character—personal courage and integrity.

John Bunyan was arrested in England in 1660 for preaching without a license. During his many years in prison, he had only dry bread to eat and dirty water to drink. He supported his wife and four daughters by making shoe-laces. After many years he was released, only to be put back into prison again. During his second imprisonment, Bunyan wrote "Pilgrim's Progress"—one of the most remarkable books of all time, on scraps of paper in his prison cell.

Strength of character implies self-confidence, and gives us the fourth characteristic of this strength, which is self-respect. Nobody is self-confident at all times. All of us feel frightened, stupid, foolish, self-conscious, embarrassed, or uncomfortable at times. But a person can learn to be self-reliant, most of the time, if he heeds his conscience and becomes his own policeman. One should never be afraid to stand up for what he knows is right, even when others try to persuade him to do otherwise. Self-control, the taming of emotions, helps in this respect.

Sportsmanship and fair play are the fifth attributes of strength and character. A sense of fair play is a time-tested virtue. It dates back to the oldtime ideal of chivalry—loyalty, unselfishness, a sense of honor, and the ability to be a good loser.

There is a need today for a return to this old-fashioned ideal. Too many of us make a motto of the statement "Nice guys finish last."

Sportsmanship is playing hard to win, but losing gracefully if you have to lose. It calls for keen rivalry, but fair play; strict observance of rules, but generosity toward opponents. The pride and self-respect which comes from good sportsmanship are worth much more than any prize—even the Presidency.

Henry Clay knew this. Clay was admired by his friends for his honesty, generosity, and gallantry. During his career, however, Clay, a Kentuckian, spoke out against slavery. The speech ruined his chances for the Presidency. Clay remarked, "I'd rather be right than President." To Clay, as to all persons of character, fair play was more important than winning.

An interest in and understanding of others implies unselfishness. This unselfishness fosters kindness, courtesy, helpfulness, and a greatness which are characteristic of strength.

Tennyson once said, "The greater the man, the greater the courtesy." Ed Sullivan puts it this way, "The bigger they are, the nicer they are." Reflection and inner seeking should assist us in sizing ourselves up. "You should stand still each day and watch yourself go by," a wise Quaker once remarked. Good mental health, a cheerful and healthy personality assist us in our acceptance of fellow humans. It is far easier to get along in this complex world if one possesses self-understanding and an understanding of the next person.

Respect for the rights of others, honesty to one's self, personal courage and integrity, self-respect, sportsmanship and fair play, and an understanding of one's fellow man are the essential attributes of good character.

A person can't alter his fingerprints, or change the color of his eyes, but he can mold and improve his character. "We are the sum total of our actions," said Madame Chiang Kai-Shek. "* * * day by day, we write our own destiny, for we become what we do." Strength of character gives a person the inner glow which everyone admires. High moral character is the keystone of good citizenship.

AN ADDRESS GIVEN ON LAW DAY, MAY 1, 1959, BY MRS. MILTON DUNN, PRESIDENT OF THE LEAGUE OF WOMEN VOTERS, TO THE STUDENTS OF EASTERN HIGH SCHOOL, WASHINGTON, D.C.

I am very happy to have this opportunity to speak to you today. If I were to ask what the word law means to you, I would get a variety of answers. It is possible that in this age of television westerns some of you would immediately think of a tall man carrying a gun and wearing a badge. On the other hand, many of you might agree with me that the meaning of law is not force, but a set of rules to guide our lives and protect us. Calvin Coolidge, our 29th President said, "I wish that people would put a little more emphasis on the observance of the law than they do upon its enforcement." As high school students you sometimes run across laws that seem to be getting in the way of your pleasure. You might wish to drive a car before you are old enough for a license, or stay out of school on a beautiful spring day. Realizing that these laws are for our own good, we obey them, not because we are afraid of the policeman around the corner, but because we know that through them we and our neighbors can have a better life. In a modern society there is no freedom from the law. There is freedom only within the law.

As we grow older we realize that since laws are made by men, and men are not perfect, therefore some laws are not perfect. As our ideals of social justice change, so laws must change to meet our modern needs. Fortunately, as American citizens we can work to change laws which do not carry out the promise of our Constitution. Our country is strong because it is founded on the principle that each person is important, and has equal rights. But we must always remember that with these rights we must accept our responsibilities.

Many years ago when I first started to work for laws which I felt were needed to make our city a better place in which to live, people would say to me, "Why do you bother to waste your time." It hasn't been a waste of time, as I have seen many wonderful things come to pass—things which many citizens worked together to accomplish. One of the situations we have been trying to change is the lack of the vote for District of Columbia residents. We hope that by the time you reach 21 the vote will have been obtained for those of us that live here in the Nation's Capital.

The one idea which I wish to leave with you today is that each one of us has an important part to play in keeping our country great. Don't say, "Not me—I'm just an ordinary fellow, nothing I can do will matter in the whole scheme of things." Let us suppose that each one of you went home today and did some job that needed doing around your home, such as fixing your front steps or cleaning your yard. Can you picture how much better your block would look if everyone did it? Now if this happened in all the blocks in your neighborhood, your neighborhood would take on a new look. With over 137 neighborhoods in the city, before long the whole city would have benefited by the action of many individuals, each one of whom did an important, though small job. To go one step further—many people come to Washington from all over the world. Just think how your action has helped to give these people from other countries a good impression of Americans, because they will judge Americans by what they see here.

I have used the illustration of fixing up our homes because it is a program easy to visualize. We can also use this same method to make our city more law-abiding. As members of this fine student body, you can accept the responsibility not only for your own actions, but you also can help a younger child understand that we obey laws, not because we are afraid we will be caught and punished, but because what we do as individuals makes our country strong or weak. Each of us can thus play an important part in preserving the strength of our country, among the family of nations.

Memorial Day at Cathedral of the Pines

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. BASS of New Hampshire. Mr. Speaker, this Saturday the Nation pays homage to those countless thousands who

have died in the wartime service of our country. At the Altar of the Nation at the Cathedral of the Pines in Rindge, N.H., a national Memorial Day service will honor all heroic war dead. Under unanimous consent, I include in the Appendix of the RECORD the following statement about this service:

At 3 p. m., May 30, all America will honor all its heroic war dead at the Altar of the Nation in the Cathedral of the Pines, Rindge, N.H. This altar is the only national war memorial in the United States recalling the sacrifices of lives of all Americans in war service.

President Eisenhower will, for the seventh year, have his wreath placed at the Altar of the Nation in tribute not only for those of the combat forces but also for those of the Red Cross, the merchant marine, the canteen workers of the Y.M.C.A., the Salvation Army, the Knights of Columbus, the war correspondents, the entertainers, and all whose lives were sacrified in war service. Gov. Wesley Powell, of New Hampshire, will be present to act for President Eisenhower. Governor Powell and the Governors of all the other States and Territories will, for the fifth year, have their tributes placed at the Altar of the Nation in honor of the war dead of their respective domains.

Miss Chloe Clifford, president of the General Federation of Women's Clubs, on behalf of their 5 million members, will have their tribute placed at this altar especially commemorating the sacrifice in war service of the lives of women. Other war memorials commemorate the sacrifices of the men only.

President George Meany, on behalf of 13 million members of AFL–CIO, annually has Hugh Thompson, New England regional director, place a wreath at the Altar of the Nation recalling the sacrifices of life in war service by those providing the sinews of war for those of the combat forces.

At the Altar of the Nation, "One Nation, under God, indivisible," is an actuality. Forty-one different faiths and people of all origins—white, black, red, yellow, and tan; Roman Catholics, Protestants, Jewish, Eastern Orthodox, Christian Scientists, Mormons, and others; those of the North, South, East, and West—have, each in their own way, conducted services before the Altar of the Nation.

The president general of the United Daughters of the Confederacy, Mrs. Murray Forbes Wittichen, is coming from her home in Coral Gables, Fla., to dedicate a plaque to be placed at this altar as a memorial for "the boys in gray." This tribute will be placed next to one commemorating those of the GAR. Miss Inez Farmer, national president of the Daughters of Union Veterans, is coming from Minneapolis, Minn. to dedicate a similar tribute in memory of "the boys in blue."

The president general of the National Society of the Sons of the American Revolution will be present to place a wreath in memory of their forefathers. Stones from all the States and Territories are incorporated into the Altar of the Nation and many of the State stones were contributed by the State societies of the SAR. Other distinguished guests will take part in this observance.

The national commanders of the American Legion, VFW, AMVETS, Sons of Union Veterans, Spanish American War Vets, Marine Reserves, the DAR Society of Mayflower Descendants, and other patriotic organizations, together with the national heads of the American Red Cross, Salvation Army, YMCA, and other national organizations will have their tributes placed at this altar at this time commemorating the sacrifices of lives in war service by members of their organizations.

New Cure for Inflation: Give the Consumer a Break

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. RAY. Mr. Speaker, the following article by Joseph R. Slevin, national economics editor of the New York Herald-Tribune, presents a facet of the problem of inflation to which sufficient attention has not been paid. I think it is worth careful consideration:

NEW CURE FOR INFLATION: GIVE CONSUMER A BREAK

WASHINGTON, April 29.—It's collective bargaining time and so many people are shouting about the rightful shares of labor and the stockholder that they're in danger of overlooking the consumer once again.

Just about everyone in the administration from President Eisenhower on down is bowing in the direction of the consumer by urging that the price line be held to stop inflation, but the question is whether they are bowing deeply enough.

Some Government economists—and they're not odd-balls—think the consumer deserves a better break than that. Their notion is that the consumer ought to get a generous helping of price cuts.

TWO WAYS POSSIBLE

There are two ways to boost living standards. One is by giving people more money to spend and the other is by making it possible for them to buy more things by cutting prices.

The price cut approach isn't the kind of solution that will appeal to labor leaders like United Steelworker President David J. McDonald. He told the Senate Antitrust Subcommittee just last week that the way to increase living standards is to pay higher wages.

United States Steel Corp. yesterday reported first-quarter, after-tax profits of $106,585,303 and its a safe bet that Mr. McDonald will take that as confirmation of his conviction that the steel companies can raise wages substantially without increasing prices.

What some Government economists suspect is that Mr. McDonald's arithmetic is right but his prescription is wrong.

EXPERTS BACK PRICE CUTS

Where Mr. McDonald contends that wages and salaries must be raised to stimulate consumer buying demands, the Government experts reply that the same result can be achieved more quickly—and with greater benefit to more people—by chopping prices.

The notions that many economists have been voicing privately for some time now have been put firmly on the public record in a remarkable speech by one of the country's most respected and influential economists—Woodlief Thomas, economic adviser to the Federal Reserve Board.

Mr. Thomas didn't mention the steel companies by name but there is no mistaking the industry he was singling out when he put his finger on bigger labor costs as the "strongest force" making for higher prices—then followed through with this pointed indictment:

"Rising profits, following maintenance of a surprising level of profits even when operations were sharply reduced would indicate that wage costs are not the sole element of price increase."

Mr. Thomas didn't stop there. He warned that a tendency to limit the division of productivity gains to labor and capital "is perhaps the most important unstabilizing force in our economy today" and the force that is most likely to end the current upturn.

BUYING DIFFICULTY CITED

The Federal Reserve official stressed that consumers will find it difficult to buy an industry's products if all the benefits of greater productivity flow into that industry's profits and into the workers' pay envelopes.

He cited the automobile industry as a horrible example and said that "many consumers will simply decide not to buy the products offered, as they did with automobiles in 1957 and 1958."

Mr. Thomas offered price cuts as the solution. He said the benefits of increased productivity must be shared by the largest possible number of consumers.

"This can be done most effectively—perhaps only—by a lowering of the prices of those products that can be produced at less cost," he declared.

Pertinent Facts on the Aswan Dam

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. JAVITS. Mr. President, much has been made of the Soviet offer to help finance the building of the Aswan Dam on the Nile River, in Egypt. In this connection, I ask unanimous consent that an article from the Winter-Spring, 1959, issue of "Prevent World War III," published by the Society for the Prevention of World War III, may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERTINENT FACTS ON THE ASWAN DAM

(By Albert Simard)

The Soviet Union's offer to loan the equivalent of $100 million toward the construction of a high dam at Aswan on the Nile challenges the ability of our diplomacy to develop a farsighted approach in regard to the Middle East. It is probable that the Soviet move will stimulate pressures here to have our Government participate in the financing of this project or other grandiose schemes. Besides the propaganda overtones of the Russian gesture, it is clear that Egypt's aim is to entice the United States to emulate or to outbid the Soviets.

However, if our Government shows prudence and realism, it will avoid the pitfalls which lurk behind the diplomatic maneuvers of the Kremlin and Cairo.

It is in the context of Cairo's imperialistic ambitions and its failure to substantially improve the plight of the Egyptian people, that the Aswan project serves as a gigantic political diversion for a bankrupt leadership.

Contrary to a widespread impression, the efficacy of the Aswan project has been challenged by authoritative sources. For example, the International Bank for Reconstruction and Development asserted in detailed analyses that the construction of the project would impose upon the Egyptian people rigid austerity over a period of years and in the end provide them with a standard of living no higher than the one on which they now barely subsist. The Bank asserted that, if the dam were built, the pace of industrial growth will be slower than heretofore, and that "it seems probable that over the next

decade or two the overall expansion of the manufacturing industry will take place at a considerably slower rate than in the past 15 years."

As regards the Aswan project's effect on the Egyptian agriculture, the Bank pointed out that even with an increase in agricultural income over the next two decades, "Egypt will no doubt face continuing problems in keeping pace with the growth of population. In view of the probability that the population by 1975 will be about 60 percent greater than at the present, there is little or no prospect that Egypt will have done much more than maintain the present standard of living. * * *"

Mr. Morris L. Cooke, a consultant engineer of international reputation who has served the U.S. Government in high posts, has also analyzed the soundness of the Aswan project. ("Panacea or Politics?" by Morris L. Cooke, published by the Public Affairs Committee, Washington, D.C., 1957). The following are some of the pertinent conclusions made by Mr. Cooke:

(a) "The $1,350 million high dam project would not, in fact, raise the present abysmal living standards of the Egyptian people."

(b) "The enormous cost of the undertaking would impose upon them a decade of severe austerity, during which urgent needs for social improvement and industrial expansion could not be met."

(c) "Construction of the high dam would invite disastrous inflation unless the Egyptian Government were willing and able to enforce rigid controls over the country's economy."

"(d) This the Nasser regime appears unable and unwilling to do. In the face of the World Bank's advice, the Nasser government has persisted in a capricious 'development' program completely out of line with the realities of its precarious economic position.

"(e) Most striking of all is the fact that Nasser has so crippled the Egyptian economy through his arms-for-cotton deal with the Soviet bloc and his huge internal military budget, that it would now appear impossible for Egypt, with or without Suez Canal revenues, to mobilize the financial resources necessary to complete the project."

Mr. Cooke further observes that the project in its proposed context would discriminate against other states through which the Nile flows, including the Sudan, Ethiopia, and Uganda.

However, the decisive factor which militates against the Aswan project is the underlying character of the present Egyptian regime. In Mr. Cooke's words, the Egyptian economy has been undermined by "militarism, fiscal manipulation, and political adventuring of the Nasser regime."

Thus, by its very nature, the Nasser regime cannot implement a sound constructive economic program to better the living conditions of the Egyptian people, and the construction of the Aswan Dam cannot produce any significant improvement in the economic status of the people.

Practical economic measures for the benefit of all of the people in the Middle East are, of course, a high priority. Experts on this subject have been in general agreement that the nature of the distribution of the resources in that area makes it advisable that economic programs be conceived in terms of treating the Middle East as a unit. The validity of an overall approach was reaffirmed in the President's speech before the United Nations General Assembly in August 1958. On the other hand, it has been proven that the Aswan project is not only of questionable economic advantage to the Egyptian people, but it also discriminates against the rights of other states on the Nile. Therefore, the national interests of the United States and of all friendly countries in the Middle East area would best be served by developing practical programs of aid based on the principles outlined by the President.

It follows from the foregoing that a hasty attempt to outbid the Russians in projects such as the Aswan Dam would, in the last analysis, only serve the political objectives of the Cairo government. These objectives contemplate the subjugation of free countries in the Middle East and the ultimate undermining of the U.S. position in that vital area of the world.

More Money Needed for Schools

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. YARBOROUGH. Mr. President, the President's Science Advisory Committee has recommended this Nation spend twice the $18 billion it is now putting into its educational system. However, like other reports on the vital needs of education, the President has taken no action on this matter.

I suggest to my colleagues that, since the need for educational improvement in this country is not only obvious, but a crying need, and since it is equally obvious that the current administration proposes to do nothing to meet this need, that it falls the duty of the Congress to correct this situation.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Post and Times-Herald for Tuesday, May 26, 1959 entitled "Another Bad Report Card."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 26, 1959]

ANOTHER BAD REPORT CARD

President Eisenhower's comments on his Science Advisory Committee's education report were as disappointingly vague as the administration's attitude toward the Nation's school needs has been vacillating. The committee, headed by James R. Killian, Jr., the President's science adviser, stated forthrightly that the United States ought at least to double its $18 billion annual outlay for schools, but Mr. Eisenhower merely said that the report is "an excellent statement of educational goals and needs."

The President seems still to place more value on theoretical budget balance than on such vital needs as more adequate education and augmented defense. If the Eisenhower administration had supported a comprehensive Federal aid to education program 5 or 6 years ago the deficit in school facilities and faculties might not be so great as it is today.

This year the administration has even disowned its modest school construction program and has asked Congress to aid only those school systems with truly desperate financial problems by helping them pay off their construction bonds. Yet a broad Federal aid program is necessary if all schools are to be brought up to the desired and attainable levels recommended by the Killian committee and other studies of education. Many cities and States have about exhausted the school tax revenues that are available to them. If Americans are getting weary of reports on the need to improve education it is because of the failure of both the Eisenhower administration and Congress to help solve a problem which has become so distressingly obvious.

Unwise Controls to Education

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. BEALL. Mr. President, an important report has been issued on the likelihood of damage to higher education by the imposition of unwise controls.

The report was prepared by a committee headed by Dr. Milton S. Eisenhower, President of the Johns Hopkins University, Baltimore, Md., the "Committee on Government and Higher Education." The report is published under the apt title, "The Efficiency of Freedom."

Dr. Eisenhower has favored me with a copy of the report.

Neither educators nor State government officials—

The report notes—

would willingly countenance turning over our educational institutions to political control. But when they condone the imposition of intrusive controls of any sort, they open the way to an erosive process which first can weaken and then destroy the essential freedom of the State colleges and universities.

The committee report traces the growth of State controls, pointing to two principal reasons for the tightening of supervisory reins—(a) governors and legislators, faced with rising costs, are forced to promote economy and efficiency in the use of limited State funds, and (b) the present trend in the philosophy of State governments is toward centralization of control.

The possibility of State interference with higher educattion is heightened, the report states, because State finances and the physical and human resources of the universities and colleges are both entering a period of stress.

The report follows a 2-year nationwide study of the relationships between State governments and the State universities. The research study was made by a 15-man group headed by members of the Department of Political Science at Johns Hopkins.

Repeatedly the report emphasizes the committee's conviction that State governments can best assure sound and efficient management of the public colleges and universities by holding a strong, able board of lay trustees responsible and accountable for the program, policies, and operation of the institutions. It argues that colleges and universities can only perform their expected role in a climate of freedom, and that intellectual freedom goes hand in hand with institutional independence.

The consensus of the committee—

The report concludes—

is that this freedom is preserved and strengthened by the granting of independence to the institution and * * * by placing responsibility and authority for the management of the institution in the hands of an able, independent lay board of trustees, who themselves can be held accountable to the people of the State for wise and effective action. Only by insuring the preservation of freedom and independence of our public institutions of higher learning can we make certain that they will continue to exist as creative centers of learning and research, contributing much, as they always have, to human progress.

The report states further:

College officials do not question the right of legislatures to determine the amount and kind of public higher education the State shall have, or the legislature's continuing responsibility for determining what share of the State's income can be allocated to the colleges and universities. They feel strongly, however, that a legislature defeats the purpose of efficient government when it makes detailed judgments on matters of curriculum and research, freezes into statutes admissions policy and other matters requiring flexibility, or, in an effort to insure the honesty and legality of all administrative transactions, sets up a multiplicity of watchdog agencies. Educators know that such all-embracing supervision is a recipe for institutional mediocrity in the field of higher education.

In the concluding passages, the report says:

Some urgency attaches itself to achieving a harmonious and fruitful working partnership between officials of State government and educators, for the heralded tidal wave of students is nearly upon our colleges and universities. There is also a critical and widely acknowledged need for ever-increasing quality in our educational programs and research in all fields. All the talents, energies, and wisdom of professionals in education and officials in State government will be called upon to solve these substantive problems. If we are wise, we shall act soon to establish cooperative relationships, for it would be wasteful to halt educational progress while we spend time settling matters of jurisdiction and procedure.

Mr. President, the committee makes 20 specific recommendations. I ask unanimous consent to have these recommendations printed in the Appendix of the RECORD.

There being no objection, the recommendations were ordered to be printed in the RECORD, as follows:

RECOMMENDATIONS OF COMMITTEE ON GOVERNMENT AND HIGHER EDUCATION

1. The committee encourages academic officials, trustees, alumni and all other individuals with an interest in higher education to make a strenuous effort to explain the case for independence of colleges and universities to State officials and the general public.

2. Colleges and universities should be candid and communicative in their dealings with State government.

3. Colleges and universities should make every effort to establish, maintain, and deserve a reputation for efficiency and sound management.

4. Colleges and universities in each State should take the initiative in coordinating the programs effectively through voluntary and cooperative means (to avoid unnecessary duplication of programs or facilities).

5. Colleges and universities should avoid undertaking activities and offering courses that are not properly within the sphere of academic enterprise.

6. Governing boards of colleges and universities should assert their traditional authority to control the policies and operations of their institutions.

7. Legal autonomy should be given to every institution of higher education that carries on a substantial program of teaching and research.

8. Legislatures are encouraged, when allocating funds to higher education, to avoid all attempts to legislate specifics of educational policy.

9. Legislative interim committees and service agencies should continue their valuable function of keeping legislatures informed, but they should never act as instruments of control over educational administration.

10. The committee encourages legislatures to review and revise those statutes pertaining to higher education and fiscal and management controls which have become outmoded or which impede the effective management of the institution by the responsible officers.

11. The committee calls attention (of governors) to the fact that a large measure of success of higher education will depend on the caliber of members serving on governing boards.

12. Governors are encouraged to survey the administrative controls over higher education and to issue administrative orders (where statutory changes are not required) to eliminate those that are unnecessary or harmful.

13. Governors are encouraged to exercise their influence to keep higher education out of any partisan conflict.

14. Regarding higher education, the work of budget officers should be confined to (a) analysis of total budget requests; (b) recommendation to the governor of the total amount needed for higher education, along with the results of the buget analysis.

15. Officers and trustees of the institutions of higher education should have the right to defend their budgets before the governor and the legislature rather than be forced to depend on a third party to present budget justifications on their behalf.

16. Annual allotments or full grants of appropriated funds are preferable to quarterly or monthly allotments for higher education.

17. Colleges and universities should be encouraged, where savings will result, to make voluntary use of State purchasing services, but they should be exempted from compulsory centralized State purchasing.

18. Purchases made by institutions should be in confirmity with modern purchasing procedures, including open and competitive bidding for large items and bulk purchasing.

19. The committee reaffirms the need for a thorough postaudit of the expenditures of institutions of higher education, but believes the preaudit should not be applied to higher education.

20. The committee urges that personnel rules, where applicable to institutions of higher education, should be made as flexible as possible, and argues that if a university is to fulfill its mission, autonomy in the control of both academic and nonacademic staff is by far the preferred arrangement.

The Modern Fallacy and the Ancient Folklore

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by the Wall Street Journal and a reply by the distinguished Senator from Pennsylvania, Senator CLARK.

I think this is one of the best replies to a superficial editorial that I have ever seen, and Senator CLARK's concise and lucid comment should be made available to all Americans. The excerpt was published in the New Republic on April 6, 1959.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

THE MODERN FALLACY

For an insight into the modern political philosophy now dominant in Congress, consider some comments made by one of its more articulate spokesmen, Senator JOSEPH CLARK of Pennsylvania.

As quoted in the current issue of the Atlantic magazine, Mr. CLARK expresses annoyance that the word "government" is sometimes equated with "other nouns having an evil connotation—such as 'waste,' 'extravagance,' 'socialism,' 'bureaucracy'." * * * He objects to the "fallacy" that "private spending is inherently good and public spending is inherently bad."

But the real point is the clearly implied one: That Americans should learn to regard growing government and growing government spending as positive and good things; as another of the "moderns" in Congress has expressed it, the danger may be not that we have too much government but too little. * * *

Well, let's see. Some rather marked—and inherent—differences between public and private spending occur at once. Private spending comes from the money individuals are able to accumulate through their own work. Public spending cannot come from anything generated by the Government itself; it comes from what the Government is able to extract from those same individuals either in actual taxes or in the more sinister tax of inflation. * * *

Beyond these elementary differences are others. The vast bulk of public spending is nonproductive; that is true not only of defense but of many other things the Government does. The Government is by and large a consumer of huge hunks of the economy, while private individuals are mostly producer-consumers. The latter combination is what makes the economy grow. Moreover, the bigger the Government becomes the more it competes with the private economy, and in this pressure against the available limit of supplies is a special inflationary force.

And because Government operates without the built-in restraints of the private economy, it is a peculiarly powerful incubator for precisely the evils Senator CLARK thinks should not be associated with Government—waste, extravagance, bureaucracy. The bigger the Government the worse the evils.

Finally, what is the political result of encouraging Government growth and growing Government spending on the theory that, after all, they are not really bad? The end result must be the triumph of the State over the individual. * * *

There is an appalling air of naivete about the expressed views of some of the modern political philosophers. It is impossible that they are unacquainted with the history of man's struggle against the all encompassing State, which is also the very heart of today's conflict with Communist tyranny. Can it be, then, that they are incapable of relating past and present human experience to their own country?

WALL STREET JOURNAL.

THE ANCIENT FOLKLORE

For an insight into the archaic political philosophy still dominant in Wall Street, consider some comments made by one of its

more articulate spokesmen, the editor of the Wall Street Journal.

As quoted in an article in the March 4 issue of the newspaper entitled "The Modern Fallacy," the editor expressed annoyance at those who challenge the assertion that private spending for whatever purpose is necessarily better than public spending for any purpose.

The real point is the clearly implied one: That Americans should complacently regard growing spending for liquor, tobacco, cosmetics, Cadillacs, tranquilizers, yachts, and parties at the Stork Club as positive and good things; as others of the dinosaur descendants on Wall Street have often expressed it, the danger may be not that we have too little public spending for national defense, schools, highways, hospitals, unemployment compensation and flood control, but too much.

Well, let's see. Some rather marked—and inherent—differences betwen public and private spending occur at once. Private spending may come from the money individuals are able to accumulate through their own work; it may also come, as it does in my case, from selecting ancestors who thought they were developing a sugar plantation but turned out to be squatting on top of a salt dome surrounded by a rich oil pool.

Beyond these elementary differences are others. The vast bulk of public spending is for purposes without which life itself would have little meaning: protection against the threat of destruction by, or in the alternative, slavery under a Communist dictatorship; and such mundane but necessary things as police and fire protection, water and sewer facilities, street construction and repair, the postal service, indeed all of that environment without which the editor of the Wall Street Journal could neither publish nor disseminate his strongly-held economic views.

And because our present tax laws are so full of inequitable loopholes, we have today a powerful incubator for what the editor of that newspaper, I am sure, thinks should not be associated with private enterprise—waste, extravagance, plutocracy.

Finally, what is the political result of discouraging all public spending without any consideration of its political, social or economic justification? The end result must be the destruction of Western civilization.

There is an appalling air of naivete about the expressed views of some of the ancient political philosophers. It is impossible that they are unacquainted with the history of man's struggle to conquer nature and subdue the devil within himself—which is also the very heart of today's conflict with atheistic and amoral Communist tyranny. Can it be, then, that they are incapable of relating past and present human experience to their own country?

Senator JOSEPH S. CLARK.

Experience Hard To Replace

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. FRIEDEL. Mr. Speaker, the growth of our Nation's cities has made areas of open space more important than ever. The need for city recreational facilities and parks is an ever-pressing problem. We in Baltimore have been fortunate for some years in having two men on the board of recreation and parks, who have not only protected these open areas and facilities from encroachment, but have increased the recreational facilities. They have been fierce defenders of the right of the people to have available spaces within the confines of the city. I am speaking of Mr. James C. Anderson, president of the board, who has served the city for 9 years, and Mr. S. Lawrence Hammerman, vice president of the board, who has served the city for 16 years.

These two positions, president and vice president of the board, are open for appointment by our new mayor. On Sunday, May 24, 1959, the Baltimore American carried an editorial lauding these two outstanding citizens of the city of Baltimore and recommending their reappointment to these offices which they have so excellently filled.

The article is as follows:

EXPERIENCE HARD TO REPLACE

We are hopeful that Mayor Grady plans to make appointments of well qualified people in organizing his administration.

In this connection it is pertinent to suggest that he not deprive the city of the experience and public spirit of James C. Anderson, president of the Board of Recreation and Parks, and of S. Lawrence Hammerman, vice president.

Mr. Anderson has served the city 9 years and Mr. Hammerman 16 years, the latter under both Democratic and Republican mayors.

During their leadership the expansion of desirable facilities for the public has been considered the largest in history and judiciously managed.

Memorial Stadium was built and more recreational space provided in several categories.

The two officials have been fierce defenders of parks acreage against encroachment by unfitting enterprises. An instance was the fight to prevent erection in Druid Hill Park of the Civic Center, which did not belong there but downtown.

When Mr. Anderson took office he was comptroller of the Standard Oil Co. (New Jersey) and spent much of his time in New York. He now has retired from that post and is able to devote much time to the needs of the sprawling parks and playgrounds.

Mr. Hammerman has been zealous and forceful in promoting the welfare of that system.

The names of a couple of men who were active in the background of the Grady campaign, including that of a district "bosslet," have been mentioned as possible appointees to the parks presidency.

They are men of ability, but they would require a long period to gain the intimate knowledge of the city's recreational needs now possessed by Mr. Anderson and Mr. Hammerman.

We think the city would be the loser if this fund of knowledge were tossed overboard.

Columbus Foundation: A Bold New Program To Promote Inter-American Friendship and Good Will

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. ZABLOCKI. Mr. Speaker, as guest of a luncheon group which met in the Vandenberg Room of the U.S. Senate on August 13, 1958, I was pleased to hear about a bold new program to promote inter-American friendship and good will. Known as the Columbus Foundation, the new nonprofit, nonpartisan organization proposed to stimulate a continuing program for stronger inter-American bonds of mutual respect and understanding.

The meeting was called by Senator WAYNE MORSE, of Oregon, at the request of Congressman PETER W. RODINO, JR., and the executive committee of the National Citizens Committee for Columbus Day. Congressman RODINO, as you know, is the author of H.R. 418 which seeks to declare October 12, Columbus Day, a legal holiday.

The purpose of the meeting was to acquaint Senator MORSE, chairman of the Subcommittee on American Republics of the Senate Foreign Relations Committee and other members and interested Congressmen with the work of the National Citizens Committee for Columbus Day and the proposed Columbus Foundation launched on October 12, 1958.

I am pleased at this time to tell you that the Honorable PETER W. RODINO, JR., of the 10th Congressional District of New Jersey, was named in September 1958 as the first national chairman of the Columbus Foundation.

On Friday, September 19, 1958, the distinguished Italian Times of Boston carried the following story about Congressman RODINO's appointment on the front page:

NATIONAL CITIZENS COMMITTEE FOR COLUMBUS DAY NAMES RODINO NATIONAL CHAIRMAN OF COLUMBUS FOUNDATION

The National Citizens Committee for Columbus Day has announced the appointment of the Honorable PETER W. RODINO, JR., Congressman from the 10th District of New Jersey, as the first National Chairman of the Columbus Foundation, a public service organization dedicated to increased inter-American friendship and understanding through educational and cultural exchange. Congressman RODINO is the author of H.R. 418, a bill which seeks to declare October 12 as a legal holiday.

In announcing the appointment, John T. O'Brien, executive vice chairman of the committee, said in part:

"Congressman RODINO has been a pioneer in the movement to make Columbus Day an important symbol of unity in the United States. For the past several years he has been equally enthusiastic in his support of the efforts by the National Citizens Committee for Columbus Day to make its slogan, 'Americans All,' encompass the 21 republics of the New World. This program, first launched in Washington, D.C., in 1955 by Dr. Carlos Davila, then Secretary General of the Organization of American States, has now become nationwide. In 1957, some 40 Governors participated in issuing Columbus Day proclamations and over 500 mayors issued proclamations and sponsored observances of some sort.

"Throughout the United States, Italian-Americans have played an important role in helping to make the traditional Columbus Day observances another occasion for greater understanding and friendship among the peoples of the Americas.

"It was this fact that prompted the Honorable Charles P. Taft, former mayor of Cincinnati, to recommend in his report on the Cincinnati Columbus Day Program in 1957, that the 1958 national chairman of the Columbus Day Foundation be an Italian-American in recognition of the outstanding work done by the people of Italian descent

through the years in making Columbus Day observances an occasion for cultural and spiritual regeneration."

In commenting on his appointment as the Columbus Foundation chairman, Congressman RODINO said:

"I am naturally honored by this recognition for doing something which is close to my heart. I have had the pleasure of working closely with the National Citizens Committee for Columbus Day for the past several years and even before that I had been actively working to have Columbus Day declared a national holiday. The National Citizens Committee for Columbus Day has, in my judgment, performed a constructive public service since 1955 with its emphasis on Columbus Day, October 12, as an occasion for commemorating the richness of the heritage we in the New World have received from the Old World through the diversity of cultures in North and South America."

In the same September 19, 1958, issue of the Italian Times, a very splendid editorial commented on the organization of the Columbus Foundation:

OUR GOOD NEIGHBORS

Occasionally someone in the Nation's Capital becomes cognizant of the fact that we have to our south a large group of countries, known collectively as Latin America, for whom we have mixed paternal and fraternal feelings. We take it for granted that this good feeling is always reciprocal and do nothing to cherish it or to foster more good will until something unpleasant, such as Vice President NIXON'S recent trip, occurs to jolt us out of our complacency.

Then in typical fashion we create a crash program and try to do in a week or month what should have been accomplished slowly and painstakingly over the years.

Therefore, it is refreshing and encouraging to learn that there are forces at work developing such a long-range program, the fruits of which may not seem spectacular at first, but the cumulative effect which will be more beneficial and long-lasting. The campaign to designate Columbus Day as a day on which all the Americas—North, South, and Central—can jointly celebrate the great man and occasion which brought them all into being is very appropriate at this time. For it not only emphasizes the heritage which we all share in common, but underlines the fact that our destinies are more closely entwined through the advancements of modern technology.

To those still residing in the Old World, the designation New World takes in more than just the United States. It may come as a surprise to many Italo-Americans that almost 5 million Brazilians are of Italian ancestry. Millions more live throughout the other Latin American countries.

It seems most fitting, therefore, that President Gronchi of Italy should visit Brazil at this time, for the ties that bind those two countries together are just as strong as those which exist between Italy and the United States.

Just as this country cannot dare to neglect her associations with those lands of the Old World that have demonstrated their friendship for us, can it dare to ignore the reservoir of good will which exists in our good neighbors to the south.

A joint celebration of Columbus Day is a good start in the right direction.

Private Enterprise, Inc.

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. CARLSON. Mr. President, we are fortunate to have in this Nation individuals who are devoting their time and effort to an international program that is of great value to our Nation internationally.

Private Enterprise, Inc., at Wichita, Kans., has an idea that the best way to meet the challenge of world communism is to have more successful private industries in far places.

This organization started originally through the efforts of one man, Mr. Bill Graham, of Wichita, and has now grown into an organization that is operating in Panama, Colombia, India, Turkey, Australia, Indonesia, Lebanon, and Pakistan, and has just arranged to operate in Ghana and Liberia.

As a member of the Foreign Relations Committee, I am familiar with the great benefits that accrue from these investments. During my visit to New Delhi, India, a year ago, I had the opportunity of visiting with some people who were financed by this organization in what we term in this Nation as very small businesses.

Private Enterprise, Inc., deserves the commendation of our citizens for the fine work it is doing in this field.

I ask unanimous consent that an article on the subject be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Topeka (Kans.) Capital-Journal, May 17, 1959]

RETIRED RICH MEN OFFERED NONPAYING JOBS

WICHITA.—"Wanted: Experienced, successful executive, maybe retired with ample income, who feels the urge for a new challenge. Age 40 to 60, preferably under 50. Money, just now, must be no object."

That is about what the want ad would say, if Private Enterprise, Inc., ran one.

It wants two, three—maybe six—such workers to help carry the load as it expands its program of loans to little people in the United States and abroad, to set them up in businesses of their own.

So says Bill Graham, Wichita oilman who fits that measure of the wanted men as head of the privately financed U.S. group; but who admits he needs dedicated, talented help.

It is Private Enterprise's theme that the best way to meet the challenge of world communism is to have more successful private industries in far places—like India, Indonesia, Africa, South America.

The program is one of investments in new, small business, in partnership with the native enterpriser who has the profit-making idea but is limited in cash.

Bankers, industrialists, salaried workers, even children are putting up the American capital in $10 shares.

It's a 50–50 deal, splitting profits until Private Enterprise, Inc., gets back double its investment, Graham said. Then the native partner can, if he wishes, buy out the loan capital that got him started.

Where native financiers show interest—and in most places they have—Private Enterprise works with them and through them and they furnish part of the capital and supervision.

Such ventures already are operating in Panama, Colombia, India, Turkey, Australia, Indonesia, Lebanon, Pakistan, and—just signed, in Ghana and Liberia.

It's a program that brings in hundreds of letters and telephone calls weekly to be screened; applicants to be interviewed; business decisions to make beyond the capacity of the small staff, including several volunteers, that already has grown up around Graham.

"I'm going to be in Colombia and Peru and Brazil, the next 3 months—and in western and southern Africa—working at this job," Graham said, before taking off on a business trip.

"We need help badly, to keep things going when I'm here. But we need it even more urgently when I'm gone.

"Somewhere, in just about any place of any size, there must be the kind of guys we need—guys who have reached the point where they're no longer worried about making another million, but just itching for a new challenge. Maybe they're not retired, but could get away for 3 or 6 months."

Tight Money Is Back

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. PROXMIRE. Mr. President, under the title "Tight Money Is Back" Sylvia Porter, widely regarded as one of the most competent financial commentators in the business, reported in last night's papers the immensely serious consequences of the Federal Reserve Board's present hard money "kick." She points out that homebuilders and buyers are not going to get the money to go through with their plans; that many loan applications from business borrowers will be cut, others will be refused; that a far greater number of States and cities will find that the legal limits have been reached on what they can pay for money and will bar them from borrowing; that whatever the American people buy on the installment plan will zoom up in cost; that the Federal Treasury—which means the American taxpayer—will pay far more on the huge national debt refunding..

Miss Porter sums up the consequences of the present tight money policies when she reports—

The tight money phase of 1959-to-? is shaping up even now as more restrictive than that of the summer of 1957 just before the recession of 1957–58, and that money pinch was brutal to countless hundreds of thousands.

Mr. President, I ask unanimous consent that the article by Miss Porter be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TIGHT MONEY IS BACK

(By Sylvia Porter)

We are now reentering a cycle of tight money.

This one will be, according to all reliable signals, the toughest in this Nation since the bank panic of the early 1930's.

Already, the "price" of money—the level of interest rates—is the highest in a quarter-century and its heading higher. Already, many loan applicants are finding it more difficult to get credit, and the clampdown will be rougher in the months ahead. Already, bonds carrying low coupons sold by the Treasury, States, cities, and corporations in the easy money cycles of the past have sunk to record lows and are moving lower.

This is what tight money means: a period in which most borrowers must stand in line to get credit, in which many are turned down flat or granted only a part of the cash they want, and in which all who do get loans must pay heavily for them.

Tight money happens when the demand for credit tops the supply of money available in the Nation's pool for loans.

It happens when the economy goes into an upswing and as a result, businessmen want to borrow more to add goods to their shelves and expand their plants, homebuilders and home buyers want to borrow more to finance houses, millions of consumers want to borrow more to buy cars, appliances, and the like, States and cities want to borrow more for essential public works, etc.

It happens when the Federal Reserve System refuses to add enough money to the credit pool to take care of the increased loan demands because the Central Bank is convinced that if all who want to borrow can do so easily, the prosperity will become an inflationary boom.

The conditions I've described above have been emerging clearly for months, are now unmistakably dominating the money markets.

What will this cycle of tight money mean to you?

To homebuilders and home buyers: Mortgage money is going to be the most expensive in years, and the stated cost of many mortgages is likely to be a lot less than the real cost. Although costs will vary from area to area, there is no doubt the ild will be on mortgage money, and many homebuilders are simply not going to get the financing they need to go through with their plans.

To business borrowers: The highest-rated corporation cannot get a loan for less than 4½ percent today—and hidden extras are raising the effective borrowing rate to well over 5 percent. Less established, desirable borrowers are paying more, of course. Now, the probabilities are many loan applications will be cut, others will be refused.

To States and cities: Lenders are demanding 3½ percent and more even on the tax-exempt securities of the highest-grade municipalities. Increasing numbers of States and cities will find that the legal limits on what they can pay for money will bar them from borrowing.

To buyers on the installment plan: They'll pay more for loans on autos, appliances, etc. Although the real charges will be hidden in the small print and rates will vary violently, costs will be definitely up.

To corporations selling bonds: They'll be placing the fattest coupons in years on new bonds and be glad to get buyers for them.

To holders of outstanding bonds: Prices of bonds they bought in the past will be down because new bonds will be coming out with higher coupons.

To the Treasury: It'll pay more than 4 percent just for short-term loans of a year or less.

To banks: They'll make more on the high loan rates and fat coupons on new bonds, but they'll be in a squeeze too because they won't have sufficient cash to meet loan demands.

To savers: They'll gain because financial institutions will be paying higher rates to attract more and bigger savings accounts.

The tight money phase of 1959 to ? is shaping up even now as more restrictive than that of the summer of 1957, just before the recession of 1957–58. And that money pinch was brutal to countless hundreds of thousands.

Dixie State Park, Utah

EXTENSION OF REMARKS

OF

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, May 26, 1959

Mr. MOSS. Mr. President, southern Utah is one of the most colorful and unique areas in America. Almost everyone has heard about Bryce and Zion National Parks, about Cedar Breaks National Monument, Navaho Lake, Puffer Lake, and the breathtaking Zion-Mount Carmel Highway.

Few people, however, know about the new Dixie State Park which has recently been opened in the southwest corner of our State. I hasten immediately to qualify that statement—few people have firsthand knowledge of the area now encompassed in the Dixie State Park, but almost everyone in America has seen part of it at one time or another as a background for a western thriller or some other movie requiring a wide sweep of western land and picturesque rocks as its locale.

I commend to the Senate an article which appeared in the travel section of the New York Times on Sunday, May 24, entitled "Head 'Em Off at Dixie State Park." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEAD 'EM OFF AT DIXIE STATE PARK—UTAH VISITORS WILL FEEL AT HOME ON LOCATION OF WESTERN MOVIES

ST. GEORGE, UTAH.—Down here, in the southwest corner of this State, first-time visitors to the new Dixie State Park may find its strangely eroded red sandstone cliffs hauntingly familiar. They may easily experience the eerie sensation of having been here before.

The explanation is simply that Hollywood's cowboys and Indians have so frequently roamed the park's 259 scenic acres that all America has seen practically all of them on the screen, and pulsed to every hoofbeat and rifle crack. As recently as last November, Gary Cooper and a sizable corps of his cavalry were galloping across the local sagebrush during the filming of a drama based on the career of Pancho Villa.

Now the Washington County Commission and the U.S. Bureau of Land Management has turned the area over to the Utah Park and Recreation Commission, including a number of picturesque old movie locations. As a result of the earlier histrionic endeavors, forts and haciendas, artfully constructed of adobe, logs and papier mache loom up in the otherwise pristine landscape.

HOLLYWOOD RUSTLERS

Many of the existing parkland trails were worn by the hooves of cattle being run off by rustlers holding cards in the Actors Guild. Virtually every box canyon in the immediate countryside has been utilized by gallant troopers trapping unwary Apaches.

Genuine redskins do reside just outside the new park. Members of a little-known and exceptionally peaceful tribe known as the Shivwits, these Indians live in shabby cabins, till small irrigated plots, or toil unobtrusively in neighboring motels and garages.

While the countryside does support a few dozen genuine cowpunchers, authentic cavalrymen are completely lacking, although a few armed guards are employed at nearby Hurricane Mesa, where the Air Force tests high-speed missiles and jetplane ejection devices in business-like, non-Hollywood fashion.

However, the slice of scenery acquired by Utah's Park Commission is authentically western. While small in acreage, the area is surrounded by additional thousands of acres of undeveloped public domain which include defunct volcanoes, sand dunes, cliffs and juniper-lined canyons of a striking nature. Locally known as Snow Canyon (named for a Mormon ranch family rather than for the flakes which rarely if ever fall here), the park is just 6 miles north of U.S. 91, the major Salt Lake-Las Vegas road.

The latter community, complete with an oddly spired Morman temple, a New England-style tabernacle, and what was once Brigham Young's winter home, has lately become something of a motel center for vacationists wishing to absorb winter sun in a mild desert climate and for those wishing to explore nearby Zion National Park, 45 miles to the east.

In addition to Dixie State Park itself, the Dixie region of Utah offers one of the most highly concentrated geology and history lessons available anywhere in the West. The "pancake rocks" adjacent to the park are striking examples of wind-and-water erosin; the Kolob Plateau in Zion National Park far across the landscape illustrates the manner in which sheer rock walls can be cut by a tiny river; six small, perfectly formed extinct volcanoes in and near the State park area are perhaps as easy to view, study and photograph as any in the Southwest, and the adjacent local sand dunes comprise one of Utah's few true deserts.

The hamlet of Santa Clara, on U.S. 91 near the Dixie State Park entry road, contains the 100-year-old home of Jacob Hamblin, the famous "Buckskin Apostle" of Mormon pioneer times who brought the Bible to the region's Indians, and who served as guide for such explorers as Major John Wesley Powell, who passed through the Grand Canyon by boat while surveying the Colorado River.

MORMON HAMLET

North and east of Dixie State Park, sheltered by the 10,000-foot-high Pine Valley Mountains, another somnolent, century-old Mormon hamlet, Pine Valley, is a haven for

artists and photographers interested in capturing the prim beauty of its clapboard Mormon church, stone houses, and hand-hewn rail fences.

Back in St. George, motel owners, restaurant waitresses or employes at the community's low-pressure tourist information bureau will cheerfully point out the way to such sights as the rock-walled factory where initial residents of Dixie set up the West's first cotton mill at Brigham Young's orders. Hence the name Dixie.

Declaration of Principles Adopted by Federation of American Citizens of German Descent in the U.S.A., Inc.

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the declaration of principles adopted at the seventh annual German-American Day in North Bergen, N.J., on May 24, 1959.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

Declaration of principles adopted at the seventh annual German-American Day held in North Bergen, N.J., May 24, 1959, under the auspices of the Federation of American Citizens of German Descent in the U.S.A., Inc., and cooperating societies throughout the United States, representing the large group of American citizens:

"We reaffirm our previous stand on the reunification of Germany as the prerequisite to its complete restoration and to universal peace. Therefore, we advocate that a peace treaty in conformity with the principle of justice and international law as expounded by the Charter of the United Nations as promised in the Atlantic Charter and as stated as self-evident proof in our Declaration of Independence be concluded as soon as possible in Europe. We appeal for the restoration of Germany in her legal borders, both in the interest of the national security of the United States as well as the entirety of our western family of nations, objecting to any endeavor to deny over 15 million of eastern expellees their right of self-determination, their unalienable right to life, liberty, and the pursuit of happiness in their homes in their ancient homelands. Any endeavor at present to legalize the terrible wrong done to those expellees would create a most dangerous legal problem, and destroy the thin fiber of justice and international law which is barely sufficient to hold mankind together in peace."

We resolve that the above declaration of principles adopted today by the large gathering of Americans of German descent at North Bergen, N.J., be transmitted to the President of the United States, General Eisenhower; the Secretary of State, the Honorable C. Herter; as well as to the chairman of the Committee on Foreign Relations of the U.S. Senate.

MAXIMILIAN L. OPOLONY,
Secretary General of the German-American Day Committee of the Federation of American Citizens of German Descent in the U.S.A., Inc.

Orphan Immigration Legislation Urgently Needed

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. NEUBERGER. Mr. President, one of the urgent matters now before Congress is the need to extend the provisions of the orphan immigration law which grants nonquota immigrant status to eligible orphans under 14 years of age who have been or will be adopted by American families. The present provisions expire this June 30, and unless a new law is enacted by that time, adopted orphan children will come under the regular immigration quota. They will be unable to enter the United States in substantial numbers and join their families in the United States. This is particularly true for orphan children from the Far East, where immigration quotas are small and from where more than 65 percent of the children admitted under the program have come.

Under the orphan section of Public Law 85–316, which I sponsored, 3,425 orphan visas has been issued since September 11, 1957, through March 1959. Forty percent of all orphan visas issued were issued to Korean children. Since July 1955, some 2,000 Korean orphan children have been admitted to the United States under the old Refugee Relief Act, the emergency parole procedure, and Public Law 85–316. Of this number, my constituent, Harry Holt of Creswell, Oreg., has brought almost 70 percent of the Korean orphan children to the United States. The members of the Holt family have expended freely of their time, money, and energy, and they are to be highly commended for undertaking this great humanitarian endeavor. They are Good Samaritans.

The surest protection for a Korean and oriental orphan child is his speedy placement with a suitable family in the United States. These children, at best, face a difficult and uncertain future in their homelands. The plight of the mixed-blood Korean orphan children, fathered by American military personnel, is still more difficult. It is my opinion that if it had not been for Harry Holt and his efforts, substantial numbers of Korean orphan children would never have been admitted to our country. Prior to July 1955, a total of only 35 Korean orphan children were admitted during 2 years of operation of the Refugee Relief Act.

Mr. President, legislation should be adopted to continue the orphan program on a meaningful basis, so qualified American families will have the opportunity to adopt foreign children. Legislation must not be so restrictive as to substantially halt the program. Abuses, whereby children are placed in unqualified American homes, and which resulted recently in the indictment of a former New York City magistrate for allegedly selling Greek orphan children, must be ended. However, we cannot lose sight of the fact that, despite the abuses that have been shown to exist, thousands of children have found good homes with adoptive parents in the United States. Well over 90 percent of the children admitted under the program are leading happy, fruitful lives in our country. The existing orphan legislation has given these children a new hope and future. Controls which would make difficult, if not impossible, the operation of any future orphan program and would restrict the entry of orphan children to our country must be avoided.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful editorial of May 18, 1959, from the Eugene (Oreg.) Register-Guard, entitled "Control Could End Holt's Baby Lift." The Eugene Register-Guard, Oregon's largest daily newspaper outside of Portland, is well qualified to speak of the Holt orphan program, since it serves the area where Mr. Holt resides.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONTROL COULD END HOLT'S BABY LIFT

Hearings will open Wednesday in Washington, D.C., upon a bill which might scuttle Harry Holt's Operation Baby Lift.

A. Robert Smith, correspondent for the Register-Guard in the National Capital, reports that this bill, S. 1468, has been sponsored by JOHN F. KENNEDY, Democrat of Massachusetts, and cosponsored by Oregon Senators WAYNE MORSE and RICHARD L. NEUBERGER. However, since its introduction both MORSE and NEUBERGER have disavowed any intent to stop Holt's internationally famous program of bringing Korean orphans to the United States for adoption.

The threat to the Creswell farmer's program—into which he has put a substantial part of his personal wealth—has roots in a provision of S. 1468 which would halt proxy adoptions. Holt has used the proxy system to get around red tape that would otherwise limit the number of youngsters he might airlift from Korea to this country, and new homes. The proxy ban, Smith reports, was tucked into S. 1468 by Senator KENNEDY because some abuses have been reported in other foreign orphan adoption programs—not Holt's.

Now Senator NEUBERGER has introduced another bill, S. 1532, which would clearly allow proxy adoptions to continue, and MORSE has stated that he certainly is not committed to all the language of the Kennedy bill.

Some legislation covering oversea adoptions must be adopted by June 30 when the present orphan immigration law expires. Otherwise orphans will be subject to regular immigration quota restrictions. It appears that whatever bill is adopted, and there are others in the hopper in addition to those we've mentioned, it will be required that hereafter some authorized agency will need to check the home life of applicant couples before they can qualify to adopt orphans from abroad. However, this is not a major point. Home checks are already required by Oregon law and in most States, and if further safeguards are needed, such as trial adoption periods, these should be enacted by State legislatures to cover all adoptions, not merely those of foreign-born waifs.

Certainly means can be found to control abuses without halting adoptions entirely. If ever it was apt to counsel care against throwing out the babies with their bath water, it is here. Harry Holt has brought some 1,300 Korean foundlings to this country. He has established sound procedures to insure that they will go into homes where they are wanted and will be loved. How senseless, how insensible the Congress would be now to say, in effect, that because a few adoption sharks have been identified elsewhere, Holt must be ensnared in the same net intended to catch them.

Youth March for Integrated Schools

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. JAVITS. Mr. President, on Saturday, April 18, 1959, a great rally was held in the Capital City of Washington, D.C., attended by thousands of young people of all races from various parts of our country. This meeting, the youth march for integrated schools, expressed the deep feeling of those who actually attend such classes, in favor of education without segregation on account of race.

I ask unanimous consent that the policy statement issued at the time of that rally and excerpts from the keynote speech of A. Philip Randolph, international president of the Brotherhood of Sleeping Car Porters, may be printed in the Appendix of the RECORD.

There being no objection, the statement and excerpts were ordered to be printed in the RECORD, as follows:

POLICY STATEMENT

From its inception, the youth march for integrated schools has maintained a nonpartisan character. In carrying on our activities, we have consistently and publicly made clear that we neither solicit nor accept financial support or participation from any political group as such. Whenever such support or participation was offered, from whatever source, it has been categorically rejected by the committee.

In keeping with this policy, we have on this occasion urged all partisan political groups to refrain from distributing any material along the line of march, at this meeting and in the armory.

Certain groups have not complied with our request. Thus they have made it necessary for us again to respectfully urge all individuals to comply strictly with this request and urge all persons who have responsibility with the march to make it clear that we dissociate the march from all such partisan political activity and literature. We disapprove of the distribution of such literature and regard it as a disservice to the march and a violation of its spirit.

STATEMENT OF A. PHILIP RANDOLPH AT YOUTH MARCH FOR INTEGRATED SCHOOLS, WASHINGTON, D.C., APRIL 18, 1959

In the name of the Youth March Committee for Integrated Schools, I want to welcome you upon the occasion of this historic demonstration for integrated schools and civil rights legislation in the Nation's Capital.

Let me, also, in behalf of our committee, express appreciation for the support of the Negro press, Negro church, NAACP and various student organizations in the colleges and universities throughout the country in making this demonstration the monumental success it is. Let me express gratitude to certain outstanding leaders for the cooperation they have given this great cause, such as Roy Wilkins, executive secretary, NAACP; George Meany, president, AFL–CIO; Walter Reuther, vice president, AFL–CIO; Jackie Robinson, business executive; Harry Bellafonte, great American artist; Judge Hubert Delany, leader at the bar; Norman Thomas, and others.

We have come again to Washington because the job of achieving integrated schools and civil rights legislation is not yet finished, although some progress has been made.

While the massive resistance movement of Virginia has collapsed, morally and legally, resistance in other areas of the South continues unabated. Thus, until the whole sinister structure of segregation in the United States has been torn down and thrown into the ashcan of history, youth, black and white, Jew and Gentile, Protestant and Catholic, and their allies, the church and labor, must make pilgrimage after pilgrimage to Washington to keep the issue of human dignity alive in America in particular and the world in general.

Youth and their allies have come back to Washington because, in this fleeting moment of history, the problem of integrated schools has become the conscience of the Nation. We have returned to our Nation's Capital today with a democratic participation in a great mass demonstration by youth and adults to indicate the uncompromising commitment of American youth to the principle of the God-given right of every child, regardless of race or color, to secure an education in the public schools free from the insult of discrimination or segregation.

We have come again to the Nation's Capital to register our protest against a movement, under the banner of States' rights, to hamstring, undermine, and ultimately destroy the place of the U.S. Supreme Court in our American constitutional system. We resist and condemn every bill which has been introduced in the Congress or which will be introduced in the Congress to curb and restrict the power of the U.S. Supreme Court to interpret the Constitution and the laws of the land.

We have come back to Washington because it is the heart not only of America but of the free world. It is the Capital to which rulers from all nations of the world come to discuss their problems and seek support and cooperation from the President of our country, the most powerful ruler in the world today.

We have come again to Washington because we want to demonstrate that the fight for civil rights and integrated schools is a part of the fight for human rights all over the world.

Because liberty is indivisible, one cannot support colonialism in Africa and racism in the United States without strengthening the hands of communism in its march for world-wide conquest. Thus, the march of youth for integrated schools and civil rights is the march for the preservation of our democratic society and maintenance of our traditions and human values of justice, freedom, and equality.

One of the best ways to halt the progress of communism in Africa and Asia and give reality and integrity to our profession of democracy is for the United States to give Negroes their civil rights today. Tomorrow may be too late.

Thus, in this hour of world crisis, the Youth March to Washington seeks to give hope and faith to the nine Little Rock Negro children who seek to enter Central High School, and to express denunciation of the policy of closing public schools to avoid integration.

In order that the Fascist and Communist enemies of democracy at home and abroad may know where we stand, let me state that the Youth March for Integrated Schools is definitely nonpartisan. It is also definitely anti-Communist, but is definitely not nonpolitical.

Finally, in this time of worldwide tension, youth, together with their allies, express unqualified support of President Eisenhower upon the eve of a conference between Communist Russia and the western democracies to discuss the problem of peace and war, in relation to the Berlin crisis. The cause of democracy must triumph for there can be no civil rights except within the framework of a democratic society. We wish to express appreciation to the Eisenhower administration for the role it has played in advancing the cause of civil rights but urge it to do more.

Let us not be dismayed by the long, hard struggle ahead for we will win if we fight and faint not.

California State Assembly Opposes Partnership Power Program on Trinity River Project

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. ENGLE. Mr. President, the Assembly of the State of California by substantial vote has asked the Congress to provide funds this year for public development of the power plants of the Trinity River project. In doing so the assembly also urged absolute rejection of the exclusive partnership plan that the Pacific Gas & Electric Co. and the Secretary of the Interior have been trying for 5 years to foist upon the people of my State.

Incidentally, I notice that the Secretary is still trying, despite the long legislative history of failure. Last week he sent to the Congress another report endorsing proposed House legislation to authorize the Pacific Gas & Electric partnership scheme which the State assembly has now condemned.

The significance of the assembly action, Mr. President, is not merely the boost it gives the authorized Trinity division of the Central Valley project. This double vote, 43 to 20 on one resolution and 44 to 28 on the other, shows that the Pacific Gas & Electric no longer controls the electric power policy of the California Legislature. The Sacramento Bee commented last week that—

Some capitol observers said they cannot remember when the Pacific Gas & Electric suffered such a setback in the legislature.

The coauthor of the resolutions, Assemblyman Edwin L. Z'Berg, was quoted as stating that—

The Pacific Gas & Electric wanted to defeat these resolutions at all costs.

Another news article from the Sacramento Bee of May 18 tells the story of the assembly vote. I ask unanimous consent that this article, entitled "Assembly Opposes Pacific Gas & Electric Trinity Plan," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASSEMBLY OPPOSES PACIFIC GAS & ELECTRIC TRINITY PLAN

(By Tom Arden)

The Democratic-controlled State assembly today went on record asking Congress to reject the Pacific Gas & Electric Co.'s proposal to build and operate the power generating facilities at the Trinity River project, now under construction by the Federal Government.

By a vote of 43 to 25, the lower house members approved Assembly Joint Resolution 23, Z'berg, calling for enactment of the Kuchel-Engle legislation to provide for public development of the Trinity's power resources.

ASKS FOR FUNDS

Then the assembly voted 44 to 28 in favor of Assembly Joint Resolution 25, Bruce F. Allen, asked congress to provide funds at this session to begin design and construction of the power facilities by the Federal Government.

The resolutions were sent to the senate for consideration.

Their approval in the lower house marked a reversal of the position of the assembly on the public power issue. Similar proposals were turned down in past sessions when Republicans controlled the assembly.

FOUR GOP'ERS, THIRTY-NINE DEMOS

Four Republicans joined thirty-nine Democrats in voting approval of Assembly Joint Resolution 23. Three Republicans and forty-one Democrats voted favorably on Assembly Joint Resolution 25. The only Democrat voting against the resolutions was Assemblyman Sheridan Hegland of San Diego County.

Assemblyman Edwin L. Z'berg, Democrat, of Sacramento County, chief author of Assembly Joint Resolution 23, said it is very important that the Pacific Gas & Electric partnership plan be turned down.

The Trinity power is necessary, Z'berg told the assembly, to pump Central Valley's project water from the Sacramento-San Joaquin Delta into the canal to carry it to the proposed San Luis Reservoir on the San Joaquin Valley west side.

If the Pacific Gas & Electric gets the power at the Government project, Z'berg stated, the Federal Bureau of Reclamation would have to turn right around and buy power from the private company to operate the pumps. It could be used, also by the State in transporting water over the Tehachapi to the south.

"The end result," he pointed out, "would be high priced water down south."

KEEP NOSES OUT

Republican Assemblyman Harold K. Levering, of Los Angeles County, said the issue is one the legislature should ignore.

"We in California should keep our big noses out of this and attend to our own business," Levering said. "This is a hassle in Congress and not a hassle for us on this floor."

Republican Assemblyman Allen, author of Assembly Joint Resolution 25, told the assembly California's U.S. Senator THOMAS H. KUCHEL, Republican, and CLAIR ENGLE, Democrat, are opposed to the Pacific Gas & Electric partnership plan.

He said unless funds are granted immediately the Central Valley's project will lose about $5 million a year in power revenue when Trinity River Dam is completed and water is available for hydroelectric generation.

VOTE GIVEN

The vote on the Z'berg resolution was:

Yes: Don A. Allen, Bane, Bee, Biddick, George E. Brown, Burton, Cameron, Crown, Mrs. Davis, DeLotto, Dills, Elliott, Frew, Gaffney, Garrigus, Samuel R. Geddes, Hanna, Hawkins, House, Kennick, Lowrey, Lunardi, MacBride, Masterson, McMillan, Miller, Munnell, Nisbet, O'Connell, Petris, Porter, Rees, Unruh, Waldie, Williamson, George A. Wilson, Winton, Z'berg, and Speaker Brown, all Democrats; Bruce F. Allen, Beaver, Collier, and Thelin, Republicans—43.

No: Backstrand, Bradley, Burke, Busterud, Chapel, Coolidge, Crawford, Cusanovick, Dahl, Ernest R. Geddes, Grant, Holmes, Johnson, Lanterman, Levering, Luckel, Marks, Mulford, Pattee, Reagan, Schrade, Sedgwick, Shell, and Sumner, all Republicans; Hegland, Democrat—25.

Democrats Kilpatrick and Meyers, absent during the vote on Assembly Joint Resolution 23, joined in the yes vote on Assembly Joint Resolution 25.

Republicans Belotti and Britschgi, who did not vote on Assembly Joint Resolution 23, voted against Assembly Joint Resolution 25 and Republican Thelin, who voted for Assembly Joint Resolution 23, voted against Assembly Joint Resolution 25.

How To Make a Movie Out of "The Ugly American"

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, as one who read "The Ugly American," I view the possibility of its becoming a movie with mixed emotions. I commend to the attention of the Members the views of Thomas W. Wilson, Jr., reported in "The Easy Chair," of the June 1959 issue of Harper's magazine. Mr. Wilson has had 12 years of oversea experience as a newspaperman, businessman, and U.S. official. He now edits Economic World for the Committee on International Economic Growth:

Offhand, "The Ugly American" looks like a natural for the screen. It has at least four big assets.

First of all, the story is presold. It was a Book-of-the-Month-Club selection; it has been on the bestseller lists for months; and it was serialized by the Saturday Evening Post. So almost everyone knows that "The Ugly American" deals mainly with the shenanigans of delinquent Americans who represent the U.S. Government overseas.

Second, there is a carload of colorful characters to work with—good and bad. The principal bad guys include the oaf who is the American Ambassador to Sarkhan; the ignoramus who is Counselor of Embassy; the moron who heads the U.S. Information Service; the numskulls who run the economic-aid missions; the Chinese servants who spy for the Communists; and the ever-so-clever Russians who make fools out of the Americans bumbling about in Asia and elsewhere. The good guys include a Catholic priest who conquers both dysentery and the local Communists; a poultryman who does good work in the hinterlands—at least for a while; an Air Force colonel who plays a mouth organ and works out horoscopes; a hardworking American Ambassador who seriously tries to serve his country; a tough-minded labor negotiator who for some unaccountable reason conducts a conference on atomic weapon installations; and the Ugly American whose uncouth physiognomy and dirty fingernails suggested a title fortuitously reminiscent of Graham Greene's "The Quiet American."

Third, there is plenty of dramatic conflict in the story because everybody who tries to do any good has to beat his brains out against the stupidity, arrogance, trickery, indolence, bureaucracy, rascality, or other flaws of American officials in the field or at home.

And finally, the story is laid in southeast Asia, which offers plenty of exotic background stuff like temple dancers, golden pagodas, jungle scenes, and other grist for technicolor.

The only obvious deficiency in the story is that there isn't much of a sex angle, but it shouldn't be too hard to put some pizzazz into that insipid secretary to the Ambassador.

With all these assets, "The Ugly American" might appear to be a cinch for adaptation to the screen. But it's not that easy.

The screen writers may have trouble developing a story line and picking a hero. The difficulty is that the book is a collection of episodes which are only loosely related to each other and would tend to clutter up the continuity. Besides, most of the good guys don't quite add up as heroes. The Catholic priest is around for only one chapter and then is abandoned by both the authors and the American Embassy; the Air Force colonel never gets to influence policy by reading the King's horoscope because the Counselor of Embassy goofs off; the good Ambassador gives up hope of making sense out of the U.S. Government and throws in the towel; the labor leaders' good work gets him nowhere because a Navy captain on his negotiating team falls for a local Communist girl to the detriment of his daytime reflexes; and the poultryman is bought off by a wily French Ambassador with an expense-free junket through the fleshpots of Asia and Europe.

By a process of elimination scenarists probably will have to settle for the Ugly American himself as the hero, because he is the only character who succeeds in doing any good for the United States of America—and then only by insubordination. The Ugly American, of course, is the earthly engineer who disappears into the sticks of an Asian country with his equally earthy wife and—despite the disapproval of his American superiors—makes a hit with the natives by inventing a bamboo pump operated by a bicycle pedal to raise irrigation water.

Right here I want to make a minor suggestion to the screen writers. It is this: Try to figure out something else for the Ugly American to invent, because the Asians themselves seem to have invented pedal-operated pumps about ten centuries ago, though there is some historical evidence to suggest that they stole the idea from the ancient Egyptians. As for the use of bamboo, a Filipino tried to sell that idea a few years ago to both his own government and to the Indian government, but it was turned down because it doesn't work very well and only works at all on shallow wells. And all the bright engineers—Asians and Americans alike—are trying to help the villagers out there to put down deep wells in place of shallow wells which are unsanitary and have other drawbacks.

As alternative ideas for the Ugly American, you might consider the invention of a coffee roaster made from a gasoline drum; or an improved stove that burns less fuel and doesn't smoke up the hut; or a manual washing machine made out of wood; or a ten-dollar water filter for village wells; or even an inexpensive gasoline pump. All these

things have been cooked up by Americans in the field and they work fine.

STAY AWAY FROM THOSE FACTS

But these are details. The first big suggestion I want to make to the script department is this: Don't do any research on this story. There is plenty of material available and it's easy to come by. But it spoils the whole theme of "The Ugly American."

Take the bit about the poultryman, for example. In the book he quits in disgust because his chief has a fixation about big projects like dams and irrigation works and can't be bothered with unglamorous, picayune stuff like improving barnyard stock. If you made the mistake of poking around into the facts, you would find that there are 58 Americans currently overseas in 43 countries helping farmers to improve their poultry and livestock. In Iran, for example, the U.S.-sponsored poultry program has benefited the farmers of some 30,000 villages and produced some 10 million cross-bred chickens which weigh twice as much as the old Iranian stock and lay 3 times as many eggs. And in Lebanon the poultry program is so well known that large eggs on the market are called "point 4 eggs." This kind of information would spoil the whole story, so it is much better just to go along with the authors of the book and ignore it.

This advice is essential because one of the main points of the book is that our foreign-aid program doesn't do any of the little things that touch the plain people. And if you started messing around with research you would find all kinds of little projects—like the substitution of steel plow tips for wooden plow tips. Or instructions on how to de-worm pigs. Or lessons on the prevention of childhood diseases. Or training schools for rural nurses. Or village programs to teach people how to read and write. Or self-help housing projects which are now underway in Guatemala, Costa Rica, Nicaragua, British Honduras, Surinam, Trinidad, British Guiana, Turkey, Korea, and Taiwan. Or the work-while-learning agricultural school for young farmers in the Philippines. Or the distribution of foods that have eased the twinges of hunger in at least 60 million bellies, mostly Asian. Stuff of that kind. It just doesn't add up to a best-selling story.

Another reason why it's important not to do any research is that a second major point of "The Ugly American" is to show what jerks we are, compared to the Russians. While the United States is represented in Sarkhan by an insensitive political hack, the Russian Ambassador is so dedicated that he not only dieted 40 pounds off his middle in deference to local predilections for slim-waisted diplomats, but he learned to play the native nose flute as well. While American supplies, labeled as gifts from the United States of America, never seem to spark any gratitude, the Russians become heroes by furtively stenciling the hammer and sickle on a few bags of our rice.

But even more important is the evidence presented in the book that the Communists not only beat us hands down but they do it with far less money and never, never make a mistake. The screen writers of "The Ugly American" would do well to take all this on faith. Otherwise, they might find out that the Communist countries have extended credits for some $2.5 billion worth of economic aid and are putting more money and technicians into some countries than we are. What's more, they might stumble across some disturbing stories of booboos by the Communist masterminds—like how they offended the Burmese by buying their rice and then selling it in competition to Burma's own customers; or how they overcharged the Indonesians for inferior jeeps; or how they sent a beet-sugar mill to Java instead of the cane-sugar mill that was ordered; or how a team of technicians from Indonesia spent 9 months in Czechoslovakia without learning anything because their Communist instructors couldn't speak the language.

How would the audience get the word that the Russians are taking the shirts off the Americans if you show the Russians making mistakes like that? So this is my first line of advice to the screenwriters: Stick with the episodes in the book and leave the facts alone. They muck up the story.

PUNCHERS AND QUITTERS

The second helpful hint is this: Don't be confused by a lot of little contradictions in the book. For example, the book says that Americans working overseas should get out and live and work in the villages where the people are; but it also says that Americans should cuddle up to students, intellectuals, labor leaders, opinionmakers, and the kind of folks who obstinately prefer to live in the cities. Then the book keeps preaching about how we should concentrate on the simple, inexpensive things that the people understand; but it also says that we should do things that will have a big dramatic impact, like the Russian offers to build a hospital and a sports stadium. The book says that we should send out only Americans who are steeped in knowledge of the language, history, religion, politics, economics, culture, and folkways of the country to which they are assigned; but it also suggests that our envoys should be down-to-earth folks ready to work with their hands in the fields and repair shops. The book suggests that our representatives should be disciplined professionals in the service of our cause; but the authors' sympathies run to insubordinate and peevish types who quit when they can't have their way, give the old heave-ho to visiting American Senators, and punch other Americans on the nose—the kind of colorful individualist with a very low survival value in any organization, public or private.

But, as I say, don't be confused by such minor contradictions. Chances are the movie audiences will never notice a thing.

The third—and most important—bit of advice to the screenwriters is this: Don't go trying to make any sense out of the big message of the book. The big message is that the United States is consistently losing to communism all over the world and that there is an easy solution to this problem.

The solution is set down as plain as day in the final chapter of the book—rather curiously entitled "A Factual Epilogue." It says this:

"We do not need the horde of 1,500,000 Americans—mostly amateurs—who are now working for the United States overseas. What we need is a small force of well-trained, well-chosen, hard-working and dedicated professionals. They must be willing to risk their comforts and—in some lands—their health. They must go equipped to apply a positive policy promulgated by a clear-thinking Government. They must speak the language of the land of their assignment, and they must be more expert in its problems than are the natives."

This is the kind of statement that is impregnable to everything but analysis.

For one thing, the "horde of 1,500,000 Americans—mostly amateurs" includes well over 1 million members of the U.S. armed services. The authors do not recommend any reduction in Armed Forces, so presumably the desired reductions would be made from the professional-level people who man the Embassies and aid missions in the sixty-odd nations in which we are represented. Certainly some of these would have to mind the store in the capitals which remain the political, economic, financial, and cultural centers of the world and where official business between representatives of governments still is conducted. And given the fact that there are somewhere between three and five million villages in the world, one wonders how the remaining Americans would manage to get out and live with the plain people as they are urged to do.

Of course, no reasonable person would quarrel with the authors' edict that the refurbished American teams must "go equipped to apply a positive policy promulgated by a clear-thinking government." But it does imply that oversea representatives—no matter how rigorously trained—cannot be much better than the policies of the government they represent.

Again, none can object to the plea for language qualification, which experts agree is one of the four or five most important assets of representatives serving abroad. In fact it is so unassailable that even the Government had sense enough to expand its language training programs several years ago.

As for the suggestion that Americans should be more expert than native experts in the problems of their own countries, it just wouldn't pay to think about the likelihood of this ever happening.

SOME NATIVE ALLERGIES

But it isn't what is said in the big message that is really troublesome. It's what isn't said.

For example, it isn't pointed out anywhere in the book that Communist parties everywhere are manned—not by Russians or other foreigners—but by bona fide nationals of the country in which they live. Nor is it recognized anywhere in the book that Americans do not and cannot have representatives in the cabinets or parliaments of other nations or even run elections in foreign countries; that Americans do not and cannot publish newspapers or control other means of public persuasion; that Americans cannot have and do not have decisive influence over any of the centers of political power in any society outside of the United States.

Nowhere does the book mention that in almost every nation in Asia, the Middle East, Africa, and Latin America the dominant political force is nationalism rather than communism; and that the trademark of nationalism is a sensitive allergy to the exercise of any influence by any foreigner over any aspect of national life—least of all by foreigners who happen to be white and Western.

Nowhere does the book refer to the fact that our basic concept of relations with friendly nations precludes our representatives from throwing their weight around—even if they could; and prevents them from going behind the backs of host governments to deal directly with the people; and requires them to work out aid programs on the basis of agreed projects and mutual cooperation—with the result that, rightly or wrongly, Americans just don't wander around in the barrios and boondocks cooking up spot projects with the head men of the villages.

Nowhere does the book point up the fact that the major enemies of social and economic reform are not so much the Communists as the conservative and reactionary elements in most societies. Nowhere does the book hint at the responsibility of foreign governments to lead in the conduct of their own affairs—nor at the existence of national leaders capable of doing so.

Speaking more generally, all that is left out of the book is a recognition that societies in the less developed areas of the world are caught up in the whirlwinds of concurrent revolutions—social, economic, ideological, and technological; that old institutions are crumbling right and left without new ones to take their places; that populations in many places are growing faster than resources; that communism—for all its sins—waits alertly to capitalize on turmoil not of its own making; and that there is a desperate lack of capital, of know-how, of management, and of the institutions needed to guide

preindustrial and predemocratic societies through the agonies of violent change—quickly enough to meet aspirations and smoothly enough to avoid political retrogression. And people who worry about such things tend to suspect that this may be just about the toughest, most complicated, subtle, and sophisticated problem that anyone has ever faced.

But the screen writers of the "Ugly American" should not boggle at this kind of thing. Stick with the big message. Stick with that small band of elite Americans—concocted of one part scholar, one part paratrooper, and one part handyman. In the book, the reader is left to imagine just how they would go about making Asia, Africa, and other parts safe for democracy. It would be well to leave it to the imagination of the movie audience as well.

The whole point underlying all my advice is that the big message in "The Ugly American" is absolutely foolproof just the way it is. There are at least three reasons for this.

1. As the authors assure us, the episodes in the book are only fictionalized versions of events that actually took place, and the characters in the book are based on people who actually exist. Thus the stories are essentially true—just as true as the fact that the U.S. Congress includes a handful of rascals and freeloaders, or that American business has its quota of incompetents and fools, or that American youth includes delinquents and beatniks.

2. The authors of "The Ugly American" have the impressive credentials of the man-who-was-there-and-saw-it-with-his-own-eyes. As they put it: "We have shared in the events of southeast Asia." And as the book itself makes clear in the incident involving Senator BROWN, the man-who-was-there is infallible, even when he is wrong.

3. The big message of "The Ugly American" is foolproof because it offers a simple, easy cure-all for violent, complex, intangible problems. Any nostrum is bound to be popular because it offers a substitute for thinking. People love easy answers. So I just suggest that the screenwriters dish up "The Ugly American" the way it was written in the book. You can't miss.

Statement by Hon. James C. Healey, of New York, on H.R. 2337

EXTENSION OF REMARKS
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. HEALEY. Mr. Speaker, I am including in the CONGRESSIONAL RECORD my statement to the Committee on the Judiciary, Subcommittee No. 3, in connection with my bill, H. R. 2337:

I want to thank the subcommittee for the opportunity to present my statement in support of my bill, H. R. 2337, which would prohibit certain acts involving the transportation, importation, possession, or use of explosives.

The bill would make it a Federal offense for anyone to possess explosives transported in interestate commerce with the knowledge or intent that such explosives would be used to damage any building used for educational, religious, charitable, or civic purposes. The bill contains a provision, modeled after the Lindbergh Kidnapping Act, which is designed to allow the Federal Bureau of Investigation to intervene as soon as a bombing occurs in any locality. The use of explosives to damage or destroy buildings within the categories mentioned, would create a rebuttable presumption that the explosives had been transported in interstate commerce by the person possessing or using them. Thus, jurisdiction would be provided for Federal intervention upon the happening of the event—to wit, the bombing—without actual proof that the explosives had been carried across State lines. There is, however, a provision that no person could be convicted in the absence of independent evidence that the explosives had actually been illegally transported interstate. This means that the presumption would operate to provide jurisdiction for FBI intervention, but that the presumption alone would be insufficient on which to ground a conviction.

In 1957 and 1958, there were some 70 bombing or attempted bombings of churches, synagogues, schools, and other civic buildings throughout the South and in isolated cases in other parts of the country. With few exceptions, these bombings appeared to be the work of an interstate gang, whose purpose probably was to retaliate against organizations and individuals for, or to intimidate them from, expressing their point of view on the desegregation problem.

At midnight on September 10, 1957, a series of explosives heavily damaged the newly constructed $500,000 Hattie Cotton Grammar School in Nashville, Tenn. One Negro first-grade child had been admitted to the school a few days earlier.

A bomb consisting of 54 sticks of dynamite was placed in a window well of Temple Beth-El in Birmingham, Ala., on April 28, 1958. It failed to explode because of an all-night rain. There was sufficient explosives, however, to demolish the entire structure. On the same day, April 28, 1958, shortly after midnight, a synagogue in Jacksonville, Fla., was bombed. Within an hour, thereafter, a Negro school in that city was damaged by explosives. In all of these cases, an anonymous caller reported that the confederate underground was responsible for the atrocities.

On March 16, 1958, a religious school was bombed at 2:30 a.m., in Miami, Fla., and a Jewish community center was damaged in Nashville, Tenn., at 8:30 p.m. by dynamite. Here again, a purported member of the confederate underground claimed responsibility in an anonymous telephone call. On October 12, 1958, the Temple of Atlanta was seriously damaged by a bomb explosion at 3:30 a.m. Once again, a telephone caller announced that the confederate unground had set off the explosion.

In all the specific cases cited, the local police authorities were convinced that the outrages committed in their cities were symptomatic of an interstate conspiracy directed by a group calling itself the confederate underground or the confederate information center.

Americans are by nature, tradition, and upbringing a lawabiding people. We do not relish subversion of our democratic and sacred institutions. These acts of violence, these dynamitings and explosions have created the exact reverse of the effect that was intended. All respectable citizens and civic groups, in the South as well as in the North, have cried out against these shameful acts of vandalism and terror.

Unfortunately, however, many of the local police officials have neither the ability nor the crime detection facilities necessary to ferret out the perpetrators of these outrages. Furthermore, it is likely that the criminals flee by automobiles across State lines. For these reasons, and because of our experience with the Lindbergh Kidnaping Act, the Mann Act, the Lottery Act, the Anti-Racketeering Act, the National Motor Vehicle Theft Act, and the National Narcotics Act, all of which are Federal criminal statutes involving crimes over which the States have concurrent jurisdiction, it would be completely consistent with States rights and Federal jurisdiction for the National Government to step in and help the local communities to root out this vicious pattern of lawlessness.

My bill, H.R. 2337, would permit the FBI to work in conjunction with local police authorities to curb the interstate conspiracies which have tended to besmirch the good name of the United States all over the world.

I hope this committee will act favorably on my bill.

Beyond the Law

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. SMITH of Kansas. Mr. Speaker, the boss of the Teamsters, Jimmy Hoffa, picked up a lot of adverse criticism by reason of his speech at Brownsville, Tex., in which he said he would call a general transportation strike throughout the United States if Congress tried to pass a real tough labor bill.

Harry Bridges, head of the Dock Workers and Maritime Union on the Pacific coast and Hawaii, made a similar gesture on his return from Moscow. He said he would tie up the waterfronts if he deemed it advisable in order to stop shipments of arms to Chiang Kai-shek.

To illustrate how unpopular Hoffa's statement was with the general public, Walter Meany disavowed and deplored this attitude on the part of Hoffa.

The arrogant, domineering, all-powerful Hoffa, friend of gangsters and gangland overlords, now says Walter Reuther is no good and a disgrace to Reuther's own CIO members.

It would appear Boss Jimmy is now going to take on everyone from the general public to Walter Reuther. Boss Hoffa—so far—has said nothing unfavorable against MacDonald, boss of the Steel Workers Union.

I append hereto an editorial which seems to point out what the American public thinks of Jimmy Hoffa. This editorial was written by Dwight Peyton, member of the editorial staff of the Daily Oklahoman, Oklahoma City, Okla. I commend it most highly:

[From the Daily Oklahoman, May 22, 1959]

BEYOND THE LAW

Even the more fanatic union members are getting a bellyfull of James Hoffa and they talk about the time when Jimmy will get his.

Willingly or otherwise the rank and file members of Hoffa's union have gone along with his rotten leadership. Unless a poll were taken it would be hard to know whether this indicated their complete willingness to take a share of the spoils garnered by the Teamsters' strong-arm tactics or whether a majority favored fairness and decency but was too intimidated to speak out.

There has been no call for any sort of reform or legal restriction on unions from

any union source in spite of the record which reads like the Chicago gangland rule in Al Capone's heyday. George Meany, top man of the AFL–CIO, took time out in his efforts to stave off all but the most minor of union controls from Congress to give Hoffa a slap on the wrist. Hoffa threatens to paralyze the economy and Meany says, "We were right in telling Jimmy he couldn't play in our yard any more," or words to that effect.

When and if the day comes that the economy again operates under rules of equal justice it will be because the members of labor unions who were able to think and act beyond intimidation joined hands with the rest of the Nation for a cleanup.

Under present conditions, talk of unions policing themselves is about like talk of turning a Federal prison over to a system of self-rule. Victor Riesel's account of "dead men, wounded women, shattered cars, dynamited homes, burnedout mill property" from southern union strife areas sounds like some report from Russia rather than the United States of America. Surely a great many workers holding union cards must be as disturbed and ashamed of such happening as anyone else.

If so there is hope of reform. Otherwise the Nation is committed to a bitter and destructive period of internecine strife with loss to everyone.

Something for both union members and nonmembers to realize is that Jimmy Hoffa is not the major villain. Eliminate him and a dozen of his stripe will step forward to fight for the power he established. It is the legal indulgence of such dangerous power which must be eliminated if the Nation is to be spared further shame and constant threat of disaster from just any thug who manages to climb on one of the union thrones. Hoffa is asking for a comeuppance but making him instead of the system, the fall guy would be a tragic mistake. Walter Reuther is altogether as offensive and far more dangerous. He does not make his plays out in the open in defiance of public opinion.

Beyond the law license is given union leaders for boycott, blackmail, forced membership, political use of members' dues, featherbedding, and denial of democratic processes such as secret elections under impartial supervision. It is almost unbelievable that Americans of any division or creed would be claiming privilege for such underworld and un-American practices. Yet in fighting against all reform measures designed to restrict unions in any way, labor leaders are doing just that.

In keeping silent and unprotesting union members must carry a share of the blame to the extent that they share in all the gains and benefits won by such tactics.

John Foster Dulles

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. DAGUE. Mr. Speaker, the Nation stands with bowed heads as we mark the passing of one of the greatest statemen of our time and it is no small thing to have lived through the years when his contributions toward the peace and security of the world come to fullest flower.

To us who stand in sorrow at his bier it seems that his usefulness came to an end at the very time when he is needed most. And yet we are persauded that as a great Christian layman he laid down his life quite content that he had done his best, and with confidence that succeeding generations would set their seal of approval on the dynamic program formulated under his direction which has kept us at peace for the last 6 years.

John Foster Dulles was a great man and his true greatness was revealed in that steadfast refusal to return in kind the vilification that was heaped upon his policies; that these detractors for the most part have reversed themselves and now acclaim him for what he was—the greatest Secretary of State in our time—indicates that in this first instance their opposition was largely political and not of the heart.

My admiration for our late Secretary became firmly established when he refused to retract his contention that the true art of diplomacy lies in the ability to skirt the brink of a world cataclysm without plunging in. In simple language this means that we must always be prepare to call the other's bluff—which under his leadership we did on several notable occasions—and the peace we enjoy today is attributable to that policy.

We stand with our President in salute as this great American is laid at rest in that sacred spot reserved for the Nation's heroes. And to his beloved wife and the members of his family goes our deepest sympathy and the prayerful hope that his service to the world will be the shining light that will guide them along the pathway of sorrow which they now must tread.

To Be Pro-Russia Is To Be Anti-Strauss

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. DEROUNIAN. Mr. Speaker, the following article by George Sokolsky, which appeared in the Long Island Daily Press, on May 20, gives an interesting picture of the viewpoint of Acting Secretary of Commerce Lewis Strauss on doing business with Russia:

CYRUS EATON AND LEWIS STRAUSS
(By George E. Sokolsky)

Cyrus Eaton, the capitalist, also opposes the appointment of Adm. Lewis L. Strauss as Secretary of Commerce.

Eaton is the Cleveland capitalist who conducts a nationwide propaganda in favor of doing business with Soviet Russia. So the pro-Russian capitalist, Cyrus Eaton, wrote a letter to a Democratic Senator instructing him to take "with the utmost seriousness" a recommendation that Adm. Lewis Strauss be retired permanently.

Eaton's letter was on the stationery of the Chesapeake & Ohio Railway Co., a public corporation.

To this letter from Eaton, the Democratic Senator from Connecticut, THOMAS J. DODD, replied:

"MR. CYRUS EATON,
The Chesapeake & Ohio Railway Co.,
Terminal Tower, Cleveland, Ohio

"DEAR MR. EATON: I have your letter of March 24, and a copy of an editorial from the Louisville Courier-Journal of March 16, concerning the appointment of Mr. Lewis Strauss as Secretary of Commerce.

"I note that your letter suggests that the editorial of the Louisville Courier-Journal 'must be taken with the utmost seriousness by the Democratic majority in the Senate.'

"I have read the editorial with great interest, but I take it from your letter that you are opposed to the confirmation of Mr. Strauss, and this in itself will be taken with the utmost seriousness by me in favor of Mr. Strauss.

"Very truly yours,

"THOMAS J. DODD."

The Louisville Courier-Journal editorial is most interesting and may even be of some significance. It tells how Strauss is energetic and cannot remain idle very long. Then it goes on to say:

"But Mr. Strauss's appointment has not yet been confirmed in the Senate.

"Each time the subject is mentioned, deep-throated growls come from Senators who can hardly wait to vote against him, and his confirmation is one of the certainties least likely to encourage bets around Washington.

"Under these circumstances the normal man would be inclined to speak softly, walk on tiptoe and engage in no controversy more unsettling than the possibility of rain or shine. Not so Mr. Strauss. * * *"

Why should a member of the President's Cabinet speak softly and walk on tiptoe when there is business of the Government to be done? Must a man cheapen himself before confirmation by the Senate?

But hark. The Louisville Courier-Journal lets a cat out of a bag. This is the story it tells:

"He promptly rejected an application for the export of some 12,000-odd tons of 28- and 30-inch pipe to the Soviet Union.

"He has this right under the Export Control Act, but it is one that former Secretaries have exercised subject to the advice of other departments, principally the State Department."

Is that not the pipeline that Anastas Mikoyan was holding out as a carrot in front of American businessmen?

Was he not telling of the pipeline to be built from beyond the Urals to the heart of Europe, so that Russian-owned oil could dominate Europe? Does Cyrus Eaton want Lewis Strauss permanently retired because he refused to let that deal go through?

The Louisville Courier-Journal, after much discussion of interdepartmental quarreling on this subject, says:

"It is fatiguing to think that this contentious man is already stirring up his own brand of interdepartmental mischief, before he is even officially installed as Commerce Secretary, and that, if confirmation is given his appointment, he can do so for almost 2 years longer."

Oh, dear. Oh, dear.

Let us not get fatigued. Why should we not all live in quiet peace and gentle conformity and let the Russians get away with what they want to get away with, as long as they are not too noisy about it?

Perhaps it were best always to have sweet and easy persons in public office, so that nobody would be fatigued by the contentiousness which establishes truth and brings the facts of deceit, subversion, and even treason to the surface.

A Good Schoolteacher Is More Than a Talking Textbook

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial of the Louisville Courier-Journal in its May 20 issue, entitled "A Good Schoolteacher Is More Than a Talking Textbook."

The editorial comments on a report submitted to the Kentucky Council on Public Higher Education by a committee making recommendations for higher standards in teacher-training courses and educators in the school system.

The editorial quotes and pays deserved tribute to Dr. W. J. Moore, dean of Eastern State College at Richmond, Ky.

Dr. Moore is one of the great educators and great citizens of Kentucky.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GOOD SCHOOLTEACHER IS MORE THAN A TALKING TEXTBOOK

"We simply could not get away from our basic thought that the teacher should be an educated person. Typing and all those hodge-podge courses are all right in their place, but they simply do not contribute to the base of a good, general education."

Those words spoken by Dr. W. J. Moore are the key to a report he submitted to the Kentucky Council on Public Higher Education. Moore is dean of Eastern State College at Richmond. He and a committee he chaired brought in recommendations for higher standards in teacher training courses and also among educators already at work in the school system. Nearly all their points were adopted.

It may seem strange that there could be discussion of whether a teacher should be an educated person. The fact is, however, that teacher training courses in recent years have produced many teachers who are technicians in a narrow sense, rather than people of broad cultural attainment. The vocational type of course has been heavily stressed for those in teacher training. Standards, set up by professional educators for certifying new teachers entering the profession, have demanded more and more of these courses at the sacrifices of training in the humanities and the sciences. The emphasis has fallen on method instead of content.

MILITARY SCIENCE ISN'T SOCIAL

Now the pendulum is swinging back the other way. It still has a good way to go, as some of the discussion at the meeting of the Council on Public Higher Education disclosed. An argument was put forward in favor of substituting 6 hours of military science for an equal amount of social science. This provoked a healthy response from President Adron Doran of Morehead State College: "If military science is social science, then I'm a walrus."

There is still too much willingness to accept such courses as speech and journalism as substitutes for courses in English literature. In some schools, speech and journalism are used as ways of dressing up the old basic training in English grammar and spelling so as to make them more palatable to adolescents. Such subterfuge should surely not be resorted to in the training of adults as teachers. A basic knowledge of English literature and usage should be a minimum foundation for a teaching career in any field, since English is after all the language the teacher uses, and the one the pupil speaks and writes.

Some other States, notably Indiana and Virginia, have recently moved to reduce the proportion of method courses a teacher must show in order to get a certificate. There seems good reason to believe that teachers themselves are ill satisfied with a narrow technical training which leaves them as ignorant in other fields as their young pupils.

Teachers know that society expects them to be people of balanced, trained, and cultivated minds, capable of giving leadership in the realms of thought. The natural superiority of the teaching profession is one of the reasons why men and women have entered it through the ages. Some modern teachers have been so harried by requirements for "education" courses, however, that they have neglected the real purpose of education in their own lives. It is good to see a trend now starting, here and elsewhere, which seems to promise them a a better chance to be the kind of people most of them want to be.

Missiles and Subs: Two Gaps

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which was broadcast over WDSU-TV and WDSU-Radio on May 19, 1959:

MISSILES AND SUBS: TWO GAPS

Two national magazines in the past 2 weeks have devoted lead articles to serious weaknesses in our national defense.

The current issue of Look has an article on submarines entitled "The War We Are Not Ready To Fight."

The May 16 Saturday Evening Post headlines its lead article on our weakness in missiles "Our Gamble With Destiny."

The Russians now have a fleet of more than 450 submarines. Adm. John Thach, who heads our antisubmarine groups in the Atlantic, says, "A dozen hostile submarines, carrying possibly 20 missiles apiece, could wipe out 70 percent of our economy in one surprise blow."

The Navy is not equipped to cope with this threat. It needs better submarine detection devices, better torpedoes, new antisubmarine cessels, more money for scientific research.

As for U.S. missiles, there has been a lot of publicity about them—Thor, Jupiter, Polaris, Atlas, Titan, Minuteman. But some of these are not yet ready to go and won't be ready for 2 years. And the others have serious defects—they don't have intercontinental range, or they have to be set up on bases that could probably be knocked out by a surprise Russian attack. The outlook is that, 2 years from now, while we're still depending primarily on manned bombers, Russia will have several hundred long-range missiles in place and ready for launching.

These facts need not be cause for hysteria. They deliberately focus attention on the grim side of the ledger. They don't mean Russia will necessarily try to plunge the world into war. They ignore, for instance, Russia's fear of revolution in her satellite countries in case of world disorder. In the long run, the cold war may be won or lost on the basis of economic competition.

But these facts on submarines and missiles do demonstrate that we're skating on thin ice. We're taking terrible risks when we let the Russians pull way ahead in such areas as submarines and missiles. The Russians know too well how to exploit such situations when they think the power balance is on their side.

This station believes there is cause for concern about the adequacy of our defense in the years immediately ahead. We would like to see less complacency on this subject in Washington and more leadership.

Prospects for Industrial Development in the South

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. LONG. Mr. President, the New York Herald Tribune recently carried an article outlining the contribution made by Mr. Henry De Bardeleben of New Orleans to the waterways transportation industry.

I ask unanimous consent that this article, which appeared in the New York Herald Tribune of February 22, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, Feb. 22, 1959]

INLAND LINES HEAD TELLS OF SOUTH'S VAST POTENTIAL

(By Walter Hamshar)

NEW ORLEANS, February 21.—Henry De Bardeleben, head of Coyle Lines, the South's oldest and one of its most respected barge and towboat companies, warned today that his industry must prepare now for a period of tremendous industrial growth in this area of the country.

Mr. De Bardeleben is practicing what he is preaching. He has just organized a new company, put the 94-year-old Coyle Lines into it as an affiliate, and also has purchased control of Blue Stack Towing Co., another venerable towing firm of Tampa, Fla.

HINGES ON ICC

If the Interstate Commerce Commission grants his application for a certificate to operate the Blue Stack service—and it is expected to do this—Mr. De Bardeleben's companies will be the largest common carriers in the South, offering service on the Gulf Intracoastal Waterway as well as out in the gulf between the Mississippi River and Florida. Coyle Lines also offers service along the Intracoastal Waterway as far as Brownsville, Tex.

The acquisition of Blue Stack has the entire inland waterways industry talking for it is the first time that an inland common carrier has attempted to operate a similar service on the open sea.

Mr. De Bardeleben's new company, the De Bardeleben Marine Corp., is one of the Inland Waterways Common Carriers Association's members through its Coyle Lines and

an ardent supporter of the association's plans for promoting and expanding the inland waterways industry.

Blue Stack's acquisition is only part of Mr. De Bardeleben's long-range planning. He said that growth of the South industrially makes it imperative for all transportation media to grow. "We're not going to stop here," he emphasized.

"We bought Blue Stack because it has a fine service but it is not financially able to provide new service as fast as the area's needs are developing," he said. "We must go ahead to retain industry."

Further plans are afoot, the veteran barge and towboat man said. "We are on the verge of new construction," he said but declined to discuss details. The Blue Stack purchase includes a shipyard in Tampa, but Mr. De Bardeleben said that it will be operated only as a repair yard. It also involves a stevedore company.

Mr. De Bardeleben, who has spent almost all his 65 years on the waterways, talks enthusiastically about the South's industrial potential and he is looking forward to participating in it. Although many new industries are already there he described it today as "still a wild country to what it will be."

"I don't see how it can be stopped," he said.

LINE TO ADD TUGS

Blue Stack will add five tugs and seven barges to the De Bardeleben fleet which already includes Coyle Lines' 10 towboats, 3 tugs, 39 barges, and 5 big liquid sulfur carriers.

Coyle Lines grew slowly since it was founded in 1865 until it received a big spurt by heavy inland waterway demands during World War II. It first specialized in hauling coal from Alabama to New Orleans for bunkering ships. Today it is still a major coal carrier but most of this commodity is delivered to new paper mills throughout the South.

Poison in Your Water—No. 83

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD, an article appearing in the Appleton (Wis.) Post-Crescent of September 3, 1958, entitled "State Water Too Often Polluted With Sewage."

STATE WATER TOO OFTEN POLLUTED WITH SEWAGE

It is a foul story in more ways than one, and it is happening in our own midst.

The waters of this area, the springs, ponds, rivers, lakes, and streams are God's gift to man. They are his most important resource, pure and sparkling and inviting in their native state. They are the foundation of whole industries, the basis of all our resort attractions, a prime necessity in man's existence.

So commonly beautiful are these assets that man uses them up, wastes them, destroys them unwittingly. Ignorantly he befouls his own nest, ruins the source of his own livelihood and wonders why there isn't more to destroy.

Years ago men violated every law and precept of decency by slaughtering ducks on Lake Koshkonong by the thousands. These were sent in barrels to New York commercial markets.

Today, with easy transportation, a great many prefer to live on or near the lakes and streams. Resorts have prospered there. Cities have grown and spread over hundreds of acres. Few have adequate sewage disposal plants to care for the new development and larger populations.

Meanwhile, the constantly growing demand for water is reducing water levels. Springs have been plugged, marshes drained, and whole water basins dried up by man's insatiable demand for tillable land in a surplus economy. The result is that wildlife searches in vain for cover, for water, and ultimately the farmer will suffer ravages of insect life formerly destroyed by his wildlife friends who have gone elsewhere.

Every year the shores of lakes and streams swarm with more and more people. They build cottages and homes, but often neglect a most vital element in the building—sanitation. Too often sewage is drained directly into the river or lake, or a dry well is made to serve for both cesspool and dry well.

Lt. Col. Charles T. Smythe

EXTENSION OF REMARKS

OF

HON. DANIEL D. ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. ROSTENKOWSKI. Mr. Speaker, I have just recently learned of the death of Lt. Col. Charles T. Smythe, the commandant of cadets at St. John's Military Academy in Delafield, Wis. Chick, as he was known to the gentlemen who attended the academy, was revered not only as a gentleman and an officer, but as a great American as well, instilling in those he taught that the American ideals are the most cherished possession we have, and they should be guarded as closely as life itself.

Colonel Smythe symbolized the spirit of a great educational institution, for he worked hard, played hard, and prayed hard. It can best be noted what he meant to the academy by the following resolution adopted by the Dad's Club of St. John's at a meeting on February 3, 1959:

The late Lt. Col. Charles Thomas Smythe was the first child born of the union of Jeannette Strotz Smythe and Sidney Thomas Smythe in Delafield, Wis., on May 13, 1898.

Upon reaching the age of 11 he entered St. John's Military Academy, one of the leading prep schools of the country, which was founded by his father, Sidney Thomas Smythe, in the year of 1884. Those of his friends who were classmates during his 6 school years at his old school will remember him as an alert young senior captain of the class of 1916, the recipient of the Dr. Delafield medal (the school's highest award), and the possessor of the President's medal, given to the most soldierly cadet.

After graduation from St. John's Military Academy he entered Chicago University. Upon graduating from the university in 1920 he returned to his old prep school as an instructor in English and Latin, and in the year of 1923 he became commandant of cadets.

Lieutenant Colonel Smythe served his father's school as commandant of cadets ably and admirably for some 32 years, at the end of which time he successively became secretary of the board of directors, executive officer, and vice president of St. John's Military Academy. In addition to his other duties this capable gentleman was superintendent of St. John's camps, chairman of the athletic counsel, executive secretary of the St. John's Military Academy Dads' Club, as well as a director of the Oconomowoc National Bank. His life was, indeed, a busy one.

The dawn of each new day presented new challenges which had to be met, and he met them squarely in his quiet, fair, straightforward manner. To the very end the colonel's philosophy of life remained unshaken. It was sometime during the last few years, when his illness became more of a burden and trial to him, that he placed on his desk a brief memorandum which read: "God grant me the serenity to accept things I cannot change, courage to change things I can, and wisdom to know the difference."

So with the hush of death come many reflections of this truly great patriot, whom most of his friends, and the corps of cadets fondly called "Chick." His memory is emblazoned on the academic walls of St. John's Military Academy, where the spirit of his father, the "H.M.," still speaks to each cadet who has the good fortune to become a member of the corps. This fine influence is also emblazoned on the hearts and in the character of the many graduates who have gone forth into the armed services of their country in World War I and World War II, or into whatever walk of life they have chosen. And last but not least on the hearts of his host of friends.

So let us salute and stand in silent reflection of this fine person, about whom it can be truly said: "He was a soldier, scholar, and a gentleman," in the true sense of the word.

Public Servants and Politics

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. DEROUNIAN. Mr. Speaker, I hope all of my colleagues will read and reflect on this editorial, which appeared in the May 25 issue of Life:

PUBLIC SERVANTS AND POLITICS

Donald Quarles, Deputy Secretary of Defense, was one of those quiet, selfless, brainy workhorses without whom the vast Federal bureaucracy could scarcely run at all. His death last fortnight revealed how nearly indispensable he was to the Defense Department, which is short of knowledgeable civilians of his steady, professional type. Its turnover is alarmingly rapid even by the standards of the Eisenhower administration; Secretary McElroy himself has been poised for flight for months.

Quarles was ideally suited both by training and temperament for high public service in the missile age; he brought a solid background in science and administration from Yale, Columbia and Bell labs, and he had an ascetic affinity for a 6-day week of 18-hour days. Since the fate of whole industries depended on some of his budget decisions, he made plenty of enemies. But he was an outstanding example of the kind of man President Eisenhower, as he told the press last week, has been seeking for 6 years: "real public servants" of "competence * * * character

and integrity," and experienced in the strange ways of Washington. Such men are tragically rare.

Then why has the Senate been trying to make them even rarer? Seldom in its history have Senators exercised their power of confirmation with more capricious and vindictive delay than in the last few weeks. Of 40-odd major Presidential appointments still unconfirmed last week, the nastiest case was that of Lewis Strauss, Secretary of Commerce.

Hostile committee witnesses were given a 10-session field day to throw rotten eggs at Strauss before any witness was called in his favor. Senator ANDERSON'S loud charges assayed as much substance as a Hollywood gossip column written by the late Senator McCarthy, yet got even more attention. The victim of all this was a man whom even his foes know to be a real public servant of topflight brains and experience, with a knowledge of Washington dating from the Wilson administration and extending through 10 storm-tossed years on the Atomic Energy Commission. Strauss himself, in a general defense of his own integrity, felt obliged to protest this "defamation of a plain man who has done his best as he sees it for his country over many years," and added, "I had little thought as a young man that I would ever be called upon for such a statement."

As the left-Democratic New York Post remarked, the right way for Democrats to keep a man like Strauss out of office is through a presidential election, not a confirmation hearing. A President is entitled to the best qualified exponents of his policies he can find. So is the country. The more such men are harassed for reasons of political spite, the fewer real public servants will be available for service.

Ironically enough it is Ike's personal and political success that has diverted so much senatorial bile toward his recent appointments. The Democratic strategists have concluded that Ike himself is an unremunerative target of political abuse. The other targets against which they had been storing up ammunition—notably Dulles and unemployment—unexpectedly became taboo or are melting away. Frustrated, the Senators are throwing the ammunition anyway, at any target they think they can see. A little patience might have improved their aim. In their wilderness, they have made real public servants even scarcer than they were before and thereby done harm to the national interest. That's never good politics.

Poison in Your Water—No. 82

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Evening Star, Washington, D.C., on May 23, 1959, entitled "New Potomac Approach":

NEW POTOMAC APPROACH

Congress has been listening for many years, mostly with one ear, to increasing demands for a cleanup of the disgraceful Potomac River pollution. In a speech the other day, Secretary Flemming of the Department of Health, Education, and Welfare threatened an unusual Federal antipollution action which we hope will focus congressional attention on the problem once again—and with more effective results.

What Mr. Flemming threatened was to invoke the second phase of a legal action which would require the District to end its pollution of the river. The first phase was taken last year when the Surgeon General of the Public Health Service, after a conference on Potomac pollution, recommended that the District carry out a $75 million antipollution program by 1966. In the second phase, as authorized by a 1956 law, Secretary Flemming would call a public hearing to determine whether the District was taking the recommended remedial steps. It is this action which Mr. Flemming said he soon may take. After this hearing, if the District still took no corrective steps, the Secretary would be able to ask the Justice Department to seek a court order directing that the pollution be ended. If the District ignored such an order, it presumably would be subject to penalties.

The 1956 law which authorizes this unusual action applies to interstate waterways and is designed to protect one State against the polluting practices of another. To be invoked here, Maryland presumably would file a complaint against the District—an action which would require no urging. The irony of the situation, however, is that the District is in no possible financial position to carry out the recommended cleanup without Congress' help.

It is precisely this situation which three Washington-area Congressmen, Representatives LANKFORD, FOLEY, and BROYHILL, have cited in their identical bills calling on Congress to provide the $75 million over the next 8 years as an expression of the Federal Government's great interest in a clean Potomac. The benefit is direct, not only to Federal installations in Washington but to the increasing number of such installations in the suburbs which must be supplied with Potomac drinking water. Aside from its role as a water source, the Potomac should be the greatest natural asset of the beautiful National Capital area, a delight to thousands of visitors instead of the stinking sewer it too often is today.

Nomination of Adm. Lewis L. Strauss To Be Secretary of Commerce

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Washington Evening Star of May 26, 1959, together with a letter from Mr. William Mitchell, a Washington attorney, formerly General Counsel of the Atomic Energy Commission, both relating to the nomination of Adm. Lewis L. Strauss to be Secretary of Commerce.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

WILLIAM MITCHELL,
ATTORNEY AT LAW,
Washington, D.C., May 23, 1959.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: I am writing as a former General Counsel of the Atomic Energy Commission. I note that, in connection with the nomination of Lewis L. Strauss as Secretary of Commerce, on which your committee has recently concluded hearings, mention has been made of a letter dated May 18, 1956, from the Atomic Energy Commission to the Chairman of the Joint Congressional Committee on Atomic Energy, stating the Commission's position on S. 2725 (84th Cong., 1st sess.) and H.R. 10805 (84th Cong., 2d sess.). Since I was General Counsel of the Atomic Energy Commission at that time, I feel that it may be helpful to lay before you my knowledge of the circumstances surrounding the preparation and dispatch of that letter.

The letter in question was written in response to a letter dated May 10, 1956, from the Chairman of the Joint Congressional Committee on Atomic Energy to the Chairman of the Atomic Energy Commission, requesting a statement of the Commission's position on the two bills above-mentioned. Pursuant to the regular practice of the Commission in preparing comments on pending legislation, the letter from the Joint Committee was referred to the Office of the General Counsel for preparation of a reply. The Commission's letter of May 18, 1956, was prepared in my office and I approved the letter before it was forwarded in the regular routine for review by the Commission staff and signature by the Chairman or Acting Chairman. The letter may not have been a perfect exposition of the rather complicated legal problems which it discussed, but I am sure that no one who had any part in the preparation of the letter had any intention to deceive or mislead any Member of the Congress.

Since Chairman Strauss was absent from the city at the time the letter was ready for dispatch, it was signed by Dr. W. F. Libby, as Acting Chairman of the Commission. Mr. Strauss did not see the letter until his return to the city, after it had been sent. In his capacity as Chairman of the Commission, Mr. Strauss did take responsibility for the letter in subsequent hearings before the House Appropriations Committee. If there were any defects in the manner in which the letter was drafted, these should not be attributed to Mr. Strauss.

I respectfully request that this letter be made a part of the printed record in the recent hearings on Mr. Strauss' nomination.

Sincerely yours,

WILLIAM MITCHELL.

[From the Evening Star, May 26, 1959]

EX-AEC AID BACKS STRAUSS ON 1956 LETTER

(By J. A. O'Leary)

William Mitchell, former General Counsel of the Atomic Energy Commission, has come forward to back up Lewis L. Strauss on a major phase of the controversy which is swirling around confirmation of Mr. Strauss for Secretary of Commerce.

In a letter to the Senate Commerce Committee yesterday, Mr. Mitchell confirmed Mr. Strauss' contention that he did not direct Mr. Mitchell to write a letter back in 1956 which touched off a stormy debate between the AEC and the House Appropriations Committee. The letter related to bills then pending in Congress to authorize Government reactors for power development.

The old House hearings quote Mr. Strauss as having said he "would like to take full responsibility for having asked the general counsel of the commission to prepare the letter."

In the recent Senate hearings Mr. Strauss insisted he did not make that statement.

CANNON MAKES CHARGE

Chairman CANNON of the House Appropriations Committee charged last week that Mr. Strauss impugned the integrity of the committee when he challenged the accuracy of this printed record.

Mr. Strauss, who was chairman of the AEC in 1956, has told the Senate committee that he was out of the country when the letter

in question was written by the general counsel, and signed by Commissioner Willard F. Libby as acting chairman.

Mr. Strauss explained to the Senators that when he returned to Washington in the summer of 1956, he told Mr. CANNON'S committee that, while he did not order the letter prepared, he would take the responsibility for it as chairman.

Mr. Mitchell, who is now in private practice, confirmed this testimony by writing to the Senate committee as follows:

"Mr. Strauss did not see the letter until his return to the city, after it had been sent. In his capacity as chairman of the commission, Mr. Strauss did take responsibility for the letter in subsequent hearings before the House Appropriations Committee. If there were any defects in the manner in which the letter was drafted, these should not be attributed to Mr. Strauss."

DEBATE A WEEK OFF

Meanwhile, all indications are that it will be the middle of next week before the Senate begins debate on the Strauss nomination. Members of the Commerce Committee staff are working on reports which will summarize the conflicting views of the Senators who voted nine to eight to report the Strauss nomination favorably from committee.

One staff member predicted the report would not be ready before next Monday. The printed record of the Senate hearings may be ready Wednesday or Thursday, but Majority Leader JOHNSON has said he wants Senators to have the hearings for several days before they begin the debate.

They Ask Us: "Are You in It to the Finish?"

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 19, 1959

Mr. LOSER. Mr. Speaker, under unanimous consent, I herewith present an illuminating report that should be read by every Member of the Congress. It is a report by one of the outstanding newspaper editors of the Nation:

(Coleman A. Harwell, editor of The Nashville Tennessean, returned last week from a world tour. He and Dean Emeritus Kenneth E. Olson of Northwestern University School of Journalism conducted newspaper seminars in five countries under auspices of the State Department exchange program. They visited numerous other countries en route. Harwell views the world scene in the accompanying article.)

THEY ASK US: "ARE YOU IN IT TO THE FINISH?"—MILLIONS LOOK ONLY TO AMERICA AS CONFLICT GROWS ALL OVER WORLD; SUGGESTED COURSE FOR US TO FOLLOW

(By Coleman A. Harwell)

Every place an American sets foot in this world, he finds himself involved in a conflict.

It is the conflict referred to at home as "East versus West."

But, out where we have been recently, the teams are given a more personal billing. They are called the Russians and the Americans.

The people know a good deal about these big opponents but they want to know more. Because you are American, they ask you many questions, and they listen intently to everything you say.

Most of the questions are friendly. Some are not. But all are very much to the point. Put together, this is what they are asking:

"Do you Americans really have your heart in this thing? We know you are strong, we know you are resourceful, but are you determined? And are you in it until the finish?"

These are questions we need to be asking one another here in America. They cannot be answered in Afghanistan or Ceylon or Indonesia. They cannot be answered by the citizens of those countries nor by the Americans we have sent out to represent our country. They can be answered only by the American people.

Our answers, to be valid, must be based on realities.

The big realities are these:

1. This conflict between communism and freedom will go on indefinitely. We will almost certainly win or lose. A draw seems highly unlikely.

2. We have lost much ground and many people, but we have held firm in a number of places and in some we have gained strength.

3. We have wasted money and effort. We will continue to be wasteful unless we adopt a long-range policy under which more effective programs, not necessarily larger ones, can be developed.

4. Being economical, however, does not mean the end of spending. This is big-time competition.

For 12 years we have been putting off making decisions of fundamental policy. We have been swayed by passing events rather than by permanent conditions. We have tried to convince ourselves that if we just won't look, communism and its threat may disappear.

WE ARE STILL REMINDED THREAT IS STILL THERE

Every now and then something happens that reminds us the threat is still there.

There was the envelopment of Czechoslovakia behind the Iron Curtain and the threat that Greece and Turkey might follow. The Marshall plan resulted.

There was the threat to Berlin and the great airlift to rescue it.

There were South Korea, Hungary, Iraq, Tibet, now, perhaps Berlin again.

Each time we rose to the challenge, fought when necessary, voted new appropriations, then subsided into the sense of safety to which we felt these actions entitled us.

These crises have been very real and it has been necessary to deal with them. But our policy should not be determined by whether Khrushchev is threatening war or promising peace. It should be based on the fact that the Communist drive to crush liberty and take over the world goes on relentlessly every day and in every land.

Upon our return to America, we have been asked repeatedly, "How did the people out there feel about Tibet? That showed them what communism is like, didn't it?"

Yes, it did. But it also showed them that Red China will not tolerate disobedience on its borders any more than Russia did in Hungary. It showed them Communist power and determination.

As one man in Indonesia said, "It showed there is only one side to communism and that is slavery."

To which a skeptic rejoined, "So what is the alternative?"

INCOME UNDER $60 YEARLY FOR MORE THAN BILLION

There are more than a billion people living in underdeveloped lands of the world in which the average per capita income is less than $60 per year. Ceylon enjoys one of the highest standards in its part of the world, $122; India's is less than half of this; Indonesia's about the same.

This compares with a per capita average in North America, Western Europe, and Australia of $900. The American average for 1957 was $2,027.

Communism is at work in every one of the lands where people are barely living. It has an effective climate in which to make its appeal. It says to these people "There are better things in life than this. You do not have to live like hungry animals * * * 12 to a room when you are lucky, on the sidewalks when you are not * * * with disease and filth as your daily lot, and nothing better in prospect for your children."

The Russians invite a young engineer from Afghanistan to visit across the border. They show him their accomplishments.

"You should see their charts of production * * * their steel, their power, their coal," he exclaimed.

"No doubt," was the reply, "but look at those in West Germany. And, certainly in America."

RUSSIA SUGGESTS WHAT THEY MIGHT ACCOMPLISH

"Of course," said the young man, "Germany and America have long had big production. But look what Russia has done in 40 years. That shows what we could do, too."

This young man so full of zeal lives in a country whose only oil streets (in the capital of Kabul) were built by Russia, whose major public works—a powerplant, highways, airfields, bakery, and grain silo—were built by Russia. And whose army, incidentally, is equipped by Russia.

You might switch the argument and point out to him that tying up with Russia would mean the end of his freedom. And he might reply, with something close to a smile, "What freedom?"

Russia is at work in many places—Egypt, Syria, Yemen, Iraq, India, Indonesia, even in Argentina, where it has contracted to provide $100 million in credit for oil development. Premier Nikita Khrushchev has boasted that Russia will outstrip American production, will wrest world economic leadership and share its new wealth and skill with others. Its commitments already total billions of dollars.

CHINA'S SLAVE DRIVING MAY BE DECISIVE

While Russia is boasting and displaying its wares, China is getting underway on an economic program that staggers the imagination and is forcing its millions into slavery. If it fails, as many on both sides of the Iron Curtain believe it will, China may be ripe for another bloody revolution. If it succeeds, then the millions of people surrounding China can expect to follow in the footsteps of Tibet, unless, meanwhile, they have gained the strength and the determination to resist.

These people want to be free. The Africans and the Asians who remain uncommitted thus far do not want to take on the Communist yoke. In Indonesia and Ceylon, even in Afghanistan, you encounter a burning desire for freedom, just as you discover it in Greece and Israel, in Egypt and Italy and in many other places. But where do these people get the strength and the determination?

They are convinced the only place to which they can turn is the United States of America. They recognize that Britain and France and our other allies are important, but they look to us. They are convinced that we, with our wealth, our experience and skill, and, they add—with a mixture of hope and doubt—our love of liberty, can provide their only means of resisting communism.

With impatience we often think and perhaps say, "Well, if you expect so much of us, why don't you get on our side?"

NEUTRAL ON COUNTRIES, BUT FOR DEMOCRACY

With this in mind, we asked a forthright newspaper editor in Ceylon how he and his

countrymen viewed the conflict and their position in it.

"In the struggle for power between the United States on the one hand, and Russia and Communist China on the other, we are neutral," he said.

"But in the struggle between democracy and communism, we are on the side of democracy.

"To us the Soviet Union and China are equated to communism, but everything we find in America today we do not consider democratic.

"Please do not think," he added, "that we who are not with you are against you. The only way you can stop communism is in helping thees countries help themselves."

Later, in another country, we sought the views of an American who has been representing his country in the struggle for several years.

"Our overseas program has been sold to the American people on the wrong basis," he said. "They've been persuaded to support it through fear. * * * Hungary, Iraq, Tibet. They fear that Russia and Red China will subjugate more and more people through conquest. Perhaps so but that isn't the point.

MUST SHARE WEALTH TO HELP CREATE MORE

"Our weakness, our Achilles heel, is the fact that we are the world's richest nation. We use 40 to 50 percent of the world's resources. We must share this wealth—the use of this wealth in creating more wealth—with the rest of the world.

"If we do not, Russia and China will create wealth and they will seize the world's markets. They will drive us back to fortress America."

And then, back home, we find people disturbed by heavy taxation, unemployment and other economic woes.

How can we help other nations, it is asked, when we have such problems at home?

Well, it seems rather obvious that we cannot solve our problems here at home by ignoring those that face us abroad. If we should forfeit economic leadership, and permit world trade to be dominated by communism our internal woes would exceed any we've ever known.

UGLY AMERICAN DOES EXIST IN SOME PLACES

There has been a great deal of talk in recent months of "The Ugly American." This is the title of a widely popular book published several months ago which describes the mischief done by some incompetents abroad, chiefly an ambassador in a fictition eastern country who used his job to advance his political career.

You cannot travel far nor meet many people without encountering some ugly Americans. They look down upon the people of the lands to which they are sent; they live to themselves in American compounds; they are satisfied with American food and American customs.

There have been instances of poor judgment, laziness, even of corruption. But most of the people aren't that kind, most of them want to do a job. Their problem often is that the job itself hasn't been made clear to them.

An encouraging thing about this ugly American situation was that not one person we questioned expressed any resentment against the book or reflected on its accuracy. And we found the book on the shelves or desks of nearly a dozen officials. Perhaps that is explained by the recent report that the book has been put on the recommended reading list of the State Department.

"Such things do exist," said one senior ICA (International Cooperation Administration) official. "We weed out people like that; the contract of one such man is expiring soon, I'm glad to say. We'll be glad to see him and his family leave.

SOME OF THE URGENCY OF JOB IS LOST

"The sad fact is," he added, "that some of the urgency of this job has been lost. Instead of a sense of mission, too many people are now finding it to be a bureaucratic exercise. But the worst thing of all is that we don't feel we have the American people behind us.

"They know about our mistakes—sure, we make plenty—but do they know or care about the heat and the dysentery, the loneliness of a woman in a Moslem land where women don't mix, the problems of educating our children, of rearing teenagers?

"We're not asking sympathy; the folks at home have their problems, too. But what we do want, and must have, is the support of the people back home in this job. We believe we'd get it if they knew just how important it is to them."

PERHAPS ALL THE UGLY ONES AREN'T OVERSEAS

He did not suggest it, but the thought follows that perhaps all the ugly Americans are not abroad. Perhaps some are here at home, ignoring our danger, sending other Americans out to do an impossible job.

If we would avoid future catastrophe, it seems inescapable for us to do these things:

1. Shape a bipartisan foreign policy with support both from the White House and the Congress that will endure in principle through changes of administration or dominant party.

2. Redefine our aims with full awareness of the economic threat we face and with minimum emphasis on essential military support.

3. Stress loans on the most liberal terms possible. Use these for projects geared to the needs and economy of the country concerned, so that our people may hand over operation to them as quickly as possible.

4. Stress technical assistance, educational exchange, and agricultural surplus exports. Don't do the job for them, but help them do it.

5. Be clearly factual in publicity on foreign projects, letting such success as they achieve speak for itself.

6. Recruit and train the highest caliber of personnel possible, give them every reasonable iducement and encouragement, require diligent service and give recognition for their accomplishments. For instance, make language study a basic requirement, provide time and instruction, and added compensation fof achievement.

In these 12 years, America has scored some great successes and the Communists have shown their weaknesses many times. These should be borne in mind, too, as we face the discouragements and complexities of the task ahead. But, most important of all, we should set ourselves to it with the knowledge that it is almost certain to continue without interruption into the distant future.

Farm Labor—Address by John M. Seabrook

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, May 21, 1959

Mr. WILLIAMS of New Jersey. Mr. President, in February, a group of very distinguished Americans, who make up the National Advisory Committee on Farm Labor, held 2 days of public hearings here. The committee heard shocking and tragic testimony of exploitation, poverty and child labor on corporations farms, the so-called factories in the field.

One of the most enlightening discussions of ways to improve the working and living conditions of farm workers came from a man who is the president of a huge corporation farm. He is John Seabrook, president of Seabrook Farm in Bridgeton, N.J.

With a display of tremendous intelligence, understanding and wit, Mr. Seabrook urged the enactment of a Federal minimum wage law for farm workers as the best and most workable way of starting them toward a decent standard of living.

Mr. Seabrook is a successful businessman who has long taken a great deal of interest in the conditions of farm workers. The farm he heads covers 54,000 acres in southern New Jersey. The vegetables grown there are processed on the farm. They resulted in $35 million worth of sales in 1958.

He is the author of the New Jersey Migrant Labor Code and has been a member of the New Jersey Migrant Labor Board for 13 years. He is now the board's chairman. The workers on his farm are organized by labor unions. Seabrook Farm is probably the only fully organized farm in the United States.

His relations with the unions has led a vice president of the Amalgamated Meat Cutters and Butcher Workmen, AFL–CIO, to write that Seabrook Farm is "a beacon of economic and social hope and justice amid corporate agriculture's poverty and exploitation."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a transcript of Mr. Seabrook's speech before the National Advisory Committee on Farm Labor.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRANSCRIPT OF ADDRESS BY JOHN M. SEABROOK, PRESIDENT, SEABROOK FARMS CO., BRIDGETON, N.J., TO THE PUBLIC HEARINGS ON FARM LABOR, SPONSORED BY THE NATIONAL ADVISORY COMMITTEE ON FARM LABOR, HOTEL MAYFLOWER, WASHINGTON, D.C., FEBRUARY 5, 1959

Dr. Graham has been talking very eloquently about the rights of man; Father Higgins, earlier today, spoke of social justice, moral values. I'm not going to talk about that sort of thing tonight; actually, I don't think it does much good to talk about it.

As I told Father Higgins: All of the people who are interested in social justice already believe in it; and the people who aren't interested already know about these things, and there really isn't much point in repeating them.

Back in New Jersey, in 1945, we did take some action—it might be interesting to some of the people here tonight to know that the Farm Bureau actually supported New Jersey's migrant labor law. Farmers aren't all bad.

The law was a good law, soundly written—actually, some people from Princeton had a lot to do with it. The Governor appointed a 12-man commission; the legislature has been generous with funds; we have lots of inspectors; we have a good, adequate code—not anything great, but it does provide adequate living standards, standards patterned on the U.S. Army.

Now, conditions in New Jersey are still deplorable. Governor Meyner made an in-

spection last summer, and he was really shocked with what he saw; he exploded in the newspapers, which gave him a little trouble with some of his farm constituents.

Now, how does this happen? How could we have a law that is widely respected and well enforced for 13 years, requiring adequate physical facilities, and we still have bad conditions? Well, I think it's because we've approached the problem in New Jersey from the wrong end.

And if I may be so bold as to make some suggestions to the members of the committee here, I hope that they won't approach the problem from the wrong end; I hope they won't work on the effect rather than the cause. We were trying to raise living standards without raising the actual standard of living, without giving the migrants a better wage.

Now, some clues to this problem can be found in a public hearing—a couple of references have been made to it today. The Migrant Labor Board wanted to tighten New Jersey's code.

We made some proposals, we publicized them, and we held the usual public hearing. It was my misfortune to preside at that hearing. I never realized before how badly constructed the State legislative hall is, because the speaker can be hit from anyplace in the room. [Laughter.]

Most of you saw the newspaper headlines; some of the boys got pretty noisy at the hearing. But there were quite a few men who spoke, and spoke sincerely in oppositoin to the tightening of this code.

They said: "I'm required by law to provide certain facilities and I do it—I obey the law—and I go further than obeying the law; I provide a nice camp. Then, the migrant worker moves in and he tears the shower heads off the wall; he breaks the screens; he promptly plugs the toilets.

One man told the story of a fellow who used the automatic washers to wash his shoes in. Now, these farmers were testifying for a reason—they were opposing the increase in standards—but I think they put their finger on the real problem, and that is that we're expecting these people to live by standards that we've set.

But these are standards that these people have never known, and they've never known them because they can't afford them, and they've never afforded them; they're not within their experience. The State legislature has tried to create a split standard of living; they're paid according to one standard, but we require them to live according to another standard.

Now, I've talked to a great many groups of farmers about migrant labor codes. Whenever I talk to them, they always cry: "Discrimination." They say: Why do you want a code for migrant farm housing when there is no code for the housing of industrial workers?

Well, of course, the answer to that is quite simple: The industrial worker has a high enough wage, and a high enough standard of living so that you don't need artificial safeguards to protect him. And I don't think that we would need any artificial safeguards, I don't think we'd need housing standards, if we had adequate farm wages.

Harry Truman once said, "An ounce of competition is worth a ton of regulation." And this is certainly true in the question of farm housing.

If wages went up, farm workers would be worth something, and farmers would want to look after them just as industrialists want to look after their valuable workers, and they would provide adequate housing standards.

Now, we hear a lot of talk about the fact that farm workers aren't skilled. I deny this.

I think, actually, that the average farm laborer requires a great deal more skill and a much wider range of skill than the average industrial laborer does. Conditions on a farm are such that the job content changes constantly.

You can't break a farm job down into a series of repetitive, easily supervised operations, like you can a factory job. I'm an engineer; I've run quite a few factories and I've run quite a few farms. I've never seen an honest job evaluation yet that didn't come to the conclusion that the farm job ought to be paid more than the factory job.

So, if you want to talk about equal pay for equal work, or something of that kind, I don't think there's any question but what the farm job ought to be paid considerably more than the industrial job.

Now, today during the hearing there was some conversation from Mr. Johnson of the Farmers Union (I almost said Mr. Johnson of the Farm Bureau, that would have been a terrible thing) about whether or not prices would go up if farm wages went up. Now certainly, in this room, I've spotted about four workers, and I know there's one farm employer—I doubt that there's more than one—but most everybody alse here is a consumer. And this is a subject of considerable interest I think the question was begged a bit today * * * would prices go up if farm wages went up? Would there be an enormous burden on the consumer?

Well, the first thing I think we want to think about in this regard is that despite the widely publicized opium of price supports, a great amount of farm products—particularly the things that you eat—are still traded in a completely free supply-and-demand market. And there are hundreds of thousands of producers producing for that market and competition really works. Most farmers are theoretically in favor of free enterprise, but they wish competition didn't work quite so well in the marketplace.

Now, I suspect that if farm wages went up substantially, prices would start up. And, as I say, I think most honest consumers, when they think about it, wouldn't complain about this too much; nobody really wants to think that his food bill is based on somebody else's poverty. But I also suspect that prices wouldn't move very much, because as praces started up and competition came into play, more efficient producers would quickly drive prices down again.

In 1938, industry had quite a similar problem: wages were low, a lot of competition, they couldn't seem to do anything about it, and eventually the Fair Labor Standards Act was passed. It's a little startling to look back at the fact now that the minimum wage was 25 cents per hour that was set in October 1938; it doesn't seem like much, does it? But agriculture made its basic mistake at that time. Agriculture didn't want to be a part of it; it was obvious it could never pass the Congress with the opposition of agriculture, so agriculture was exempt. Since then, the problem of the agricultural worker has grown steadily worse, the spread has widened.

As something is done to right this problem of the disparity between agricultural and industrial wages, what would happen to the farmer? Would he get squeezed? I've already said I didn't think prices would go up very much: Now, how do wages go up and prices not go up?

Well, in the first place, of course, wage rates and labor costs are not one and the same thing at all; obviously, there's a connection, but there's a strong link in between called "productivity," and if productivity increases, wages go up and labor cost doesn't go up.

Now, we heard some talk today about what proportion of the cost of farm products wages are—or labor cost is. Dr. Bean gave an estimate. Dr. Bean is an economist and economists deal in averages. I'd like to say to Dr. Bean that I had a very good friend once, who drowned because of an average. [Laughter.] This is serious.

He was a platoon leader and he was in strange country, and he wanted to cross a river with his platoon, and he got out the guide book he'd been given and he saw that this river had an average depth of 24 inches and he started across.

The guide book was right: From its source to the sea the river had an average depth of 2 feet—but where he tried to cross it, it was 15 feet deep—and with a full pack, my friend drowned and three other soldiers drowned with him. So you've got to be careful about using averages.

But I think the sort of thing that would happen is this Dr. Bean and beans—the price of green beans, snap beans—call them what you will, depending where you come from—is about 6 cents a pound—that's a good, average price. It costs 3 cents a pound to pick them, the direct labor cost of picking.

Of course, there are labor costs involved in the planting and the spraying and the preparation and all that, but let's just stick to the picking labor. So suppose we double the agricultural rate and it now costs 6 cents to pick beans, so beans have got to sell for 9 cents.

And as soon as beans sell for 9 cents, a few farmers are going to go to a farm machinery company, actually the Chisolm-Rider Company, who have developed the machine—it costs about $15,000—to pick beans. And it can pick beans—counting amortizing the cost—for about 3¼ cents. So, those fellows are going to start selling beans, then, for 6¼ cents—and pretty soon the price of beans is going to be back down.

Of course, a lot of other things are going to happen, too. There's going to have to be some readjustment to what happened to the people who used to be picking beans, because a mechanic is now going to run this machine. But the consumer hasn't been hurt and the fellow who is working on the farm, instead of averaging 50–60 cents an hour, is now averaging $2.50 an hour, this mechanic. And with some readjustment, society is considerably better off.

Now when I talk about mechanization—obviously you can't use this machine on a small farm. So I've now raised the spectre of corporate farming, and my friends among the push-button liberals are going to respond with hisses and boos.

Corporate farming is synonymous with the exploitation of labor in their minds—just as in Mr. Khrushchev's mind democracy means decadence—decadence means democracy—they're one and the same thing.

Well, it isn't quite that way and it doesn't necessarily need to be that way. Actually, a lot of nonsense gets spouted—it's romantic nonsense—but there is a lot of nonsense spouted about farming as a way of life. I've never known anybody who really worked as a farmer who was much enamoured with farming as a way of life. [Laughter.]

Once in a while I get sort of carried away and I think, you know, this modern society * * * Leon Schacter, the union president, he's banging me; the bankers are banging me about interest rates; the chain stores are always driving prices down. This is too complex, you know?

Why don't I give this up and go back to the delightful pastoral life—there used to be a wonderful poem about "Let the wealthy and great roll in spendor and state, I envy them not * * *." And it goes on about—"I wear my own sheep and eat my own lamb" and so forth.

Well, that's a very fine idea but, you know, pretty soon I get a little more relaxed and I get to thinking about how nice it is to have a bathroom, and I'm rather fond of shoes, so I give up that idea and go back to work. Well, that's the way with a lot of

this romantic talk about farming as a way of life.

Now, a lot of today's so-called family farmers are really no better off than the sharecropper; in fact, in some respects they're worse off than the sharecropper. They pay their rent as interest on the mortgage and that's the same every year, regardless of how good or how bad the crop is; at least the sharecropper pays less rent in the years when his crop is poor.

I don't want to be misunderstood * * * being against the family farm is sort of like being against motherhood and the American flag. Nobody dares be against the family farm. I can't be against motherhood. I'm just the father of a brand new son, right now, so. [Applause.]

And I guess I don't dare be against the American flag either, so I'm stuck. Actually, it's all a question of definition.

Farming requires, as a business, the very closest kind of attention of the proprietor. With the constant changing pattern of weather and soils, you can't delegate decisions on a farm like you can in a continuous flow chemical plant, for instance.

I think that for a long, long time to come the owner-operator farm is going to be the most efficient producer. Now, it's not going to be a family farm according to Mr. Johnsons' definition of this afternoon, in which he said that a family farm is a farm unit, owner operated, which employed no outside labor, or very little outside labor (I guess he said).

I was a bachelor until a couple of years ago, so since I didn't have a wife and a lot of children to oppress by making them work on my family farm, I guess under this defition I would have been restricted to a very small farm. But if I had ten kids I could have a bigger farm.

Actually, if you talk about this * * * Dr. Graham spoke about the industrial revolution * * * all of us, if we had it to do over again, the industrial revolution, would like to protect those little English children from the grinding exploitation in the early textile mills, but I'm sure no one would suggest keeping the spinning wheel in the home—as a solution to this problem. There certainly is a better solution to the problem.

And if the industrial revolution had been stopped and the spinning wheel had been kept in the home, I don't think we'd be very well off today. I'm sure I wouldn't be very well off, I'd be standing before you naked probably; my wife was a newspaper woman, I don't think she'd know how to run a spinning wheel, you know? [Laughter.]

Well, putting a limitation on a farm size and trying to keep the farm on what is the current accepted definition of "family farm" is, to me, exactly like the arguments that tried to keep industrial piecework in the home.

When the professor from North Carolina was talking about these hearings having started in 1936, Dr. Graham, I want to stand up and say that when you were at the University, I hope you researchers did a better job than that, because I read with great interest of a congressional investigation in 1892 on this subject—and they were dealing with farm workers—true, mainly with sweat shops—but they were dealing with farm workers.

And a lot of people had some very good reasoned arguments at that time as to why the garment industry shouldn't move out of the home piecework stage, because all of these poor families would be denied a right to be a family together and to be happy starving together, you know? Well, the unions broke up the garment piecework, they broke up the garment sweatshops, but I don't think that the unions are going to be able to help the farm labor problem very much.

Now, Monsignor Higgins today spoke on this subject and said to the Farm Bureau representative that he thought within 5 years this was inevitable. I don't think so—at least with the kind of unions that are American unions.

The American labor union is—should be—a worker's service organization, service to the workers, and the guys who do this are called business agents; and it's pretty expensive to provide business agent service to a bunch of farm workers who are spread out.

One fellow testified today and said he was an organizer for a union, farm workers; but nobody asked him how many members he had; I don't believe he had very many; and the union isn't a self-supporting union—it doesn't support itself with dues because you can't afford to—you can't afford to give business agent service to farm workers that are constantly moving and are spread out. The union has had—and will have—an effect with the larger units.

Mr. Randolph, who seems to know more about me than I know myself—I don't know where he dug up that my mother was a colonial dame * * * Mr. Randolph mentioned that we've been organized. Since there's no Taft-Hartley Act to protect employers, we have a closed shop; we're oppressed by these unions, you see? [Applause.]

Actually, I've never been able to figure out in practice how a closed shop and a union shop differ—in practice. I understand the theory.

But let me tell you a little what's happened. Being organized—more than 15 years ago—the union collected dues and the union had to give service for the dues, and the direct form of service is to get wages up. Our rates have gone up, since we were first organized, by some 450 percent.

Now, incidentally, I'm a little tired tonight because I've just lived through negotiating a new 2-year contract, so I'm very familiar with that figure, and when I quoted it, of course, the business agent said: "That's because they were so low in the beginning. But that period includes the war * * * let me take a more recent period.

In the last 5 years our farm rates have gone up by more than 35 percent—not counting the most recent increase they got out of my hide on Tuesday night. Now, did the consumer pay for this. No, the consumer didn't pay for it. In the last 5 years our selling prices have gone down by 15 percent.

Incidentally, I'd like to pause parenthetically here and pay for my trip, if I can get a commercial in. These are Bureau of Labor statistics. "Frozen food prices have declined in the last 5 years by 15 percent; other grocery items went up by 18 percent." So let me tell all of your housewives: Buy frozen foods.

Actually, in any period of rising wages management is always prodded to get more efficiency. Secretary Benson, in his letter today, spoke of that. And this is what would happen to agriculture if wages were to rise.

Now, I don't think there's any cure for it; I don't think it can come through unions. I don't think the farmers themselves—and believe me, there are a lot of farmers, who would like to have wages go up—farmers understand, just like the steel companies understand, that their profit in general is a percent—most every business is really a sort of a cost-plus business—and if they paid their workers three or four times as much, the part that stuck to their fingers would be a little fatter, too.

So, a lot of farmers are impressed with this idea, but they don't know how to start. And I think the place to start is with the Federal minimum. [Applause.]

Now, I've kept my eye on the watch here and I'm coming to the end of my time so I don't need to go into why we need Federal minimums, and why State minimums won't work. I don't have a suggestion for what the minimum ought to be. Obviously, it's got to be low enough to satisfy the needs of political expediency, of the Congress that has to enact it.

I'm not poking fun at Congress; Congress in their infinite wisdom will find a point that will work. [Laughter.] And the thing that I have to say about it is that wherever it starts, and I don't think it's really terribly important where it starts, but wherever it starts it ought to go up steadily year by year until it finally comes to a full parity with industrial workers. [Applause.]

Now, if I had my way, actually I think it ought to be higher than industrial workers because I think the work is harder, but this is going to take some time, and there are a couple of things that could be done in the meantime.

Secretary Mitchell is going to speak, and I hope he is going to speak about one of these things. Last year there were between 8 and 9 million placements made by the Federal-State Employment Service. Now, this doesn't mean 9 million people—a lot of them were placed again and again, over and over again.

But I think it's entirely within his province to say that the public facilities shouldn't be used unless there were some very reasonable minimum standards. And in the case of foreign workers, I don't see any point to getting in a quarrel as to whether foreign workers are needed or whether foreign workers aren't needed.

We all know that the farm labor supply is dwindling; in theory, there would be enough farm work if it was well enough paid but we don't know, really, whether there's going to be enough or there isn't going to be enough. You look at the statistics of able-bodied males, etc., and we're coming into a period where they're going to decline.

So, I don't think we really need to worry about that. I think that if foreign workers were also covered immediately by substantial minimums, this problem would solve itself.

I have just one final thing to say, and that is: Would farmers support a Federal minimum? I believe they would support the Federal minimum. I think they have to be approached correctly and I don't think they ought to be approached from the standpoint of social justice.

As I said earlier, those of us who believe in it believe in it; and those of us who don't—don't, and so it doesn't really do any good. I think they should be approached from the standpoint of their own self-interest. If you want to make it a little softer, say "enlightened" self-interest. But approach them from their own self-interest.

And don't spend a lot of time talking to them about the terrible conditions that we see here tonight. They're all very familiar with that fact because, after all, they're out in the field among these people, you know; they know it a lot better than anybody in this room will ever know.

This question of who says what to whom * * * I went, some years ago, to a dinner of "The Friendly Sons of St. Patrick." And I went because Senator Kennedy was to be the principal speaker and I wanted to hear what he could say. He got up on a platform and he was almost entirely surrounded by the upper hierarchy of the Holy Roman Church, and he started off in a very florid, old-fashioned, oratorical style, which surprised me a bit.

He said: "It gives me great honor tonight to speak to you from this platform surrounded by the ranks of our distinguished clergy, who are lean, drawn, and hungry from constant privation, fasting, and prayer * * *"—and then he paused.

And Cardinal Spellman's rather ample stomach began to jump up and down, and soon the good cardinal's jowls were shaking, and pretty soon he was laughing right out loud. Then a couple of bishops started to laugh and pretty soon, you know, everybody was laughing; even the laymen were laughing.

So, when the noise died down, Senator Kennedy said: "You can imagine what would have happened to me if I had been a Protestant and said that!" [Laughter.]

Well, there's a lot in this * * * so, don't send the people whom Dr. Graham referred to as the "do-gooders"—and don't send the do-gooders to convert the farmers. There are plenty of farmers who are smart enough to realize that this is a good thing for them; send some of them to convert the farmers.

Now I think that this committee should devote its efforts to showing that a Federal Fair Labor Standards Act for Agriculture is in the economic best interest of all of society—the worker, the employer, and the consumer alike.

Thank you very, very much.

Short Course in Latin American History

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. PORTER. Mr. Speaker, the best short course in Latin American history is an article in the May 28, 1959, Reporter magazine by A. A. Berle, former Ambassador to Brazil and outstanding Latin American authority.

It is entitled "Latin America: The Hidden Revolution," and is included hereafter under a previous consent.

Will the southern section of our hemisphere stay with the democratic West? This is a live issue, writes Mr. Berle.

Our real allies are leaders like Pepe Figueres, Romulo Betancourt, Alberto Lleras Camargo and Luis Muñoz-Marín.

He does not think Castro is a Communist but he, along with myself and many others, is disturbed by Communist infiltration into Castro's government and also by Castro's delay in setting a date for elections.

The only flaw I found in this magnificent analysis was an allegation that Castro's military courts murdered "inconvenient editors or political figures." If there were any such executions, I have not previously heard a whisper about them.

The greatly heightened interest in Latin America is a good sign. I do not think it comes too late. The merits, as Pepe Figueres likes to point out, are overwhelmingly on our side in the contest between democracy and communism. We have the weapons and the strength. Once we are informed, as by articles such as this one, we shall quickly acquire the will to act before it is too late.

The article follows:

LATIN AMERICA: THE HIDDEN REVOLUTION

(By A. A. Berle, Jr.)

Latin America is entering a new and possibly crucial phase. At stake is a continent. The issue is whether the southern section of our hemisphere stays with the democratic West. For the first time since the Monroe Doctrine was proclaimed in 1823, the Americas could break in two. This statement is not a rhetorical one. The possibility is, I think, greater than in 1939, when Hitler and his then ally Franco tried to achieve this same end. Fidel Castro's revolution in Cuba, and the swift, and thus far partially successful, attempts of a small but well-organized Communist minority to seize the reins of power in Cuba are the immediate events that have forced the attention of a lethargic United States. They are merely the visible phenomena of a deeper crisis.

From 1952 to January 1, 1959, Latin America (or more accurately Spanish America, because Portuguese Brazil ended its dictatorship in 1945 and in any case goes by its own rhythm) was the scene of a vast democratic revolution, comparable in dimension to the Russian revolution of 1917 and the Chinese revolution that culminated in 1950. Because so many countries were involved, it did not have the great impact on world opinion that occurs when a single empire changes control. Further, since the revolution was liberal and friendly to the United States—and since we are overwhelmingly ignorant of our closest neighbors—little note was taken. So the story has to be summarized here.

It began in tiny Costa Rica, just north of Panama, the best-governed and most stanchly democratic of the Central American Republics. There, in 1948, Costa Ricans held their usual constitutional election, choosing as president Otilio Ulate. But outgoing President Rafael Calderón Guardia, already allied to a small Communist minority, sought and secured support from his neighboring Nicaraguan dictator, Anastasio Somoza (father of the present dictator), and in this he was promptly supported by the Communists. At this point enters a major figure in the current struggle—cultivated and capable José (Pepe) Figueres, an accomplished economist and engineer (he had studied at M.I.T.). With a small group of Costa Ricans, he took the field against Calderón Guardia's combination of Communists and Nicaraguan mercenaries. After a campaign of 6 weeks, he defeated them in a pitched battle behind the city of Cartago, reorganized the government, and restored Ulate to the presidency. When Ulate's term expired in 1953, Figueres ran for president, and was overwhelmingly elected. He undertook the political and social regeneration of Costa Rica. As it turned out, his achievements went far beyond Costa Rica.

At that time most of Latin America was dominated by dictatorships, either of the demagogic or of the military type. Perón ruled Argentina; Rojas Pinilla had taken over Colombia; Pérez Jiménez ruled Venezuela; General Odría governed Peru. The dictatorships of Somoza and Trujillo in Nicaragua and the Dominican Republic were solid, and Fulgencio Batista was holding Cuba. The staunch but militarily impotent liberal governments, led by Costa Rica and Uruguay, seemed in a hopeless position. The dictators, particularly Rojas Pinilla, Pérez Jiménez, and Trujillo, ceaselessly attacked them and their leaders by assassination threats, forged slanders, and intrigues in Washington. Most of the honorable and able leaders in the countries ruled by dictators escaped imprisonment or death only by taking refuge elsewhere. Many found asylum in Costa Rica, while their governments, not always unsuccessfully, tried to have Washington bring pressure on Figueres to throw them out of Costa Rica and out of the hemisphere.

A CONTAGION OF FREEDOM

In 1952 the big change began. In Bolivia a revolution directed by its present President, Hernán Siles Zuazo, one of the great spirits in Spanish America, finally overthrew an ancient, ineffective oligarchy and a social order that had hardly changed since the Spanish conquest. A social revolution followed that is still under way. It is one of the bright spots in American diplomacy that the United States, in this case, speedily moved to support the right side. Argentina in 1955 by the combined efforts of liberals and the military, succeeded in throwing out Perón. A transition government honorably carried on by General Pedro Aramburú held a straightforward free election in 1958, bringing to power the present President, Arturo Frondizi. In 1956, Honduras threw out its dictatorship, and recalled its liberal leader, Ramón Villeda Morales, who had been in exile and under heavy threat in the Costa Rican capital of San José, where Figueres had befriended him. He was elected President of Honduras in 1957.

General Odría, the dictator of Peru, with a wisdom not emulated by many of his contemporaries, voluntarily terminated his dictatorship in 1956. The incoming régime recognized and made peace with the popular Aprista Party, which largely represented the Indian and proletarian workers of Peru. It subsequently elected Manuel Prado as president; his government is a coalition between conservatives and Apristas, and has a clear popular mandate.

On May 10, 1957, under the battering of a liberal opposition, General Rojas Pinilla fled Colombia after successfully emptying the treasury. An outstandingly capable man, Alberto Lleras Camargo (he had been ambassador in Washington and is one of the wisest of South American statesmen), was chosen president a year later. In January 1953, the Venezuelan dictator, Pérez Jiménez, fled the country in the face of a nationwide revolutionary upsurge that engaged the support of students, of the Catholic Church, indeed of practically everyone save a small group of Jiménez hangers-on. Romula Betancourt, leader of the largest democratic party, was elected president 9 months later. He also had been in exile in Costa Rica, had been chivvied out at the behest of Washington, and had been granted asylum in Puerto Rico, where he was kindly received by his old friend, Governor Luis Múñoz Marín. A few months later, the smoldering revolution of Fidel Castro reached Havana, slightly ahead of three or four other movements designed to upset the corrupt dictatorship of Fulgencio Batista. On January 1, 1959, Batista fled. A provisional government of excellent men headed by Manuel Urrutia took office, but it has not yet established its power to govern. The real power lies with Fidel Castro, and with a group around him—and in the streets.

So in the space of about 7 years, most of Spanish America, from Cape Horn to the Florida Strait, changed hands. Of interest is the fact that in their hour of exile and peril many of the men now governing found asylum and comfort through the courage of José Figueres, and the wisdom and broadmindedness of Governor Múñoz Marín of Puerto Rico.

SHADOW OF THE PAST

So far, so much and so good. The old style caudillo-general or his counterpart, the demagog, and their dictatorships had been proved not only hateful but obsolete. The three remaining—Somoza II in Nicaragua, Trujillo in the Dominican Republic, and Stroessner in Paraguay—are on the defensive. In Nicaragua, the only question is whether the transition can be secured peacefully, as in Peru, or must involve bloody drama, as was the case in Cuba.

A few weeks ago, the second phase of this huge struggle began. It revolves, quite simply, around the Communist issue.

In the previous phase, communism had not been a major issue since Pepe Figueres outmaneuvered and outfought it in 1948. True, the dictators, notably Trujillo and

Jimenez, had sedulously spread the impression that everyone opposed to their dictatorships and their corruption was Communist—a not unskillful use of the technique of the late Senator McCarthy. Some of them had resources McCarthy did not have, notably some expert counterfeit-and-forgery shops where documents could be fabricated "proving" their point—until a laboratory as good, say, as the FBI laboratory in Washington got to work on them. There were apparently quarters in this country where such balderdash was taken seriously.

Following Castro's seizure of Cuba, he or his Government invited Figueres, no longer President of Costa Rica, to visit Havana. Figueres went. He had every right to expect friendship. He had helped Castro when Castro had few friends, as he had helped other Cuban exiles. He was worried, for Castro had made a trip uninvited to Venezuela, and had there seen fit to attack Puerto Rico as a "colony" of American imperialism. By implication, he had attacked Gov. Luis Muñoz-Marín, one of Figueres' closest friends. Figueres had been invited to speak at a mass meeting in Havana, but was asked not to discuss Puerto Rico. So, before a vast throng, after congratulating Cubans on becoming free and saluting their revolution, he pointed out that Latin America was part of the Western World and must stand with the West; that having overthrown one dictatorship, the Cuban revolution and its brother revolutions must not permit dictatorship to rise again either through demagogy (as in the case of Perón) or through Communist seizure such as had been attempted against him in Costa Rica in 1948.

"That speech would have been considered neutralist in Chicago," Figueres commented wryly after the event. But Fidel Castro rose, and in a long tirade—repeated the following evening over television—attacked the United States, attacked the West, attacked Figueres, attacked Betancourt, attacked the democratic leaders in Latin America. They were "agents of American imperialism." Latin America could not stay with the West, and certainly not with the imperialist United States, in any conflict. And so forth. It followed the Communist line from beginning to end—and everyone knew it. The speech, like Figueres', echoed from Cape Horn to the Rio Grande. Its effect was to crystallize Latin-American partisanship with breathtaking speed.

It was highly reminiscent of Europe in 1945. All the movements resisting Hitler in each country were then considered as one. But, at a given moment when Stalin so decreed, every resistance movement split. One wing was pro-Communist, blackguarding the United States, Great Britain, and others, following the Moscow line. The other stood with the western allies and for democratic government. Exactly this happened in mid-April of 1959 throughout Latin America. Small but well-organized bands of propagandists entrenched in various quarters unmasked their batteries. Their targets were José Figueres, the recognized continental leader of democratic thinking, and President Rómulo Betancourt in Venezuela, perhaps the ablest politician in South America. Their broader attack was on the entire liberal-democratic movement.

This time they made no bones about it. True, the State Department had treated Figueres and Betancourt with notorious shabbiness, had decorated and flattered their enemies, and had been anything but enthusiastic when they moved into leadership. To accuse them of being "agents of Yankee imperialism" was the most ironic of big lies. But it seemed the hour had struck for the Communist seizure of power, and the battle is joined.

CASTRO AND THE COMMUNISTS

To the United States, the contest is most noticeable in Cuba. Fidel Castro has just visited us, making sweet noises and, incidentally, saying the exact opposite in New York and Washington of what he previously said in Cuba and Venezuela. The reasons may not be far to seek.

Fidel Castro says he is not, and I think he is not, a Communist. He is merely a guerrilla leader who commands the admiration in Latin America properly due to an individual of great courage who fought a winning battle against huge odds. Cuban Communists had consistently supported the Batista dictatorship; only in the last few months of Castro's campaign did they change sides. One Cuban Communist central committeeman then moved into Castro's camp in the Sierra Maestra. He has since spent much of his time with Castro.

The Costa Rican Communist leader, Manuel Mora, who is considered an extremely able propagandist, likewise moved into the picture. It is clear that a number of other Communists are assuming positions in various parts of Castro's amorphous régime. Courtsmartial, set up to execute perpetrators of atrocities under the Batista government, soon became mere people's courts, murdering inconvenient editors or political figures. Castro has recently announced that the death penalty will no longer be applied except in cases of outright counter-revolutionary activity: it will be interesting to see how far this phrase stretches.

The idea that Cuba ought to elect a president with a popular mandate is repudiated by Castro and his clique: some sort of social revolution must first be carried out. It is not specified what this will be, or what it will do, or where it will go. A chief and constant theme is anti-Americanism.

The same tune is sung everywhere by pro-Communist groups in Latin America. The United States is chief target; the liberal democracies presently trying to bring a better economic order to their countries are the secondary targets. The unanimity convincingly suggests that orders were given from the Communists high command in Moscow, presumably through a command post in western Europe. It also suggests that the situation is being used to asist the Soviet Union diplomatically in its current Berlin-Middle Eastern push.

THE UNDERLYING REALITIES

Let us sort out, from the political noise, the underlying realities with which we have to deal. It has been clear to anyone with eyes to see that the dying Latin-American dictatorships would not be able to hold on. They were also the worst possible long-range allies of the United States. Help or cordiality extended in their direction merely meant convincing the oppressed peoples of their countries that the United States was their enemy. Happily, the liberal democratic leaders who now control most of South America are men with education and with experience of the United States. They are quite aware of the difference between the reality of the United States and the ineptitudes of its politics often reflected in the Government of the United States. Most of them have been in close contact with American liberal thinking.

On the other hand, they know that their own countries must go through a social as well as a political reorganization. They are not clear whether the United States understands that fact. The outstanding necessity is to put an end to the division between age-old oligarchic, irresponsible power cliques and a proletariat living out its life in hunger and disease, without hope of improvement. Figueres' first act in Costa Rica was to nationalize the banks, and he was right; no other way would have made credit available to all of Costa Rica.

The Bolivian revolution, like the Mexican revolution against Porfirio Diaz in 1911, marked the end of Spanish feudalism. Social change on a sweeping scale is inevitable in all Latin American countries, except in democracies like Uruguay or Costa Rica, where continuous evolution has been possible. For practical purposes, this means, first, assurance that land is reasonably distributed or available. Second, that credit is available to everyone on reasonable terms and not monopolized by private usurers and moneylenders. In short, a popular banking system. Third, that the governments together, and almost necessarily with the United States, work out a system of economic planning, so that prices of the principal products will be more or less stabilized, the flow of necessary imports will continue, and the industrialization of these countries will go forward rapidly. Fourth, and perhaps most important, that there will be a vast and solid expansion of popular education.

It also means that the United States will have to assist a continuously expanding Latin American economic system. So far as the United States is concerned, it must stand not merely for private enterprise—who in the world wants to die for that?—but should spearhead a battle for personal, political, and economic freedom, by any method, socialist or private, that seems best adapted to meet local conditions.

In fairness to the United States, which has not been getting much of a break in Latin America, it should be said that Washington has made major moves in this direction. The Eisenhower administration, perhaps without realizing it, sharply changed course in the right direction nearly a year ago when it faced up to the fact that the Latin-American economic problem had to be met. It did follow the Brazilian initiative toward continental planning which goes by the name of "Operation Pan-Americana." Governor Meyner, of New Jersey, speaking in Rio de Janeiro and representing the Democratic opposition in the United States, gave powerful support to this view. Washington did give limited approval of the idea of continuous planning, and has taken an active part in the Committee of Twenty-One, established by the Organization of American States, whose report is expected shortly. U.S. Treasury experts supported and have assisted in drawing up a project for an inter-American bank, a measure long overdue. During the Roosevelt administration such a treaty was drawn but it was blocked in the Senate by one of the New York banks through its private influence with the late Senator Carter Glass. Now the project has been restudied and should come before the Senate before too long.

Limited support has also been given to price-stabilization schemes that should remove at least some of the hazards from Latin-American trade. Coordination of public and private investment from the United States in these countries also can and should be attempted. Actually, sustained assistance for 10 years, costing $12 billion—half the size of the Marshall plan—could reorganize the Latin American in a decade.

WHAT WE CAN DO AT ONCE

Most urgently the United States should dramatically reverse its position in respect of the new governments. It should, rather dramatically, indicate its solid support of the liberal democrats who are now running most of Latin America. Especially it should make a clear demonstration of good will toward President Rómulo Betancourt, presently under Communist fire in Venezuela. It can and should give solid evidence of cordiality to Lleras Camargo in Colombia, Frondizi in Argentina, and Villeda Morales

in Honduras (he also needs immediate and direct help: his is a poor country). The United States should establish the principle that it can and will make long-range plans with governments that have held free, honest, and open elections, and must deal with others only on a de facto, day-to-day basis. Incidentally, this means insisting that Cuba hold an honest election, without the terror that stalks there now, before Washington commits itself to long-range plans of economic aid.

Latin America will be setting its direction in the next couple of years—with Washington if it can, without Washington if it must. If it is to be with Washington, we must contribute not only capital but also long-range planning and technical advice, so that the economic development of the southern part of our hemisphere may contribute to the economic and political growth of the free world as a whole. If we let Latin America drift away, it will be to the detriment of the peoples of the hemisphere as a whole. The Marshall plan proved that, with the cooperation of the nations we assist, we can do a lasting job of rehabilitation and improvement abroad. In Latin America, we are facing conditions that cannot be easily compared with those of western Europe. But in Latin America too, we can do the job—and now is the time to do it.

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. LIPSCOMB. Mr. Speaker, with the passing of former Secretary of State John Foster Dulles, the United States has lost a great statesman who was completely dedicated to and worked unceasingly for the cause of peace.

One of Mr. Dulles' guiding principles, and for which he was criticized in certain quarters, was that there would be no appeasement of the Soviets. Do the citizens of the country approve of this policy? A letter which I received recently from Mr. and Mrs. Lloyd S. Summerhays, residents of the 24th District of California which I represent, sets forth in unmistakable terms their complete support of the U.S. policy to stand up firmly to the Soviets in their insidious campaign for world domination.

Under leave to extend my remarks, I am submitting the letter for inclusion in the RECORD for I am certain it catches the feelings of the great majority of Americans throughout the country:

MAY 14, 1959.

The Honorable GLENARD P. LIPSCOMB,
House of Representatives,
Washington, D.C.

SIR: During recent months, in particular, it would appear that our Government leaders have been heavily burdened with problems and decisions the outcome of which could spell future world peace or, on the other hand, might possibly lead to our eventual destruction. As privileged citizens of our beloved country, we sympathize with our leaders in the enormity of their task, and pray that they will be given the wisdom to make the proper decisions in the day that lie ahead. Their job is made no easier by the fact that they represent many diverse and dogmatic factions, some groups clamoring for a yielding acquiescence to the demands of our sworn enemy, the Communists, and others demand a "stand-firm" attitude at any cost.

Since we realize that our representatives in Washington are eager and anxious to know the will of their constituents in any crisis, we feel that we must write to voice our convictions. We do so humbly, for we know that many important circumstances are possibly unknown to us and that we must have faith in the courage and judgment of our leaders to do what is right. However, we consider this letter to be one of the most important we shall ever write, for it is concerned with one of the gravest problems our country and our world have ever faced. This problem concerns but one consideration, namely, our attitude toward the Communists, and particularly their Russian leaders. There is no doubt in our minds that the Communists will never rest until they have utterly conquered the free world, including our own United States, with all the principles of humanity, freedom, and Christian decency which constitute our heritage.

We are absolutely convinced that Khrushchev's present plans include yet another vital step toward eventual world domination, that of further solidifying the Communist empire by forcing the West out of West Berlin, making it a demilitarized, neutralized city. This disengagement would be a trap, threatening the freedom of the more than 2 million people who live in West Berlin and the security of all Western Europe. Let us never forget that West Germany is the heart of NATO defenses in Western Europe, and that demilitarization of East and West Germany would not only abandon the heroic people of West Berlin, but would leave Soviet troops in a perfect position to deploy in force. They would be within a few hundred miles of Great Britain, France and all the rest of the West with its back to the sea.

We remember all too well the terrible price the world paid for the "lesson of Munich." We have repeatedly, during the years following World War II, seen the Communists gain concession after concession and conquest after conquest, so that now over 100 million European people have been reduced to a state of slavery behind the Iron Curtain, not to mention our friends and former allies in Asia who have suffered a similar fate.

If the West does not stand up to communism, even at the risk of war, what can possibly save us from such a fate? Bit by bit, the communistic empire is growing, not on the principles of decency and human rights, but by the insidious enslavement of whole nations—among them heroic Hungary—whose agonized appeals to the free world have apparently fallen on deaf ears. What, we wonder, has happened to the brave resolution of the United Nations to find out what is going on behind Hungary's Iron Curtain? Isn't Hungary still a member of the U.N.?

We know, before we start, that the Soviets are incapable of sincerity or honesty in any future negotiations. They have proved this again and again. So why make further negotiations and concessions which will only lead further down the road to more human enslavement and the eventual day when we will have to stand alone against impossible odds?

We want to stand up and be counted, now, as citizens who will willingly make any sacrifice to preserve our American heritage from the onslaughts of this terrible enemy. Further, we realize that Khrushchev knows the strength of the United States and the West's military assets and he is not likely to want a war. If, however, the West pursues a role of appeasement or indifference, a really hot war is probably nearer than we would like to think. On the other hand, a shoulder-to-shoulder resistance to Soviet demands just might possibly preserve peace, and eventually bring mankind back to a decent world. In any event, it now appears that our course is clear and that we have no choice in the matter. The enemy is getting entirely too close to our very own front yard.

At this time we want to acknowledge our gratitude and loyalty to our constitutional representatives in Washington for their unstinting efforts and their sacrifices during these trying times. We are especially grateful to President Eisenhower and to Mr. John Foster Dulles, for their diplomatic skill and the inflexible, honorable principles upon which our foreign policy has been conducted. We are deeply appreciative of this. We only hope this letter will serve, in its own small way, to help our leaders to know the will of their people.

Yours very truly,
ANGELA SUMMERHAYS
LLOYD S. SUMMERHAYS.

World Refugee Year Brings Hope for Italian Refugees

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. IRWIN. Mr. Speaker, on July 1, by proclamation of the United Nations, World Refugee Year will begin.

I have had, on several occasions recently, the opportunity of learning more about the problems of refugees, in particular Italian refugees.

I would like to introduce into the RECORD, therefore, the following article submitted by the American Committee on Italian Migration which, I think, vividly highlights the problem:

HOPE FOR ITALIAN REFUGEES THROUGH WORLD REFUGEE YEAR

(Submitted by American Committee on Italian Migration (National Catholic Resettlement Council), New York, N.Y.)

With World Refugee Year proclaimed by the U.N. and scheduled to begin on July 1, the American Committee on Italian Migration joins in the motives and sentiments behind its program and pledges its efforts to help make it a success both from the standpoint of American national interest and its humane aspects.

The Displaced Persons Act of 1948 and Refugee Relief Act of 1953 reflected the concern of the United States in the plight of the refugee and gave tangible proof of its determination to alleviate it.

ACIM, organized in 1952, played a role in the passage of the Refugee Act and in its implementation insofar as the Italian phase was concerned. Job and housing assurances, as required under its provisions, were obtained for thousands of Italian refugees through the 127 chapters of the organization in every section of the country. The 60,000 Italians eligible for entry under the act have all been resettled here and are faring well.

But, while the scope and purposes of the DP and Refugee Acts are commendable, the problem of the refugee is still a pressing one and in many instances has become even more aggravated. Flight from persecution for political and other reasons is ever-present.

In the case of the Italians, a new situation has cropped up recently.

Local governments in north Africa and in the Near East have projected a policy of expropriation and dispossession which affects thousands of Italians. In Tunisia, there are 60,000 Italians, approximately 30,000 of whom are in Tunis where the problem is extremely acute. They are being systematically dispossessed of their jobs and businesses. Most of them have lived there for generations. Those who can find the means, flee to Italy. It is officially reported that the number of Italians working part time in Tunis is being reduced each day as a result of the government policy to replace Italians with Tunisians as workers. Their plight is extremely serious despite desperate measures of the Italian consulate and of the Catholic charities agencies to give them assistance. Even those who own land are being pressured to leave without their possessions.

In Egypt, nearly 500 Italian families (about 2,000 people) have left for Italy because they have been deprived of their jobs and of other means of support resulting from a situation similar to that of Tunisia. These families are subsisting on welfare funds provided by the Italian Government and the Catholic welfare agencies. Those expropriated Italians who still remain in Egypt, eventually will find their way back to Italy and this additional burden on an already over-populated country will be difficult to sustain. Italy, in addition to its own, has a caseload of over 11,000 refugees of non-Italian ethnic origin, nearly 7,000 of whom seek resettlement.

ACIM, mindful of our Government's generous policy of giving leadership for the solution of the world refugee problem, since the end of World War II, urges that renewed efforts be made in pointing the way to other nations to help erase, or at least attenuate, this unfortunate situation. Legislation to help relieve the world refugee problem would be an example for other nations to follow.

ACIM submits that such legislation should contain provisions for the entry, among others, of some 15,000 Italian, north African and Near East refugees and asks that consideration be given to this proposal by administration and congressional leaders.

It is confident, as President Eisenhower declared to ACIM officials on the matter of reunion of families, that the "common decency of the American people, imbued with the tradition that this country is the sanctuary of the oppressed," will prevail.

National Rivers and Harbors Congress Endorses Water Pollution Abatement Bill (H.R. 3610)

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY,
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. BUCKLEY. Mr. Speaker, the bill to further stimulate construction of needed municipal waste-treatment facilities to prevent the discharge of untreated or inadequately treated sewage or other waste into the waters of the Nation (H.R. 3610) will soon be considered in the House. The bill was reported from the Committee on Public Works on April 23, 1959 and a rule was granted for its consideration on May 25, 1959. I invite attention of the Congress to the fact that the bill has the support and endorsement of the National Rivers and Harbors Congress as set forth in a letter I have received from William H. Webb, executive vice president, as follows:

NATIONAL RIVERS AND HARBORS CONGRESS,
Washington, D.C., May 25, 1959.

Hon. CHARLES A. BUCKLEY,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN BUCKLEY: The following information is submitted for your consideration:

The National Rivers and Harbors Congress, assembled for its 46th Annual Convention in the City of Washington, D.C., on May 15, 1959, has considered the growing urgency of the problem of water pollution abatement.

It appears that with the rising population, rapidly increasing per capita water use and developing industrial and recreational needs for water, current levels of expenditures for pollution abatement facilities are grossly inadequate. Reliable estimates clearly demonstrate the imperative necessity for a level of expenditures for these purposes of approximately $575 million annually.

Evidence submitted to the convention compels the conclusion that only through increased Federal assistance to local communities can this national problem be solved. Accordingly, the National Rivers and Harbors Congress strongly endorses the provisions of the bill, H.R. 3610, and recommends its immediate enactment into law, which it believes to be an essential step in the constructive solution of this growing national problem.

Sincerely yours,
WILLIAM H. WEBB,
Executive Vice President.

"There Is Utterly No Sense for a Superhighway To Destroy a Historic Building or Slash a Historic Battlefield if It Can Swing Around in Some Acceptable Way," Declares the Wilmington, Del., Morning News

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. McDOWELL. Mr. Speaker, I find myself in complete agreement with the position of the Wilmington (Del.) Morning News which said in a recent editorial that—

There is utterly no sense for a superhighway to destroy a historic building or slash a historic battlefield if it can swing around in some acceptable fashion.

There is a deepening concern on the part of our civic and cultural leaders over the heedless destruction of many of our country's most famous historical sites and buildings. In some instances great buildings are being razed and replaced by such things as parking lots. This was the fate proposed for the historic Patent Office Building, in Washington, D.C., and the San Francisco Mint. The Morristown, N.J., National Historical Park with its famed Revolutionary War headquarters of Gen. George Washington was threatened with a highway. I have introduced a bill, H.R. 7215, to save our great sites and buildings which, in fact, are often threatened by federally assisted programs.

Delaware is rich in historic sites and buildings, and our museums and art galleries, such as Winterthur, are world famous. Along with other States interested in preservation of cultural monuments, we have found that our concern with history is richly rewarding both to ourselves and to tourists who visit our State and spend money here with our merchants.

My bill will not halt progress, but it does establish a regular means whereby national organizations interested in historic preservation may advise the Federal Government in these matters. No appropriation of Federal funds is provided or contemplated in my bill. It is not a matter of money, but, rather, of better advice so that the vast bureaucracy of Government gives the same weight to historical factors which they presently give to other factors in making their decisions.

Like the national treasures legislation of European countries, my new bill includes the fine arts as worthy of saving. Among the 30 groups listed in my bill are such outstanding organizations as the American Institute of Architects, the National Trust for Historic Preservation, the American Association for State and Local History, the American Federation of Arts, and the General Federation of Women's Clubs.

I include for the information of my colleagues the editorial from the Wilmington (Del.) Morning News, and the text of my new bill, H.R. 7215, to amend the Historic Sites Act of August 21, 1935, to provide a method for preserving sites, areas, buildings, objects, and antiquities of national, regional, or local historical significance which are threatened with destruction by federally financed programs, and for other purposes.

I invite any of my colleagues who are interested in this matter of historic preservation to join with me in introducing this legislation, and I invite comments and suggestions from all interested individuals and organizations which will assist me in perfecting my measure.

It is my hope that hearings will be held on this legislation at an early date.

[From the Wilmington (Del.) Morning News, May 22, 1959]

NOT A MATTER OF MONEY

In these days of special concern with taxes and revenues the title of this piece could have led you into this note on a measure introduced in the House at Washington this week by Representative HARRIS B. McDOWELL, JR., of Delaware. It would set up some commonsense procedures for saving historic sites and buildings apparently in the way of Federal-aid highways and urban renewal programs.

By Mr. McDOWELL's bill the Interior Department could give weight to the advice of outfits such as the American Institute of Architects, the National Trust for Historic Preservation, and the General Federation of Women's Clubs.

There is utterly no sense for a superhighway to destroy a historic building or slash a historic battlefield if it can swing around in some acceptable fashion. Too much good civil engineering has been done in some parts of the Nation, for the roads program,

without enough good regional planning that takes our heritage into consideration.

A straight line is the shortest but not always the best line between two interchanges. We compliment Mr. McDOWELL and urge that this bill get prompt, full attention by all Delaware people who value tradition.

H.R. 7215

A bill to amend the Historic Sites Act of August 21, 1935, to provide a method for preserving sites, areas, buildings, objects, and antiquities of national, regional, or local historical significance which are threatened with destruction by federally financed programs, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the Act entitled "An Act to provide for the preservation of historic American sites, buildings, objects, and antiquities of national significance, and for other purposes", approved August 21, 1935 (16 U.S.C. 461), is amended to read as follows:

"That it is hereby declared that it is a national policy to preserve for public use historic sites, areas (including sections of cities), buildings, objects, and antiquities of national, regional, or local significance for the inspiration and benefit of the people of the United States."

SEC. 2. Section 2 of such Act (16 U.S.C. 462) is amended by redesignating paragraph (k) as paragraph (m) and by adding after paragraph (j) the following new paragraphs:

"(k) Carry out (insofar as practicable and appropriate) the same duties and functions with respect to historic areas (including sections of cities) as those which are specified in the preceding paragraphs of this section with respect to historic sites, buildings, and objects.

"(l) Protect and preserve, in the manner provided in section 8 and through the performance of such other functions of the type described in this section as the Secretary may deem appropriate, historic sites, areas (including sections of cities), buildings, and objects of national, regional, or local significance.

"(m) As used in this section the terms 'objects' and 'antiquities' include objects and antiquities of art."

SEC. 3. Such Act is further amended by adding at the end thereof the following new section:

"SEC. 8. (a) Whenever the Secretary receives a petition from any State or political subdivision thereof, or from the American Institute of Architects, the National Trust for Historic Preservation, the Commission of Fine Arts, the National Wildlife Federation, the American Council of Learned Societies, the American Association for State and Local History, the Natural Resources Council, the Wildlife Management Institute, the National Parks Association, the American Institute of Planners, the American Automobile Association, the Society of Architectural Historians, the American Planning and Civic Association, the General Federation of Women's Clubs, the Garden Club of America, the American Society of Landscape Architects, the Urban Land Institute, the American Federation of Arts, the National Academy of Design, the National Council on Arts and Government, the National Art Education Association, the National Council of the Arts in Education, the College Art Association of America, the Artists Equity Association, the American Association of Museums, the Joint Committee on the National Capital, the National Capital Arts Council, or any other organization recognized by the Secretary for purposes of this section as being concerned with historic preservation, alleging that a Federal project or program or a State or local project or program financed in whole or in part with Federal funds will seriously damage or destroy a historical site, area (including a section of a city), building, or object of national, regional, or local significance, or upon his own motion, the Secretary shall conduct an investigation, which shall include (but not be limited to) holding public hearings or affording the opportunity for such hearings, for the purpose of determining whether or not such site, area, building, or object is of national, regional, or local historical significance.

"(b) Whenever the Secretary determines under subsection (a) that a site, area, building, or object is of national, regional, or local historical significance, he shall forthwith determine whether or not the proposed project or program will seriously damage or destroy it.

"(c) Whenever the Secretary determines under this section that a site, area, building, or object of national, regional, or local historical significance will be seriously damaged or destroyed by a Federal project or program (actual or proposed) or by a State or local project or program which is or will be financed in whole or in part with Federal funds, he shall submit such determination to the head of the Federal department, agency, or instrumentality under the jurisdiction of which the project or program is to be carried out; and after the receipt of such determination the head of such department, agency, or instrumentality shall not commence or further proceed with such project or program, or expend or approve the expenditure of any Federal funds (or further Federal funds) for such project or program, unless and until such project or program has been modified and the plans, specifications, and contracts thereunder amended so as to provide to the satisfaction of the Secretary for the preservation of the historic site, area, building, or object involved. Such modification or amendment may be made notwithstanding any provision of law limiting the right of a department, agency, or instrumentality to modify a project or program or amend plans, specifications, or contracts, but shall otherwise be subject to all the provisions of the law under which the project or program is being or will be carried out.

SEC. 4. The Secretary of the Interior, in consultation with the organizations named in subsection (a) of section 8 (as added by this Act) of the Act of August 21, 1935, and other organizations recognized by the Secretary as being concerned with historic preservation, shall make a continuing study of the tax advantages, technical and financial assistance, and other incentives which could be provided (by legislation and otherwise) ot promote and encourage the restoration and preservation of sites, areas, buildings, objects and antiquities (including objects and antiquities of art), in the United States of national, regional, or local historical significance by the Federal Government, and by States, political subdivisions, private organizations, and individuals, giving appropriate consideration to the methods which have been used to encourage such restoration and preservation in other countries and in areas of the United States where intensive programs for historic preservation have been successfully carried out.

The Foremost Manufacturing City

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. MULTER. Mr. Speaker, many people do not realize that our great city of New York is the largest manufacturing city in the world.

I commend to the attention of our colleagues the following informative article written by Martin W. Wilmington of the New York City Department of Commerce. Mr. Wilmington is well known for his writings in the economics field and is a professor of economics at Pace Institute of New York City. His article appeared in the May 1959 issue of Industrial Bulletin, a publication of the State of New York Department of Labor:

THE FOREMOST MANUFACTURING CITY

(By Martin W. Wilmington)

Andrew Carnegie once called New York City the place where people spend the money they make elsewhere. Like most people, then as now, he had the city all wrong.

In Detroit or Chicago or Pittsburgh or Washington, no one is likely to mistake the nature of the dominant local economic activity. Nobody would hesitate before tagging manufacturing as the vital sinew of Detroit's employment strength. But so few people seem to know that New York City is a far greater center of manufacturing than is Detroit—or Chicago—or Pittsburgh—or any other city in America or the world. It also has more government employees than Washington.

Besides being the country's foremost manufacturing city, New York leads the nation in trade, finance, services, corporate management, communications, transportation, and port facilities. Thirty thousand wholesale firms, 100,000 retail outlets, 150,000 service establishments, 1,200 large corporate headquarters, 380 banks and bank branches, 12 trunk railroads, 13 million airline passengers annually 22 ship movements daily, thousands of truck arrivals daily, 1 billion securities turned over annually—all add up to make New York the undisputed leader.

Its very variety and scope cause most of the confusion that arises about its economic character. The city is both a colossus and a cosmos. Its giant size can swallow new social and economic enterprises without more than a momentary stir.

In almost any other city, the presence of the United Nations and all the subsidiary activities connected with it would continuously excite the awareness and the attention of the public. Not so in New York. Thousands of New Yorkers still have never seen the gleaming structure on the East River.

A world trade fair drawing more than 60 nations, with nearly 3,000 exhibitors and almost a million visitors, would set off a hue-and-cry celebration throughout a lesser city. In New York last year, more than one bus driver, when queried for directions to the first U.S. World Trade Fair, replied haughtily that the fair had been closed in 1940.

The departure of a plant with hundreds of employees, or the compensating opening of a company's new headquarters, would get banner headlines in other towns. In New York it rates back-page treatment by the metropolis' mass-circulation newspapers.

Helping to mask the importance of industry in New York is the unostentatious nature of most of its proliferated manufacturing activities and the rich diversification of the city economy. Amidst the welter of stores, theaters, brokerage houses, cabarets, restaurants, office skyscrapers, jet planes, ocean liners, terminals, exchanges, bank palaces, TV studios, fashion shows, festivals, exhibitions, art auctions, concerts, fairs, congresses, tourists, diplomats, and white-collar commuters, even an industry complex that employs nearly 900,000 production workers can seem inconspicuous.

These hundreds upon hundreds of thousands, far from being concentrated inside a

few giant industries, are spread out through some 40,000 factories that represent more than 300 different industries and make New York a small-business citadel. All told they provide a diversity of production unmatched anywhere—this single city spews forth a greater variety of goods than do most nations of the world.

Yet the average plant in the city, operating in rented quarters and by preference using subcontractors and outside services, employs fewer than 25 workers. The average annual payroll is scarcely $100,000.

Quite clearly the symbol of New York City is not the blast furnace, the towering refinery, the sprawling assembly hangar. The overalled man carrying a lunch pail does not personify the city. Rather, manufacturing in New York speaks through the sewing machine, the clothes rack, the loft building that may look like a tenement. Most of New York's production workers wear white collars or cotton prints on the job.

New York's greatest economic resource is manpower. Many a Gotham manufacturer who feels himself tempted to move elsewhere because of costs finds in the end that the size, the instant availability, and the incomparable variety of skills found in New York's labor force comprise too valuable an asset to sacrifice.

The great waves of transatlantic immigration are no more, but year after year the magic of New York City pulls thousands of opportunity-bound men and women into its orbit, and keeps its labor exchanges filled with eager applicants. Added to this is the pervasive willingness of workers, students, and housewives to take on secondary employment and offhours assignments. Burmese translators, electronics assemblers, what-have-you, are on tap at almost any hour of the day or night.

Diversification and the propensity to modest-scale operation have given the city two other outstanding characteristics: business incubation and business stability.

The place to start a business with modest means is still the big city. Throughout its recent history, New York has been a mass generator of new business. Its labor supply, the availability of low-cost rental space (lofts), diversified credit facilities, the size and depth of the immediate market, and a stimulating environment where top talent meets, demonstrates, competes, and compares every day, have made the city the opportunity-maker it is. While New York is seldom able to report spectacular large-enterprise relocations from other parts of the country, growth goes on. New industry comes to New York via passenger conveyance: people arrive with ideas and turn them into fast-multiplying business operations. The community notices them only when they have grown so much that space has become a problem and relocation a consideration.

Entrepreneurial birth and development are reflected in the 1,500 new incorporations that are recorded for New York City each month—nearly 300 of them in the manufacturing field—and in the construction reports: in 1958 the monthly average of nonresidential construction started in the city reached nearly the $20-million mark.

One-industry cities, like one-crop countries, suffer from extremes of cyclical fluctuation: they ride high with booms, plummet during recessions. New York City, with its wide economic diversification and emphasis on consumer-goods manufacture—which, in general, is relatively insensitive to business-cycle ups and downs—habitually rides out recessions with losses far below the national average. During the first 10 months of 1958, for example, when the recession was at its peak, insured unemployment rose 92 percent in the country as a whole, but less than 55 percent in the city.

Total jobs during the 10-month period declined only 1.2 percent.

While the city may preen itself over the evidence of its economic resilience in a year of national decline, which caused scarcely a ripple in the steady rhythm of its business growth, it must give an ear to the constant prophecies of its doom. The present may be gratifying, but what about the future?

There have been warnings that the process of suburbanization and the developing westward and southward bias of the nation's economic gravitation sound the knell for vigorous life as far as the "old" cities of the Northeast are concerned. Must New York City falter in the momentum of its over-all growth? Are the great days of the Northeastern cities really over?

Free market forces are moving toward a gradual economic attrition of the central cities in most of the nation's metropolitan regions. The lack of reasonably priced industrial and residential space of good quality, the congestion of transportation facilities, the attractions of suburban living, the dispersal of industrial concentration promoted by centrifugal population movement, the heightened commercial mobility afforded by the truck, wage differentials that favor peripheral locations, the outward migration of the middle class, these and other factors adverse to the continued domination of the central city are at work.

Far up to the north, the great St. Lawrence Seaway project nears completion. Port cities, small and large, of the Great Lakes region are licking their chops in expectation of a larger share of the Nation's seaborne trade. The defenses of the port of New York continue to be weakened by railroad freight rates that in effect discriminate in favor of the ports of Philadelphia, Baltimore, and Norfolk on export-import cargo.

Consumer trends are working against the prospects of the city's principal manufacturing industry: apparel. The proportion of the consumer dollar spent on clothing has been shrinking. In addition, the growing preference for casual wear—especially sportswear—has downrated the significance of style, which always has been a prime factor in keeping apparel manufacture to a compact sector of Manhattan.

In terms of employment capacity, manufacturing is on the decline, relatively, all over the United States. For the first time in U.S. history, nonmanufacturing activities give more jobs to workers than do manufacturing, mining, and agriculture combined. With more than 30 percent of its labor force engaged in manufacturing, New York City is highly vulnerable to this trend.

The city, too, is the site of a continuing great industrial treasure hunt. An estimated half-billion dollars are spent annually by States, cities, counties, chambers of commerce, citizens committees, public utilities, banks, newspapers, real estate firms, and railroads to lure enterprises into industry-starved communities. There being a concentration of managerial decision making in New York, the promotional raids are heaviest here; lately, even foreign countries and communities have joined the fray.

Nevertheless, New York has a way of growing in the teeth of all gloomy prophecies. As long ago as 1830, observers complained that middle-income groups were vanishing from the city. At the dawn of the 20th century New Yorkers and their guests were complaining about traffic congestion. A learned professor warned of an impending vehicular strangulation of the city long before World War I.

The traffic problem, for example, is a sign of strength as well as a source of weakness. No prosperous, dynamic city will ever be without congestion. The surest sign of decay would be the disappearance of trucks and delivery cars from the urban arteries. At best, new traffic solutions manage to contain the traffic problems but they never quite abolish them. Build new arterial highways, new bridges, wider streets, and more people start owning and using automobiles. Provide garages, and feeder streets become more congested than ever.

What's more, too many observers forget that New York is a city of five boroughs. Except for the parkways and boulevards feeding into Manhattan, there are no monstrous traffic and parking problems in the other boroughs.

In a different vein, much has been made of the current trend toward spacious 1-story factories. But only recently the business world saw a successful experiment in Newark, where a large company scrapped plans to move its operations to the South and instead completely remodeled the old 5-story structure it had occupied for 70 years. By staying, and expending little more than $2 million for alterations—which are expected to be recouped within 3 years because of greater operating efficiency—the company save more than $5 million, without counting the cost of labor supply and and training difficulties at the once contemplated southern site.

A less dramatic but equally instructive demonstration has taken place on Manhattan's West Side, where a virtually abandoned 6-story building has been turned into a streamlined, ultramodern distribution point for ready to wears. Such officials and engineering experts are predicting that the multistory production plant will stage a comeback and trigger a new era of industrial expansion for cities like New York.

Statements from electronics and missile manufacturers indicate that the one factor that may soon overshadow most others in their site selection is the residential preference of key scientists in their employ. Most of them prefer locations in or near great urban centers with their vast cultural, educational, and recreational facilities.

Even on the subject of the suburban exodus, hasty projections should be accepted with care. Real-estate officers in New York City report a rising reflux of exurbanites to modern apartment buildings in Manhattan. And the city planning commission has detected a perceptible inflow of middle- or high-income families without children into apartments vacated by families with young children.

Probably nowhere in the city has the presence of hidden wellsprings of recuperation been so amply demonstrated as in the downtown financial district. Only a few years ago, the area was written off as moribund in the face of the midtown office construction boom, and many leading institutions, including the Stock Exchange, began expressing the urge to move. Today, Wall Street challenges midtown in the race for construction records; new skyscrapers are changing the Battery skyline; civic improvements crowned by the Manhattan Plaza development at the entrance of Brooklyn Bridge have recast both traffic flow and the downtown panorama; and a group of businessmen and civic leaders has formulated an impressive plan for further revolutions.

While private enterprise is launching its counterattack, government has not been standing still. The highway programs of

the Federal and State Governments have already immeasurably enhanced the locational assets of New York. The impact of the throughway and the third Lincoln Tunnel tube in the recent past, and the Narrows Bridge and projected arterial improvements in Long Island and Staten Island by the near future, forecast dramatic progress during the next decade. The State government, through its industrial-promotion activities, small-business workshops, and various other programs, has shown its determination to maintain a steady pace of progress both in the State and in New York City.

The least-explored factor in most diagnoses of New York's economic future is the role of the city government. It still escapes the attention of many that the relationship between local government and the local economy in America has gone through a historic transformation in the years since World War II.

The traditional American concept of local government vis-a-vis the economic sphere has long resembled that of the role of women in oriental society: passive adjustment to coming inevitabilities. Responsibility for economic growth and employment stability on the local level by and large was left with the market economy and the Federal-State governments.

However, local government in recent years has been taking a far more active role. It is initiating measures of its own to broaden and diversify the economic base, to adjust to shifts in the economic structure without waiting for the more painful corrections of the free market, and to forestall or alleviate unemployment caused by national trends rather than merely to submit to it.

We may expect from New York City's administration sustained efforts to provide more and better services such as pier improvements, better transport facilities, more training institutions, more efficient traffic regulation, more road building and street improvements, and better zoning and building codes. It will seek also to formulate an overall economic policy that will aim at such targets as more jobs, higher incomes, industrial diversification, economic growth, and employment stability.

Three examples illustrate the beginnings of such a policy. During the peak recession months, the city's public works department increased its contract awards to nearly double the corresponding level for 1957, pouring an additional $27 million, in the form of useful public repairs and improvements, into the faltering city economy.

Secondly, New York is now one of the only two cities in America to have a statutory municipal department of commerce. This department's job is to promote industrial expansion and inmigration; to render, and seek improvements in, services by the city to commerce and industry; to disseminate information needed for the planning of business and governmental activity; and to advise the mayor on long-range economic policy.

Thirdly, the city is now laying the groundwork for a great industrial revival which, city officials confidently predict, will confound the experts. A new zoning code hospitable to industry and industrial research institutions will soon replace an amalgam of old regulations bearing an anti-industry stamp in many instances. Industrial parks financed by private capital but dependent on positive municipal encouragement and cooperation are rising in Brooklyn and Staten Island. And the Narrows Bridge linking to the city a broough with 18,000 acres of undeveloped land—much suitable for industry—is nearing reality.

Make no mistake about it, confidence reigns in old Gotham's highest places. The reasons, simply put, are these: the great shockproof diversification of the city's economic activities; the constant locational improvements; the continuous enhancement of the city's advantages as the gravitational pinpoint of American management; the changing concepts in plant construction; the changing requirements for plant location; and, most especially, the continued abundance and high quality of its labor force.

None of these elements is more important than the last. One constantly discovers new points of strength that business in New York derives from the labor supply at its disposal. One of the most telling and simple arguments in favor of locating industry in New York City recently came from a manufacturer who relies heavily on Government contracts. If he moved to a nice rural location somewhere south he might find enough workers to carry his normal load of orders; "But what would I do in case of a national emergency?"

Adding Zest to the Teaching of Citizenship

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 26, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article recently prepared for the publication Social Education, written by Elaine Exton, which describes the many and varying opportunities which now exist in Washington for summer training in citizenship and public affairs. Certainly the expansion of these opportunities for young persons of college age has added enormously to the life of this city.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ADDING ZEST TO THE TEACHING OF CITIZENSHIP

(By Elaine Exton)

How can teachers and school administrators infuse new vitality into educating our country's youth for citizenship, imparting not only understanding of the essential elements of our American form of government and way of life but deep devotion to our heritage of freedom and a sense of personal responsibility for participating fully in helping to make democracy work?

Developing among the youth of the land the understandings, skills, and attitudes which will result in active citizenship is of prime importance in orienting American education to its new obligations in a post-sputnik world. In the period of change and challenge teachers of all subjects and at all levels need to be well informed about the nature of our Government and the policies that are helping to shape our country's destiny.

WASHINGTON WORKSHOPS

Four summer programs in Washington, the Federal city on the Potomac, offer exceptional facilities for strengthening the ability of teachers and school administrators to make citizenship meaningful to American boys and girls; namely, the National Education Association's Washington-United Nations Seminar, Syracuse University's Washingon Seminar, American University's Institute on Current Problems in Education, and its Institute on the United States in World Affairs.

Using Washington's resources as a laboratory for learning about the Federal Government through first-hand experience and observation, their offerings combine classroom lectures and traditional methods of research with briefings by Government officials, group discussions, and visits to scenes of our Nation's history and of today's government in action.

While these programs "major" in different subject fields—the first two stressing government, the third education, and the last-named world affairs—and differ in some procedural matters, they have many attributes in common.

Teachers who have come to the capital city of the United States to participate in one of these summer programs are quick to state that they will be better citizens and teachers as a result of their study.

"I have acquired a store of personal anecdotes which will help to add interesting sidelights to many of the events under question during the semester," a New England classroom teacher states. "With the pictures which I took on the trip I can literally project colorful reminders of our precious heritage on the screen for all to see, thus sharing some of my summer's experiences with a large number of pupils" declares a Michigan social studies teacher. "I will be in a better position to describe the actual mechanics of government," a teacher of the political phases of history relates.

Besides being the home of the U.S. Office of Education, Washington houses the headquarters offices of a number of important national education groups, including the National Education Association, the American Council on Education, and the Association for Childhood Education International. In its environs are located the most extensive library holdings of any U.S. city, including the unusually rich collections of the Library of Congress.

The vast amount of educational information available through these sources makes it a choice place in which to conduct educational research and to obtain background on methods of meeting educational problems. Diversified arts galleries and museums are among the many cultural attractions that help make the capital city of our Nation one of the leading educational centers of the world.

Among the unique resources that Washington offers for keeping abreast of new instructional materials are the Educational Materials Laboratory of the U.S. Office of Education where a representative collection of textbooks in use in the Nation's elementary and secondary schools may be examined, the Current Curriculum Collection in the Library of the Department of Health, Education, and Welfare where a large selection of courses of study, curriculum guides in various subject fields, and annual reports issued by State departments of education and some city school systems may be viewed, and the Government Printing Office Bookstore where teachers can browse among the 2,000 Government publications on display to find those which best suit their needs.

Weekends may also be used for sampling some of the historic attractions of the area ranging from attending services in a church where an American President has worshiped to touring battlefields of the Revolutionary War at Valley Forge or Yorktown and such history book spots associated with the Civil War as Harpers Ferry, Bull Run, Gettysburg, and Appomattox.

Popular weekend destinations in Virginia include Jamestown, site of the first permanent English settlement in America, restored Williamsburg, and Fredericksburg, the hometown of George Washington's youth. In nearby Maryland, Frederick, where Barbara Fritchie lived, and Annapolis, where the U.S. Naval Academy is located, are among the favorites.

PROGRAM EMPHASES

Each of the Washington seminars emphasizes a certain aspect of the Washington scene. For this reason, a person interested in studying in the Nation's Capital must first decide whether he desires supplementary training in government, education, or world affairs.

The Government in action

Through a well-planned sequence of activities the Washington Seminar, cosponsored by the National Education Association's travel division and National Council for the Social Studies, takes its members to places of Government in action where they hear talks by Federal officials on the work of their agencies and obtain information on how policies are determined and how a wide range of Government agencies operate. Prior to these appointments, the group meets in the Top-of-the-Park Room at their headquarters hotel for a half-hour briefing session, and returns to the same room for follow-up discussions after the various Government visits.

The NEA seminar begins with a historical review of the plan and founding of our Nation's Capital, and considers seven other significant topics during its 6 weeks' existence; namely, "Making Federal Law," "Promoting the General Welfare," "Educating and Informing Citizens," "Safeguarding Our National Security," "Preserving and Extending Our Heritage," "Participating in World Affairs," and "Pushing Back the Frontiers of Knowledge." The latter topic, for example, reviews the role of the Federal Government in scientific research through visits to such agencies as the Atomic Energy Commission, National Institutes of Health, U.S. Naval Observatory, and National Bureau of Standards. At-the-scene laboratory sessions, lectures, and exhibits help illustrate the variety and scope of Government research.

Students who attend the 3-week Washington seminar operated by Syracuse University's Maxwell Graduate School of Citizenship likewise confer with key officials in the legislative, judicial, and executive branches of the Government. Like the participants in the National Education Association's project they watch Congress in session, visit the Supreme Court, talk with individual Representatives and Senators, sit in on congressional committee hearings, meet with spokesmen of various special interest groups, such as business and labor, and with diplomatic representatives of foreign countries. This year's activities will center on the formulation and execution of American foreign policy. Protection of the consumer will be a second topic for consideration.

Education

Practical applications of American education principles is the focus for American University's Institute on Current Problems in Education, which considers such topics as administrative and supervisory procedures, methods of teaching, curriculum revision, use of audiovisual aids (including radio and television) and school public relations. The day's activities begin on American University's Washington campus at Massachusetts and Nebraska Avenues with an 8 o'clock lecture delivered by guest speakers. The rest of the morning is devoted to study group sessions in such curriculum areas as history, music, chemistry, and mathematics.

Participants may elect to serve on committees which work on reports of a professional nature in such fields as study unit construction, trends in building design, or planning a student trip to Washington. Meetings of these committees and discussion seminars consume two afternoons each week. An Embassy visit is a highlight of the third afternoon, leaving two free afternoons and a free weekend for seeing the places and meeting the people of most interest to individual members.

World affairs

While international relations have a place in all four programs, the Institute on the United States in World Affairs sponsored by American University is the only one which makes this subject its sole preoccupation. Offered since 1945, this seminar now has about 1,000 alumni scattered throughout America and in some foreign countries. Its sessions consider such subjects as world politics and America's role in the international scene, U.S. membership in such organizations as NATO and the Organization of American States, duties of American Ambassadors abroad, and activities of the Senate Committee on Foreign Relations and the House Committee on Foreign Affairs.

Two speakers address the group each weekday during the Institute's 5 weeks in Washington. A discussion period follows. Besides foreign ambassadors, guest lecturers include Congressmen, State Department officials, and other international experts. A day spent at the Pentagon and another at the Pan American Union, as well as several afternoons at foreign embassies, help to provide a broad perspective for interpreting world events.

The work in Washington is followed by a final week (July 24-July 31) in New York City (optional) to round out the study of American foreign policy with two days at the United Nations, a day of briefings at the U.S. Mission to the United Nations, and a day of visits to such American organizations supporting the U.N. as the Foreign Policy Association and the American Association for the United Nations.

The National Education Association's Washington Seminar now also sponsors an optional week in New York City (August 15–21) which schedules meetings at the United Nations and at the headquarters offices of some of the American organizations specializing in international activities.

During the preceding week in Washington, the emphasis of the NEA seminar program is on international affairs. In visits to the State Department, for example, officials explain the agency's organization and functions, review global problems, and furnish information on the International Educational Exchange Program. At the U.S. Information Agency Seminar members hear broadcasts by the Voice of America and see typical USIS exhibits and films. Teachers may enroll for just the international portions of the NEA seminar (2 weeks).

New Afro-Asian Ally

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. MULTER. Mr. Speaker, although the State of Israel is only 11 years old, it is already rendering valuable assistance to its friendly neighbors.

I commend to the attention of our colleagues the following article by Roscoe Drummond which appeared in the New York Herald Tribune of May 17, 1959:

NEW AFRO-ASIAN ALLY

(By Roscoe Drummond)

WASHINGTON.—Numerous Asian and African nations are today turning to a newfound ally and benefactor. This is a development of the greatest significance which is just beginning to gather momentum. It is a development which the free world can view with satisfaction.

The new Afro-Asian ally is Western in outlook, Middle Eastern in geography. It is democratic, anti-Communist and, since it is neither a large nor powerful country, it is basically a neutral source of assistance which gives its recipients no appearance of choosing up sides in the cold war.

I am referring to the young but mature State of Israel, which was reborn only 11 years ago and which is now embarking upon a wide-ranging, diverse program of economic aid and technical assistance where it is most needed.

A nation which has been greatly helped by its own friends, Israel is now helping others—to the advantage of everybody.

Israel's expanding investment assistance and technical aid ranges from Ghana to Burma. Its scope is illustrated by the fact that trainees from 17 Afro-Asian countries and territories are now studying Israel agricultural settlements and cooperative enterprises.

The best example of the burgeoning economic relationship between Israel and the Afro-Asian nations is what Israel and Ghana are doing together.

To begin to finance an expanding two-way trade Israel has provided Ghana with a $20 million credit over a 4-year period.

Israel is substantially financing—but taking only 40 percent of the stock—Ghana's newly organized Black Star shipping line and is providing the technical training for Ghanan personnel to man its merchant marine. It is also helping Ghana develop its building industry by providing the necessary beginning capital and by training Ghanans in construction techniques. In other fields of technical skills Israel is providing training in agriculture, city planning, irrigation, water resources and in consumer and producer cooperatives.

A group of Burmese farmers is now living and working on Israeli cooperative farms and it is not to be overlooked that Burmese army contingent is learning how the Israelis defend their frontiers with citizen volunteers who simultaneously till the fields and guard the nation. There is no spirit of pacifism in Israel and Israel is teaching none to its Asian and African friends.

Israeli universities and institutes are taking exchange students from many countries, including some trainees from Thailand, India, and Japan.

Obviously Israel is not doing all this out of sheer goodness of heart.

For Israel it has large political as well as economic advantages. The biggest boon from this growing relationship of trust and good will is that it enables Israel to free itself from the physical and psychological isolation of Arab encirclement. Israel's expanding trade and her enlarged horizon of friends mean that she cannot be surrounded either politically or economically by a Nasser blockade.

Israel's new-found allies are also blunting Egypt's efforts to recruit Afro-Asian support in its own cold war against Israel. At the Accra conference of independent African States a year ago Ghana almost singlehandedly turned back Egypt's effort to aline all Africa against Israel. Egypt could get nothing but a harmless resolution calling for a just settlement of Arab-Israeli disputes. Earlier Burma's Prime Minister, U Nu, rejected an Egyptian demand that he call off a projected visit to Israel. What he called off was a visit to Egypt.

Because Israel is a small, pioneer-spirited, new country, deficient in many physical resources and rich in nearly all human resources, it is in an ideal position to help others. It seems to me that the friends of Israel in the United States might well look for ways to nourish and enlarge what Israel is doing so well in this field.

Legislation Needed To Aid Depressed Areas

EXTENSION OF REMARKS
OF

HON. LUDWIG TELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. TELLER. Mr. Speaker, we have all been greatly heartened during the past few months by the Nation's economic recovery and decline in unemployment.

Nevertheless, despite the general economic recovery, we must not lose sight of some basic problems that face the American economy at this stage. Unemployment still remains a major problem.

It has, therefore, been a source of great disappointment to me that the Ways and Means Committee has rejected proposed legislation to strengthen and improve our unemployment insurance system. We need Federal standards for unemployment insurance regardless of the immediate economic conditions that prevail in the country. It is exactly during this time of general economic recovery that we should focus our sights ahead and plan to reduce the tragic impact of any future declines in total economic activity, and provide for persons willing and able to work who lose their jobs due to no fault of their own. I believe that present levels and duration of benefits are inadequate in most States.

Another basic problem about unemployment is the fact that it tends to be concentrated in a number of areas throughout the Nation. Even during the period of general prosperity which the Nation has enjoyed since World War II, areas with high levels of unemployment have persisted during good times and recessions. It is my firm conviction that we must provide Federal aid to help pull these communities out of their economic doldrums and to help broaden their economic base so that the people in these communities can participate in making their contribution to the general economic growth of the country.

The needs of the Nation and a humanitarian philosophy dictate that every American should have the opportunity to engage in gainful employment, to support himself and his family. The fact is that in depressed areas where chronic unemployment and underemployment prevail, such an opportunity is denied to thousands of families in many States throughout the Union.

It would, therefore, be a grave mistake for us to turn our backs now on the problems of these areas because of the general economic recovery. Experience has shown that a general rise in income and employment is not going to solve the problems of chronically depressed areas.

To help these communities we must inaugurate a program which would help the people in the depressed areas to help themselves. Obviously I do not believe that the Federal Government either can or should solve the problems of local communities, but I am firmly convinced that the Federal Government can help them.

To do this job, we must provide a variety of programs to suit the individual needs of the various communities. Appropriate legislation to accomplish this much-needed end has been before Congress for a number of years. Congress passed area redevelopment legislation toward the end of the 85th Congress, which I was happy to support. It was disappointing to me that the President saw fit to veto the area redevelopment bill in 1958.

This year the Senate was quick to seize the initiative to reenact similar legislation to that vetoed last year. I believe that the bill (S. 722) approved by the Senate should be enacted into law without further delay. We should no longer tolerate postponing a job which America needs, and needs immediately.

The bill passed by the Senate is the product of long and thoughtful hearings and debate which has been going on continuously since the 84th Congress. It offers a variety of provisions designed to help the diverse needs of people residing in economically depressed areas.

S. 722 provides for technical assistance to plan the redevelopment of the community, loans to business locating or expanding in these communities, the development of needed public facilities, training and retraining of the labor force in depressed areas, and urban renewal.

Let me briefly summarize each of these provisions. The first step in area redevelopment is the inventory of human and physical resources of the communities. This type of a survey should help the people in the community to appraise their economic potential and to plan the type of industry which can best flourish in the community. We need a central office which can become a reservoir for the various techniques developed to aid area redevelopment and to help individual areas to appraise their economic status. The Federal Government has been doing this type of work for many years. There is now an Office of Area Development in the Department of Commerce which does exactly that. The Bureau of Employment Security in the Department of Labor has conducted a number of surveys of the available manpower pool and skills available in several localities. But the resources of these agencies are entirely too inadequate to perform the needed job. The proposed legislation would, therefore, provide $4.5 million annually to expand technical facilities to help depressed areas to develop a positive program of action for self-development.

Once a community is ready to embark on a program of economic expansion, it is frequently found that chronically depressed communities do not have sufficient resources and facilities to attract new industry. The program, therefore, provides for the establishment of a revolving fund from which the depressed communities could borrow money at a reasonable rate of interest to improve their public facilities. Only in the case of the poorest communities whose economic base is insufficient or has deteriorated to the extent to which the community does not have a sufficient tax base to pay for the interest on loans does the program provide grants.

The third step in community redevelopment is to attract new industry. It is a well-known fact that capital in the declining communities is not as venturesome as that in expanding and growing communities. Consequently, the question of credit becomes more acute in these areas. The proposed legislation would, therefore, establish a revolving fund from which businesses locating or expanding in these communities would be able to obtain loans. The bill provides for two separate revolving funds: one for industrial communities and the other for rural areas where income is commonly low and where underemployment prevails.

A fourth aspect of the proposed program deals with the training of the human resources in the community. In rural areas there is frequently a lack of sufficiently trained personnel available for new plants. In industrially depressed areas the skills of many people have become obsolete because the demand for the products in which they have been engaged has lessened or disappeared because of changes in consumer habits or new technological developments, or because of depletion of resources or change of industrial location.

The program would, therefore, provide for the establishment of training facilities in these areas to equip the labor force to accept new jobs. In many cases it would be unreasonable to expect people who have been exposed to long periods of unemployment to be able to undergo an effective training program without any means of subsistence. The program provides that persons undergoing training for new jobs would receive subsistence payments during the period of training, but not for a period exceeding 13 weeks. It has been realized that this type of program may be very costly. But the proposed program would limit the subsistence payments to $10 million a year. This would allow the administrator of the program to evaluate the need and effectiveness of subsistence payments, but at the same time restrict the budgetary outlays to a bare minimum.

Finally the program would extend the present urban renewal program to blighted commercial areas. At present, urban renewal activity is primarily limited to residential slum areas.

In outlining the program, I failed to mention the sums allocated for the revolving funds in connection with the community facilities and the amount to be expended for grants and loans. The bill as approved by the Senate calls for three revolving funds of $100 million each for loans in industrial areas, loans in rural areas and for public facilities. A $75 million fund was provided for grants. This, it should be noted, was the total extent of the fund and not an annual amount.

Unfortunately, as an over-simplification, the $300 million allocated for revolving funds, the $75 million grants, the $10 million subsistence payments and the $4.5 million for technical assistance have been added up and totaled, giving the im-

pression that the bill provides for an annual expenditure of $379.5 million.

This, of course, is a misrepresentation. The $300 million revolving funds are not really an expenditure or a burden upon the taxpayer. The best experience with this type of loan by the RFC, Small Business Administration and others has shown that these loans are repaid in full. Moreover, the interest that borrowers will have to pay on these loans will be in excess of the interest paid for by the Federal Government. Hence, the loans would not constitute any burden upon the taxpayer.

But the revolving funds for the loans would have to appear as an additional budgetary outlay, and because of the overzealousness to balance the budget from a bookkeeping point of view, proponents of the legislation have feared a repetition of last year's unfortunate veto of similar legislation. The majority of the House Banking and Currency Committee has, therefore, cut down the amount of the proposed loans by one-third. As the bill now provides, there will be two revolving funds—one for $75 million for loans, and $50 million revolving fund for public facilities. In addition, the funds allocated for grants are reduced to $35 million.

I am happy to note, however, that none of the programs proposed by the Senate has been eliminated.

I commend the distinguished Members of the House Banking and Currency Committee for the diligent work that they have done on this bill and the spirit of compromise which they have displayed in order to secure administration appproval of the proposed legislation.

I urge that we enact S. 722 as amended by the House Banking and Currency Committee without further delay.

The country needs this legislation. We must help stamp out the blight of depressed areas from our midst. At this time when we all rejoice in the Nation's economic recovery, we must plan ahead to prevent the reoccurrence of recessions and economic decline. Aid to depressed areas is a most effective tool to prevent, or at least reduce the impact of further recessions. The program should also help millions of Americans in the depressed areas to enjoy a greater measure of prosperity and to partake in our improving standard of living.

A substantial measure of highly valuable research work has been done by an organization known as the Area Employment Expansion Committee to support and point up the need for a Federal area redevelopment program. One of the fact sheets recently issued by the Area Employment Expansion Committee has to do with a situation in the State of New York. The text of this New York fact sheet study, supported by detailed tables which I have omitted in the interest of brevity, is as follows:

AREA REDEVELOPMENT FACT SHEET NO. 61—NEW YORK STATE

The Empire State is among those which would benefit from the proposed area redevelopment legislation. While the total number of areas immediately affected constitutes a somewhat smaller proportion of the total of the State than is prevalent in other States where there are more chronically distressed areas, yet the problems are none the less serious in this State.

In January 1959, there were one major labor market, Utica-Rome, and 11 smaller areas which would become eligible immediately for benefits under the area redevelopment bill. Their total civilian labor force was over one-half million people, which probably represented some 6 percent of the State's working population. The average rate of unemployment in these areas was 11.9 percent. It would take 29,865 new jobs to eliminate the unemployment in excess of 6 percent in these areas.

In addition, there were six major labor markets, four smaller labor markets and three very small labor markets in which there was a substantial labor surplus. Continued high unemployment in these areas would graduate them into the chronically distressed state. It is probable that some of these areas will reach this condition.

There are 23 counties for which no labor market data are currently available.

DISTRESSED AREAS

A. Major labor market

Utica-Rome: This large labor market in central New York State, including both Oenida and Herkimer counties, suffered seriously from the postwar contraction of the textile industry. It has struggled desperately to replace some of the textile jobs with new durable goods plants, but these have also been hard hit by unemployment. While these plants have opened up new jobs for the younger people, they have not provided job opportunities for the older population. As a result the rate of unemployment in the labor market in January 1959 was 11.8 percent.

The unemployment rate reached a high of 11.3 percent in January 1955, but had declined in the subsequent years reaching a low in the fall of 1956. In 1958 this labor market again suffered reverses so that the average unemployment rate for 1958 was 10.4 percent. The community needs considerable assistance to revamp its basic economic structure.

B. Smaller labor markets

Eleven smaller labor markets have had a high rate of unemployment for long enough periods to become eligible for benefits under the area redevelopment bill.

The following are the periods during which these smaller labor market areas have been certified as having had substantial labor surpluses:

Periods of substantial labor surpluses:

Amsterdam: June 1954 through September 1956, March 1958 to date.

Auburn: January 1955 through July 1955, April 1958 to date.

Batavia: March 1958 to date.

Elmira: April 1958 to date.

Glens Falls-Hudson Falls: June 1958 to date.

Gloversville: November 1952 through September 1955, April 1958 to date.

Kingston: September 1958 to date.

Newburgh-Middletown-Beacon: July 1958 to date.

Oneida: June 1958 to date.

Plattsburgh: March 1959 to date.

Watertown: April 1958 to date.

Amsterdam: This textile community has suffered repeated setbacks from the closing of large textile mills. The shift of mills from this area to other States and the contraction of operations are the basic causes for its difficulties. The community has made desperate efforts to attract new plants. It has sponsored local industrial advances though individual improvements have been made.

The labor market includes Montgomery county. It has had annual average rates of unemployment of 9.4 percent in 1955; 9.8 percent in 1956; 8.9 percent in 1957 and 14.1 percent in 1958. In January 1959, the unemployment rate was 13.5 percent.

Auburn: Including as this labor market does Cayuga County, it has been a center of industrial activity except that it has suffered from plant closings and the contraction of some of its basic industries. Among the most significant closings was that of the International Harvester Co. Recently an electrical machinery company moved out of the area. Difficulties are being faced by other textile plants in the area. The annual average rate of unemployment in 1955 was 9.1 percent; in 1956, 7.1 percent; in 1957, 8.4 percent and in 1958, 14.3 percent. Relief from continued high unemployment is not in sight.

Batavia: This labor market includes Genesee County. Its annual average rate of unemployment in 1957 was 8.8 percent and in 1958, 9.4 percent. While it was only recently certified as having substantial labor surpluses, it faces serious problems. Layoffs have occurred in its machinery and primary metal industries and many of its local residents must depend upon jobs in nearby areas for continued employment since the area does not itself support the population.

Elmira: This labor market includes Chemung County. Unemployment began to assume serious proportions in December 1957 and has continued at high levels through 1958 and in 1959. In February 1959 the rate was 11.1 percent. The community has suffered from widespread layoffs in machinery and the electrical equipment plants.

Glens Falls-Hudson Falls: This labor market includes both the counties of Warren and Washington. Unemployment was most marked in 1958 with reductions in the electrical equipment, paper, and textile industries. In 1958 the average rate of unemployment was 9.7 percent.

Gloversville: This is one of the truly chronically distressed labor markets. It encompasses Fulton County. It suffers from the decline of the dress, glove and the woolen knit glove industry. These have been adversely affected by imports. This area has been suffering from continuing high unemployment for a number of years. In 1955, the average rate of unemployment was 13.0 percent; in 1956, 9.3 percent; in 1957, 14.1 percent and in 1958, 19.5 percent. In 1959, the rate was 17.9 percent in February. This is an area needing immediate and continuing attention.

Kingston: This labor market of Ulster County has suffered from the closing of a large machinery manufacturing plant, as well as losses in the aircraft, paper, and chemical industries. Only the seasonal pickups in the summer resort trade help offset these setbacks. The average rate of unemployment in 1958 was 8.1 percent and in January 1959, 10.4 percent.

Newburg-Middletown-Beacon: This labor market includes Orange and Putnam Counties as well as the city of Beacon and the town of Fishkill in Dutchess County. There have been widespread layoffs in the apparel, textiles, leather goods, metals and machinery industries. Many residents working in outside areas have also been adversely affected. The average rate of unemployment in 1958 was 9.7 percent. Much hope has been placed in the economic effects of the New York Thruway, but these have not yet lived up to expectations.

Oneida: The Madison County labor market has also recently been added to the list of the distressed areas. There have been heavy cutbacks in the silverware industry. This is a community which needs long term improvements. Residents have been working in outside areas and commuting and the cutbacks in these outside areas have adversely affected local people. The unem-

ployment rate has been particularly high in 1958, with an annual average rate of 13.1 percent. Long term redevelopment is essential.

Plattsburg: This labor market includes Clinton County and has suffered from the long term drop in construction and losses in mining industries. The average rate of unemployment in 1958 was 12.9 percent and unemployment continued at a high rate of 15 percent in February 1959.

Watertown: The Watertown labor market includes Jefferson County. The difficulties of this community are attributable to the decline in employment in the machinery and paper industries. The high unemployment rates were first noticeable in March 1957 and continued through all of 1958. The average rate of unemployment for 1958 was 11.6 percent.

AREAS OF SUBSTANTIAL LABOR SURPLUS

In addition to the preceding distressed areas there are a number of labor markets with substantial labor surpluses. This condition has not been of sufficient duration to qualify them for the benefits of the act. These areas will become eligible as of the following dates:

Corning-Hornell, June 1959.
Olean-Salamanca, June 1959.
Albany-Schenectady-Troy, July 1959.
Buffalo, July 1959.
New York, July 1959.
Syracuse, July 1959.
Jamestown-Dunkirk, July 1959.
Orleans, September 1959.
Binghamton, October 1959.
Catskill, December 1959.
Waterford-Mechanicsville-Stillwater, January 1960.
Wellsville, January 1960.
Rochester, July 1960.

Time and Foreign Aid

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include the following editorial from the New York Times of May 26, 1959, entitled "Time and Foreign Aid":

Dr. Vannevar Bush, one of our most eminent scientists, has stated that our program of foreign aid "must continue as long as the Communist threat endures." An arbitrary cut-off date, he says, would be a "calamity of the first order."

Dr. Bush in making such a statement is probably not thinking of the Communist threat in terms of a cold war or of our aid as a weapon in that struggle. What he is doing, rather, is to dramatize the fact that weakness, instability, insecurity and fear provide a ground in which the Communist threat can flourish.

What we need to do is to make persons and societies strong in their own right. This not only offsets this Communist threat but also lays the ground for progress in human betterment.

Dr. Bush does not set any fixed time limit on the endurance of the threat. But he is not pessimistic. He holds that the processes of education and enlightenment, within the very confines of the Communist tyranny, cannot be permanently denied. The spark of true learning will eventually touch off the fire that consumes the enemies of the human mind and the human spirit.

With such an end in view we can well afford to give the help that will make resistance to those enemies stronger. This is the analysis of a skilled scientist with a world-wide outlook. The words of Dr. Bush can well be heeded at this time.

Eloquent Essay for Peace by William Goold

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. PORTER. Mr. Speaker, under unanimous consent previously granted I am including here an essay by William Goold of Lebanon, Oreg., entitled, "Peace with Honor for America." My friend, Bill Goold, works untiringly for many good causes, including peace in the world. He is a strong supporter of the United Nations. He speaks for many of his friends and neighbors when he asks for greater support for the United Nations.

The essay is as follows:

PEACE WITH HONOR FOR AMERICA
(By William Goold)

"Blessed are the peacemakers, for they shall inherit the earth." This historic admonition was given to man at a time when civilization was comparatively young and primitive, even in the most violent conflicts between clans, tribes or nations common to that time. If peacemakers were so honored in this early historic era when man's potential for destruction was utterly insignificant as compared with man's potential for destruction today, the honor and importance of the peacemakers must, as a matter of logic, increase in direct ratio with the destructive forces in man's possession for evil.

The basic philosophy of Christianity and the sheet anchor of democracy has its deepest and strongest roots in the soil of peace and the man or nation whose contribution is the most effective in achieving this noble objective is the most deserving of the love and gratitude of mankind. Peace with honor for America is the prize challenge of current history by which to stimulate and inspire a people to their grandest and most noble deeds. Whether by fate or fortune or by decree of the eternal gods this challenge must be met head-on, confidently, courageously and fearlessly because the very fate of civilization is committed to our keeping, we dare not, we will not, fail this trust.

Never before in all the long march of history has a combination of circumstances and events fraught with the elements of such world-shaking magnitude, been placed in the lap of a single nation with breath-taking possibilities that call forth every resource that moves a nation on toward the goal of greatness. Nations, like men, must be faced with great problems, great decisions—by no other course can greatness be determined.

The challenge provided by the revolutionary war gave us the impassioned words of Patrick Henry that literally set men's hearts on fire; it gave us the leadership of Washington that could inspire and hold the loyalty of his men even as they left their blood-stained footprints in the snows at Valley Forge; it gave us the brilliant pen of Thomas Paine and his "Common Sense," "The Crisis"; it gave us the magnificent Jefferson that who was responsible for the immortal Declaration of Independence that, for breadth of vision and depth of understanding, has not been equaled in the annals of history.

Only by a crisis of the magnitude of the slavery problem and secession that threatened the dissolution of our Nation was the "Man of the Ages," Abraham Lincoln, elevated to the heights to which history has proclaimed him.

"Peace with Honor for America," in its very essence means "Peace with Honor for the World"—the two are synonymous and the time of decision is now. To us is given the choice of whether it will be a world of peace or no world at all. In our hands rests the most momentous decision in the annals of history because, what we do will affect more people over a larger area than any one single decision of recorded history.

How can peace with honor for America be achieved without compromising our democratic ideals and our traditional national honor? The frame-work of such an institution is found in our great United Nations organization. It not only offers our own Nation peace with honor but it offers the entire world peace with honor.

In order to realize this great prize of peace, men of goodwill everywhere must rise to the challenge, that these momentous problems impose upon us. It seems that almost by an act of God the framework of this great institution was founded while partial sanity and goodwill prevailed among nations. The completion of this World Parliament of Man has been temporarily delayed while men and nations jockeyed for advantage. In the meantime, the world's potential for destructiveness becomes positively frightening with unparalleled dangers, so that we dare not tempt the fates with further delay.

People of good will must rise up as with one mighty voice and demand in tones of thunder that the magnificent temple of man's last hopes for survival—the United Nations—must be completed with all possible speed and given the necessary resources and manpower to make its mandates final and effective. With an aroused and enlightened world opinion marshaled on the side of the United Nations, with adequate military force to back up decisions, men of good will could then return to peaceful pursuits and the resources of the earth and skills and ingenuity of man could then be used to build the temples of good will and universal brotherhood, instead of implements of death and destruction.

The unpardonable blunder of the ages has been our neglect and failure to strengthen and expand the one single emblem of man's hope for peace with honor in our day and generation. As a nation, we are blessed with natural and human resources almost beyond calculation. In World War II, we not only maintained aggressive military forces throughout the globe, but also set up a global program of aid through lend-lease to our allies on a scale that is unparalleled in its magnitude and generosity. With millions of our choice young men and women taken out of constructive production and trained specialists for the destructive pursuits of war, we still maintained a standard of living among our civilian population that might, under the circumstances, be considered lavish.

If the 59 nations that constitute the the United Nations were to devote themselves with even half of the fervor and resourcefulness they put into winning the war to working to win the peace, the last potential aggressor in the world would be isolated and condemned by the forces of democracy. Greed and aggression simply could not stand before the mighty forces of

men and nations determined to build and secure an edifice dedicated to world peace and the dignity of man. War can and must be discarded as a means of world policy in the settlement of disputes between nations. War's potential destructiveness can become so frightening with its slaughter of the innocent and helpless as to shock the sensibilities of mankind.

In our final quest for peace, we must develop a world consciousness, a world psychology, a world attitude. We must learn to think big and act big. We must take into account the language barriers, the racial prejudices, religious differences, social customs, political animosities and the wide divergence in environment and heredity with tolerance and understanding.

One of the noblest quests to which man can devote himself is the quest for peace and good will among men, and one of the surest methods to use in the achievement of this worthy goal is to practice what we preach and thus make democracy such a shining example of justice and equality that men will seek it out and adopt it as their own.

In conclusion, my final appeal for your wholehearted support for the United Nations—it can truly be made with the fulfillment of man's most cherished hope—peace wtih honor. In our approach to peace as the most desirable and worthy goal to which man can aspire we will need courage and fortitude to apply the exacting yardstick given to man 2,000 years ago—"Whatsoever ye would that men or nations do unto you, do ye even so unto them." Applying this philosophy to our everyday living will cause us to realize the rightness of an organization such as the United Nations which is the world's last great hope for achieving peace with honor for America and peace with honor for the whole world for full measure.

Page Boy Residences, H.R. 869

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. MULTER. Mr. Speaker, my statement before the Committee on House Administration in support of my bill, H.R. 869, follows:

Mr. Chairman and members of the committee, I appreciate the opportunity you are affording me to give you my views with reference to my bill, H.R. 869, a bill to provide a residence for the pages of the Senate and the House of Representatives under the supervision of a Capitol Page Residence Board.

This bill, if enacted, would create a Capitol Page Residence Board composed of 3 Senators and 3 Members of the House of Representatives who would be authorized to establish a home for these young men who serve the Congress as pages.

The naming of page boys comes under the patronage system; hence they may come from the 49 States, far and near. The maximum age limit of a page is 18 years and the minimum age is 14 years. The average age is between 15 and 16 years. A boy at this stage has not reached years of discretion. Under the present setup, these boys have living accommodations scattered throughout the city. Some are paying exorbitant rents and, in many cases, are exposed to the evils of a large city without adult supervision.

Boys of 14 or 15 are neither mentally nor physically matured, and, in my opinion, every Member of this Congress is, to some extent, responsible for their well-being. It is not only our duty but we have an obligation to furnish these boys with the parental care and supervision they left behind when coming to Washington.

The page boys must attend school at the Library of Congress before reporting to work each morning. In some cases, these boys travel alone several miles in the early morning hours. We owe it to the families of these young men to enact legislation of this kind.

My proposal would require these boys to pay reasonable rent, just as they do now. The home should, therefore, be self-sustaining. These teenage boys will be the men of tomorrow. Many are dreaming of taking our places in the years ahead.

Our responsibility to them is to provide adequate quarters, with a superintendent in charge, and a complete housekeeping staff, which would be responsible for their supervision with regard to proper food, sleep, recreation, and sufficient application to their schoolwork.

It is my sincere hope that the Congress will enact this bill to prepare them for the great responsibility which lies ahead. "Let's put first things first."

Business Finally Gets Into Politics

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. SCHERER. Mr. Speaker, as most of us know, General Electric is one of the industries in this country which has come to the conclusion that we are only going to get sound and stable government in this country if business and its employees take an active and intelligent interest in the political life of the Nation. General Electric is, of course, to be congratulated on such a forward step. It has gotten beyond the realm of the talking stage insofar as General Electric is concerned. This company has set up a series of lecture and discussion meetings available to all groups of employees after working hours. General Electric says:

This project is designed to give the participant practical experience and understanding of the American two-party system.

General Electric points out that improvements in the climate of the community as a place to live, and work, and raise a family most frequently are the result of political action. Participants in these programs are encouraged to recognize political activity as a dimension of personal responsibility—to be accepted and discharged as a fundamental of good citizenship.

A recent speaker at one of these seminars was one of Cincinnati's leading citizens, William L. McGrath, chairman of the board of directors of the Williamson Co. Mr. McGrath as an industrialist practices what he preaches. All his life he has participated in numerous political and community activities. He devoted many years and gave much of his energy and abilities as the employer delegate to the International Labor Organization at Geneva. Mr. Speaker, every Member of the Congress should have the benefit of Mr. McGrath's speech. I am sure the great majority will realize and appreciate the significance of this activity by men like Mr. McGrath and companies like General Electric. Mr. McGrath's address follows:

We are assembled here to talk about politics. Now that in itself is rather unusual. Up until recently, businessmen thought they had no time to concern themselves with politics. Too many people used to think that politics had to do with things like kissing babies and helping somebody get a job—and even with corruption.

However, let's start from the ground up on this subject. Just what is politics?

The "Century Dictionary" defines politics as "the science and practice of government." Now certainly there can be no higher profession than the science and practice of government. Certainly every citizen, including businessmen, should be strongly interested in the science and the practice of the Government under which we live—because that is what determines in the long run our future opportunities as individuals. What opportunities would individuals have if private enterprise business were destroyed?

Now let's think about the word "politician." When you say "politician" some people think of a man on a soap box waving his arms and promising people that he will get them something for nothing. Well, unfortunately, there are politicians of that sort, as we all know. But there are other kinds, too.

It may be that when history is written several hundred years from now, the historians may say that Abraham Lincoln was the outstanding figure of the 19th century and that Winston Churchill was the outstanding figure of the 20th century. Now these two great men had one thing in common. They were both politicians. They both entered politics at a very early age. As a matter of fact, every President of the United States and every Prime Minister of England has been a politician. So, when we talk about politics, we are talking on a pretty high level.

I want to go back to Abraham Lincoln for a moment. Lincoln talked about the Government of the people, by the people, and for the people. Today I want to ask the question, what people?

Well, the people who make their wishes heard and felt are the ones who get attention. The people who say they don't care anything about politics and don't want to be bothered with it are the ones whose wishes and interests are neglected or ignored.

So what's been happening in recent years? Let's be frank about it. Organized labor has organized for political action. It has used for that purpose the same machinery that is available to all of us. It has become the most powerful single political influence in the United States. The organization known as COPE carries more weight in the Congress of the United States than any other organization in the country. Organized labor is today dictating policies in Columbus, Ohio. Why? Because organized labor has worked in politics while businessmen and other citizens said they were not interested in politics. Most businessmen thought they were interested only in business, and so businessmen have practically abdicated their rights as citizens. They have been sitting on the side lines, while other people with special axes to grind have been getting bills passed favorable to them but in many cases, unfavorable to business. What happens in the long run is determined not so much by what businessmen manufacture, as it is upon how people think.

While we have been busy making products, a lot of other people have been busy saying words that will influence people to think along the lines that the wordmakers want to think. They have influenced politicians and voters.

When you go to work in the morning you are concerned with a special, concrete problem—the design of a product, or the layout of a plant, or the setup of the sales organization, or the purchases of materials, but the world is full of people who actually do nothing but use words.

The head of a union does not have to concern himself with his or his shareholders investment with capital equipment, plant layout, product engineering, packaging, and so forth. He works chiefly just with words. He can spend all day long figuring out what he should say, and what he should get into print to influence people to his way of thinking.

Teachers, ministers, newspaper reporters, editoral writers and columnists, TV and radio commentators, all are putting forward ideas with a particular slant to them. Those ideas influence votes, elections, and legislators and Congressmen. They are the basis for political power—they determine in the main the way the country is going.

Most of these union men, and many educators, ministers, and writers, are not aware that business is the basis of all taxes, and without taxes no government can function. Many of these molders of opinion would destroy business, would destroy the source of jobs and wages, would kill the goose that lays the golden eggs. Businessmen make jobs. But some people do not grasp this truth. They must be told. One of our political jobs, therefore, is that of education.

We are confronted with misrepresentation or twisting of facts to meet special purposes. We see people voting on issues against their own best interests. The reason is because they haven't got the facts straight. In that connection I want to quote briefly from Dr. Claude Robinson, of Opinion Research Corp., who is really an authority on the subject of the molding of public opinion. Dr. Robinson says, and I quote:

"It can be demonstrated that when you take the ideologies of people with different informational levels you always find that the ideologies swing to the right as the facts are clearer in people's minds. That is demonstrable over and over again. It doesn't make any different what income groups or what age groups or what educational groups they are; that basic principle holds. The more people know about the capitalistic system, the more they believe in it."

And then, after we have given people facts so that they can understand them, the other job is to see that they get out and vote on election day.

The minute anybody mentions politics people always start thinking in terms of Republicans or Democrats. Now, that's all right. The science and practice of government in the United States is handled on the two-party system, and to a certain extent on the basis of party responsibility; and our system has proved to be better than that of countries, like France, which had so many political parties that they couldn't get anything done.

As far as the individual is concerned, I think he should concern himself with issues and with trying to get more votes for capable men who have sound views on the political issues involved.

As a matter of fact it is pretty hard to tell today what is meant by Republican and what is meant by Democrat. Both parties are split right down the middle. On many subjects there is great disagreement within the parties.

I think this gives businessmen the biggest opportunity that we have had in years. Political leadership in this country, right now, is very much confused. So let's all go to work at it and see what we can do to get thinking going in the direction which we believe is right.

This isn't going to be easy. I said before, a lot of people are laboring under misconceptions. There are so many things that people just don't understand. For example, I think if you would ask the ordinary man on the street whether he thought Social Security should be increased, he would say yes. Then if you asked him if he thought taxes should be increased, he would say no. A good many people actually don't seem to understand that government can pay out only what the taxpayers pay into it. People seem to think that government somehow possesses billions of dollars of its own.

Now action in politics (that is, vote-getting) has certain established procedures and methods which have been developed by trial and error over the years. Organized labor has commandeered these procedures and methods. A good many of us know little about them. But, on the other hand, businessmen have had considerable experience in promotion. They put on successful sales campaigns for their products. They have put on United Fund, Red Cross and hospital campaigns. We all have been schooled in the techniques of these campaigns. If we apply the same hard work to learning the techniques of political campaigns, we can do a great public service.

We may think we are amateurs, but I am not so sure. For example, let's just take one theme—economy in government. Suppose we started out to sell economy in government the way we sell the United Fund, or the way my company sells furnaces, or the way your company sells electrical equipment, or the way Procter & Gamble sells soap. Why shouldn't we? If we don't get economy in government, sooner or later all of our companies are going to be ruined by confiscatory taxes.

Here's another angle. Everyone of us has sales outlets. Do we know them personally? Of course we do. We give them help and recognition and back them up every way we can. But what do we do with our Congressmen, our Senators, our State legislators and our Governor? We write indignant letters to them when they do something we don't like, but do we praise them for right action and encourage them when they are maligned by their traducers? That's a field that needs attention.

In closing, let me quote two sayings of Abraham Lincoln:

First: "You can fool some of the people all of the time; all of the people some of the time; but you can't fool all the people, all the time."

Second: "Give the people the truth and they will follow with right political action."

New Educational Curriculum, Benjamin Franklin High School

EXTENSION OF REMARKS

OF

HON. JAMES C. HEALEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. HEALEY. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a statement recently issued by the Honorable Charles J. Bensley, member of the New York City Board of Education from the Borough of the Bronx, joined by the Reverend Dr. Gardner Taylor, member of the New York City Board of Education from the Borough of Brooklyn. The statement, which follows, concerns a proposal for a new curriculum and program of instruction for the Benjamin Franklin High School to develop that school into the finest educational facility of its type:

The Honorable Charles J. Bensley and the Reverend Dr. Gardner Taylor, members of the Board of Education of the City of New York, today issued a statement of a proposal of new policy to be submitted to the board of education concerning a plan to develop the Benjamin Franklin High School into the finest educational facility of its type that will gain for the school a world-wide reputation and bring honor to the city of New York. This proposal is an affirmative and constructive approach to enhance the value of the school to the community and city rather than minimize its value by a possible change in organization to an elementary and junior high school, and has taken into account the petitions of many civic and community organizations.

In essence, this plan aims to prepare students to take further work toward careers as social scientists. The curriculum and program of instruction will be designed to develop the type of personnel most critically needed in the field of human relations. It will prepare these students for public service and leadership on municipal, State and national levels. From these leaders in our governmental affairs will emerge the types of persons who could become leaders in world affairs. A result of the plan would be to develop a system similar to the English civil service whereby creative leadership in government would be developed on a career basis.

In explaining the purpose of this proposal, Mr. Bensley said, "In these times of a dynamic and expanding society such as never before witnessed by man, an education for responsible citizenship and leadership must be given proper and special emphasis. We must train our children to think in values that will teach them how to live together. Our problem is how to make human intelligence work for humanity. Man's present solution for peace is through a balance of destruction. We are so concerned with advancing our frontiers of science in tribute to this balance of destruction, that we are continually adding peril upon peril. The values that we evolve must make it axiomatic that science is but a tool of man in his way of life and that this tool should never become the master. The humanities of man must direct the science of man."

Mr. Bensley and Reverend Taylor will introduce at the next meeting of the Board of Education on May 28 a joint resolution to effectuate this plan. The resolution will ask the Superintendent of Schools to prepare such an enriched curriculum of instruction in the following areas: English, economics, human relations, world history and geography, social sciences, foreign languages, and other suitable areas of knowledges and skills that will lead to admission to higher schools and service in municipal, State, National, and international governmental agencies and trade.

Into this school, the resolution proposes, will be gathered from all parts of the city, irrespective of socioeconomic or ethnic background, the young men and women who desire this type of education. Mr. Bensley and Reverend Taylor envisioned, with the assistance of outstanding educators and national leaders, the establishment of admissions criteria. "It is our intention to admit children not alone on the basis of IQ for we recognize that those children who come from socially

and economically deprived environments have not been given an equal opportunity to develop their potentials. We also recognize that a test score solely in terms of IQ is not sufficient to discover the type of children who may possess this special potential and profit most from such instruction. The criteria for admission will have as the goal the selection of those children who will most benefit the community and themselves from this kind of enriched curriculum," they said.

Another feature of the plan will be the establishment of an advisory commission to assist financially those children who will go on to college to pursue these studies. A program of scholarships and fellowships will be sought and the aid of various foundations and international organizations will be enlisted.

The Reverend Taylor said, "We are certain that all men and women of good will and faith will join forces with us in this endeavor to produce leaders of the future for brotherhood and better understanding not alone for the city of New York and throughout the Nation, but among all peoples and nations of the world."

Dr. Taylor and Mr. Bensley pointed out, "It is fitting that the center for world relations, the United Nations, is located in the vicinity of the Benjamin Franklin High School. It is our thought that the Benjamin Franklin High School may well also become the training school for children who will seek their future in activities allied with the United Nations and international affairs."

Limitations on Commodity Credit Corporation Loans

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. GATHINGS. Mr. Speaker, it is unwise, unjust and discriminatory to place limitations by law on Commodity Credit Corporation loans. To do so would defeat the purpose for which the loan program was designed to accomplish. The CCC loan is intended to permit farmers to market their crops in an orderly manner. The larger producers use the CCC loan extensively and this results in stabilizing prices during the time the crops are moving to market. The small farmer will be forced to receive less for his commodities if limitations on the amount any one farmer could place in the load should become effective. The impact on the market due to inability to use the loan at harvesttime would lower the price for all farmers and, at the same, cause the Government, the taxpaying citizen, to stand the loss on reduced prices that would be realized on stocks of farm commodities that are owned by the Commodity Credit Corporation.

The limitation of $50,000 or $35,000 applies on the gross value of the crop placed in the loan; it is not the net profit of the farmer. If it is made applicable for one or both of these amounts as a ceiling they could and would be reduced. That is what has been happening throughout the years in connection with the agricultural conservation program. The limitations have been reduced appreciably on the false assumption that to do so would help the little man. The truth of the matter is that the small farmer and the large farmer alike would suffer if loan limitations are invoked.

To attempt to make loan limitations applicable to the 1959 crop year would abrogate agreements with cotton farmers who have chosen either the A or B program. To limit the loan after farmers had voted controls when no limitation existed would be changing the rules of the game in the fifth inning. It would be unlawful and dishonest.

There should be no limitation placed on cooperative organizations as such. If there is to be a limitation it should be on individual farmers, that is, landowners and renters in their separate capacities. The cooperatives would continue to serve its members as agent in the handling of the CCC loans so long as no one of the members placed more in the loan than permitted under the limitation of $50,000 or $35,000 as the case may be.

The propagandists have been unjust in their campaign against the farmer. Nothing is said about subsidies and tariff benefits to business enterprises. There is no effort to deprive labor of its minimum wage. It is directed at the farmer and farmer alone. It is unjust and discriminatory.

I include some pertinent excerpts from communications received by me on the subject of loan limitations:

Letter of May 23 from Mr. R. A. Pickens, of Pickens, Ark.:

A limit on the amount of CCC loans to any farm or organization for 1959 is a considerable breach of faith on the part of the Congress.

When various crop quotas were voted on, there was no limit. Nor when cotton farmers were given a choice of two individual cotton allotments. The limitation voted by the House last week would, in effect, pull the rug from under us in the very middle of a crop.

A result could well be a complete disruption of what free markets we have left. There would probably be enough dumping of crops on our commodity markets caused by this action to force prices down to the point where a tremendous volume would seek CCC loans, farm in excess of any amounts that might be allocated for CCC purchases. Such could possibly cause the 1959 marketing season to be far worse than that in 1929.

Much has been said about the large corporation farms but Congress should realize that the day of the ox and the bull tongue plow is past. The economy of our rural areas is dependent on the agriculture of these areas, whether marginal producers or efficient modern farms. This sudden limit on CCC loans effects, roughly, each acre of production over 300 acres of cotton and/or rice on each Arkansas farm.

The laborer on the mechanized farm is just as deserving of price protection and a decent standard of living as is the landowner. Possibly more so, as he has very little capital to fall back on.

Excerpts from a letter written by Mr. William Rhea Blake, executive vice president of the National Cotton Council:

Fifty thousand dollars may sound like a large amount, but it represents gross, not net, income. Furthermore, the records of the ACP and other Government programs show that a ceiling once placed in the law is constantly lowered. As the ceiling goes down, the value of the loan as an orderly marketing device is progressively destroyed and the benefits of the program to all farmers are progressively diminished. Cotton forced on the market, instead of being orderly marketed with the aid of the loan, will depress market prices and hurt all farmers, especially the smallest ones who seldom, if ever, use the loan.

The marketing system would be seriously impaired. In fact, it would be hard to devise anything that would do more harm all the way around than the proposed limitation.

Finally, when made applicable to the 1959 crop, limitations would be in direct violation of the Government's contracutal obligations to all farmers who accepted present programs in a commodity referendum and, in the case of cotton, who further made a separate individual agreement with the Government under the choice A and B programs.

Telegram from Mr. Ralph Woodruff, general manager of Delta Products Co., of Wilson, Ark.:

House amendment limiting support loan to $50,000 unfair to grower. No limitations were involved when marketing quotas were approved by referendum. This action also breaks faith with choice B cottongrowers since limitation was not a factor when choice was made. Speaking for member of Delta Products Co., strongly urge elimination of this vicious amendment to agricultural appropriation bill.

Telegram from Mr. Waldo Frasier, executive vice president of the Arkansas Farm Bureau Federation, Little Rock, Ark.:

The passage of the limitation provided in the Senate bill (S. 1968) would be extremely disastrous to the orderly marketing of cotton, rice, and soybeans.

Cotton, rice, and soybeans forced on the market instead of being marketed in an orderly fashion with the aid of the loan will depress market prices and hurt all farmers, especially the smaller ones who seldom, if ever, use the loan. Depressed market prices will in turn force farmers who can use the loan to put their commodities in CCC in greatly accelerated volume; thus Commodity Credit's holdings will be substantially increased and not decreased.

Under the present method of operations under the CCC the rice marketing cooperatives which process and market more than 50 percent of the rice grown in the State, can borrow and have borrowed in the name if the cooperatives. Under the amendment that has passed the Senate this would be impossible. It would mean that the two cooperatives that operate in the State would have to handle rice on which the CCC would have from 5,000 to 6,000 loans to individual farmers who are their members.

If Arkansas' agriculture is forced to operate under limitation of CCC loans the Government's handling of commodities and the cost of that handling would be greatly increased. Farmers benefits would be greatly decreased. A ceiling would be placed on the individual farmer's initiative and efficiency that is contrary to our American system.

Telegram from Mr. Lloyd Godley, of Osceola:

Mississippi County ASC office made 4,386,000 1958 soybean loans. Seventy five percent has been paid. Most of balance will be before dealine. Collected enough fees from farmers to pay clerical and field help 5 years. Farmers averaged $2 for beans. Where storage not available $50. Without storage and loan farmers would have had minimum of $3 million less income this county. Program has not cost Government. Saved farmers big and little from heavy

losses. Despite incidious propaganda, program is good for agriculture and business. Limitation will upset orderly marketing. Will not save money for Government. Will cost economy of Nation.

And from Mr. R. E. L. Wilson III, of Wilson, Ark.:

Congratulations your remarks page 7488, May 18, CONGRESSIONAL RECORD. House current legislation regarding limitations will eventually force liquidation of large and proven and efficient operations in favor of its opposite. Discrimination against so-called large farm operators completely unfair in view of the fact that large industry and labor receive the same benefits under our tariff laws as small industry.

Tremendous concern among farmers in this area raising the majority of crops regarding orderly marketing of crops when loan limitation enforced. Commercial banks will have to carry full burden of commodity loans with virtually no price insurance. Entire farm credit structure is threatened. Banks and farm furnishers will be hesitant to advance production loans next spring. Small farmers as well as large farmers threatened by such impending legislation.

Huge Anti-Inflation Campaign Seeks To Cover Up Soaring Profits

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. ANDERSON of Montana. Mr. Speaker, we are all receiving a flood of mail inspired by a clever, well-organized, heavily financed master plan to discredit the Congress.

The master plan is to persuade the public that inflation is responsible for all our economic troubles and that Government spending and costs of labor are causing ruinous inflation.

A current article in the Rail Brotherhoods' weekly newspaper Labor points out the real villains, administered prices and exorbitant profits.

It is a refreshing contrast to the expressive propaganda which is constantly coming across our desks, pouring over the air waves, and being published in the slick magazines.

The article from Labor is as follows:

Recent weeks have brought a pair of apparently unrelated developments that actually are closely tied together—but the powers that be would prefer people not to wake up to that fact.

The first development is a big anti-inflation publicity campaign. This campaign has been launched by rightwing daily papers, the steel trust, the big life insurance companies, other big business firms, and rightwing pressure groups like the so-called Committee for Constitutional Government.

Aim of this campaign is to arouse people against inflation—and to channel their resentment against big spenders in Congress and against wage increases for workers, as the supposed culprits causing inflation.

The second parallel development hasn't been noted in any full-page ads, nor in newspaper editorials. The facts are to be found mainly in the financial pages of the daily press, or in the financial journals.

SOARING PROFITS

This second development is the fantastic increase in profits shown by the big corporations in the first quarter of 1959, over the same months last year. The Wall Street Journal, for example, reports: Corporate profits in the first quarter this year leaped to a level 53.9 percent higher than in the recession-hit period a year earlier. And an equally sizable—and perhaps even larger—gain appears likely for the current quarter.

Significantly, the most fabulous first-quarter profit jump of all those reported by the Wall Street paper was shown by 36 major railroads, with an average profit increase of 428.8 percent. Also, the paper said, "railroads expect sharp increases in second-quarter earnings."

Moreover, for 1959 as a whole, alltime record corporate profits are being freely predicted. The Wall Street Journal quoted analysts in Washington as expecting corporate pretax profits of $50 billion this year. U.S. News & World Report forecast a $50 billion annual rate for the first half.

The previous alltime high in corporation profits came in 1956, at $45.5 billion. Last year's total was $36.7 billion, fully $13.3 billion less than this year's predicted total.

EMBARRASSMENT OF RICHES

Already, according to Business Week magazine, "with profits flooding in at this record rate, some corporate treasurers look as though they were faced with an embarrassment of riches. Says the treasurer of one chemical company: 'The biggest problem we have around here is trying to find ways to spend all the money we've got lying around.' "

These soaring corporate profits come ultimately from just one source—the consumer. The consumer will be paying for these $13.3 billion extra profits in the goods he or she buys. But none of this side of the inflation tory percolates into the anti-inflation campaign of the rightwing daily papers and the big interests.

The Chicago Tribune first launched its anti-inflation drive with front-page editorials and articles about a month ago. It coupled this with continuing promotional stories and blank forms for readers to write their Senators and Congressmen urging a balanced budget and less spending.

OTHER PAPERS JOIN DRIVE

The Tribune's sister papers, the New York Daily News and Chicago American, quickly joined in. So also did the big Philadelphia Inquirer and other papers. Big business firms cooperated by ordering scores of thousands of reprints of the Tribune's stories for distribution on their own.

Similarly, a so-called sound dollar committee—promoted by labor foe Edward R. Rumley of the right-wing Committee for Constitutional Government—has been seeking to place full-page ads in 2,000 newspapers. These ads also hammer at Government big spenders. Newspapers have been urged by the committee to drum up local sponsorship of these ads in every city.

The Institute of Life Insurance has launched a big new advertising campaign of the same nature. Meanwhile, the Iron and Steel Institute, speaking for the big steel companies, has placed a deluge of ads in 450 papers trying to blame steel workers' wages for higher steel prices. These ads, geared to the slogan "Inflation robs us all," have been mum about skyrocketing steel profits.

THE REAL TARGET

None of this anti-spender material points out that the real target of economy leaders in Congress is badly needed social welfare programs. Nor do the anti-wage increase ads point out that workers may have some right to share in the soaring big-business profits created by their labor. In fact, all of this anti-inflation campaign is silent about the role of soaring profits in the inflation picture.

In the background lie these further facts: The cost of living has now been roughly stable for about a year. However, Government economists have been predicting for several months that while food prices will go down this year, the prices of other goods bought by consumers will go up.

Thus, when the big manufacturers begin boosting their prices, consumers might be expected to raise some sharp questions about profits. But if, meanwhile, consumers have been educated to put all the blame for inflation on Government spending and on unwarranted wage increases, then the soaring profits may go unchallenged. That's the sort of education many of the current campaigns seem designed to accomplish.

Columbus Day: An Opportunity To Strengthen the Spiritual Bonds of the Americas

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. RODINO. Mr. Speaker, as the author of H.R. 418, which seeks to declare October 12—Columbus Day—a legal holiday—I would like at this time to tell you about some of the outstanding 1958 Columbus Day celebrations sponsored by the National Citizens Committee for Columbus Day.

As the first national chairman of the Columbus Foundation which now sponsor the work of the National Citizens Committee for Columbus Day, I was more closely associated with the work of the national committee in 1958 than in the 4 previous years of its existence.

Mr. ZABLOCKI, of Wisconsin, has explained to you why I was chosen to head the Columbus Foundation, an overall organization dedicated to increasing greater cultural and educational exchange and improved understanding among the peoples of the Western Hemisphere.

THE COLUMBUS FOUNDATION

Launched on October 12, 1958, the Columbus Foundation proposes to increase and broaden the traditional observance of Columbus Day in two ways:

First. By stimulating such sister projects as sister cities, sister schools and colleges, and sister organizations.

Second. By encouraging educational and cultural exchanges through scholarships raised by communities, schools, colleges, organizations and business groups.

Now I want to commend the leaders of the National Citizens Committee for Columbus Day for the fine work which is being done to bring to Americans the significance of the discovery of the Western Hemisphere by Christopher Columbus.

AMERICANS ALL-COLUMBUS DAY THEME

The theme of the 1958 celebrations was: Americans All. No continent is so closely knit by religious ties as is the

Western Hemisphere. All people who live on the American Continent are bound together by their belief in the fatherhood of God and the brotherhood of man—religious principles of Catholics, Protestants, and Jews.

Only through the determined achievement of these spiritual values can we of this hemisphere prove to the world the value and effectiveness of our free western system.

Since the discovery of America over 450 years ago, this continent has been an inspiration to the peoples of the world. From the beginning this new world has offered an opportunity for all peoples to seek and achieve a new and more meaningful life because our country was founded on the belief that spiritual faith, initiative, courage, and energy are traits to be admired.

During the last 50 years, people have come to believe that the destiny of the world was in America's hands—that America was composed of men from the mold of Columbus—men who questioned, dared, and dreamed—men who had the courage to translate their dreams into noble action for the benefit of all mankind.

U.S. CITIZENS NEED TO KNOW MORE ABOUT LATIN AMERICANS

In recent years, we of the United States have been too unmindful of the problems besetting our neighbors in the other 20 American Republics. After World War II, the national yearnings of the peoples of Asia and Africa burst upon us like a bomb. In our struggle to meet these unexpected responsibilities, we perhaps gave the impression to our Latin American neighbors that we no longer were concerned with their problems. At the same time, population growth in Latin America has been exceeding ours. In conjunction with population growth, there is a tremendous desire to push forward on the part of all Latin Americans to obtain some of the more tangible and intangible benefits of life.

The 1958 demonstrations against Vice President and Mrs. NIXON in some of the Latin American countries reveal the urgent necessity for an improved understanding between the citizens of the 20 Latin American Republics.

In 1957, His Excellency Victor Andrade, then Bolivia's Ambassador to the United States and now her Foreign Minister, made this statement in an address before the Cosmopolitan Club of Pennsylvania State College:

> The average citizen in the United States is only vaguely aware of Latin America. He has, on the whole, a kindly feeling toward his southern neighbors and believe they will stand beside the United States in the event of crisis—as, indeed has been true in the past. But he knows comparatively little about Latin America and hears comparatively little. Many Latin Americans feel they are taken for granted by the United States, and, perhaps there is something in that feeling.

Recently, Members of Congress listened to an address by President José Maria Lemus of El Salvador who pointed out that Communist imperialism menaces the entire Western Hemisphere because of "valuable allies" in the hemisphere such as "social injustice, disorder, and political errors, the impoverishment of nations, and the wretchedness of great groups of human beings whom a weakened economy is not able to protect fully, nor offer comforting prospects."

U.S. CITIZENS MAKE COLUMBUS DAY AN OCCASION TO LEARN ABOUT LATIN AMERICANS

It is therefore with great pleasure that I tell you about some of the 1958 activities of the National Citizens Committee to dramatize this great historical date, October 12, as an occasion to learn more about our Latin American neighbors through meaningful exchanges of people and ideas.

Under the leadership of the President of the United States, who made the Columbus Day address at the distinguished New York City celebration, more than 40 State Governors issued 1958 Columbus Day proclamations calling for observances on October 12 to create greater inter-American friendship and understanding under the theme "Americans All." In addition a majority of these Governors appointed State Columbus Day chairmen to stimulate statewide observances and to coordinate the activities of the various communities.

SUPPORT OF STATE GOVERNORS

I would like to call your attention to the statewide Columbus Day observances in some of our States. It is particularly pleasing to report that my own State of New Jersey had a most outstanding series of celebrations under the leadership of Gov. Robert B. Meyner and such distinguished mayors as my own mayor, Honorable Leo P. Carlin, of Newark.

Other examples of outstanding statewide celebrations were: Pennsylvania, Colorado, Ohio, Florida, Tennessee, Wisconsin, Iowa, California, Missouri, Delaware, Utah, Massachusetts, New York, Illinois, and the District of Columbia.

Cooperating Governors were: Hon. James E. Folsom, Alabama; Ernest W. McFarland, Arizona; Goodwin J. Knight, California; Steve McNichols, Colorado; Abraham Ribincoff, Connecticut; J. Caleb Boggs, Delaware; Leroy Collins, Florida; Marvin Griffin, Georgia; William G. Stratton, Illinois; Harold W. Handley, Indiana; Herschel C. Loveless, Iowa; George Docking, Kansas; Albert B. Chandler, Kentucky; Earl K. Long, Louisiana; Edmund S. Muskie, Maine; Theodore R. McKeldin, Maryland; Foster Furcolo, Massachusetts; G. Mennen Williams, Michigan; Orville L. Freeman, Minnesota; James T. Blair, Missouri; Victor E. Anderson, Nebraska; Charles H. Russell, Nevada; Lane Dwinell, New Hampshire; Robert B. Meyner, New Jersey; Averell Harriman, New York; John E. Davis, North Dakota; C. William O'Neill, Ohio; George M. Leader, Pennsylvania; Frank G. Clement, Tennessee; Price Daniel, Texas; Cecil H. Underwood, West Virginia; Vernon W. Thompson, Wisconsin; Milward L. Simpson, Wyoming; Luis Munoz Marin, Puerto Rico; The Board of Commissioners, Hon. Robert E. McLaughlin, President, District of Columbia.

SUPPORT OF MEMBERS OF CONGRESS

Through the years, the National Citizens Committee has invited Members of Congress to act as honorary sponsors for Columbus Day. In 1958, many distinguished Senators and Congressmen not only were willing to serve as honorary sponsors, but they helped to set up Columbus Day committees in their States and districts. Others gave major talks on Columbus Day in their own States and elsewhere.

U.S. Senators cooperating: Hon. George D. Aiken, of Vermont; Hon. J. Glenn Beall, of Maryland; Hon. Styles Bridges, of New Hampshire; Hon. Clifford P. Case, of New Jersey; Hon. John A. Carroll, of Colorado; Hon. Dennis Chavez, of New Mexico; Hon. Paul H. Douglas, of Illinois; Hon. John D. Hoblitzell, Jr., of West Virginia; Hon. Hubert H. Humphrey, of Minnesota; Hon. Irving M. Ives, of New York; Hon. Estes Kefauver, of Tennessee; Hon. John F. Kennedy, of Massachusetts; Hon. Thomas E. Martin, of Iowa; Hon. Wayne Morse, of Oregon; Hon. James E. Murray, of Montana; Hon. Richard L. Neuberger, of Oregon; Hon. William Proxmire, of Wisconsin; Hon. A. Willis Robertson, of Virginia; Hon. Leverett Saltonstall, of Massachusetts; Hon. Stuart Symington, of Missouri; Hon. John J. Williams, of Delaware; Hon. Ralph Yarborough, of Texas; Hon. Milton R. Young, of North Dakota.

U.S. House Members cooperating as honorary sponsors: Hon. Hugh J. Addonizio, of New Jersey; Hon. Victor L. Anfuso, of New York; Hon. Wayne Aspinall, of Colorado; Hon. William A. Barrett, of Pennsylvania; Hon. Walter S. Baring, of Nevada; Hon. Hale Boggs, of Louisiana; Hon. Gordon Canfield, of New Jersey; Hon. Emanuel Celler, of New York; Hon. Marguerite Stitt Church, of Illinois; Hon. Harold D. Donohue, of Massachusetts; Hon. Ivor D. Fenton, of Pennsylvania; Hon. James E. Fogarty, of Rhode Island; Hon. James G. Fulton, of Pennsylvania; Hon. Kathryn E. Granahan, of Pennsylvania; Hon. Martha W. Griffiths, of Michigan; Hon. Wayne L. Hays, of Ohio; Hon. Lester Holtzman, of New York; Hon. Walter H. Judd, of Minnesota; Hon. Don Magnuson, of Washington; Hon. Fred Marshall, of Minnesota; Hon. Joseph W. Martin, Jr., of Massachusetts; Hon. Charles E. Merrow, of New Hampshire; Hon. Joseph M. Montoya, of New Mexico; Hon. Albert P. Morano, of Connecticut; Hon. Thomas E. Morgan, of Pennsylvania; Hon. Carl D. Perkins, of Kentucky; Hon. Henry S. Reuss, of Wisconsin; Hon. Peter W. Rodino, Jr., of New Jersey; Hon. Alfred E. Santangelo, of New York; Hon. D. S. Saund, of California; Hon. Hugh Scott, of Pennsylvania; Hon. Henry G. Talle, of Iowa; Hon. Frank Thompson, Jr., of New Jersey; Hon. Stewart L. Udall, of Arizona; Hon. William B. Widnall, of New Jersey; Hon. Clement J. Zablocki, of Wisconsin.

COOPERATION OF MAYORS

In addition to the outstanding leadership given by Senators, Congressmen, and Governors, hundreds of mayors throughout the United States issued

Columbus Day proclamations and appointed local chairmen and local committees to stimulate communitywide observances to advance the goal of increased inter-American understanding under the theme of Americans All.

In this category of accomplishment, the following cities deserve special recognition for their unusual efforts: Kansas City, Mo.; Salt Lake City, Utah; Springfield, Ill.; Wilmington, Del.; York, Pa.; Hoboken, N.J.; Denver, Colo.; Washington, D.C.; Nashville, Tenn.; Galveston, Tex.; San Jose, Calif.; Philadelphia, Pa.; Tampa, Fla.; Miami, Fla.; Fitchburgh, Mass.; Clayton, Mo.; Nashua, N.H.; Des Moines, Iowa; Peoria, Ill.; South Norwalk, Conn.; New Brunswick, N.J.; New London, Conn.; Oakland, Calif.; Sacramento, Calif.; Albuquerque, N. Mex.; Minneopolis, Minn.; and many others. Reports are still coming in. These were the cities and towns giving full reports on their activities. There were countless others who carried out elaborate programs but did not write a full report to the national committee.

COLUMBUS DAY AIDS

As background information for groups and schools, the national committee provided two excellent pamphlets: "The Leaders Guide" and "You and Your Latin American Neighbors"—the latter in collaboration with the Department of Public Information of the Pan American Union.

"You and Your Latin American Neighbors" received great praise from leaders everywhere. I recommend this pamphlet to the attention of every Member of Congress.

In addition, I wish to also commend the following for their excellent Columbus Day materials: Dr. James A. Di Renna, Kansas City, Mo.; Hon. Mary A. Varallo, Philadelphia; Sister Constantius, Clayton, Mo.; Tom Sarcone, Des Moines, Iowa; John Egizzi, Springfield, Ill.; Charles G. Merlini, Utica, N.Y.; Sister Mary Janet, East Lansing, Mich.; Anthony E. Candela, Ashtabula, Ohio; Louis S. Solari, San Jose, Calif.

Also noteworthy is the fact that these spectacular accomplishments were attained by private citizens in States and communities who joined forces to create Columbus Day celebrations across the Nation. There was not one cent expended by the National Citizens Committee for Columbus Day for salaries or paid staff. All of these skills were contributed and donated by the officers and executive committee as their contribution to better inter-American friendship and international understanding.

Furthermore, I was pleased to see the widespread development of interfaith Columbus Day committees in the States and cities. The District of Columbia committee did an exceptional job. I believe such a move represents a tremendous step forward in the extension of our spiritual leadership in North, Central and South America.

THE 1958 NATIONAL CITIZENS COMMITTEE FOR COLUMBUS DAY

The 1958 National Citizens Committee for Columbus Day was composed of fifty-odd people from many organizations in thirty-odd States across the country. Represented were business, labor, education, fraternal, religious, and nationality groups. It was the largest and most representative committee in the national committee's history. Again, I wish to express my appreciation for the fine leadership given by Italian-American organizations to Columbus Day celebrations everywhere, and to the Knights of Columbus who have labored so long to keep Columbus Day alive in this country.

The 1958 Columbus Day Committee members were: Dr. George E. Arnstein, Washington, D.C.; Mrs. Eugene Bacarisse, New York City, N.Y.; James L. Baker, Peoria, Ill.; Peter J. Bertoglio, Pittsburgh, Pa.; James G. Blaine, Clovis, N. Mex.; Barnee Breeskin, Washington, D.C., Dr. Arthur Campa, Denver, Colo.; Anthony E. Candela, Ashtabula, Ohio; Felix N. Cantore, New Brunswick, N.J.; Angelo J. Catucci, Washington, D.C.; Henry G. Catucci, Washington, D.C.; Louis J. Colombo, Detroit, Mich.; Sister Constantius, C.S.J., Clayton, Mo.; Charles De Facio, Jr., Hoboken, N.J.; John R. Di Cello, Kenosha, Wis.; Dr. James A. Di Renna, Kansas City, Mo.; Peter F. Di Stefano, Buffalo, N.Y.; Francis J. Donnelly, Kansas City, Kans.; Dr. William E. Dunn, Washington, D.C.; John Egizii, Springfield, Ill.; Joseph A. L. Errigo, Wilmington, Del.; Angelo Fabrizio, Albuquerque, N. Mex.; Rudolph Faupl, Washington, D.C.; Mrs. Molly Ferrara, Tampa, Fla.; Philip A. Guarino, Washington, D.C.; Joseph M. Garrety, Hork, Pa.; Lawrence P. Girolami, Sacramento, Calif.; M. P. Goebel, Corpus Christi, Tex.; Richard M. Gunn, Tennessee; Frederick G. Hochwalt, Washington, D.C.; Thomas F. Hogan, Norwalk, Conn.; Rev. Alfred F. Horrigan, Louisville, Ky.; Dr. J. Dan Hull, Washington, D.C.

Sister Mary Janet, East Lansing, Mich.; Paul E. Johnson, Indianapolis, Ind.; Richard E. Kellogg, Washington, D.C.; Newell Knight, Salt Lake City, Utah; Milton S. Kronheim, Washington, D.C.; Col. Waldron E. Leonard, Washington, D.C.; Frank Longano, Cincinnati, Ohio; Don P. Luther, Detroit, Mich.; V. P. Mickey McGinn, Phoenix, Ariz.; Rev. Frederick A. McGuire, Washington, D.C.; Justin J. McCarthy, Washington, D.C.; Charles G. Merlini, Utica, N.Y.; Ted Moreno, Eugene, Oreg.; Hon. Judge George D. Neilson, Washington, D.C.; John T. O'Brien, Washington, D.C.; Richard C. O'Connell, Baltimore, Md.; D. Alejandro Orfila, Pan American Union; Andrew A. Ovellette, Nashua, N.H.; Oliver A. Ossanna, Minneapolis, Minn.; Miss Inez Petersen, Sioux City, Iowa; Dr. Thomas G. Pollock, New York City, N.Y.; John S. Prico, Oakland, Calif.; Hon. Peter W. Rodino, Jr., Newark, N.J.; Frank A. Romano, Fitchburg, Mass.; Mrs. Mary E. Romano, New London, Conn.; Saul N. Sanfilippo, San Jose, Calif; Tom Sarcone, Des Moines, Iowa; D. V. Signa, Greenville, Miss.; Paul E. Smith, Washington, D.C.; Louis S. Solani, San Jose, Calif.; James Sottile, Jr., Miami, Fla.; Stanley S. Villavasso, Baton Rouge, La.; Hon. Mary A. Varallo, Philadelphia, Pa.; John W. White, Washington, D.C.

NATIONAL SPONSORS

As I pointed out earlier, the National Citizens Committee is a voluntary citizens organization with no paid staff. There are, however, expenses for secretarial services, duplication of materials and mailings. In 1958, these expenses were underwritten by the following national sponsors:

Sam G. Baggett, vice president, United Fruit Co.

Edgar R. Baker, manager, Time-Life International.

H. W. Balgooyen, vice president, American & Foreign Power Co.

Charles R. Cox, president, Kennecott Copper Corp.

John A. Diemand, president, Insurance Co. of North America.

Fred M. Farwell, executive vice president, American Telephone & Telegraph Co.

W. Latimer Gray, senior vice president, First National Bank of Boston.

Walter Harnischfeger, president, Harnischfeger Corp.

Carl N. Jacobs, president, Hardware Mutual Casualty Co.

John K. Jenney, director, foreign relations department, E. I. du Pont de Nemours & Co.

Charles A. Meyer, vice president, Sears, Roebuck & Co.

W. M. Miller, vice president, Singer Sewing Machine Co.

Howard M. Packard, president, S. C. Johnson & Son, Inc.

J. P. Spang, Jr., president, the Gillette Co.

Wm. S. Youngman, Jr., director, American International Underwriters Corp.

Ray Schrick Reports on China Trade

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. PORTER. Mr. Speaker, the Secretary of Commerce has notified me that he has no information as to the trade potential of Red China. It seems to me that we should get this information. Under a unanimous consent I am including hereafter an article from the Wall Street Journal for Wednesday, April 29, 1959, regarding Canadian trade with Red China:

CANADIANS EAGERLY WOO BIG RED MARKET THOUGH THE PROBLEMS ARE MANY—CHINESE BUREAUCRATS SNAG TRANSACTIONS, PUSH GOODS THE CANADIANS DON'T WANT—UNITED STATES IS AN OBSTACLE, TOO

(By Raymond J. Schrick)

VANCOUVER, CANADA.—The Norwegian freighter *Bougainville* bobs lazily at its moorings here in Canada's western gateway. Tall wharf booms swing lines into the vessel's gray and green hull and unload 153 cases of towels, workshirts, other cotton goods and feathers imported from Red China.

At 446 Homer Street, away from this port city's dock area, there's a tiny shop, owned by the East West Export Import Co., which exhibits such Communist Chinese wares as

tennis shoes, silk shirts and tea. "We expect to sell $1 million worth of technical machinery to China this year if all goes well," says balding Al Grinkus, the firm's secretary-treasurer. "And over there," he says, pointing to wooden crates addressed to the China National Import & Export Corp., 2 West Bund, Canton, "is the first trial shipment of some rubber goods."

Canada's trade with the Red Chinese amounts to just a few million dollars worth of business annually, and in 1958 it totaled less than one-half of 1 percent of Canada's trade with the United States alone. But this country's commerce with the giant behind the Bamboo Curtain is interesting, and its side effects are causing concern in the United States—which refuses to recognize Communist China or do business with it. And Canada's experiences help point up some of the problems peculiar to dealing with Red China.

TRADING WITH RED CHINA

Red China imported $2.4 million worth of goods from Canada in 1956, cut this to $1.4 million in 1957, then boosted its imports nearly sixfold to $8 million last year, with purchases of Canadian wheat accounting for about $7 million of the 1958 total. The Communists' exports to Canada hit a record $5.7 million in 1956, then bumped into this country's 1957–58 recession and averaged a bit above $5 million in each of those 2 years.

The Reds boast that they're ready to export bicycles, medical and surgical instruments, electric light bulbs, sewing machines, tools, chemicals, rubber tires, automobiles, and dozens of other items. The Canadians, however, have been buying such traditional Chinese exports as peanuts, shelled walnuts, hog bristles, sesame seeds, mink furs, and hooked rugs.

Red Chinese wares are frequently disparaged. The nonpartisan Far Eastern Economic Review, published in Hong Kong and backed largely by British capital, reports one case where a Red factory repackaged American antibiotics, slapped a "Made in China" label on them, and proudly exhibited them at eastern European trade fairs. Here in Canada, however, Communist China's exports are earning a good name for themselves.

At Vancouver's Hudson Bay Co. store, for example, the carpet department recently featured 9- by 12-foot hand-made Chinese hooked rugs tagged at $79.50. "We had to lower the price of our Japanese rugs from $99.50 to compete with them," confides a sales clerk, "but the Chinese rug still is better because it's all wool while the Japanese is half cotton."

RED HOOKED RUGS

"We placed our first $25,000 order for Chinese hooked rugs last summer," says wavy-haired Trevor Jordan-Knox, vice president of Jordan's, Ltd., which has six retail carpet stores in western Canada. "Since then," he adds, "we've placed two more orders, and we're completely sold out except for the couple of rugs you see there. We have had nothing but good comments on these Chinese goods."

While Canadian importers are pleased with Red China's wares, they're distinctly unhappy with the Communist bureaucrats they're obliged to deal with in order to get the goods.

One Canadian buyer who recently visited China says, "We accomplished as much by letter as by my actual visit." One stumbling block was the language barrier, plus the fact that the Communists can translate a letter and run it through the proper channels faster than a buyer can locate a Red official with enough authority to okay a transaction.

The representative of a large Canadian manufacturing firm placed a large order for burlap. But when he visited China in an effort to discover why it hadn't been delivered, he found his order had simply been postponed for 3 years. Another Canadian in the paper business says he traveled to Red China where he was graciously permitted to view the great wall of China, the summer palace, the winter palace—all the tourist traps—but no paper mills."

SKEPTICISM ON QUALITY

But Red bureaucracy is only one of several problems involved in trading with Red China. The Chinese aren't content with selling hog bristles, hooked rugs and other traditional items to Canada. They'd like to sell machinery and other industrial products, too. Such additional sales, of course, would boost China's earnings of Canadian currency and might make the Reds better customers for Canadian wares. But the Canadians remain highly skeptical of the quality of Chinese industrial products and thus shy from buying them.

In the Reds' eagerness to boost sales to Canada, they often overestimate the size of the Canadian market. "The Chinese are very stubborn salesmen," says Mr. Jordan-Knox, who not long ago was refused permission to visit the Tientsin factory that makes the hooked rugs he buys because the Reds figured it wasn't necessary. "These Chinese," he continues, "almost insisted our one company buy more hooked rugs than all Canada imported in the biggest boom year in history. They can't seem to understand that there are only 17 million people in our country."

Jean-Louis Junod, president of Pacific Grain Corp., Ltd., of Vancouver, sold some wheat to China last year and hopes to sell some more in the future. "But," he wonders, "will Canada's small population enable us to buy enough from the Chinese to balance our cargoes of wheat?"

There's no question the Chinese are determined to balance accounts with Canada. Harry MacDonald, sales manager for Canadian Forest Products, Ltd., visited Peking last year seeking pulp orders for his firm. "The Chinese," he recalls, "tried to get me to buy their peanuts so they could buy my pulp. The situation was impossible."

A FRUSTRATING BUSINESS

Though trading with Red China is a frustrating business, many Canadians are enthusiastically pushing it for what they consider to be good business reasons.

"The Chinese market is exciting," sums up one Canadian export-importer, "because it contains 25 percent of the world's people." Canada's businessmen are goggle-eyed at the sight of 600 million potential Chinese customers who are, incidentally, reproducing themselves at a yearly rate that exceeds Canada's entire population.

The huge Chinese market bought more than 75 percent of its import needs from the free world before the Korean War, Canadian Government sources claim, compared with only about 25 percent today. Most Canadian businessmen are eager to see a return to the pre-Korean war percentages. But there still are those who fear the sales competition of Communist China, whose greatest economic weapon is cheap labor in endless quantity.

"There is no cost of production in China," says one Canadian importer. "If Mao Tse-tung's regime wants to export a certain product," he adds, "it can undersell anybody." Another importer tells the tale of negotiations with some Red tea merchants. "We asked the Chinese," he says, "to tell us the price of their tea. They told us they had no price, and asked us what we were willing to pay. Sometimes they dicker on our offer, but they can always undersell the competition."

If the Chinese are anxious to earn foreign exchange of a certain country, they can take a loss on a sale to that country, knowing they will be able to absorb the loss in the profits of some other state-owned enterprise.

CHINESE DUMPERS

Red China's critics insist the Communists are not above dumping their goods on the market for any price they will bring. In the past year, for instance, the Reds have been accused of using these tactics in southeast Asia's textile markets at the expense of Japan, India, and other textile exporting countries.

Malaya's minister of commerce and industry recently told of Chinese textiles "known to be sold at prices which did not even cover the cost of raw materials." The same goods, he charged, cost three times as much in China as in Malaya. So the minister slapped a 3-month import ban on the Reds' wares. The ban since then has been lifted.

Charges of Red Chinese dumping are currently in the news right here in Canada.

Red China is the world's major supplier of hog bristles that are hand gathered after the porker has scratched them off his back against a fence. These bristles are hollow, and are used to make paint brushes of high quality. The hog bristle dumping issue was joined recently when Canadian customs appraisers put a value of $7,658.75 on some Chinese hog-bristle paint brushes which the importers had valued at $2,804. This sharply boosted the import duty.

Canadian officials normally rule that dumping has occurred if goods are sold in a foreign land for less than the fair market price in the supplying country. It is often difficult to learn what Communists charge for a product inside their own borders, and not long ago Canada reportedly began appraising hog bristles on the basis of the estimated cost of production plus what Canadian officials regarded as a reasonable profit.

"We think the action taken by the Canadian customs is regrettable, says the China National Animal By-Products Export Corp., the Reds' hog bristle export agency. "We have absolutely made no attempts at disturbing world markets," writes the vice manager of the Chinese agency, which claims its prices were in line with the London open market price, for bristles, plus 50 percent to 70 percent added to cover costs of making the brushes.

Marshal Johnson, president of the East West Export Import Co., says, "We planned to import $100,000 worth of paintbrushes this year, but we will be obliged to pay 180 percent more for them at the expense of the Canadian consumer if the dumping finding stands." Mr. Johnson alleges the government's action in the paintbrush case was based on "misleading information and inadequate consideration of the facts." A paintbrush distributor in Vancouver says, "We bought some Chinese paintbrushes originally but we aren't buying any more right now. With the dumping duty, Chinese brushes cost as much as Canadian-made bristle brushes which are a little higher in quality."

The furor over the antidumping ruling increased recently when George Nowlan, Canada's national revenue minister, told the House of Commons in Ottawa that, because dumping was alleged, a revaluation had been ordered on 2 million yards of Chinese cotton goods that had been imported from Red China in the preceding 2 weeks.

U.S. CHARGED WITH MEDDLING

Canadian news stories in the past year have reported charges of U.S. meddling in Canada's efforts to increase its China trade. The stories generally have contended Canada's economic dealings with the Reds would be a lot more lucrative today if Americans hadn't poked their noses into this country's internal affairs.

A big stir occurred here last spring, for example, when it was charged that Ford Motor Co. of Canada, Ltd., had been refused home office permission to sell 1,000 Canadian-built Ford cars to Red China. Last July,

the Canadian subsidiaries of Ford, Chrysler, and General Motors all indicated a willingness to accept orders from Red China. But so far as can be ascertained here, China hasn't purchased a single Canadian-made car.

One explanation is offered by Al Grinkus of the East West Export Import Co.: "The Chinese couldn't buy our cars when they needed them, so now they are making their own."

When Canada's Prime Minister John Diefenbaker met with President Eisenhower last summer, the United States agreed that in certain cases it would approve permits for subsidiaries of American firms in Canada to talk trade with the Chinese Communists. The only two permits issued so far have gone to Alaska Pine & Cellulose Co., Ltd., that's 95 percent owned by Rayonier, Inc., of New York. Alaska Pine has received two Chinese inquiries on 4,500 tons of Canadian wood pulp, but no orders have followed. "We still hope to get some China orders, but frankly, we aren't too optimistic," says the company's president, W. E. Breitenbach.

"We would welcome some Chinese interest in our flour, but none has come yet," says G. J. O. Degroot, assistant export sales manager of Robin Hood Flour Mills Ltd., a Canadian subsidiary of International Milling Co. of Minneapolis, which has five mills in this country.

While the U.S. Government definitely has relaxed its rules against the Canadian branches of American companies trading with the Communists, it's still attracting barbed criticism from its northern neighbors. "I'm a Canadian," says one. "Why should controls be put on us by Washington?"

This Canadian pique with the United States was heightened recently by an incident involving the giant Aluminum Co. of Canada, Ltd. Alcan has been operating at only 65 percent of its 700,000-tons-a-year capacity, yet it turned down an inquiry from Red China for 2,000 tons of aluminum worth about $1 million. The reason given by sources close to the company: "Unwillingness to hazard relations with steady customers." About 40 percent of Alcan's business, as it happens, is done with American manufacturers.

Some Canadians view the trickle of Red maneuver to sharpen Canadian resentment of the United States. "It's a phony," is the way one Canadian business leader describes the Red aluminum inquiry. There's some solid justification for this executive's stand. The Chinese themselves list aluminum as one of the products they're ready to export. And Red China's best friend—the Soviet Union—apparently has so much aluminum for sale that a year or so ago it was charged with dumping around 20,000 tons of the metal on world markets at less than half the price aluminum commands in Russia itself.

A COINCIDENCE?

It may be coincidence, but the Reds started buying Canadian wheat last year at precisely the time when the U.S. Government's worldwide wheat disposal policies were coming under sharp attack here.

Canada normally exports about 75 percent of its more than 350-million-bushel-a-year wheat crop. But during the period from July 1, 1958, through the beginning of this year, Canada's wheat exports dropped by 6 percent while American exports rose 8 percent, thanks in large part to the U.S. Government's willingness to accept foreign currency in payment for its wheat. Canada insists on payment in dollars. "China has won her point," says a Canadian grain exporter. "She has shown the world she can trade on an equal basis, not the gift basis the United States has cherished in recent years."

Canada's grain fraternity takes pains to shroud its dealings with Red China in secrecy. This apparently stems at least in part from a fear of upsetting trade relations with U.S. businessmen. "Even the name of China was not mentioned in the telegrams that went back and forth before we completed our business," says a Vancouver exporter.

Canadian concern over the U.S. attitude on trade with China goes beyond mere worry over upsetting U.S.-Canadian trade relations. For one thing, of course, there's the U.S. Government's control over trade by Canadian subsidiaries of U.S. firms.

Under the U.S. Trading with the Enemy Act, an embargo on U.S. trade with Red China has been in effect since December, 1950. The top penalty for a U.S. businessman caught dealing with the Reds—either directly or through subsidiaries in foreign countries such as Canada—is 10 years in prison and a $10,000 fine.

The U.S. Government so far has never imposed these penalties. But they still exist as a strong deterrent to any U.S. businessman who might be interested in trading with China. And the U.S. Government has taken some steps to make its position extremely clear.

Just last year, for example, there was a longshoremen's strike in Vancouver and a boatload of Red Chinese sesame seed was diverted to Seattle for unloading. The Canadians planned to put the seed in bond and ship it to Vancouver by rail, but the U.S. Government turned down the request and the Canadians had to pay costly demurrage charges while the boat waited for the strike to end.

Ten Easy Ways To Bootleg Nuclear Tests

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. HOSMER. Mr. Speaker, interest has been expressed in my list of 10 easy ways the Soviets might try to bootleg nuclear weapons tests in violation of a test ban agreement. The Soviet Union's immoral reputation for treaty breaking gives every reason to believe they would use any possible subterfuge to break any test ban agreement they signed. The list is as follows:

1. Hiding: Conceal tests in a location of many naturally occurring earthquake shocks, such as the Kamchatka-Kuriles area.

2. Coinciding: Trigger tests to coincide with naturally occurring earthquakes.

3. Confusing: Firing several tests simultaneously or in rapid succession to create a confused and unreadable seismograph signal.

4. Shaping: Design the nuclear explosion to produce a seismograph signal "shaped" the same as a natural earthquake signal.

5. Absorbing: Fire the illegal test in an icepack, volcanic tuff, or other absorbent formation which fails to transmit the shock.

6. Screening: Trigger a nearby nonnuclear explosion a few seconds prior to bootleg test, erecting a screening signal on seismographs.

7. Minimizing: Keep power of explosion so small it does not register significantly on seismographs.

8. Cushioning: Explode in large, underground cave, air in which cushions shock waves and fails to produce significant seismic signals.

9. Snuffing: Build into the bomb a self-snuffng feature which permits test data to be obtained, but snuffs out explosion before seismologically significant shock is created.

10. Jamming: Jam seismograph stations likely to detect the bootleg test by increasing local background noise. (Even passage of a heavy truck near seismograph may jiggle its recording needle enough to blackout other signals.)

This list is not in any way complete and it is not based on the still secret Berkner Report on test evasion possibilities. I reiterated my earlier demand the Berkner Report be declassified by the State Department so the American people can evaluate pitfalls inherent in the Geneva test ban negotiations.

The foregoing list is based on a ban agreement that would apply to underground as well as atmospheric tests. The only kind of ban offering decent prospects for enforcement is one against atmospheric tests which are the only tests creating fallout, and I have previously expressed my opinion there is a moral responsibility on the United States to seek an atmospheric testing ban and at the same time refuse to consider other type bans pending discussion of the moral, military, and political questions involved.

Nuclear explosion can be detected by acoustic waves, electromagnetic radiation, radioactive debris, and seismic waves. All but seismic waves can be suppressed by underground explosions and my list shows how these, also, could render valueless any detection-inspection system so far discussed at Geneva.

Some other ways the Soviets might consider to violate a test ban include these:

Simply shift testing from Soviet soil to the vast Red Chinese land mass not subject to the proposed agreement.

Test at very high altitudes, using rockets.

Set up secret test at a remote, uninhabited South Atlantic or Pacific Island, using submarines. In this case a few coke bottles and empty American cigarette packages might be left in the test site vicinity to confuse an international inspection team.

At the height of a phony propaganda campaign falsely charging Western violations, or that the detection system is faulty, et cetera, set off a test, and let it get lost in the general hullabaloo.

I hope my remarks may serve the purpose of encouraging public interest in and discussion of this vital test ban question.

Ellis Island as Cancer Research Facility

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. GALLAGHER. Mr. Speaker, pursuant to permission granted, I am inserting a letter from John M. Deegan, chairman of the Hudson County, N.J., chapter of the American Cancer Society, to the President of the United States, in which he proposes that the Government-owned Ellis Island be made available for

the establishment of additional research facilities to continue our fight for the cure for the dread disease of cancer.

While I am confident much has been accomplished in this tremendously important field of research, we have not yet conquered this dread disease. I wholeheartedly endorse and concur in Mr. Deegan's proposal.

The letter follows:

THE AMERICAN CANCER SOCIETY,
NEW JERSEY DIVISION, INC.,
HUDSON COUNTY CHAPTER,
Jersey City, N.J., May 12, 1959.

President DWIGHT EISENHOWER,
White House, Washington, D.C.

DEAR MR. PRESIDENT: I note in the press that the offer to purchase Ellis Island and convert it into an amusement park has been again wisely rejected by our Government.

It is my belief that at least 75 percent of the present generation of American citizens can trace their ancestry back over the years to someone who was welcomed to a new life in this country on arrival at Ellis Island.

Just why cannot this tradition of humane assistance be carried on to an even further degree by converting Ellis Island into a research center for the cure of the dread disease of cancer?

Ideally located by its proximity to the largest city on our continent and to the many colleges and hospitals where many phases of research are at present being conducted, Ellis Island entirely surrounded by water, offers an advantageous location free from dust, noise, and harmful bacteria.

The need for this type of research center to seek the cure of cancer, I feel, deserve top priority in the domestic phase of our Federal governmental planning and the opportunity to utilize this island for such a humane cause will preserve the intentions of our forefathers that Ellis Island be dedicated to the faith, hope, and tranquility of all Americans.

Our men and women of science can and will conquer cancer eventually and by the creation of this center I am confident that we will greatly shorten the time to the achievement of this God inspired goal.

As the campaign chairman for the Hudson County, N.J., chapter of the American Cancer Society, I have intimate contact with our citizens and I can assure you that the creation of a cancer research center on Ellis Island would, without dissent, be acclaimed as one of the most humane and progressive projects our Government ever initiated.

Respectfully yours,

JOHN M. DUGAN,
County Campaign Chairman.

Pan American Airways: Union Milestone

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. HOLT. Mr. Speaker, a unique agreement has been reached between Pan American Airways and the Air Line Pilots Association, the Flight Engineers International Association, and the Air Line Dispatchers Association. MATS made the recommendation to private carriers that to have successful utilization of civil air transport service a labor agreement such as the one below would be of interest to national security. I thoroughly agree with this and want to congratulate Pan American Airways and the unions involved for an outstanding milestone in aviation history.

Under leave to extend my remarks in the RECORD, I include the following statement:

SUMMARY OF PAN AMERICAN NATIONAL DEFENSE LABOR AGREEMENTS

Pan American World Airways has signed agreements with three of its operating unions which will assure the Department of Defense that traffic essential to defense purposes will continue to move despite possible labor disputes between the company and the unions, Juan T. Trippe, president, announced today at the annual stockholders meeting in New York. The agreements signed with the Air Line Pilots Association, the Flight Engineers International Association, and the Air Line Dispatchers Association are the first of their kind in the history of transportation. A summary of the contracts follows:

1. Even though the three groups should withdraw from commercial airline service because of labor disputes, they will continue at their respective jobs to insure the airlift of cargo and personnel essential to national defense.

2. A company official will certify in writing that the flight concerned will be exclusively for these purposes.

3. The agreements are consistent with the longstanding policy and performance of the three associations and their members.

4. This agreement will not be altered or terminated without at least 2 years' written notice by either the company or the associations.

5. The agreements with the three associations have been incorporated into their regular collective-bargaining agreements.

Aid to Derthick To Be Promoted

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. LINDSAY. Mr. Speaker, higher education in the United States has received a boon in the appointment of Dr. Homer D. Babbidge as Assistant Commissioner for Higher Education in the Federal Office of Education. Dr. Babbidge is a young man who has made a lasting mark in the world of education.

Secretary Flemming, Dr. Derthick, and Dr. Babbidge are all to be congratulated on this excellent appointment. I am including the report of Dr. Babbidge's appointment which appeared in the New York Times for May 19:

AID TO DERTHICK TO BE PROMOTED—H. D. BABBIDGE WORKED OUT BASIS FOR NEW DEFENSE EDUCATION PROGRAM

WASHINGTON, May 18.—Dr. Homer D. Babbidge is to be named Assistant Commissioner for Higher Education in the Federal Office of Education, it became known today. He will succeed Dr. Lloyd E. Blauch, who is to retire.

The choice of Dr. Babbidge, who was 34 years old today, for a post that is fast increasing in importance is an acknowledgement of his work under the National Defense Education Act.

As Director from the start of the Aid to Institutions Branch of the Office of Education, he has had charge of all programs under the act relating to higher education, such as the student loan program, the fellowship program, and the language and counseling institutes.

PROGRAM VOTED LAST YEAR

The National Defense Education Act was voted last year. The task of Dr. Babbidge was to lay the groundwork for the general program provided by the act. To help in the task he has brought to Washington some of the top educators of leading colleges for limited tours of duty. At present he has about 100 such assistants.

The funds to set the general program rolling were assured only this week when a $75 million deficiency appropriation was voted and sent to the White House for signature. The money is to carry the program through the rest of this fiscal year.

As a result of the preliminary work done under Dr. Babbidge, Arthur S. Flemming, Secretary of Health, Education, and Welfare, was able to announce today that the college loan program was ready to be sent into operation and the fellowships to be granted had been processed.

COMMENT BY DERTHICK

Dr. Lawrence G. Derthick, commissioner of education, said the post Mr. Babbidge is to take had the great potentialities for two main reasons.

1. College enrollments are expected to double in the next 10 years.

2. Higher education is assuming a new posture in national life under the National Defense Education Act, which was enacted as a result of the Soviet scientific challenge in the cold war.

Dr. Babbidge was born in West Newton, Mass., and attended grade schools there. He was graduated from the Amherst Center High School in Buffalo in 1943, winning a fellowship to Yale University. He received at Yale the bachelor of arts degree in political science and in 1953 a Ph. D. in education.

He taught at Yale and was employed in various capacities in its admissions office, on one assignment being in charge of the financial aid program.

He first came to Washington in 1955 to serve for a year as special assistant to the commissioner of education, Samuel M. Brownell. He returned in September 1957 as a special assistant to HEW secretary, Marion B. Folsom, and remained to aid Secretary Flemming.

On December 22, 1956, he was married to Marcia Adkisson, of Seattle, who had come to Washington as secretary to a Congressman from her home State.

Is Fidel Castro a Communist?

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. FLYNN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an article entitled "Is Fidel Castro a Communist?" by Dale Francis. This article was featured in the May 3, 1959, national edition of Our Sunday

Visitor, a religious newspaper with one of the largest circulations of its kind in the world. The piece by Dale Francis is particularly meaningful because this journalist was one of the most ardent supporters of Dr. Fidel Castro until the latter got into power and began the present regime in Cuba. This article is submitted at the request of one of my constituents, and the article reads as follows:

IS FIDEL CASTRO A COMMUNIST?

(By Dale Francis)

Whether Fidel Castro is a Communist or not is of great importance to this country and to the entire western hemisphere. In this article, I do not propose to reach a conclusion. Instead I will offer the evidence both for and against the thesis and let the evidence speak for itself.

First of all, many zealous anti-Communists have made charges against Castro that do not stand investigation. One of the most frequent accusations is the one that charges Castro bragged after the riots of 1948 in Bogotá, Colombia, that he had killed a priest. This has variously been reported as anywhere from one to eight priests killed.

But the fact is that there were no priests at all killed in the Bogotá riots. So if none were killed then obviously Castro did not kill eight, six, or even one.

For another thing, Castro's participation in the riots does not establish him as a Communist. There were many different groups assembled in Bogotá to protest against the Ninth Conference of American Union. Some were Communists, some were not. The riots were sparked by the murder of a non-Communist but liberal leader, Jorge Gaitan, and while the Communists took full advantage of the riots, there were non-Communists among the rioters and the Communists made up only a small minority of the group.

Then in any discussion of Castro there must be recognition of the fact he had almost unanimous backing of the Cuban people in his battle against Batista. Those few commentators who still fail to understand that Batista's government was both corrupt and tyrannical are failing to understand the Cuban situation at all. Batista had to be overthrown. The people's support of Castro was not based on any knowledge of Castro but simply on the fact they hated Batista and Castro was fighting against him.

The evidence that seems most pertinent to me dates back to 1953. Batista was then solidly in power after seizing the government before the elections of 1952. Almost universally, the Cuban people disapproved of the forceful seizure of the government in 1952 and almost all of the people were in some degree opposed to Batista. Because there was some material progress under Batista, this opposition was not always a passionate one but still Batista was by and large always an unpopular man.

But Batista denounced his opponents as Communists, claimed to be the saviour of Cuba. It was in 1953 that the two major political parties in Cuba—the Orthodox and the Authentic—decided to issue a statement of unity in opposition to Fulgencio Batista.

They first planned to meet in Mexico but they decided this was too close to Cuba. They finally decided that the top five members of each party should meet in Montreal to issue a statement of opposition to Batista and make a pact of unity.

A few days before these men were to move out of Cuba secretly, a young member of the Orthodox Party began a campaign for the formation of a popular frent against Batista that would include the Communist Party.

This young man was Fidel Castro.

He was violent in his demand that the Communists be included with the Orthodox and Authentic parties in any statement against Batista. He argued this was necessary for national unity and he argued strongly.

This was a strange argument. Batista could have been given no greater weapon than the inclusion of the Communist Party as an integral part of his opposition. It would have helped him in his efforts to convince the United States he was really a bulwark of strength against Communist encroachments.

Naturally the Orthodox and Authentic party leaders preparing to meet in Montreal knew this and the proposal that Communists be included in the unity pact was so fantastic that they gave it no consideration. Yet young Fidel Castro continued to insist that this had to be done and he threatened that if it was not done that he and his friends would form their own opposition to Batista.

You must understand that at this time Fidel Castro was not well known in Cuba. He had been a leader among the students at Havana, he had participated in an ill-fated venture against the Dominican Republic, he had been a congressional candidate on the Orthodox ticket, he had filed a legal brief against Batista's seizure of power, so he was not completely a political unknown; yet he was in no way a political leader in the nation and so his emotional plea for the inclusion of Communists and his threat to start a movement of his own if the recognized parties did not include the Communists, was not given serious consideration by the more experienced political leaders.

Yet Castro did wield an influence on the men meeting in Montreal. The Authentic Party wanted to include a strong anti-Communist statement in the Montreal pact. Remembering the strong pressure exerted by Castro and his young followers who wanted the Communists included in the pact, the Orthodox members explained they simply could not go along with an anti-Communist statement without causing a split within their own party.

On this issue, the meeting almost broke up. Finally, the Authentic Party members agreed to go along with the Orthodox members and so the anti-Communist statement was dropped out of the pact.

When the delegates returned to Cuba the Orthodox representatives faced an angry young Fidel Castro. He chastised them for failing to include the Communists in the pact. They explained they had at least been able to keep out the anti-Communist statement and they hoped this would satisfy him.

It did not. Fidel Castro, who had threatened to start a movement of his own if the Communists were not given an equal standing with the two major parties, left the Orthodox Party and launched a revolutionary movement of his own.

A few short weeks later Castro and his associates stormed a barracks in Santiago de Cuba. This could have been the start of the overthrow of Batista. Had everything gone as planned, Castro could have taken over Santiago and established a rebel government there.

This is important to understand. Castro and his corevolutionaries had reason to believe that a few hours after their attack they could have been in control of the city and they would have had to establish a government. What sort of a government would have been established then?

We will never know since the attempted revolt was thwarted but one chilling fact about Santiago de Cuba on that July 26, 1953, must be added to give the full evidence on Castro.

On that day every important Communist in Cuba was in Santiago. Blas Roca, Lazro Pena, Bernardo Hernandez, Juan Llosa, Antonio Perez, Rolando Ruiz, Jose Cabrejas, Joaquin Ordoqui—all of the Communist leaders of Cuba were in Santiago, some 600 miles away from their usual haunts in Havana. Why? They say they had assembled for Blas Roca's birthday party.

Is this true? Did it just happen that on the day Fidel Castro launched his revolt and had expected to establish a provisional government that all of the Communist leaders of Cuba were around? Maybe.

But when you remember how a few months before Castro was battling for the Communist Party against what was plainly against the best interests of enemies of Batista's oppression, when you remember his threats to start a movement of his own that would not exclude the Communists, the appearance of the Communist leaders in Santiago appears an ominous thing.

Now Castro says he is not a Communist and there are those who believe him. He says he believes in freedom of the press and this is proof he is not a Communist. I remember newspapermen told me just a few weeks ago that the self-censorship they must exercise to escape the wrath of Castro is a more complete censorship than under Batista. They do not believe there is a free press today in Cuba. Castro's own words tend to convict him.

Law Must Spell It Out

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the San Mateo Times, San Mateo, Calif., for Friday, May 22, 1959:

LAW MUST SPELL IT OUT

Congress has a bill before it which would go far toward clearing up future legislative and judicial muddles over Federal versus States' rights. The bill, authored by Representative HOWARD SMITH, of Virginia, would require Congress to spell out in each piece of legislation whether it intends that law to supersede or complement similar enactments in the various States.

There was no need for this legislation until a few years ago. Legal experts took it for granted that the 10th article of the Bill of Rights, which says, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people," meant what it said.

A liberal Supreme Court, however, began adopting what it called a policy of preemption, which holds that Federal and State laws on the same subject only confuse the picture, and the Court has specifically accepted Federal law as superseding similar ones in the States, although such intention was never voiced by Congress nor written into the law. The tendency has been to avoid Federal-State squabbles by the simple expedient of denying the States jurisdiction in areas covered by national laws.

Among the more famous Supreme Court decisions incorporating the policy of preemption was that which upset the conviction of Pennsylvania's top Communist, Steve Nelson, under a State subversive act. The

Supreme Court, in effect, held that Federal acts preempt the field of subversive control and State laws are invalid.

If the Constitution is not to be flavored by changing political philosophies, Congress must be more specific in its legislative intent. It is no longer sufficient to assume the States have those rights not specifically denied them by the legislative branch of the Federal Government. The judicial branch has decreed otherwise.

Address by Chairman Roger W. Jones, U.S. Civil Service Commission, at the Annual Conference of the Society for Personnel Administration

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. REES of Kansas. Mr. Speaker, under approval granted by the House, I am including an interesting and timely address delivered by the Honorable Roger W. Jones, Chairman of the U.S. Civil Service Commission, at the annual conference of the Society for Personnel Administration on Thursday, May 21.

The administration is fortunate to have a man of the ability and the understanding of civil service problems as that of Mr. Jones. The reading of his statement will indicate his familiarity with civil service matters:

This is a speech without a title. A number of my associates suggested that I should limit myself this morning to a report of stewardship. Others suggested that I should try to look into the future. Still others suggested that this would be a good opportunity for a new Chairman of the Civil Service Commission to develop his personal philosophy and to set down the goals which he seeks to achieve. I may end up by trying to do all of these things—and not in a very logical order at that.

As a beginning, I am going to quote the Bible, both to give myself a text and to recall to you one of the most graphic verses which has come down to us from the minor prophets. The Second Chapter of the Book of Acts records the reactions of St. Luke when, on the day of Pentecost, the apostles seemed suddenly to be capable of speaking to every man of the multitude in his own language. Some were full of wonder, and the skeptics, of course, were full of derision and mockery. It was at this juncture that Peter lifted up his voice and quoted the poetry of the prophet Joel: "* * * and your sons and your daughters shall prophesy, and your young men shall see visions, and your old men shall dream dreams." Here, then, is a text which is applicable to the civil service. Its history is replete with prophecy, and its young men, too often in the past, have seen their visions become dreams when they were old. But now it seems that fulfillment is at hand.

To an extent never before experienced, the civil service system is able to speak to every American in his own language. It can now offer a career in almost any field of useful endeavor. Its supporters understand its message; its detractors know what is being said to them; those who profess indifference can no longer justify hiding in ignorance. Events and developments of the past dozen years have told the civil service story in such a way that no man or woman need have any doubt that a career in Federal service presents opportunity and challenge, and greater awards of satisfaction than some might think. There are, of course, inevitable expressions of derision and mockery. But, perhaps, these voices will be stilled if they, like the multitude to whom Peter quoted Joel, will listen to the voice of democracy. The story of civil service has been one in which it seems to have been destined that the prophecies and visions of young men should come to pass, and that the dreams of old mean should take on reality in the period of our responsibility for administering the civil service system.

The celebration of the diamond anniversary of the Civil Service Act in 1958 was more than a mere recital of the progress of 75 years of slow, but unchecked, advance of the merit system and its ideals. It was also a most effective device for improving public understanding and appreciation of the civil service and its people, the work of the Government agencies, and career opportunities in the Federal service. If we in the Civil Service Commission learned anything from it, it was to pay public homage to some of the dreams of those who had gone before, and to take unto ourselves an obligation to listen to the prophecies of their sons and daughters, and to share with them the vision of a civil service which can be abreast of the Government's changing needs in this rapidly changing world.

As long ago as Theodore Roosevelt's time, Civil Service Commissioners and advocates of the merit system looked to the day when we would foresee Government personnel needs and be prepared to meet them, not always panting to catch up. Strange as it may seem, I believe that the single largest stumbling block to attainment of this dream has been pursuit of a crazy and false will-o'-the-wisp. The belief (whether in 1914, 1933, or 1950) that the dynamic events of the day represented the abnormal, and that tomorrow we would return to the old stability, slowed down the growth and the efficacy of the civil service. We chased an illusion, and in doing so left management in a peculiar position to complain about the application of yesterday's methods to today's problems.

The cumulative effects of two world wars, a depression, the Korean conflict, and the bursting of the nuclear age have finally proved to the American Government that yesterday will never come again. The long drudgery of doing things year after year in the same way has been irrevocably broken. Agencies and the people who man them now perform old tasks by new and different methods. They also do altogether different things, and do not find them inconsistent with either the wishes of the American people or the statutory charters which underline all Federal programs. We have come to accept and to try to prepare for the fact that we now need different skills, different qualifications, and a different, ever-changing population of Federal employees. We no longer wage a nostalgic fight against realization that change is the order of the day, and that the need for change may arrive on short notice, or no notice at all.

None of this, however, is inconsistent with a career civil service. It simply means that in concept and in execution the idea of civil service has outgrown the physical dimensions of a "corps of clerks." The clerks are still here, an honored ,necessary, vital part of the civil service, but they do not make it. Perhaps we could have outgrown the narrow concept long ago if we had paid attention to what were then young men's visions but which the neglect of the years turned into old men's dreams. On digging into the history of civil service I find that we have made at least eight of these dreams come true in recent years. Time and the promise to change this meeting into a question-and-answer period as soon as possible do not permit me to discuss them in any detail, but at least I can give a catalog.

1. We have found the right formula for career recruitment at the college level without forcing everyone through the small end of the funnel of restriction to qualification in a major subject. Slowly but soundly the years since the depression of the early thirties, and the great expansion of Government programs which accompanied it, have given us more and more opportunity to take our pick of college-trained people. We have found means to examine, recruit, and develop them, and to convince them that Government offers a satisfying career. We are rapidly improving our selection of noncollege people, too. It is heartening on both scores to note that in a recent survey of 800 Government executives, some 50 percent of the persons interviewed reported that they had come into the service at grades below GS-9, 22 percent of them at grade 4 or lower. While we still have not done as much as I think we can and should do about career planning with our young people, the old men's dreams of better training facilities, equitable promotion programs, and greater possibility for transfer have come into being as realities regardless of the amount of academic training a person may have had on entry into Federal service.

2. The right of the employee to be considered something other than a cog in a machine also has moved beyond the dream stage. I may have been misled by overoptimistic reports, but I think that there is now a sincere desire and effort on the part of agency management almost universally throughout the Federal establishment to obtain and consider employee comments and suggestions and to support whole heartedly an incentive awards system. How sharply this stands in contrast to attitudes and rules (albeit usually unwritten rules) of not too many years ago.

3. The employee organization is no longer something to be feared or to be treated with contempt as a self-serving, selfish effort to interfere with the prerogatives of officials appointed to make democratic government work. In agency after agency, experience has demonstrated that one of the most effective methods of consultation on personnel matters has been discussion with respresentatives of employee organizations. Furthermore, employee organizations have made many well-thought-out recommendations for management's consideration and have urged members and nonmembers alike to give the kind of active support for suggestion systems and incentive awards which are their lifeblood. Finally, the agencies have generally established and are applying adequate methods for handling grievances and appeals. In fact, the overwhelming majority of employee complaints today are resolved before they reach the formal appeal and grievance stages. These developments have come about gradually, and they have required and received a most commendable degree of restraint from employee organizations. Every one of these developments was prophesied long ago by far-seeing civil servants.

4. The establishment, maintenance, and assignment of major responsibilities to personnel programs in the agencies is now an accepted way of life. In fact, the formal personnel program has moved from an era of mere tolerance and skeptical attention to an era in which analysis and evaluation on an agency-wide basis are important tools for bettering effort across the board. I can only express the hope that the Civil Service Commission in its own work of review and audit will be able to keep up.

5. The Civil Service Commission has opened a concerted attack upon the persisting problems of redtape and paperwork on classification. My late colleague in the Bureau of the Budget, Frederick J. Bailey, was one of the architects of the original "Preliminary Class Specifications of Positions in the Field Service." He once told me that his greatest mistake in a Federal career which spanned more than 40 years was his acceptance of the complicated verbiage of that famous 1930 publication. As closely as I can remember them, his words were: "I dream of the day when a job sheet can be simply written, simply handled, and promptly allocated, without an argument about the degree in which adjectives and adverbs are expressed."

6. The dream of William McReynolds that we would some day have authority to pay premium salaries for high-quality recruits is now a reality, although in somewhat limited form, as is also authority for on-the-spot hiring for regular appointment, which is my seventh point. This was, as some of you recall, often spoken of by William A. Jump.

8. Finally, and this has been dreamed of by many people over the years, we have made at least the first stumbling and imperfect steps in the direction of a merit promotion program. It may well be that for years to come there will have to be almost as many exceptions as there are applications of the rule, but I believe that we will develop the techniques, the skill, the courage, and the fundamental improvements which the concept of a true merit promotion program demands.

We sometimes think that perhaps Government today does not produce Baileys, McReynoldses, and Jumps; that the merit system has grown too complex and too flexible to produce another Stockberger or a Frederick Davenport, with their high regard for fixed principle; that we can never again have even one of those wise and self-effacing "chief clerks" on which so much depended in the old days. I think this is a sentimental comparision, or contrast if you choose. We do not need to judge the present and the future by the yardsticks of the past, even when those yardsticks were towering figures who came to be known as prophets in their own times. I believe that their sons and daughters will prophesy and that we have young men and women today who are quite capable of seeing visions. We will do well to heed them. They come into the Federal Government every year, not by tens, but by hundreds and even thousands. And they come better equipped to be articulate about their visions than their predecessors of an earlier day.

It was the young scientists who saw what the rate of scientific discovery and progress after World War II would do to create a manpower pinch in the Federal Government. It was the young who, by their own examples, demonstrated the value to be obtained from the enactment of a uniformly applicable Government Employees Training Act. Young training officers have done much to nail down the doctrine that responsibility for developing and realizing the potential of this act belongs primarily to the heads of their agencies. With and through the younger staff of the Civil Service Commission the agencies have undertaken broad programs to develop better relationships with college placement officers and faculty members, and a better understanding by them of what the Government needs and what it has to offer. Here is infinite room for the vision of any young person who is dedicated to the democratic ideal and who believes that democracy can outproduce, outgovern, and outlast communism through the strength of its programs rather than the force of its arms.

Better placement, to cite just one more example, must depend upon the vision of the young as much as it depends upon the experience and the judgment of older heads. So, too, must the ever-elusive goal of improving communication from employees to management and back down the line from management to employees.

Most of what I have said up to the present minute has either been accomplished or is on the way to accomplishment. This still leaves the obligation to look a little farther into the future. The suggestions needing attention fall into two broad groups: those for which there is an immediate need, and some prospect of immediate action, say within a year or two; and those which either permit or require consideration over a longer period of time.

In the first group are a number of legislative proposals, of which I shall mention a few. A major gap in the benefit structure for Federal employees is the absence of a suitable health insurance program. The Congress is currently considering legislative proposals for group health insurance with part of the cost contributed by the Government and part by the employee. In its report on Senate bill S. 94 the Civil Service Commission listed a number of standards which we believe any group health insurance plan for Federal employees should meet. S. 94 in its present form fails to meet some of those criteria, and contains some provisions which we consider unwise or unworkable. However, the Senate subcommittee has held hearings and is now actively trying to work out a bill which will offer an acceptable solution for all the parties concerned. The Civil Service Commission and the Bureau of the Budget are collaborating in this effort, and the prospects for success seem better now than they have at any time in the past.

Despite the enactment of new pay legislation last year, the pay problem in its broader aspects is still with us. We still have the hodgepodge of Government pay systems about which so many proposals have been made and so little has actually been done. The President has recommended the establishment of a bipartisan commission to study Federal compensation systems and policy. We all should strongly support this objective, recognizing that a major effort will be involved.

There are several hundred separate statutes on the books pertaining to Federal employee pay. We feel there is a clear need for the development of servicewide compensation policy as a guide for the legislative and executive branches in dealing with pay matters. For example, we have no criteria or systematic methods for adjusting white-collar statutory pay scales on a timely basis. These and other inflexibilities, such as the numerical limitations on the use of supergrades, have put an artificial and unwise ceiling on Classification Act and Postal Field Service grades, and have weakened the ability of the Federal service to attract the most competent persons for Federal jobs in a highly competitive labor market.

Three legislative proposals prepared by the Commission deserve no attention as visions, but they do deserve mention as projected improvements. They have been submitted to the Bureau of the Budget and are now in clearance. One of these would provide more realistic relocation allowances for employees who transfer for the convenience of the Government. Present allowances do not cover the employee's out-of-pocket expenses; they do not take into account increases in rates charged by common carriers, and they fail to cover certain other necessary items such as temporary living expenses for employees and their families. If we can relieve employees of this burden, we will certainly lessen resistance to at least one kind of change. The second proposal is for amendment of the Performance Rating Act of 1950, to enable agencies to adopt systems for evaluating employee performance that are more closely fitted to the agencies' individual needs. The third proposal would authorize the Government to pay for preemployment medical examinations by other than its own facilities, and also to provide fitness-for-duty examinations of employees. Requiring new employees to pay for their own medical examinations is a deterrent to recruitment; it is also unfair, since some applicants are examined free and others are not. Also, fitness-for-duty examinations which may be in the interest of the Government cannot be required if the Government is unable to pay for them. I would also call to your attention a proposal now pending in the Congress to modify and remove the rigidities of the Hatch Act. The Civil Service Commission has endorsed this bill, with a number of amendments.

There are four visions for the longer future which this audience would do well to share as goals deserving of much careful thought and planning. They are: (1) Equalization of appeal rights for veterans and nonveterans; (2) establishment of some system which will insure a regular and substantial annual intake from college graduating classes for Government careers, and with Government agencies authorized to make firm commitments during the competitive recruiting period which falls in the 4 months prior to graduation; (3) establishment (when circumstances, finances, and our state of readiness will permit) of a Federal administrative staff college for the training of the executives we need to discharge Federal program responsibilities; (4) adaptation of the competitive examining system to find ways to fill few-of-a-kind jobs which are scattered in many parts of the country. To this I would also add a corollary, finding means of keeping registers in a constant state of refreshment. It should be possible to add current eligibles to those who have established eligibility earlier without either destroying merit principles or going down the road of specialized recruiting which often misses its mark.

I think that all four of these goals need no further discussion now, but I want to repeat a conviction which I have often expressed: Only an administrative staff college can round out whatever uses we make of the new training act. We need to use the wealth of talent which we have in the Federal Government—the real experts in their fields—to train those who come after them. As Dr. Lillian Gilbreth neatly put it, "We talk a lot about know-how, but it's the know-why that is the key to all good management."

I should like to conclude my remarks this morning with some observations about three significant trends in the general field of personnel management—trends with which I know you are all directly concerned.

The first is the trend toward decentralization and delegation. While these are not identical, they have parallel objectives and results. They respond to the recognition that the man on the firing line, out in our field installations, and down in our lowest level of supervision, is the man responsible for getting the job done. He should have the authority he needs to do his job quickly, economically, and in a manner best suited to the local or specific situation.

Another trend is in the direction of creating more flexibility in the management area. This trend responds to the need for increased freedom to apply basic principles and commonsense rather than restrictive rules and regulations—in recruiting, in classification, in career planning, in training, in incentives.

The third trend is a companion to these—the trend toward the development of tools for positive and better personnel management. Without them, the promotion of decentralization and flexibility would be a

foolish gamble rather than reliance on a relatively sure and predictable outcome.

Progress in these areas cannot be accomplished by fiat, nor by mere acquiescence as to purposes and methods. It involves clear vision, hard work, and courage, because the obstacles are many. The very exacting demands on the Federal establishment for complete and quick reports on stewardship, to the public, to the Congress, and to other levels of Government, make it hard to delegate and decentralize with a free hand. An ability to tolerate uncertainty and ambiguity has been identified as a characteristic of the successful executive, but this is certainly not a characteristic of the American public in expressing their attitudes toward Government. They will tolerate mistakes, honestly made, far longer than they will tolerate inaction and uncertainty.

On the technical side, the task of developing personnel tools based on a realistic appraisal of the problem to be solved, combining the wisdom gained from experience and the knowledge gained from science, is not easy. Productive personnel scientists are rare, and practical managers regard with a healthy cynicism the enthusiastic peddler of the fad or fancy. The problem of identifying the worth while, and selling it to the wary manager, requires intelligence, patience, and wisdom.

Despite these barriers, there are hopeful auguries. The stark necessities of the present situation—the pressing need for economy and efficiency in a Government growing by leaps and bounds to accomplish new functions in a new age—provide an irritating and effective goad against complacency. The constant drive in parts of Government not only to match but to exceed private industry in improved management is encouraging. The increased attention to careers instead of clerks, and the sound development of the career executive bring into prominence the requirement to improve key links in the administrative process. Exploitation of all of the fields of social science through interdisciplinary probings of personnel and management problems creates the hope that our kit of knowledge and tools may be refurnished.

The Civil Service Commission is a service organization. Its purpose is to help the agencies of the Government to recruit and retain the kind of people, and to develop and practice the kind of personnel management, that will enable them to accomplish their several missions most effectively. The Commission is keenly aware of the challenge for bold and imaginative change that is presented by this changing world. We want to meet that challenge, to provide leadership that will keep the whole Federal service in step with the tempo of the times.

But in order to provide such leadership we must know what the agencies need. We have no desire to march off heedlessly in a direction no one cares to follow. We know many of the changes that are needed, but we also need to share more in those needs which are still visions of the young or dreams of the old. Nothing can be accomplished by vague complaints; much can be accomplished by concrete rearrangement of our personnel system—by strengthening those features of merit-system administration that help us, and by getting rid of those that hinder. As I said a couple of weeks ago in discussing scientific manpower, no matter how strongly the urge may come to abandon all the rules, the Government's needs contain no license to scrap the merit system. We can modernize it, and streamline it, and adapt it; we can cut red tape and we can cut corners; but we must maintain the basic merit principles. Then the vision will have substance; the dream will have reality; the prophecy will become history.

Revenue Producing Features of a National Lottery

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. FINO. Mr. Speaker, while we in Congress persist in refusing to capitalize on the natural gambling spirit of the American people, and while we continue to ignore the tremendous revenue producing features of a national lottery, the American people continue to buy from 75 to 85 percent of all Irish Sweepstake tickets sold.

In view of the fact that another Irish Sweepstakes drawing is scheduled Thursday and Friday of this week, the New York Daily News, a strong supporter of my national lottery bill, wrote the following editorial on May 25 which should be read by each and every Member of Congress.

OH, TO BE IN IRELAND

Come to think of it, though, it isn't necessary to be in Ireland for the purpose we have in mind; namely, to buy Irish Sweepstake tickets.

You can get them in the United States, and an estimated 4 million Americans are at this moment holding tickets for the next drawing, to be staged May 28–29.

How the tickets get to this country is a mystery about which President Sean T. O'Kelly's government isn't saying anything—nor have its predecessors uttered on this question since the lotteries began in 1930. But get here the tickets do; so much so that Americans are believed to buy from 75 to 85 percent of all Irish Sweeps tickets sold.

By the same token, Americans win about 75 percent of all the generous prizes awarded by the Sweeps.

Well, we love the Irish; but we love the Americans a bit more—and lovingly we wish they would have sense enough to set up a national lottery of their own, along the lines suggested by Representative PAUL A. FINO, Republican, of New York, and thereby raise billions in painless revenue per year, with painful taxes cut in proportion.

What a revenue raiser a national lottery would be is indicated by—

THE BINGO TAKE

In New York State, in the first year since charitable bingo games were legalized.

In that period, 1,357,199 persons played in 6,571 bingo contests. They paid $4,310,632, and collected prizes worth $2,861,547. Net profit to the operators—churches, veterans' groups, volunteer fire companies, and the like—was $1,016,527. The State collected $91,120 in license fees.

Most of these figures were racked up, it should be noted, before many of the larger communities—New York City included—had voted last November to have legal bingo under the local-option provision of the bingo law.

What the take will be each year from now on is anybody's guess, but it should be impressive.

And, to repeat, the bingo handle should be peanuts as compared with that of a national lottery.

However, if our national leaders don't want to set up a lottery as a system of painless taxation, they are hereby advised that plenty of—

PAINFUL TAXES

—are available which haven't yet been levied here.

Those we have are bad enough, but the rulers of prerevolutionary France were really geniuses in this field.

They taxed virtually everything in sight, both directly and indirectly, and they had some clever ways of collecting.

For example, there was a tax on salt. Everybody over age 7 had to buy 7 pounds of salt a year, whether he wanted that much or not. France's government was as zealous in enforcing these purchases as ours used to be in trying to enforce Federal prohibition.

You could use your 7 pounds of salt only at the table and in cooking. If you wanted to use salt for non-cooking purposes, you had to buy extra salt.

Further, the government did not collect the salt tax on its own. It farmed out the tax-collecting privilege to a private company, with full powers of enforcement—which naturally inspired the company to squeeze all the tax money it could out of the people.

Shortly before the French Revolution (began 1789), it is estimated that direct taxes were taking about 50 percent of the incomes of the middle class, workingmen and peasants, with indirect taxes grabbing another unknown percentage.

So if our politicos want to get really tough about taxation, they should study the methods and devices of the rulers of prerevolutionary France.

There is this catch, though: that taxes were largely to blame for the French Revolution and all the slaughter of big and little politicos that went with it.

Poison in Your Water—No. 84

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Staten Island (N.Y.) Advance, of August 30, 1958, entitled "Creek Probe Finds Proof Of Pollution."

CREEK PROBE FINDS PROOF OF POLLUTION

Definite proof of pollution from sewage has been found in Oakwood Creek and efforts are continuing to track down the source and eliminate it, the health department reported yesterday.

All samples of the water taken in all branches of the creek 3 weeks ago, after laboratory tests, were found to contain human chloroforms, even though the samples were taken in dry weather, the department reported.

Additional samples were taken early this week immediately following a heavy rainfall and tests of these are expected to show an increase in the pollution, according to department.

Just how long it may take to track down the illegal sewage outlets believed responsible for the pollution, the department yesterday could not say.

The investigation, by a team of health department inspectors, was ordered after Public Works Commissioner Frederick H. Zurmuhlen advised the department and

Borough President Maniscalco that samples taken along the beach at Oakwood showed heavy pollution and led him to suspect that illegal discharges into the creek were responsible for this.

Zurmuhlen pointed out that samples of the effluent from the city's new treatment plant near the mouth of Oakwood Creek, showed no pollution, clear evidence that the plant was doing an effective job.

He pointed out that unless something were done to halt illegal discharge of sewage into the creek it could nullify the city's efforts to improve the bathing waters.

The health department said yesterday that results of latest tests of the creek waters should be available next week. If they continue to show heavy pollution, a survey will be made of creek banks in an effort to locate illegal sewage outlets. Owners of the property will then be directed to correct the conditions immediately under penalty of court summonses.

U.S. Expert Warns Defense System Needed Against Biologic Attacks

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. SIKES. Mr. Speaker, an article written by Mr. Thomas R. Henry and appearing in the Kingston, Ontario, Whig Standard on April 28, 1959, entitled "U.S. Expert Warns Defense System Needed Against Biologic Attacks," has been called to my attention and I feel it will be of interest to the Congress. I take pleasure in having the article inserted in the CONGRESSIONAL RECORD.

U.S. EXPERT WARNS DEFENSE SYSTEM NEEDED AGAINST BIOLOGIC ATTACKS

(EDITOR'S NOTE.—Lord Jeffrey Amherst, an 18th-century British soldier, once had the brilliant idea of taking clothes from victims of smallpox, putting them on Indian prisoners of war—and then releasing them. The idea was that POW's would spread an epidemic among the tribes. Today, biological warfare is more refined and more effective. One of the outstanding scientists in the field explains the latest developments in the following article.)

(By Thomas R. Henry, science editor, North American Newspaper Alliance)

FORT DETRICK, MD.—A top expert in biological warfare says that Canada and the United States must improve and expand their warning system against disease-causing agents if we are to be prepared against attack.

Dr. LeRoy D. Fothergill, scientific adviser to the commanding officer of the U.S. Army's biological warfare laboratories here, said in an exclusive interview:

"It is important to maintain an adequate epidemiological intelligence service and warning network. An unusual occurrence of disease in a particular location may be the first warning of an attack. It also is important to have available an organized network of laboratories having qualifications for recognition and identification of unusual agents, particularly in the virus field."

Dr. Fothergill, who in the past has been director of the laboratories here, outlined the entire field of biological warfare in the course of the interview, which follows:

Question: "Which disease organisms would an enemy be most likely to use should biological warfare be attempted?"

Answer: "Obviously, the enemy would use agents which are believed to be highly infectious. Among these are agents causing 'Q fever' (which causes lung damage), tularemia (rabbit fever), brucellosis (undulant fever), and glanders (which causes hardening of glands in the lower jaw and ulceration of mucous membranes in the nose).

"Recently there have been reported results of exposing human volunteers to aerosols of the causative agent of Q fever. The minimum infective dose with a billionth of a gram of embryonated egg material containing the agent.

"In other words, there are 1 billion effective doses in a gram. But having given this figure one must emphasize that there is no conceivable way of realizing this potential. This would imply that each individual gets an exact dose without any wastage. It would mean that every cubic centimeter of infected air would be inhaled, and then only in an amount required to infect. Nevertheless the potency of such agents is enormous."

Question: "How would clouds of disease agents be delivered?"

Answer: "It would be no more difficult to deliver such devices than an atomic bomb. The same vehicles—airplanes, submarines or guided missiles—would be usable.

"Biological agents, moreover, are very suitable for delivery through enemy sabotage. One can let one's imagination run wild in this regard. Air-conditioning and ventilating systems of large buildings are obvious targets.

"Also, Canada and the United States are rapidly becoming nations that use processed, precooked and even predigested foods. This is an enormous industry that is subject to sabotage.

"One must include the preparation of soft drinks and the processing of milk and milk products. And, finally, huge industries are involved also in the production of biologicals, drugs and cosmetics which are liable to this kind of attack."

Question: "Does biological warfare have further potentialities than those of causing human sickness?"

Answer: "Biological warfare may find its greatest effectiveness when used for anticrop and anti-animal purposes. It could play a decisive role in any war that was not decided with pushbutton speed. This continent is in anticrop warfare. Our crops are very diversified and biological agents are specific only for particular crops. Those countries that are generally dependent on a single crop are the most vulnerable."

Question: "What defenses are possible, or contemplated?"

Answer: "There is a vast amount of medical knowledge in existence which can be useful. We have had long medical and epidemiological experience with infectious disease. Sanitary engineering practices and methods for disease control are at a high level of efficiency.

"But we must not be lulled into thinking that biological warfare would be rendered ineffective by these aids. Military exploitation of massive amounts of high infectious agents through unusual portals of entry creates new problems for which these procedures were not designed.

"Critical in defense is detection or early warning. Biological clouds have no characteristics detectable by the senses. They are invisible, odorless, tasteless.

"One might suggest that any laboratory conducting research to improve and speed up identification of disease-producing organisms will be making a significant contribution to the defense effort.

"One of the most important of all defensive procedures is active immunization. A number of effective immunizing materials already are available for some infectious diseases. But there are some against which there is no known method of immunization.

"The most effective results could be produced by an enemy introducing a highly infective disease into a population, one that could be expected to spread rapidly from person to person. For example, it has been said that a major setback for both allies and German armies in the First World War was the outbreak of the 1918 influenza epidemic. I never have heard the suggestion that this was introduced deliberately by either side, but with present techniques it might have been."

Question. "What progress has been achieved to date in the United States?"

Answer. "Many aerobiological instruments and techniques have been developed to a remarkable state of technical perfection. We are able, for example, to produce regularly an aerosol (cloud of disease agents) such that each liter of air contains one pasteurella tularensis organism (the agent responsible for tularemia or rabbit fever) and to give each of a series of primates a dose of 10 to 25 such organisms.

"The importance of particle size in such aerosols has been thoroughly demonstrated. The natural anatomical and physiological defense features of the upper respiratory tract, such as the turbinates of the nose and the cilia of the trachea and larger bronchi, are capable of impinging out the larger particles to which we are ordinarily exposed in our daily existence.

"Very small particles, however, in a size range of one to four microns (a micron is roughly a thirty-millionth of an inch) are capable of passing these barriers and entering the avealar bed of the lungs. This area is highly susceptible to infection. Entrance and retention of infectious particles amount almost to an intratissue inoculation.

"Extensive studies have been conducted, both at our laboratories and elsewhere, with the spores of anthrax, one of the most deadly of the diseases to which man is subject. These showed that there is a very definite relationship between particle size and infectious dose. When animals were exposed to particles in the one-micron size range and compared to those exposed to those 12 microns in size, it was found that in the latter case the required dose was 17 times as large as in the former. An even more striking relationship between size of infectiousness has been found for the microorganisms responsible for several other diseases."

Guff in the Appendix

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. PORTER. Mr. Speaker, on page A4117 in the Appendix of the RECORD my friend and distinguished colleague from Iowa, Mr. WOLF, included an article by William Bohn, editor of the New Leader, who undertook to raise an ironic eyebrow about certain insertions in the Appendix of the CONGRESSIONAL RECORD.

An April 27, 1959, editorial in my hometown paper, the Eugene Register-Guard, went a little further in an editorial entitled "Too Much Guff." Under a previous consent, I am appending the text of this editorial and the text of a letter I

wrote in response which was printed May 21, 1959:

[From the Eugene (Oreg.) Register-Guard, Apr. 27, 1959]

TOO MUCH GUFF

This day, which is not so different from other days, there arrived on the desk four excerpts from the CONGRESSIONAL RECORD—two of them quoting, with apparent approval, from these columns.

We're flattered, of course, to be picked up by any of our contemporaries, including the RECORD. But we'd be more flattered if we felt at the same time that we'd be read. However, a flip through the RECORD indicates that all sorts of people and papers are quoted at great length, less for the historical record or for the edification of Congressmen than for the vanity of the folks at home.

What the daily cost of printing the CONGRESSIONAL RECORD is we do not know. But whatever it is, it's too high.

The verbatim account of the proceedings of Congress should be printed, of course. But the extensions of remarks allowed Congressmen, wherein they write into the RECORD all sorts of guff not uttered on the floor, is largely a waste of time. So are the long harangues (including editorials) inserted for the purposes of buttering up constituents.

An opening of the RECORD at a random spot (p. 5284) shows six columns devoted to reprinting a speech made by Senator Mike MANSFIELD in New York. On the next page his colleague, Senator MURRAY, puts in nine columns of speech delivered someplace by Elmo Roper.

On page A3062 Senator JOHN CARROLL, of Colorado, uses nine columns for the reprinting of a speech by his good friend Senator HUMPHREY, which speech was made elsewhere than in Congress. This polemic is followed by seven columns of small type inserted by Senator HUMPHREY. It is a speech delivered by Representative JOHN BRADEMAS, of Indiana, at the University of Indiana.

The polite word for all this is backscratching.

The RECORD for April 15 happens to run from page 5253 to 5438. The pages of the Appendix, where the most flagrant stuffing occurs, is numbered on that day from page A3059 to A3121.

By our horseback guess, the 247 pages of zephyr, chinook, and typhoon contain 395,200 words. A busy Congressman who wants to read the RECORD thus can read it in a 14-hour day (no time out for coffee or lunch) if he reads at a rate of 500 words a minute.

Somehow, it hardly seems worth it.

MAY 13, 1959.

EDITOR, REGISTER GUARD, *Eugene, Oreg.*

DEAR SIR: Let's talk about guff. Certainly editorial writers and politicians can qualify as experts on guff. You write (April 27, 1959) that there is too much guff in the CONGRESSIONAL RECORD. You say that much appearing there is simply for the vanity of the folks at home, and not for the historical record or for the edification of Congressmen.

You are right.

You say a polite word for a lot of the material is backscratching.

You are right again.

You speak of flagrant stuffing. You figured out that a busy Congressman could read the RECORD for April 15 if he read continuously for 14 hours at the rate of 500 words a minute.

Now, before I defend the guff and backscratching, let's talk about the Eugene Register-Guard, my favorite newspaper. Who reads all of it? Nobody. Who reads most of it? Very few. How much guff and backscratching does it contain? Plenty.

"Extraneous materials" (our parliamentary phrase for what we add to our "remarks" in the RECORD) are not meant to be read by every Member of Congress or by every subscriber to the RECORD, any more than your classified ads or social notes, for example, to more than a fraction of your readers.

Perhaps you will want to argue that the Register-Guard is a business enterprise. It pays its own way—plus part of the taxes which go to pay for the guff in the CONGRESSIONAL RECORD. My answer to that is that our business here on Capitol Hill is government, which includes not only the promotion of policies to help the general welfare to preserve our freedoms and to defend our country, but to create and maintain confidence by the people in the men and women who make and execute these policies both in and out of government.

Congressional courtesy, or backscratching, may seem sometimes to be overdone but without it we couldn't function as an effective legislative body. As for our concern with the vanity of the folks at home, well, why not? They sent us here. One of the most important jobs of a Member, in my opinion, is to make it clear to his constituents that he is available to help them.

This job has dignity and power. It should have, considering the great responsibilities of the office and the real glory of our system of representative democracy. As the U.S. Representative for some 460,000 people I can do much for economic conditions in the Fourth District of Oregon and the Nation, much for our precious heritage of individual freedoms, and much for peace in the world.

But if I don't make it clear to the men and women who sent me here that I am their readily available representative (small "r") back here in Washington I can't do any of those jobs as I should. I won't have the information I need. I won't be giving them the confidence they need to fell that the Federal Government is in fact responsive to their opinions and needs.

One of the ways we Members of Congress make this clear is through insertions in the RECORD. If we abuse our rights in this or any other respect, the next election is never very far away. One man's backscratching is another man's encouragement. One man's guff is another man's mead.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

You Can Never Tell

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. WOLF. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a recent column by George E. Sokolsky appearing in the Washington Post of May 25, 1959. The RECORD has previously carried my comments on the so-called mystery of the Soviet lunik or mechta. Following the publication of a story entitled "The Big Red Lie," by Lloyd Mallan, the House Science and Astronautics Committee held hearings on the problems of measuring the rate of Soviet scientific progress. Mr. Mallan was one of a number of witnesses who appeared. His views that the Soviet Union poses no threat in the ICBM field, and has perpetrated a gigantic hoax with their lunar rocket was in sharp contrast to the testimony of better known and official witnesses. Mr. Sokolsky's article, which appears below, discusses some of these contradictory aspects of the Mallan views and the background of the witness. The article is as follows:

YOU NEVER CAN TELL

(By George E. Sokolsky)

It is not unusual for an able newspaperman to get a scoop, as it is called. Sometimes, it is accidental; sometimes it is due to superior ability. What Lloyd Mallan did in Soviet Russia is not altogether a scoop; it is a statement contradicting all authenticized data on Soviet Russia's production of missiles.

In a brochure issued by Mallan's publisher, there are photographs showing the American writer interviewing Soviet scientists with a recording machine on the table. The brochure says:

"This qualified observer, after 14,000 miles behind the Iron Curtain says:

"'1. The Soviet Union's first manmade planet, Lunik, does not exist and never did.

"'2. The Russians do not have any ICBMs, the long-distance terror missile with which Khrushchev has threatened this country.'"

Carl Ruff Associates, a publicity firm, says in a release:

"'The Red air force is said to be a mighty, almost invincible war machine,' Millan states. 'Its striking power is called at least equal to our own Strategic Air Command, if not greater. It is supposed to include countless squadrons of intercontinental, nuclear-armed jet bombers, deadly ground-to-air and air-to-air missiles, supersonic interceptors that form a virtually unbreakable defense wall around the Russian homeland.

"'This is a lie.'"

According to the Associated Press:

"Mallan's stand has been strongly challenged by both U.S. space scientists and military officials. They contend that all available evidence tends to back up Soviet accounts that the Russians succeded in firing Lunik all the way to the sun."

It is startling that Mallan alone, of all reporters, including science writers, intelligence officers, government officials, should have had the opportunity of interviewing the principal Soviet scientists, with a recording machine on the table. It is startling that these scientists were permitted, in a police state, to disclose to him military secrets which completely contradict the published statements of the Russian Government.

To check on these amazing statements, which, if correct, deserve at least a Pulitzer Prize, I made inquiries as to whether Lloyd Mallan is a member of the National Association of Science Writers, which is the journalistic organization of his specialty. I find that, according to the records as of February, 1959, he is not a member of this organization.

The only record of a Lloyd Mallan I could find was one born in Pittsburgh on June 27, 1914. His father, Abraham Mallan, was born in Russia; his mother, Etta Sable Mallan, in Titusville, Pa. In 1937, Lloyd Mallan went to Spain where he was a radio communications officer in the Abraham Lincoln Brigade, the Communist revolutionary force, in which he served from August 1937 to April 1938. He subsequently served in the U.S. State Department in the book and magazine section in 1951. He has been employed by the Toledo Blade and the Pittsburgh Post-Gazette and writes for True magazine.

This is about all there is to Lloyd Mallan's biography and his preparation for contest-

ing the judgment of Dr. William H. Pickering of the Jet-Propulsion Laboratory in Pasadena who, on January 8, 1959, announced that the Lunik was sending signals at short periods at 183 megacycles. The signals were observed to have two tones and that they came from a region west of the moon. On March 3, 1959, Dr. Pickering said definitely that the Russian announcement concerning the Lunik was reliable.

The question then arises as to who was hoaxed, the Government of the United States, the American intelligence officers and newsmen stationed in Soviet Russia, the Jet-Propulsion Laboratory in Pasadena which records space movements, or Lloyd Mallan?

Frankly, I do not know the answer. If Mallan is right and everybody else wrong, why are we spending all our money to beat the Russians to the moon? If Mallan is wrong, what is his reason for saying:

"The Russians claim to have fired a rocket named Lunik past the moon in January. Last month, I stated that Lunik was a hoax. It never existed. Russian space technology simply isn't capable of pulling off any such feat."

No one in authority in the Government of the United States has thus far supported Mallan's statement. Are they all fooled, from President Eisenhower down? Is the CIA fooled? Is the Pentagon fooled? Is every newspaperman in Russia fooled? Or, has Lloyd Mallan been tranquilized?

Basic Cause of Inflation: Excessive Government Spending

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. QUIE. Mr. Speaker, recently Mr. Anton Bertelson of Albert Lea, Minn., called to my attention an admirable statement concerning our economy. It was prepared by Mr. H. G. Frankel, of the Frankel Carbon & Ribbon Co., of Denver, Colo., and at this time, when the health of our economy is one of the great considerations of the Congress, the statement should be required reading:

We feel it is time for individual citizens, whether Democrat or Republican, to take more interest in the serious governmental problems facing us today.

We sincerely believe that certain truths are self-evident—regardless of political affiliations. We also believe in the basic intelligence and foresight of the great American middle class that has been the foundation and strength of our country from the beginning.

We feel that the time has come for all thinking people to consider what ultimately will be the end of the paths we are now following. Toward this end, in all humility we present this article.

The dollar has now plunged more than half way to zero. How long will it take to whittle away the rest of it?

If and when the dollar is whittled to zero, not only will all savings accounts, insurance and bonds, savings and pensions be wiped out, but far more important—we will have lost our American form of government.

We know today • • •

That the basic cause of inflation is excessive government spending—Federal, State, and city. The loss in value of the dollar (and hence the so-called increase in the cost of living) must be in direct proportion to the extent of government deficit financing.

That controls are not the answer and can no more stop the downward plunge of the dollar than they can stop the tides. Controls simply call for more controls and must ultimately end in regimentation and state socialism.

That in order to retain our individual liberties, we must accept individual responsibility.

That a welfare state which guarantees security from the cradle to the grave must necessarily be a regimented state. It must destroy individual liberty and incentive, and it must ultimately result in state tyranny—whether we call it "fascism" or "socialism."

What good are further so-called social reforms—what good are temporary gains by certain favored pressure groups—what good are huge profits in the stock market—if we lose our Government in the process?

When the only solution our leaders offer us to correct a depression is more and more government spending, aren't we buying some temporary prosperity at the cost of future misery?

The danger is real—and the danger is here now. Isn't it time for the great middle class of America—Democrats and Republicans alike—to organize now in order to:

Get back to the basic principles upon which our Government was founded—less and not more government; individual rather than social responsibility.

Resist any further subsidies to pressure groups, and reduce present subsidies as soon as possible.

As defense expenditures increase, insist on more and more economies in nondefense expenditures; and insist that our representatives adopt in toto the economies recommended by the Hoover report.

And unless we exercise our right to vote out of office the squanderers, and unless we can stop now this mania for more and more government, and more and more spending, we feel that our American system of free enterprise and individual freedom must perish from the earth.

H. G. FRANKEL,
FRANKEL CARBON & RIBBON CO.
DENVER, COLO.

A Tribute to John Foster Dulles

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. CURTIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include therein an editorial from the Levittown Times of May 25, 1959, of Levittown, Pa., wherein is expressed with great clarity the feeling of all of us regarding the late Secretary of State:

MR. DULLES VALIANT, DEDICATED PATRIOT

We cannot here and now write the verdict of history on John Foster Dulles as Secretary of State.

But in our own time, with only the short perspective of his final tragic illness, we can recognize him as a valiant, dedicated, selfless diplomatic soldier who may literally have given his life in the service of his country.

He was a soldier who did not serve in vain. He personally, as perhaps no other single Secretary of State in history, gave free men a rocklike defense against the aggressive force of totalitarian tyranny.

In his 6 crowded years as President Eisenhower's foreign affairs chief, Dulles traveled a fantastic 560,000 miles, visiting again and again every sensitive corner of the globe. He elevated face-to-face diplomacy to levels never before imagined.

The President gave him an amazingly free hand in setting the course of American policy. He was the boss of the State Department, and in effect he took it with him wherever he went.

Dulles believed that to assert the free world's strength effectively against encroaching communism it was necessary not only to hold a tight line but to take risks. By his own word, he did.

He was a tough negotiator, a fit adversary for the stubborn Russians and Red Chinese. He was willing to move to the edge of conflict to force his opponents to back down.

These tactics kept the Red tide in check. But they did not break the stalemate. And, in consequence of that, Dulles was assailed in some quarters as too rigid, too unimaginative to lead the free nations to a lasting peace, free of cold war tensions.

Some of the militant phrases he used, like "massive retaliation," were criticized as either provocative or empty of meaning.

Yet, the real meaning of Dulles was not what he said but what he did. Free men everywhere saw this the instant he was stricken and could no longer serve.

Many once skeptical Asians are glad today that Dulles held firm against Peiping when it pushed against the tiny but symbolic offshore Chinese islands of Quemoy and Matsu. They are coming to see the face of communism as he saw it.

The Europeans, who many times felt him inflexible in cold war dealings, were stunned when he was no longer there to stand firm. They were grateful for his sturdiness in Berlin, in the Lebanon-Jordan Middle East crisis, in the Trieste settlement that removed a sore spot for free Italy.

His 6 years at the core of trouble in one of the world's most troubled times were the crown of a life devoted to diplomacy and pointed toward the post of Secretary of State.

While 19 and still a junior at Princeton, Dulles went to his first world conference for Theodore Roosevelt. Diplomatic assignments came often thereafter. The greatest before the Eisenhower era was his brilliant supervising of the post-World War II Japanese Peace Treaty.

Historians will decide whether any man could have gone beyond holding the line and led us closer to lasting peace in this tense age. Whatever their judgment of this man, it will surely be said that he tried—tried to the limits of his ability and energy. The world honors him for his tireless efforts to keep free men free and make them secure.

Origin and History of Reserve Officers' Corps

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. FISHER. Mr. Speaker, on May 4, 1959, I had the honor of addressing the Reserve Officers' Association of Washington at an annual banquet held at Bolling Field Officers Club on the subject

of the Reserve Officers Incentive Act. On that same program a very interesting and informative address was delivered by Hon. George H. Foster, colonel, U.S.A.R., retired, on the subject of the origin and history of the Reserve Officers' Corps. Mr. Foster, an ex-commissioner of the Court of Claims, is a prominent attorney and a recognized authority on the subject of his discussion. Under leave to extend my remarks, I include Mr. Foster's address. It follows:

It is always a pleasure to talk to Reserve officers. You are Air Force Reserves and I am not one and therefore cannot speak to you about your special branch of our defense forces. However, as one of the oldest Reserve officers, in point of service, at least, I would like to review, briefly, the origin and development of the Officers Reserve Corps. Having been a Reserve officer since 1917 and having served as an enlisted man in the National Guard for 6 years previously, I am able to recall much of the development of the Officers' Reserve Corps from firsthand information. During all of my adult life I have been connected with the Army. Now I am a retired colonel in the Reserve Corps, having reached the age of 60 in August 1951. I am also a retired Commissioner of the U.S. Court of Claims.

The Officers' Reserve Corps had its start in 1908 when, by the act of April 23, 1908, Congress established the Medical Reserve Corps. Previous to this the Army had contract surgeons and dentists who had no military status. When the Medical Reserve was created in 1908 the contract surgeons were commissioned in that Reserve. In the Medical Reserve the highest rank available was first lieutenant.

For some years previous to 1908 there was a Regular Army Reserve. This, however, was limited to enlisted men. They would be enlisted in the Regular Army for 7 years and after 3 or 4 years active they would be transferred to the Regular Army Reserve for the remainder of the enlisted period. This organization never amounted to much and it was abolished about 1916.

There was also authority commencing in 1903 for enlisting, after examination, qualified men, for use as officers in any volunteer Army later authorized in case of war. When needed they could be commissioned as such volunteers in grade up to major.

The real start of the present Officers' Reserve Corps was the National Defense Act of 1916. Section 37 of that act authorized the establishment of the Officers' Reserve Corps of the Regular Army. Such corps was, in the language of the act, "to have available for service, temporary officers in the Regular Army." The grade was not to exceed that of major, with a few exceptions. I do not know how many of the Officers' Reserve Corps served in World War I, but the number was relatively small. Most of the officers, other than Regular officers, were the product of the 90 day officer training schools. They were called national Army officers officially, but sometimes called 90-day wonders and sometimes Sears, Roebuck officers. However, the member of the Officers' Reserve Corps who did serve in World War I were actually a part of the Regular Army, but only technically so.

After the war was over in 1920 the National Defense Act was amended. Section 37 was amended to provide for a separate Officers' Reserve Corps. This was established as a component of the Army, or Army of the United States. The 1920 act provided that the Army of the United States should consist of three components: (1) The Regular Army; (2) the National Guard while in the service of the United States; (3) the organized Reserves, including the Officers' Reserve Corps and Enlisted Reserve Corps.

Both the 1916 act and the 1920 act provided that members of the Officers' Reserve Corps could not be retired or paid retirement pay. Even if disabled they were left to the mercy of the Veterans' Administration. Actually, this provision against retirement in the National Defense Act was not repealed until 1949, long after provision had been made for disability retirement and even retirement for age and length of service. This was clearly an oversight, and it has not had any effect adversely.

Because of the denial of disability retirement for those disabled in World War I, Congress in 1928 enacted a law known as the Emergency Officers' Retirement Act. The pressure for this was irresistable. There were many instances where two officers, one a Regular and the other a non-Regular, were similarly disabled, sometimes in the same engagement. The Regular got 75 percent of his pay for life and the non-Regular a much smaller pension. When this bill had passed both Houses of Congress it was vetoed by President Coolidge. However, the Congress passed the bill over the veto. Some 7,000 officers were placed on the retired list. The extent of the disability required for retirement was 30 percent.

In 1933 at the insistence of President Roosevelt a drastic change was made in this law. Not only was a 30 percent disability required but the disability had to have its origin in the character of the service. That is, it had to result from something incident to the service. As a result, the list of retirees was reduced from 7,000 to about 2,000. Some are still being carried on the emergency officers' retired list. These officers are listed in volume 1 of the U.S. Army Register under retirement Code K–4.

In the late thirties the need for a larger Army became evident. In August 1935, Congress passed an act, referred to as the Thomason Act, providing for calling to active duty for a year, not to exceed at one time, 1,000 Reserve second lieutenants. This was with the view of appointing them in the Regular Army if they became qualified. This act was amended in 1939 to permit 3,000 Air Corps officers and 300 staff officers. By this time the lack of disability retirement rights for such Reserves was realized and an act of April 3, 1939, provided that in case of disability these non-Regulars should be afforded the same pensions, compensation, retirement pay and hospital benefits as may be provided by law and regulation for officers of the same grade and length of service in the Regular Army. While this act was actually aimed at the Reserves on the extended active duty it was broad enough to encompass all the non-Regulars who were appointed during World War II. In fact, upward of 30,000 officers are now drawing retirement pay under the 1939 act.

RESERVES BETWEEN THE TWO WORLD WARS

Commencing about 1922 Congress began making appropriations for active duty training of Reserves. These were the 15 (later 14) days of summer training duty for Reserves. This was the only opportunity that Reserves then had to recoup the money they had to lay out for uniforms and equipment. He was not paid for this inactive training. Provision for inactive duty training was not made until 1948.

WORLD WAR II

During World War II practically all the Reserve officers then on the rolls, were called into service. By joint resolution of August 27, 1940, authority for 1 year's active duty was provided. When we entered the war after Pearl Harbor, the tour of duty was extended for the period of the war and 6 months thereafter. I do not know just how many Reserve officers served during the war but in 1939 Congress reported to the Senate that as of June 30, 1939, the officer corps of the Army consisted of 13,032 Regular officers, 14,455 National Guard officers, and 104,375 Reserve officers. Of these Reserve officers the War Department thought that 14,000 had had World War I service. That was a very large corps of retreads.

Of course, by far the largest number of officers in the Army during World War II was the group appointed under authority of a joint resolution of September 22, 1941. This act provided that such officers as were needed could be commissioned. That law provided that such persons be appointed in the Army of the United States, without components. That is, they were not Regulars, not National Guard, nor were they Reserve officers. They were in the Army but they did not belong to either of the components. Of course, for all practical purposes they were the same as Reserve officers, as the act provided that they should have the pay and allowances, and the rights and privileges of a Reserve officer.

POST WORLD WAR II

Having fought two wars with officers other than Regulars, and feeling it desirable that Reserves be fully trained, Congress in 1946 turned its attention to afford an inducement to Reserves to retain their active interest in military affairs. One way to do this was to reward such officers with long service a measure of compensation; namely a retirement right for age and service. The bill to provide this had a long and trying time in Congress. The House passed a bill in 1946 which did not get through the Senate. Retirement for Reserves was not popular with the Regular personnel and the Department of the Army, but it was finally passed on June 29, 1948. The position that the Department first took was that retirement should not be given unless the officer had had 15 years of active service. Of course in 1946 the chances of a Reserve serving on active duty for 15 years was remote. Personally, I had been in the Reserves since 1917 and served in both wars, yet I could muster only 8 years of service. President Eisenhower, as the Chief of Staff did a great deal to cause the Department to alter its views. I need not, I think do more than say that the 1948 act provided retirement based on at least 20 years of service, active and inactive, upon attaining the age of 60.

TENURE

From 1916 to 1952 appointments were for 5 years. In 1952 provision was made for indefinite duration of appointment.

So much for the general background.

Of more present interest is a short résumé of the present rights of Reserves.

As to disabled officers, their rights are in all particulars the same as Regulars.

The retirement law for Reserves is the same, granted service and age as the Regulars, in principle. The rate of retired pay is 2½ times years of service, with a very important difference. While the act is somewhat difficult to explain it can be simplified by treating all active service in full. Inactive service is counted at one-seventh. That is, each 7 years of inactive service counts as 1 year of active service. By adding to your active years one-seventh of your inactive years you get a constructive service which is multiplied by 2½ to give you the percentage of your active duty pay that will constitute your retired pay.

There is, however, another provision for retirement for Reserves.

Any Reserve who has had 20 years of active service either as an officer or an enlisted man, at least 10 of which is active commissioned service, can be retired without waiting to reach 60. The minimum pay for such

retirement is 50 percent of active duty pay, again 2½ times years of service.

In addition, Reserves retired under the basic Reserve Retirement Act who have had at least 8 years of active service, not counting training service, are entitled to hospitalization for themselves and dependents at hospitals of any of the armed services.

And last, but by no means unimportant, is the fact that the retired Reserve can work for the Government and receive full pay as a civilian and draw his full retirement pay. This is the one thing that you have over the Regulars.

Address by Hon. James C. Davis of Georgia, before the Alexandria, Va., Rotary Club

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. BROYHILL. Mr. Speaker, My good friend and colleague, the Honorable JAMES C. DAVIS of Georgia, was guest speaker for the Alexandria, Va., Rotary Club at a luncheon meeting today in my congressional district.

I was indeed fortunate in being able to obtain a copy of his speech, and as I am firmly convinced this message is of interest not only to the membership of this august body, but also to the entire citizenry of these United States, I am pleased and honored to be able to present it in its entirety to you:

SPEECH DELIVERED TO ALEXANDRIA ROTARY CLUB LUNCHEON MEETING, MAY 26, 1959

I appreciate very much the kind remarks of Mr. Marshall Beverley in his introduction. He is a staunch believer in the principle of States rights, and I have admired him for the fact that he recognizes the need for continued maintenance of our segregated school system. I appreciate the fact that he stands squarely in the open in favor of these principles.

I regard it as a privilege to be invited to address your splendid club. It has been my pleasure at home in Georgia to speak to the Rotary clubs in my congressional district from time to time. The membership of the Rotary clubs at home consists of some of our finest and most outstanding citizens. From my knowledge of Rotarians there, I know your club here in Alexandria is made up of high type and outstanding business and civic leaders.

I know you are seriously concerned with the grave issues which all of us face today, issues which require the best thought and effort not only of our officials, Federal, State, and local, but of each individual citizen. For in the final analysis no single one of us can shunt his responsibility for good government off onto the shoulders of his neighbor. Under our form of government, each citizen must bear an equal responsibility for good government. Just to the extent that I or you neglect that duty, just to that extent we may expect a failure in government.

One of the greatest domestic issues facing the American people today is the problem of preserving the rights of the individual States against ever-increasing Federal encroachment—the problem of States rights on the one hand against Federal domination and tyranny on the other.

The term "States rights" is but the American term for the principle of local self-government—a fundamental human right for which, over the centuries, those who love liberty have fought, struggled, and died. In the establishment of our American Government we recognized this right of self-government. We incorporated it in our written Constitution, and we gave it its American name of States rights.

The other principle relied upon by the founders was, of course, the principle of separation of powers—the creation of three coordinate branches of the Federal Government, legislative, executive, and judicial, each of which would be independent of the other.

Those who founded our Government, being realists, knew that the power of government would, on many occasions at least, fall into the hands of selfish men of boundless ambition. They knew that the idea of benevolent government, without checks is a delusion. They knew the utter fallacy of setting up a government without limitations in the reliance that good men would control it. In this respect Thomas Jefferson said:

"In the questions of power then, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution."

I think that Thomas Jefferson believed that the structure of our liberty rests upon the twin pillars of States' rights and separation of powers. So long as these pillars stand unimpaired, our liberties stand also. But if either of them be struck down, or slowly chipped away, then surely and inevitably our temple of liberty will come crashing down.

With almost prophetic vision that great Virginian Thomas Jefferson warned that the germ of dissolution of our Federal system lay in the Federal Judiciary. On that subject he said:

"Working like gravity by night and by day, gaining a little today and a little tomorrow, and advancing its noiseless step like a theif, over the field of jurisdiction, until all shall be usurped from the States, and the government of all be consolidated into one."

Although the Supreme Court had manifested the inclination throughout the years to expand its jurisdiction and influence, the basic principle of States' rights remained fundamentally intact, remained a sturdy support of the Constitutional liberties of the people throughout the years until about a quarter of a century ago. Until the 1930's our governmental system was still fundamentally based on States' rights, both in principle and in practice. This was so, not to the extent that many had desired, to be sure; not to the extent that the framers of the Constitution had recommended; but still to the extent that the vast majority of those vital economic, political, and social activities most closely affecting the lives of the people remained the subjects of State control and regulation, and were outside the province of the Federal Government.

In the last quarter century, however, we have seen assaults on States' rights at many points. We have seen the National Government in Washington expanded to its present swollen size, to the accompaniment of a steady elimination of the reserved powers of the States.

All three branches of the Federal Government have participated in this movement. The people of the United States, rendered fearful and timid by economic depression, acquiesced in it.

The Supreme Court resisted the trend until the 1930's; but in that era the Supreme Court's role became, and has been since, one of aggrandizing the Federal Government at the expense of the State.

Since that time the Federal Supreme Court has handed down a long string of decisions which have tied the hands of State courts, State Legislatures, and other State and local governmental agencies, rendering them powerless in many respects to oppose Communist infiltration and communistic activities. Among these decisions have been the Slochower case from New York, the Steve Nelson case from Pennsylvania, the Schware case from New Mexico, the Cole vs. Young from New York, the Watkins case from Illinois, the Passport cases, and many others. That Court also handicapped the courts and law enforcement officers in the Mallory case decision.

One of the many Supreme Court decisions affecting local government and States' rights was the school segregation decision in 1954. In the school cases the Supreme Court struck one of its hardest blows against the States and against the Constitution.

The people of Virginia are facing some vital decisions regarding the operation of your schools. The future of Virginia, and indeed the future of the South and of our country, will to a considerable extent be affected by the decisions you make and the action which the people of Virginia take this year and next year regarding the operation of your school system. Now I want to talk to you some today about the important question of segregation in the schools.

I was chairman of a subcommittee of Congress which made a detailed investigation of the integrated Washington school system in September and October 1956, 2 years after the schools were integrated in 1954. I am in position to know the facts about the Washington schools.

To the investigating committee in 1956, Dr. Carl Hansen, then assistant superintendent of schools, and now the superintendent of Washington schools made this statement: "I think that the integration program in this city has been a miracle of social adjustment."

That statement was in direct conflict with the overwhelming evidence about the chaotic conditions in the Washington schools which are driving out the white parents and children, and which have already made Washington a predominantly Negro city, a city in which the school population is 75 percent colored and the overall population is 53 percent colored. While Dr. Hansen was making that general statement, principals and teachers were giving specific testimony along these lines:

The principal of Eastern High School in Washington swore that he retired in 1955 as a result of ill health directly attributable to the conditions that developed in Eastern High School after the integration of the District schools; that fighting, including stabbings, went on continuously; that there were many sex problems; that colored boys began writing notes to the white girls, telling them their phone numbers and asking the girls for their numbers; that he heard colored boys making obscene remarks about a white girl passing in the hall; that white girls complained of being touched by colored boys in a suggestive manner when passing in the halls; that one white girl left school one afternoon and was surrounded by a group of colored boys and girls; that one of the colored boys put a knife at her back, marched her down an alley and backed her against a wall, and that while the group debated as to whether they should make her take her clothes off, she broke away and ran home. He testified that never in all of his experience had he observed such filthy and revolting habits in the lavatories. He testified that there were a dozen or more colored girls who became pregnant during his last year at Eastern High School, and that virtually all social activities were abandoned in that school after integration.

Here are just a few instances of typical testimony of principals and teachers:

The principal of Theodore Roosevelt High School testified to disorder in the classrooms, including fights, foul and obscene language, carrying knives, pregnacies, passing obscene notes, continual efforts on the part of colored boys to approach white girls, even up to the week of the testimony; 10th grade students reading at 4th-, 5th-, and 6th-grade levels, etc.

The principal of Davis Elementary School told the committee that the head of the NAACP Educational Committee in Washington had called her up and demanded that a Negro child who had been transferred to kindergarten from first grade be put back in the first grade. She said this Negro told her, "I will give you 3 days, and then you will hear from me again." She told the committee about pupils in the fifth grade reading on first-grade level.

The principal at McFarland Junior High School, a formerly all-white school, told the committee that school probably would get back to a segregated status. His prediction is rapidly coming to pass. He told the committee that disciplinary problems had a frustrating effect upon the teachers; that this had its effect upon the teaching of the students. He detailed these problems as being such things as stealing, boys feeling girls, disobedience in the classroom, carrying knives, and that sort of things. He said it was necessary to call the police about 50 times during the previous school year.

An elementary schoolteacher at the Emery School testified that teaching in the schools was very difficult after integration; that it affected her health to the extent that she was a nervous wreck.

A teacher in McKinley High School testified that the colored students required considerably more time than the white students, and that as a result the white students suffered educationally because he could not get to them to give them individual instruction. One teacher told of a white senior at McKinley High School attacked by a group of colored boys and beaten so severely that 13 stitches were required to be taken in his face; this was because he objected to an integrated prom at the school. The father of this boy brought him to the Capitol to exhibit his injuries to members of the committee. I saw these injuries myself, and got the story from the boy and his father. That formerly all-white school is now 92 percent colored and 8 percent white.

A teacher at Roosevelt High School, formerly all-white, testified to disciplinary problems, concealed weapons, pregnancies, fighting, lying, stealing, one Negro boy and a white girl writing love letters to each other, miserably low grades. She testified she went to see a doctor at the end of the school year who told her, "You are on the verge of a complete mental and physical breakdown."

These instances I have given you do not even begin to be all of the testimony about the deplorable and chaotic conditions in the District of Columbia schools after integration. They are merely typical of testimony given to the committee day after day. I have dwelt at some length on the undisputed testimony about conditions in the schools simply to point out that Dr. Hansen's statement, "I think that the integration program in this city has been a miracle of social adjustment," is as different from the actual facts presented as daylight is from darkness, and to point up his attitude that this forced system of integration in Washington must be portrayed, at all costs, as a miraculous success.

The plan of integration was so set up that it was so difficult as to be practically impossible for a white child to transfer out of an integrated school.

The only relief for a parent who could not afford to send his child to a private school was to move out of the city of Washington. This they proceeded to do in droves. This is most disturbing to all who are interested in the future of the Nation's Capital. On March 2 this year, the District of Columbia Board of Commissioners made the announcement that Negroes in Washington now constitute 53 percent of the total population. The school census taken in October 1958 showed that in Washington schools the colored pupils were 74.1 percent of the total and whites only 25.9 percent. In the last 5 years Washington has lost 123,000 white people, leaving the white population 387,000. In the same 5 years the Negro population increased 98,000 to a total of 438,000.

The notoriously radical newspaper, the Washington Post, has been one of the most ardent advocates beating the drums for race mixing throughout the years.

Even this notoriously radical newspaper, blinded by its bias, was prodded into a mournful editorial on March 4 this year entitled, "New Form of Segregation," and reluctantly agreed that the situation is bad, and that it is going to get worse.

The record shows that 62 percent of the teachers in the Washington schools now are colored with only 38 percent white.

There are 4,287 teachers in the school system, and of this number, 1,092 are on a temporary basis. The temporary teachers are those who cannot qualify for a permanent teacher's position. The school records in Washington show that the great majority of teachers now applying to the Washington school system for positions are of low ability. In 1958, of 216 teachers who applied, 52 passed the examination; in 1957, of 177 applicants, 40 passed, etc. In the elementary schools more than 30 percent of the teachers are temporary. In mathematics, more than 35 percent are temporary.

On May 3, 2 weeks ago, Dr. Carl Hansen, now Superintendent of the Washington schools, made a television appearance in Atlanta to speak in behalf of the Washington integrated school system. His expenses were paid by the Georgia Council on Human Relations, who also, he said, tendered him an extra $100 for working the appearance.

In his Atlanta program Dr. Hansen was asked the question, "What would you say has been the reception of the people in Washington to the new system?"

His answer to that was, "I think the vast majority of the people in Washington feel that this has been a good thing to do."

As to that statement, the facts speak for themselves. The mass exodus of white people from Washington since 1954 refutes that statement far better than anything I could say.

The facts are almost directly in opposition to the answers given by Dr. Hansen. At the committee hearings, teacher after teacher told us, not in generalities, but of specific instances of friction and trouble. They came before us for 9 days giving detailed information. In this 30-minute speech I cannot even make a good beginning toward giving you the information we received in the school investigation. However, I can send you the printed hearings consisting of 512 printed pages. I will be glad to do so on request, and you may read this testimony for yourself.

School conditions in Washington for white children and white parents are pathetic today. In some respects they are worse than they were in 1954 and 1956. Activities like this are going on: In February of this year a Negro teacher in an elementary school staged a play in the school in which two of the characters were husband and wife. This Negro teacher cast a little white girl in the role of the wife, and a Negro boy in the role of the husband. A few weeks ago a worried father told me that a Negro boy tried to kiss his daughter in the school; that she was able to fight him off, but he did succeed in kissing her girl companion.

One parent of a daughter in one of the Washington schools brought me valentines from a Negro boy to his daughter, and valentines from another Negro boy to another white girl in the same school.

In one of the schools a white girl married a Negro boy who previously attended the same school with her.

In Washington schools today there is being carried on a revolting, systematic, progressive, disgusting campaign of race amalgamation. The situation is not improved. These conditions will develop anywhere under the same circumstances.

The pregnancy situation in the junior and senior high schools is so acute that on the 6th day of May the District Congress of Parents and Teachers adopted a resolution calling for a special education program to insure continued schooling for the many pregnant students of the Washington school system. In that connection, the District of Columbia public health reports show that more than one out of every four Negroes born in Washington is an illegitimate child. This is the atmosphere and these are the conditions to which white boys and girls are subjected in the Washington integrated schools.

To bring the school situation up to date, on Wednesday, May 11, one member of the District of Columbia School Board proposed an ultimatum to require the temporary teachers—who make up about one-fourth of the teaching force—to qualify for certification or leave the system. He said he would rather have double-sized classes taught by qualified teachers than to retain incompetents. On the same day the proposal was also made to increase the compulsory school attendance age in the District from 16 years to 21 years. The reason given for that extraordinary proposal was that children who dropped out of high school at the age of 16 tend to drift into delinquency, often do not become self-supporting, and, more significantly, give birth to those who follow the same pattern of life. The situation, instead of being the "miracle of social adjustment" claimed by the Superintendent of Schools, is bad and is growing worse.

The school problem has reached the stage where the people of Virginia must soon determine whether they will permit the miserable conditions now prevailing in Washington to spill over into Virginia, whether this NAACP-sponsored plot will succeed to transfer control of the public schools system from the State to the Federal Government. I believe that the Virginians of today will make no decision which will stamp them as being unworthy descendents of their revered forebearers, Washington, Jefferson, Lee, Madison, Marshall, Henry, Randolph, Monroe, Mason, and other patriots of the Old Dominion, so proudly acclaimed by the Nation at large. I believe that we of this generation will no more accept oppression or dictatorship than they did.

In carrying on the battle to preserve the principle of States' rights, we are not fighting for any mere slogan. Local self-government is the guarantee of individual liberty, which is the highest aim of all government.

This principle which has come down to us through the ages rings as loudly in our ears as it ever did in theirs, that "resistance to tyranny is obedience to God."

Plato said many years ago that the penalty good men pay for indifference to public affairs is to be ruled by evil men. Edmund Burke said many generations later that all that is necessary for the triumph of evil is that good men do nothing.

The lessons of history are before us to read. Our fight is ahead of us, not behind us. If we do our part, with faith in Almighty God, we will win it.

Corn Has It Better Than You at 65

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. BOYLE. Mr. Speaker, of constant concern to me is the welfare of our senior citizens, who today face the problem of "making-do" with inadequate benefits, in our run-away economy, after a lifetime of service as solid citizens.

In the 86th Congress, legislation must be enacted which will increase the amount of outside earnings permitted without deduction from benefits and provide insurance against the costs of hospitals, nursing homes, and surgical services for persons under the coverage of old-age and survivors insurance benefits.

In this worldwide clash of ideologies, the American people continue to hold firm to their belief in the supreme importance of the human person. One of the hallmarks of our present civilization is our devotion to that ideal and our efforts in effecting its accomplishment. Our Federal Social Security Act embraces that principle for the whole country and corresponding State laws reemphasize it within each and every political subdivision of our land. Disturbances in the economy, or any other events creating human deprivation, distress and want, which cannot be alleviated by individual effort, must consequently set into motion action by the Congress of the United States and the legislatures of the several States to assist our senior citizens.

The presence of over 14 million senior citizens and their ever-present problems will be a challenge through the coming years. With science prolonging the life of the American citizen a singular achievement has been wrought. It is incumbent upon us to find ways and means of solving this new and tender problem.

Under leave to extend my remarks, I want to include a very timely and well written article by Cclumnist Thomas Collins writing in the Chicago Daily News—who pointed up the problem under the title "Corn Has It Better Than You at 65":

CORN HAS IT BETTER THAN YOU AT 65?
(By Thomas Collins)

How come I have to retire at 65?

That's a stupid question. Everybody retires at 65.

But how come?

Because you are old.

That's what a 15-year-old daughter would tell her 40-year-old father. What is old?

Old is 65 years old.

Sixty-four and 11 months is not old?

No.

But 65 is old?

Yes.

Who says so?

Let's change the subject.

O.K. we'll talk about money. When they retire me at 65 my income will be cut from $600 a month to $150 a month. That is a fourth. Will my landlord cut my rent to a fourth of what it has been?

You're being difficult.

I am not. You and my landlord, and my grocer, and the phone company, and the clothing store are being difficult. Don't you think they should cut their prices down to one-fourth for me since my income has been cut one-fourth?

No.

Then how do I make it?

Get another job.

Now you're being stupid. I'm old. Remember? Nobody will give me a job.

Well, you should have saved some money for retirement.

Ha. That's the best joke yet. I saved in 1920, in 1930, in 1940, and in 1950. You should have been around, sonny. Those dollars came hard. And do you know what those dollars are worth now. Have you heard about inflation? That was a pretty dirty trick to play on people who are retiring in 1959, don't you think?

Let's change the subject.

OK, we'll talk about medical bills. Have you had arthritis lately? And what do you think about the price you pay to get it treated after 65?

That's a sensitive subject. It's Off Limits for Discussion.

What do you mean? Who says it's Off Limits?

All right. Cool it off and hand it back.

Very well. Since the business world says I can't work after 65, and since it will pay me only one-fourth of my income when it retires me, how come I can't get my arthritis cured for one-fourth the cost? And, by the way, have you seen how much medicine costs—if you can scrape up enough cash to pay the doctor to prescribe some?

What do you mean getting arthritis?

I'm old. Remember? I worked through World War I, World War II, the Korean War, the Depression, and Bath Tub Gin. I'm a people. And people get arthritis, hardening of the arteries, bugs, gray hair, false teeth and indigestion. Do you think I made a mistake in being a people?

No doubt about it. You should have been an ear of Iowa corn. Then America would have put you in a nice aluminum house, kept the bugs out of you, and paid a premium to preserve you.

Dick Neuberger Selects Oregon's Scenic Gems

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. PORTER. Mr. Speaker, native or adopted sons and daughters of Oregon can vouch for the Oregon which has been described by my good friend and colleague Senator RICHARD L. NEUBERGER in the following article, "Make Mine Oregon." It appeared in the June 1959 issue of Pageant magazine.

A native of the State, a student of its beauties, and probably its most well-known author-politician, DICK NEUBERGER agreed to select his favorite five spots in Oregon for the magazine. It was a difficul assignment. How does one separate gem from gem?

But he took the plunge and I am happy to report that one is in the Fourth Congressional District—it is Ashland's Shakespearean Festival in the Rogue River Valley. A second jewel, Crater Lake National Park in the Cascade Range, adjoins the Fourth District.

I am glad I did not have to make the five selections. Oregon in this centennial year is more lovely than ever. It is beautiful.

Under leave to extend my remarks in the RECORD I now include "Make Mine Oregon":

MAKE MINE OREGON
(By RICHARD L. NEUBERGER, U.S. Senator, Oregon)

One sultry day last June, my wife Maurine was at a swimming party in Washington, D.C., with nine other wives of U.S. Senators.

Pool-side conversation turned to the subject of each wife's home State. Maurine was amazed to find she was the only woman there who still had a house of her own in the State which had sent her husband to the Senate. The others confessed they rarely returned to their States, except perhaps during election years.

When Maurine—like a good Senate wife—reported her findings to me, we tried to figure it out. It didn't take long. Our home State is Oregon. Obviously, the rest of the Senate wives by the pool that afternoon came from States whose charms were pallid by contrast with Oregon's.

The evergreen forests and snowy peaks of Oregon have such a hold on us that we head westward the minute the Vice President's gavel falls on the closing Senate session. We never return to the Capital until the reading clerk is ready to intone the first rollcall of the new Congress. And we usually travel by train, so we can savor the thrill of rolling into Oregon through the great natural gateway of the Columbia Gorge.

Indeed, we understand well the sentiments of the young married couple, schoolteachers from New York City, who worked for a summer as lookouts in Oregon's Mount Hood National Forest. They lived in a crackerbox cabin on a lonely bowsprit of lava rock above a sea of fir trees. "It's downright breathtaking," they exclaimed. "And we even got paid for it. We had no idea our country contained a Shangri-La."

They were not the first or the most renowned to react so exuberantly. Six decades before, a mustached little Englishman avidly angled for Chinook salmon from the Clackamas River and exulted:

"I have lived. The American Continent," said Rudyard Kipling, "may now sink under the sea, for I have taken the best that it yields, and the best was neither dollars, love, nor real estate."

Oregon is one of the few States of the West where it was rare for a frontiersman to perish from hunger. Tales of cannibalism might come from California or Colorado, but in Oregon there was always a stream bursting with fish or a mountain swale dotted with elk. Waterfowl streaked the sky overhead. Oregon was breadbasket and lumberyard for California's gold rush.

The Columbia River is a symbol of Oregon's remarkable fecundity. Its salmon runs are worth $20 million annually. It has the proportions of the Rhine or St. Lawrence. In its swift reaches lie over 40 percent of our country's potential hydroelectric power. It frequently attains a depth of 300 feet and annually carries 180 million acre-feet of water to the sea. The surging Colorado, next principal river of the American West, has a runoff of only 18 million acre-feet.

Throughout western Oregon, evergreen trees flourish like weeds do everywhere else. They thrive in backyards, cling precariously to mountainsides. Trees grow so profusely in Oregon that the early settlers actually burned off virgin fir and pine so they could clear the land for potatoes. This wasteful practice was stopped in time to save for Oregon some 434 billion board feet of sawtimber, which makes it by far the country's leading lumber-producing State.

But these trees do more than support 70 percent of Oregon manufacturing payrolls. They safeguard the runoff of innumerable lakes and rivers; they furnish the snug home for big game, birds, and other wild creatures.

Across the street from our 45-year-old colonial-style residence in Portland are fir trees twice the height of our three-storied roof. More evergreens grow in Portland than in any other city of the world, even including those in Vienna, immortalized by Johann Strauss' lilting "Tales From the Vienna Woods."

A mere 1 percent of the national population—1,760,000—people inhabit Oregon, a realm more than twice the size of Pennsylvania. This means that elk, mule deer, pronghorned antelope and cougars have not yet been civilized out of existence in our State. People fish for smelt in the rushing Sandy River with wastebaskets, washtubs and stewpots. Shovels and rakes bring in a rich harvest of crab, clams and oysters from the sea.

Oregon's 167 State parks are the most numerous of any State, and why not? Around every bend in the road is a scene worth permanent protection. At Silver Creek Falls, a sheer cliff is embroidered with a varied series of lacy cataracts. At Ecola Park, timbered headlands of the Coast Range kneel spectacularly in the Pacific. Lewis and Clark, first of all westbound Americans, picked the name ecola, the Clatsop Indian word for "whale." My pulse always beats faster when I am camping or surf-bathing where our Nation's most important exploring party reached its goal.

Sometimes as I sit in my leather chair on the Senate floor, between Senators FRANK CHURCH, of Idaho, and ALBERT GORE, of Tennessee, I think of hand-hewn Timberline Lodge, notched into the great glacial face of Mount Hood, with its tempting choice between 3-mile ski runs and a steam-heated pool. My mind dwells in reverie on the meadows of clematis and bride's bonnet which dot the granite Wallowa Range, where gleaming little lakes are alive with trout.

I recall turbulent rides on the Rogue River in the boat which brings mail to the people of the wilderness, and I remember riding out of Hells Canyon across the frowing hump of Freezeout Saddle. Hells Canyon is 6,500 feet deep—deeper even than the Grand Canyon of the Colorado—and sometimes the comfortable Senate chair fades away and I am peering giddily down at the green Snake River, over a mile below.

Being a U.S. Senator from Oregon has its rewards. But the penalty is spending so much time 3,000 miles away from Oregon.

Oregon can spoil people for other places. Roses grow in abundance in Portland, the long, cool spring giving this loveliest of all flowers a special sheen and fragrance. If rodeos are your weakness, the annual Pendleton Round-Up is without peer. If flights of migratory waterfowl at sunset make you feel humble and nostalgic, the Malheur National Wildlife Refuge is in a class by itself.

If the Malheaur Refuge were in distant Africa, Americans might cross the Atlantic and the Mediterranean to be awed by it. The immense refuge, established by President Theodore Roosevelt as a wildlife sanctuary, is 100 miles long and 30 miles wide. One sees countless sandhill cranes, egrets, herons, pelicans, ducks and geese, swans, gulls, quail, sage hens, and loons. As a wayfarer walks along the dikes, small game starts up—deer, raccoons, beavers, porcupine, badgers, coyotes, antelope.

Oregon, less publicized than such States as California and Colorado, appears to my biased eyes to possess more grandeur than either Colorado lacks the ocean to offer contrast to its mountains. California, for all its magnificence, is searingly dry and arid. But Oregon lilts to murmuring water.

Oregon reflects intellect and ideas, too. Her people have taxed themselves sacrifically in order to develop one of the finest school systems in the Nation. During the Korean war, in Army aptitude and intelligence tests, GI's from Oregan had a higher proportion of successful grades than those from any other State except Minnesota. In the percentage of its adult population with less than 5 years of schooling, Oregon comes up with only 4.3 percent—the best record save for Iowa, with 3.9 percent.

Oregon is but 1 century old this year, yet its contributions to Government would be worthy of a State in the Union since colonial times. It was a precedent-breaking Oregon law which resulted in the original U.S. Supreme Court decision upholding a limitation on the number of hours which women could be worked in factories or laundries.

Oregon also was the first State to adopt the initiative and referendum. To this day, petitions are circulated on Oregon street corners and rural roads, as proposals are placed on the ballot through the collection of signatures. Some people have reduced signature collecting to a skilled pastime, although pretty girls generally have the highest skill of all. (And Oregon, where Jantzen bathing suits were originated, has breathtakingly pretty girls.) Some 26 other States have copied Oregon's initiative and referendum laws.

Furthermore, until Oregon demonstrated that there was a better way to do it, all U.S. Senators were appointed by State legislatures. Land companies, timber barons, and railroads bought and sold Senate seats like baubles. Finally, in Oregon, a brilliant reformer named William S. U'Rren initiated a movement which developed over the years until, in 1906, Oregon became the first State ever to elect a U.S. Senator by direct popular vote. The old appointment method was thoroughly discredited. The 17th amendment to the Federal Constitution followed, requiring Members of the Senate from every State to be chosen at the ballot box.

So plenty of original thinking has occurred in Oregon against the backdrop of limitless forests and glacial mountains. I always get a thrill when I enter a remote ranchhouse and find books from our well-stocked State library. Oregon citizens are assiduous readers of books, magazines, Government document and even the CONGRESSIONAL RECORD.

Below the timbered ramparts of the Siskiyou Range, Southern Oregon College sponsors one of the Nation's finest Shakespearean festivals each August in an Elizabethan-style theater. Actors and actresses from as far as England participate. Tourists who have fished for salmon or steelhead trout by day sit under the stars at night for performances of "King Lear" or "Much Ado About Nothing."

Yet, in Oregon, man's handiwork will always seem secondary to the State's cosmic natural environment.

Look down into the blue cauldron of Crater Lake, the great National Park of our State. The icy water fills the volcanic hollow of Mount Mazama, which blew off its summit in prehistoric times. It is 2,000 feet from rim to water, and uncharted distances from there to the lake bottom. The ubiquitous evergreen, in the form of stately pines, stockades the lake's shore and the croutonlike islands. Lupines and heather ring the rocks.

No Oregon resident can stand on the brink of this mighty spectacle without immeasurable pride in a State which a generous Creator has tinted and touched so gloriously.

A Tribute to Carl Holderman

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. RODINO. Mr. Speaker, a poet once describing man's way from life to death had this to say of it: "I shall not pass this way again." And so it has been from the beginning of time and man.

And, on Wednesday last a good friend, a great public servant and one who loved his fellow man, passed this way for the last time. And his passing has filled the hearts of many with sorrow.

Those who knew him most intimately, who had worked with him in the labor that was his love, the officers and executive board of the New Jersey State CIO Council, recorded their deep sorrow over "the passing of our brother and former president, Carl Holderman." In this manner Carl Holderman devoted his entire life to the service of all who must toil. Every workingman and woman, both from within and without the ranks of organized labor, has had his life enriched by the noble contributions made by this great leader of the New Jersey trade union movement. His achievements will forever constitute a monument to the goodness and greatness of this outstanding fighter for social, economic, and political justice.

The above is an eloquent and fitting tribute to any man. And by none could it have been more richly deserved than Carl Holderman.

It had been my privilege and pleasure during the past 14 years to have known Carl Holderman as a friend. Many times I was the beneficiary of his good counsel, unselfish assistance, and generous and kindly guidance. All of this was aimed in the direction of the general common good.

Mr. Holderman was appointed commissioner of labor and industry by Gov. Robert B. Meyner, in 1954. In assuming the post, he resigned as president of the New Jersey Council of the Congress of Industrial Organizations, a position he had held since 1945.

He had been identified with trade unionism in the State since 1919, when he was elected to a minor office in a local union. He believed strongly in labor's role in politics as a means of eradicating corrupt influence from governmental offices.

As an organizer for the CIO Political Action Committee, Carl Holderman often appeared before the State legisla-

ture to express his views on pending bills.

He left public school at 13 to work for the Erie Railroad as a messenger. After 2 years he was made a shop worker. Four years later he took a job in a textile mill.

Mr. Holderman worked in mills in Hornell and in Paterson and Union City, N.J., for 14 years and was a member of the American Federation of Labor's hosiery workers' union. In 1926 he became manager of the union's New York-New Jersey district and 2 years later became an international vice president.

In 1928, Mr. Holderman was named to the executive board of the New Jersey Federation of Labor. Three years later, he became business manager of a cooperative labor publishing house in Philadelphia.

He returned to the AFL in 1933 as an organizer of hosiery workers in Pennsylvania. Four years later Mr. Holderman was elected president of Labor's Non-Partisan League of New Jersey, an organization he help to found in 1936.

In 1937 he was regional director of the CIO Textile Workers Organizing Committee, which set out to unionize 1,250,000 employees in the industry under the guidance of John L. Lewis. In the same year, Mr. Holderman, worked toward the organization of a labor party in New Jersey among CIO and AFL unions.

In World War II he served on the War Labor Board and the Newark Labor Relations Board and Defense Council.

Holderman was above all else a man of character and integrity, and idealist and dedicated servant of the rank and file worker in his State and in the Nation. He was a foe of corruption and shady dealings in the trade union movement and in political life. He was a sophisticated and able operator in the fields of both politics and labor, but he never compromised with what he believed to be the ethical and wise position for a labor union or a political party.

Carl had great breadth of outlook; his interests and sympathies were wide and deep. Though his first and primary loyalties were to the working people of his State and to the administration of the legislation governing industrial relations and the social welfare of our society, he gave much thought to international questions and worked with various groups who feel that it is to the vital interest of the people of this country to seek ways and means of insuring the growth of democracy and free institutions everywhere.

Carl Holderman was a wonderful human being; warm, companionable and wise. His influence, his sagacity and his leadership will be greatly missed in New Jersey and throughout this country.

Carl Holderman shall not pass this way again—but I am sure that none will ever forget the good things he did while passing along the way.

Under leave to extend my remarks I wish to include the following editorial which appeared in the Newark Evening News of May 21:

CARL HOLDERMAN

The fiber required for survival as a labor organizer in the brickbat era of the 1920's carried Carl Holderman on to the presidency of the New Jersey CIO and then into the office of Commissioner of Labor and Industry. When some protested the Cabinet appointment on the ground he would favor labor over industry, he was the first to agree.

As the Governor's emissary to labor he handled the political requirements of that post capably, and a large share of his energy was directed to making his department serve working people of the State in the field of industrial safety and the like.

In Mr. Holderman's death, the Governor has lost an able cabinet officer, and New Jersey labor has lost a friend.

Hazleton (Pa.) Church Celebrating 112th Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Hazleton Plain Speaker of Saturday, May 16, 1959:

The members of Grace United Church of Christ will celebrate the 112th anniversary of the founding of the congregation beginning on Sunday.

The special speaker for the occasion will be Dr. William Toth, chairman of the department of history at Franklin and Marshall College, Lancaster, Pa. He will address the members and friends of the congregation at both services of worship at 8:30 a.m. and 10:45 a.m.

Dr. Toth studied at Franklin and Marshall College, the Seminary at Lancaster, the University of Budapest, and Yale University. Next year he will be on sabbatical leave from F & M and will travel, research, and lecture in various countries of Europe. Dr. Toth has written scholarly articles and several books in the field of history and religion. His last appearance in Hazleton was a few years ago when he spoke at the Reformation Day services sponsored by the Hazleton Ministerial Association. The title of his sermon at both services on Sunday will be "The Precious Possession of Christ—the Church."

The three choirs under the direction of Miss Chlora Fey will render special music for this occasion.

The annual "Love Gifts" from members of the church will be received at these services. Last year these gifts amounted to $1,800.

Last year the congregation gave total benevolences of $6,788 to the denominational apportionment, World Service, and other denomination causes, including some causes outside the denomination. Total congregational expenses were $17,596. Capital outlay for improvements to the church property amounted to $2,919.

Officers of the Consistory are as follows: President, William Y. Gebard, pastor; vice president, Robert Pensock; secretary, John F. Boettger; treasurer, Donald Reimold. Members of the official board are John Boettger, George Guscott, T. D. Kreiger, Landis Oberholtzer, William Toennes, Eugene Welsh, Irvin Hoppich, John Schafer, Charles Koch, Robert Pensock, John Schnorr, Paul Sell, and Clarence Shermer.

The general officers of the Sunday school are Mrs. Robert Pensock, superintendent; Thomas Burgess, secretary; Harold Benner, treasurer.

Executive heads of the departments of the school are Clarence Shermer, adults; John Benner, youth; Mrs. Ruth Siglin, juniors; Miss Hilda Wendel, primary; Mrs. Harry Howey, kindergarten; Mrs. Harry Schmauch, nursery; Mrs. Fred Walk, cradle roll. Mrs. T. D. Kreiger serves as president of the Women's Guild, Mrs. Conrad Klotz as head of the Mission Group, Robert Koch is president of the Youth Fellowship, Robert Knyrim supervises the Grace Dart League.

The congregation has entered men's and women's bowling teams in the Sunday School League, a team in the Sunday School Basketball League, and a team in the softball league sponsored by the Protestant churches of the area. The budget for the year 1959 approved by the official board and the congregation is $23,422.

The congregation has opened its facilities for work with Boy Scouts, Girl Scouts, and Brownies. Competent leadership promotes the work of these community organizations every Tuesday, Wednesday, and Friday nights.

Many of the members of Grace Church serve the community in the following organizations: Junior Chamber of Commerce, Salvation Army, Y.M.C.A., Y.W.C.A., Pennsylvania National Education Association, Child Care Clinic, Community Chest, Hazleton Women's Club, Crippled Children's Association, State Hospital Auxiliary, Community Chorus, Hazleton Art League, and the Concert Association.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

What Should Be America's Role in World Politics?

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. VANIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following seminar addressed to the senior class of Akron University by Prof. Alfred J. Hotz, of the political science department of Western Reserve University in Cleveland, Ohio.

In this era of international tension it is particularly timely that all Americans be informed of the problems which face their Nation in the sphere of world politics.

WHAT SHOULD BE AMERICA'S ROLE IN WORLD POLITICS?

(By Dr. Alfred J. Holtz, senior seminar, general studies program, Akron University, Apr. 23, 1959)

What should be America's role in world politics in this mid-20th century? Stated in most simple terms, America's role should be to maintain peace, with honor. As President Eisenhower warned: "Such a peace cannot be achieved suddenly by force, by edict, or by treaty. It can only come slowly and tortuously. It will not be won by dark threats or glittering slogans. It will be born only of courage, knowledge, patience, leadership."

Is such a peace, with honor possible, or even probable, when we soberly analyze the issues and problems that divide the world today? In my measured judgment, such a peace, tenuous and tortuous, can be, and must be, maintained by-and-through American leadership. Yet, to accomplish this difficult objective will require a sound understanding of three massive realities: (1) the nature of the world problem; (2) the crucial issues that divide the present-day world; and (3) the possible and suggestive alternative policies to be pursued by the United States.

First, the nature of the world problem can be simply stated as the rivalry between the Communist-imperialist states and the western-democratic states, for the extension and expansion of their respective systems to the rest of the world. World politics has always, in past history, involved a basic struggle for power and influence over other national-sovereign states. Unhappily, in the past these ancient rivalries even as recent as World War II, have invariably ended in armed conflict.

So long as there are sovereign states, so long as there is no world government, with commensurate power, there will be, at best, a constant power struggle between those nation-states who have sufficient power (political, military, economic) to wage such a struggle for power; or, at worst, another war.

The power struggle is inevitable. Indeed, all politics, local, national, and international, is power politics. At the local, State, and National levels of politics, we, in the United States, appeal to our politicians to achieve worthy objectives. That is the reason that we have political parties, who periodically present the ovters with alternative policies and programs—i.e., at election time. The victorious "politician" after ascending to his position must employ power to achieve the results expected of him. Power, itself, is amoral—without morals. Power, even at the national level, can be used for legitimate objectives—internal order, economic security, justice for all, etc. Power, at the national level, can also be used for wrong objectives—and a government, or a politician, is then referred to as corrupt.

The essential fact that I wish to reiterate is: that all politics is power politics, for power is the capacity to produce results, or to achieve objectives. Thus, as George Kennan wrote: "Power does exist and is, indeed, a necessity of civilization, flowing from certain facts about human nature—certain imperfections if you will—that are basic and are not going to be corrected by any man-made device whether institutional or educational. These basic facts provide one of the main keys to the understanding of history."

Within the United States, as well as within the other liberal-democratic states, political power is constitutionalized and institutionalized. Yet, we must frankly admit that sometimes, even within our beloved Nation, there exist political, social, and economic evils.

Indeed, that is why our periodic elections provide the opportunity for interested citizens to change the guard, as the saying goes, whether in the White House, Congress, or other political institution. Thus, we should, as political realists, reaffirm the statement made by the distinguished theologian, Dr. Reinhold Niebuhr: "Man's capacity for justice makes democracy possible; but man's inclination to injustice makes democracy necessary."

When this concept of dualistic man is projected onto the international level, we see no constitutional restraints, nor common objectives. What we see instead is a bipolar power struggle between the Western democracies and the Communist imperialists. This power struggle cannot be eliminated by moralistic admonitions to do away with power politics, nor ameliorated by invocations that we should turn to international law.

For, international law is so fundamentally different from constitutional law within a nation-state (i.e., United States) that it should probably be called by a different name to avoid confusion. For real law can be effective only when two conditions prevail—a moral concensus within the world community, and adequate power of enforcement. Neither of these conditions for effective international law prevail at the present time, nor are either of these conditions likely to prevail in the foreseeable future.

As Secretary of State Dulles stated: "Treaty pledges, no matter how solemn, will never restrain powerful and ambitious rulers who do not accept the restraints of moral law and who are not responsible to the will of the people. As against such despots there must be other and further restraints. Thus, the struggle goes on. * * * Treaty declarations must be backed by a purpose that is ever sustained by an intelligence that is ever alert, and by power which is ever ready and able to punish aggressors so that aggression will not pay."

The nature of the problem is then: the inevitable struggle for power as waged between sovereign states, each of which is capable of defining and defending its national interests. The national interests are those vital interests, both ethical (moral) and material, which a nation will defend with its ultimate weapon. The national interest includes a nation's territorial integrity, political independence, and economic productivity.

No nation, however responsible, or peaceful, can long survive without the necessary power to sustain and defend its national interest. The basic power factors include the size and geographic position of the nation-state, its economic resources, industrial potential (both quantitative and qualitative), its political stability, its national morale, and its military establishment.

Military force, when supported by other power factors, may modify the behavior of potential aggressors. Clausewitz wrote: "War is the continuation of politics by other means." Good intentions, and high-sounding moral resolutions cannot preserve peace with honor. In brief, for any nation to survive (i.e., defend its legitimate national interests), and indeed to preserve its value system (the American way of life), it must be prepared to employ its military force. Therefore, the sole question is whether military force should (would be) utilized for aggressive-expansionist national objectives, or for restricted defensive objectives.

In the present bipolar world, the Communist-imperialist bloc has expanded its domain, as clearly evident in East Europe, in China, primarily by the use of military force. This military expansion has been contained thus far to some extent by American military power. Its political extension has been countered in Europe by the Western coalition, i.e., more specifically—the North Atlantic Treaty Organization (NATO). Communist expansion has been somewhat restrained in Asia by the Southeast Asia Treaty Organization (SEATO); and by certain bilateral pacts, led by the United States.

More simply stated, the United States has attempted to forge coalitions of nations, thereby bringing to fruition the balance-of-power mechanism. Now, the balance-of-power system, in both domestic and international politics, is designed merely to prevent a particular power group from acquiring a monopoly of power. Even the best of alliance systems can never guarantee peace; though, if properly employed, a sound alliance system has, thus far, prevented any single state from achieving world empire.

The nature of the problem (i.e., the eternal struggle for power) has been compounded since the end of World War II, by the unceasing hostility of the Communist-imperialist bloc toward all non-Communist states. Whether or not we Americans accept or understand the Leninist declaration that war is inevitable between the Communist and Western systems, it is reasonably clear that Soviet-Red Chinese leadership acts on that premise. To be sure, Khrushchev, at the 20th Communist Party Congress, stated that war is not fatalistically inevitable. Yet, a closer analysis of Khrushchev's entire speech reveals that he was not asserting a self-denying ordinance to Soviet military force (against its use), but was, instead, assuming a passive military posture by the United States.

More recently, the Moscow declaration (November 16, 1957), with its clear denuncia-

tion of all that the West (United States) stands for, and with its brutal enunciation of Communist global objectives, was so blatant, and so ill-concealed, that even the Communist Tito was prompted to reject it, while Poland's Gomulka attempted to soften its import.

America's role in world politics is both great and grave—the more so, because liberal democracies are numerically in the minority in the mid-20th century world. Actually, and factually, true democratic nation-states are in the minority, whereas totalitarian dictatorships, along with authoritarian states, are in the majority. If the world balance of power is not to be tipped irrevocably against the United States (and our allies), we must remain united and strong. More specifically, that means that America and her allies must not merely pursue a policy of mere containment of the Communist empire; but that we must produce a policy of expansion of western ideals, ideas, and institutions—at least to that part of the world, frequently referred to as the "uncommitted world"—the Afro-Asian world.

Whether we know it, or not; whether we like it, or not, the western coalition, led by the United States, is engaged in a bitter, and crucial struggle for power and influence in the world, and is dramatically opposed by the Soviet-Red Chinese empire. More precisely, the present balance of power will not necessarily remain relatively favorable to our side, nor even tolerable for the West, unless American leadership commences real action policies on all fronts—that is, political, economic, military, and psychological.

Sir Oliver Franks, British Ambassador to the United States, declared, in 1955: "I believe that history has given us (the West) a period within which to work out our problems. The period began with the end of the Second World War, and it may last as long as the working lifetime of my generation. It will not be longer; it may be shorter. Within that period, no one year or the decisions made in it are likely to be in the strict sense crucial; neither this year (1955), nor the year thereafter. Within the period there is always time. But the whole period, whatever its duration may turn out to be, is crucial. What we do or fail to do in it will be decisive. After that there will be no second chance."

Those of us assembled here are living during this crucial period of decisions, and we are discussing today those grave determinations whose consequences may not afford us a second chance. Indeed, the very fact that Khrushchev feels powerful enough to raise the Berlin crisis again; and that the Kremlin launches blustering threats of nuclear warfare against such small peaceful nations as Switzerland, Denmark, Norway, and others, seriously suggests that the West, and particularly the United States, has not properly used the years since Ambassador Franks' clairvoyant warning, issued in 1955. Moreover, the very fact that Red China has felt powerful enough to act so brutally in Tibet, as evidenced recently, illustrates the power balance is shifting slowly and imperceptibly in favor of the Communist bloc.

Now, if I may move to my second major area for your consideration—i.e., the crucial issues that divide the bipolar world. Essentially, as I stated earlier, the major issue that divides the democratic (Western) coalition from the Communist bloc is which grouping will not only defend its national interests per se, but which bloc can extend its particular system to the uncommitted third bloc—i.e., the Afro-Asian world, which area holds the determination of the ultimate world balance of power.

This broad general issue (the present and future balance of power) may be delineated by a brief analysis of the separate-though-interlocked issues—i.e., the military issue, the economic issue, and the political issue.

The military issue is quite clear—the arms race. Actually, the United States, in the immediate post-War II period did its utmost to prevent the arms race—for we demobilized our huge World War II military machine, and offered to internationalize our atomic bomb production—i.e., the Baruch plan. But the Soviet Union refused to cooperate on both counts.

Indeed, Stalin employed a highly mobilized armed force to encourage the Greek civil war to impose the first Berlin blockade, and to unleash the Korean war. Soviet leadership, whether under Stalin, or presently Khrushchev, openly avows the famous Clousewitz dictum that war is a continuation of politics by other means.

A recent Soviet General Staff paper put this doctrine more bluntly when it stated: "The objective of (Soviet) military strategy is the creation by military means of those conditions under which politics (Soviet ideology) is in a position to achieve the aims it sets for itself."

Former Ambassador to Russia, George Kennan, said that "a major war with Russia within the next decade is likely unless the weapons race is halted and our relations (United States) with the Soviet Union improve."

The one hopeful note, in this otherwise dismal picture is that Soviet ideology, dynamic as it appears, does not necessarily prescribe the actual initiation of war by the Communist military machine. Indeed, thus far, at least, Soviet doctrine opposes the taking of inadmissable military risks—and in that sense is defenseive—i.e., the survival of the Soviet States. Yet, the Soviet ideology has as its major objective the expansion of Communist power by whatever means, including the employment of military force, if not counter-balanced by Western force.

More simply stated, the Soviet Union would prefer to achieve its objective of an expanding Communist Empire by not engaging in a general all-out war, but by employing a variety of military measures against the non-Communist world, none of which appear, at the moment, to be of sufficient gravity to call for the fullest measure of response by the West, particularly the United States.

The Berlin crisis, at present, openly perpetrated by Khrushchev, and perhaps perpetrated for some months ahead, unless the United States firmly undertakes to warn the Soviets that we shall take the calculated risk of war, is an example of Communist ambiguous aggression, rather than open military war by the Russians. However, Khrushchev presented the West with an ultimative note, answerable by May 27—and what the American position will be in these critical days of the future, I would not, at this moment, be prepared to predict. Yet, I sincerely trust that the United States will be prepared to defend, with military force, if necessary, our national interests,—which, in my measured judgment, include the defense of West Berlin at all costs.

The comparative quiet of direct Soviet military pressure in the early 1950's only came about after the American military response to Korea, with its subsequent buildup of our conventional and nuclear armed forces. Thus, we were compelled by military necessity to acknowledge that military force is an instrument of American policy in defense of our national interests.

A closer look at the present Soviet military establishment, and its component weapons system, suggests the future military problem to be confronted. Having maintained a 3-to-1 advantage in ground forces over those of the combined Western coalition, the Soviet Union has dramatically built up its atomic-hydrogen capabilities in an attempt to overtake the initial nuclear advantage held by the United States—an advantage, incidentally, which we have never applied directly in a military sense thus far.

While the United States today has a far larger number of nuclear weapons in its military arsenal than does the Soviet Union, all sound intelligence estimates agree that Russia has a sufficiency of nuclear weapons capable of devastating our industrial centers. Indeed, it is significant that the major difference, as between the United States and the Soviet Union, during the most recent nuclear tests has been the Soviet objective to produce larger bombs, of greater firepower, as contrasted to our objective of low-yield nuclear weapons for purposes of more sophisticated and selected warfare.

The major Soviet military weakness, thus far, has been the lack of long-range delivery systems designed to place the continental United States under direct attack, or at least under the threat of attack. Up to the present date, we have held a qualitative and quantitative advantage in piloted medium and long-range bombers. That military fact preserved heretofore the basic concept of a deterrent to any large-scale Soviet military venture against the free world periphery.

However, the American deterrent has been undoubtedly weakened by the Soviet comparative success in the missile field. Even the best and most objective Western military experts disagree on the exact progress of Soviet missile development. Yet, the concensus appears to be that with respect to short-range missiles (up to 700 miles), and with regard to intercontinental missiles (range up to 5,000 miles), the Russians are presently ahead of the United States.

The spectacular success of the Soviet sputniks, while perhaps originally exaggerated by both the Kremlin and by us, presents us with two major military conclusions. First, it is reasonably clear that the Soviet Union is attempting to leapfrog the American temporary advantage in piloted long-range bombers by intensifying their miltary technology in the missile field. Second, the Kremlin is expecting within the next few years to achieve a counterdeterrent by making more vulnerable to possible attack the United States proper.

Once having achieved such military sufficiency in ICBM's, the Soviet would nullify the prevailing military balance of power. Thus, while Soviet missile development is in one sense a defensive operation, its end result would be offensive. Behind a sturdy missile shield, the Soviet Union would again assert, as it has in the past, both direct and indirect military pressure all along the entire Eurasian periphery. Therefore, we should expect a return to a variety of forms of Communist military pressure—namely, military demonstrations such as the Red Chinese against Quemoy; the fomenting of proxy wars, such as in Korea; the creating of internal dissension through support of local Communists, as in Malaya or Burma; the encouraging of new military conflicts through Soviet arms deliveries, as exemplified to Nasser's Egypt, but presently to Iraq; and open threats against West Berlin.

Parenthetically, Soviet political tactics coincide with the above-mentioned military strategy and tactics. On the one hand, Soviet leaders proclaim their soothing logic of peaceful coexistence with the West—the so-called spirit of Geneva. On the other hand, the Kremlin launches blustering threats of nuclear warfare against such small peaceful nations as Switzerland, Denmark, Norway, and others. In both instances, the Soviet objective is designed to neutralize the Western will to resist Soviet expansion. Expressions of peaceful coexistence neutralize those well-meaning, but ill-informed, Westerners who have faith in Soviet good intentions. Threats of atomic warfare, or blackmail if you will, neutralize those who sincerely fear nuclear attack.

However, it should be added that Soviet military doctrine is fully prepared to utilize

nuclear weapons as part and parcel of Russian military pressure. Indeed, the Kremlin has kept a more balanced view on the horrors of atomic war than have we. A recent Soviet General Staff report declared: "It is entirely clear that atomic and hydrogen weapons alone, without the decisive operations of (Soviet) ground forces with their contemporary material, cannot decide the outcome of war." A balanced utilization of nuclear and conventional forces is reaffirmed in their statement that it will be "necessary to advance on the territory of other states, not in order to seize their territories, nor to suppress some people, but to destroy the barbarous imperialist robbers" (meaning the United States). Indeed recently, there came an official declaration from Red China that it was prepared to sacrifice 300 million Chinese in a new war. Incidentally, Red China has announced a 16 percent increase in its military budget for next year.

Now, to the final major problem to be analyzed—i.e., the American response to the Soviet military challenge. The answer, in my measured judgment should be obvious; yet, I feel that we have compounded our problem by a strange combination of philosophic tradition and psychological trauma.

Traditionally speaking, we Americans have held to the illusion that military force should not be an instrument of national policy. Part of this view was held due to our profession of ethical concern against the use of war, even though, as a Nation, the United States has engaged in war in defense of the national interest.

Part of our past views were due to fortuitous circumstance. That is to say, until World War II, the United States had reaped the benefits of an unearned military security because of the British Navy and the French Army. Today, the Western military balance of power must be assumed by the United States.

Our psychological trauma has resulted from the new awesome dimensions of the consequences of atomic war. Please don't misunderstand me when I say that if American leadership were to give vent to these fears and cringe from the military responsibility to be borne, even at the cost of atomic war, the Soviet Empire would expand to encircle the globe by virtue of our default. Thus, Khrushchev hopes that the United States will concede West Berlin to the expanding Communist empire by default through our retreat.

Moreover, the United States is constantly being pressured by the so-called neutralist nations, such as India, to reduce our military preparedness. Two things should be clear. First, India has protested less against the Soviet continued military build-up, including Soviet atomic testing, than against Western defense preparedness. This despite the fact that India's national security is presently being shielded by the military umbrella of American power.

Second, India, and the other neutralist states, made no great outcry against Soviet sputniks, whose military implications should have been obvious to all. Indeed, India proclaimed great praise for Soviet scientific technology, suggesting, in effect, the supremacy of the Soviet system over that of the West. Moreover, neutralist schizophrenia is further exemplified by the incessant criticism of Western materialism, supposedly because we do not grant due concern to spiritual and ethical aspects, yet no such criticism is directed against Soviet materialism. Thus, I do not think that the United States should take too seriously the neutralist view against military force, nor should we be deterred from building up the commensurate military establishment in an effort to maintain a tolerable balance of military power vis-a-vis the Communist empire.

The key point to remember in this grave military dilemma is that Americans must first create within themselves a proper attitude of mind, a firm will to resist, and to communicate this attitude with clarity and dispatch to the Communist leadership. For essentially, the military deterrent can only be effective if it is credible—in other words, if the enemy credits us with the military capability and the psychological will to employ our weapons system when and where required. Therefore, the present balance of terror is measured less by the uneasy equilibrium of military power per se, than by the political assessment of risks involved, an area of calculation in which the Soviets are superior to the Americans.

Paradoxically, the more successful we are in deterring the Soviets from a general war, the more likely we shall be confronted with the possibilities of ambiguous aggression, affecting a local balance of power, as in Berlin, or, as in the Middle East. Consequently, there will be the continued requirement to increase our military strength to achieve two military objectives: one, continued deterrence, and two, sophisticated-selected warfare.

Deterrence, to be effective in the future, will require a substantial development of the missile field, with greater dispersion of our launching sites, including atomic submarines loaded with the solid-fuel propellant, the Polaris. It will demand also a firmer understanding with our NATO allies, especially Great Britain, which for some strange reason is quaking in the wake of the crucial decision to hold West Berlin at all costs.

Sophisticated selected warfare to counter ambiguous aggression will require mobile aircraft of shorter range, capable of something less than atomic attack; combat-ready amphibious forces, backed by sturdy naval support, for purposes of both firepower and logistical support; and a highly trained ground force, backed by air elements necessary for tactical support.

In brief, our military policy should be to attempt to avoid a major conflagration, if possible, but to accept the risk and even necessity for involvement in minor conflicts, including Berlin, and to deal with these at the least practicable level of armed violence with a view to acceptance of temporary armed truces that promise no final settlement, but which at least grant us the time and the opportunity for political negotiations with our adversary. We should have the modesty to admit that it is not within our power to settle all, or even a substantial part, of the great issues that exacerbate the irrevocable conflicts between the Communist Empire and the Western World, and the patience to recognize that the unpretentious political settlements we may achieve in the future (i.e., Berlin) are momentary and temporary.

This leads me into a very brief discussion of the second grave issue—the political problem—and America's role in an attempt to resolve the deep-seated political-ideological conflict that divides the Communist world from the Western World, and thereby prescribes the present bipolar world. Frankly speaking, I see no way, as of this moment, whereby Americans, who firmly preach, and more resolutely practice, real political democracy, can ever merge with those Russians and Chinese, who devoted articulate, and devastatingly insist, that communism must embrace the entire world.

The political issue, then, is clear—i.e., which of the two political systems can offer the greater attractions to the third bloc—the Afro-Asian world. And here, I am reminded of one of the most expressive definitions that I have ever heard as to what is democracy. Interestingly enough, this definition of democracy came from one of my Asian graduate students, who was working on his master's degree at Western Reserve University. He said: "Democracy is not the color of one's skin, nor the slant of one's eyes; but it is the color of one's thinking and the slant of one's ideas."

Quite obviously, the United States requires new thinking and new ideas as to its role as world leader—though the basic principles of world politics are age-old. America must not miss this great challenge and opportunity; nor employ weak excuses, and run away from the awesome risks that lay in wake of Soviet constant pressure.

In my measured judgment, America's best political efforts should be directed toward encouraging the development of democratic institutions, and a liberal economic system in such Asian nations as India. For the great struggle for power and influence in Afro-Asia, as between the Communist empire and the free world, will be finally determined by the relative success of India versus Red China. India's emerging democratic institutions, buttressed by its new 5-year plan, aided by Western, and particularly American economic aid, must win in a battle for the mind and hearts of Asians against the fierce competition from Red China, with its monolithic dictatorship, buttressed by its forced labor under its new 5-year plan.

In the Middle East, Arabic nationalism must be encouraged by the vision and vigor of American leadership, which, in frank terms, means money and guns to those Arabic states that do not wish to fall to Communist subversion and infiltration (i.e., the kind of ambiguous aggression), as represented in Iraq.

But, more important still, is the obvious fact that the United States should not hesitate to direct support of all kinds to the modern State of Israel. Here is the one true democracy in all of the Middle East region—for Israel is a young nation, yet basd upon the pride of an ancient culture (the Hebrew faith in one God, and the Hebrew language). Israel has embraced modern self-determination, with dignity of freedom, pride of soil, and production (economic) through free enterprise, interspersed with some social ownership. Ambassador Abba Eban stated recently (April 16, 1959), in a speech in Cleveland, that modern Israel is a pioneer people, weaving a tapestry of a new civilization. Thus, the moral grandeur of these democratic Israeli serve as an exemplary lesson for all Afro-Arabic-Asian nations to follow, if they only will alert themselves to their opportunities.

Yet, we know full well that political democracy cannot long survive in economic chaos. Therefore, we as students of world politics, must address our attention to the third issue—the economic race that encompasses the bipolar struggle.

America's role in the economic power balance is very great. I firmly believe that, since World War II, the United States has initiated and implemented more fruitful economic plans for foreign aid and assistance than has the Soviet empire. Commencing with the postwar loans to Britain and France, the Marshall plan, the International Bank, and the present Mutual Security Act, America has advanced, during the period July 1, 1957–December 31, 1957, a total of $60 billions in grants and credits. During the year of 1958, roughly another $5 billion was granted to those nations who were attempting to develop their political institutions, and advance their peoples' socio-economic welfare; and, thereby, not fall prey to Communist overtures.

Briefly stated, West Europe received about $37.2 billion (economic aid $24.9 billion, and military $12.3 billion). Asia and the Pacific region received around $13.6 billion (economic aid $8.4 billion and military aid $5.2 billion) mostly to South Korea, Japan,

and Vietnam, nations directly pressured by the Soviet-Red Chinese empire. The Near East and Africa received from the United States a total of $7 billion (economic $4.1 billion, and military $2.9 billion). The American Republics around $1.7 billion (economic $1.4 billion, and military $3 billion). Since the Korean war, the largest proportion of our foreign aid, by necessity, had to be allocated for military aid, rather than economic improvements to advance the national interests of those Afro-Asian states, who desired of their own accord to remain out of the fierce embrace of the Communist empire.

Thus, the real economic issue should be: Will the present administration recognize that the Soviet-Red Chinese Empire, while maintaining its huge armaments race against the West, is presently also trying its utmost to enter the economic competition for the minds and hearts of the Afro-Asian world, previously monopolized by the United States?

Recently, Khrushchev frankly stated to a group of visiting American Congressman that the Soviet Union values foreign trade and economic aid "least for economic reasons and most for political purposes." Even without this Communist perversion of economic aid, as part of Soviet foreign policy, the United States should devote more of its energies to new ideas to aid the economic improvement of the Afro-Asian world, such ideas as a World Development Fund, or SUNFED (under the auspices of the United Nations).

America is rich in economic resources, though, of late, rather poor in new and fresh ideas in the realm of economic power, including its concomitant factor—science and technology. I see no earthly reason why the Eisenhower administration should not press forward a revived Marshall plan (i.e., call it a Herter plan) for Afro-Asia. I see no conceivable reason why, with forthright imagination and forceful leadership from the White House, such a reasonable and responsible economic plan cannot be sold to Congress and the American people.

Now, finally, and briefly, to alternative approaches to world peace—our third major area for analysis and discussion. In all candor, I see no practicable alternative to our immediate bipolar struggle against Communist imperialism than a coalition of liberal-democratic nations, with major emphasis upon maintaining a favorable world balance of power, (i.e., enlarged American support for NATO, SEATO, etc.)

There are those who propose the United Nations as an alternative to the coalition approach. There are some here (and several of your readings affirm) who insist that the alternative is the establishment of a world government. May I again declare, without equivocation, that those of you here who take this optimistic view, and those authors of the selected readings who write in this vein, are just plainly ignorant of the political facts of life, however sincere and dedicated you, or they, may be.

Please read the capsule form of my analysis of the United Nations, entitled "The U.N.: New Perspectives," published by the Church Peace Union. This small effort on my part is merely a summation of the larger work on the United Nations, presently in manuscript form, awaiting review and reappraisal by myself (the author), before it will be published by Prentice-Hall, Inc.

Moreover, I call to the defense of my major theses, relative to the possible effectiveness of the United Nations, such a distinguished statesman as former Secretary of State, Dean Acheson, who placed the United Nations in proper perspectiv when he wrote: "In a sense, we are standing with one foot in the world of our hopes for a future world order among nations, and the other foot in the world of power (struggle)."

In summation, may I reiterate that America's present short-range world problem is to prudently play the power struggle, maintaining by all the methods necessary, including the calculated risk of war, with the Communist expanding empire. Our long-range objective should be to plant young men and women, who with new and pragmatic ideas will not cringe from the awesome responsibility that is theirs to assume.

Thus, Akron University, both students and faculty, have a great challenge ahead, and a grave responsibility in the future. Each of you in this audience have an individual responsibility to assist and support our national leadership which sometimes stumbles and fumbles the ball, so to speak, because its human frailty, yet magnanimity of spirit, is clearly evident, as was true even of the Truman administration. Especially those here assembled, who will not enter directly into the American political arena (i.e., run for national political office) have a tremendous responsibility to learn, to think, to act within your purview and power as responsible citizens, whether you enter the business world, the teaching profession, or the world of art and culture. You cannot escape your responsibility, even though, I fear, many of you will attempt to escape the challenge ahead.

The United States must, in its own national interest continue to lead the free world, with all that that entails, including the risk of war, as, for example, in the present Berlin crisis.

DAV Services in Florida

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. CRAMER. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Florida citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Florida, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx; DAV legislative activities have benefited every compensated disabled veteran very substantially. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer N. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

DAV ORGANIZATION

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV maintains three VSO's in Florida—Mr. Albert Guerve, Mr. Robert Bregan, and Mr. Charles N. Girard located in the VA regional office, Post Office Box 1437, St. Petersburg. The VA hospitals coming under the jurisdiction of this office are: a 450-bed general medical hospital at Coral Gables, a 516-bed general medical hospital at Bay Pines, a 729-bed hospital—DOM—at Bay Pines and a 354-bed general medical hospital at Lake City.

NEW VETERANS' HOSPITALS

It is noteworthy, in discussing veterans' hospitals in Florida, that the Veterans' Administration approved and the President authorized the construction of some 814 additional general, medical, and surgical and neuropsychiatric beds during the last 2 years, 350 for Bay Pines, 350 for Coral Gables, and 114 for Lake City. A large share of the credit goes to the veterans organizations, including the DAV, that have fought for so many years for a recognition by the VA that Florida's veteran influx has been and will continue to mount so rapidly that it is essential new bed authorizations be made. Florida is a veteran impacted State and many of us in Congress have been fighting along with veterans' organizations in Florida to get the VA to realize this.

This improved hospital program for Florida includes the construction of a new 800-bed hospital at Coral Gables, an additional 500-bed hospital at Bay Pines, and the renovation of existing facilities at Lake City to accommodate 114 additional beds.

The department commander, Mr. Robert T. Kelly, 482 Perrine Avenue, Perrine, is chairman for the DAV's national convention to be held in the Hotel Danville, Miami, during the week beginning August 16, 1959. The department adjutant is Mr. Horace E. Johnson, Post Office Box 567, St. Petersburg, Fla. Mr. Miles H. Draper, First National Bank Building, Tampa, a long time friend of mine, is 1 of the 12 trustees of the DAV Service Foundation and was its president and chairman of its board of trustees from 1949 to 1957.

VETERANS' BENEFITS AND SERVICES

During the last fiscal year, the VA paid out $146,511,000 for its veteran program in Florida, including $46,778,453 disability compensation to its 53,356 service disabled veterans. These Federal expenditures in Florida furnish substantial purchasing power in all communities.

Only about 8 percent—4,440—are members of the 59 DAV chapters in Florida.

This 8 percent membership is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of Florida veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimate)	66,769
Claims folders reviewed	55,641
Appearances before rating boards	31,994
Compensation increases obtained	4,638
Service connections obtained	1,604
Nonservice pensions	1,411
Death benefits obtained	138
Total monetary benefits obtained	$3,551,662.46

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Florida veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms, and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits and multifarious other problems.

FAIR TREATMENT FOR VETERAN ASKED

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertiment laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims that it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability conpensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 2.6 percent of such discontinuances and reductions have probably occurred to disabled veterans in Florida with a consequent loss of about $738,000 per year. I have joined with the chairman of the Veterans' Affairs Committee in introducing legislation to make sure the disabled veteran gets a fair break in these review cases and in holding hearings on such cases in Florida recently.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Florida to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it was expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increased obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

DAV SERVICES RENDERED

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 12,238 of whom, during the last 8 years, were Florida residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,340,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV

unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member.

As a DAV life member, I am pleased to enroll as one of the benefactors on the memorial honor roll of the DAV Service Foundation, with the realization that only the interest earnings therefrom will be available for appropriation to the DAV for its use in continuing to maintain its national service officer setup in my State of Florida.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Florida by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such "serviced" claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

Do Refugees Have Names?

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, under leave to extend my remarks, I commend to the Members the very moving sermon preached last Sunday by Rev. James Clark Brown. It contains specific suggestions for ways in which individuals can help meet the refugee problem.

DO REFUGEES HAVE NAMES?

(Sermon by the Reverend James Clark Brown at Cleveland Park Congregational Church, Washington, D.C., May 24, 1959)

Our city has been host this past week to a distinguished group of some 200 American citizens. They came to Washington from every part of the United States for the purpose of attending what Vice President NIXON, in speaking to them, described as "one of the most important conferences to be held in this city for several years." They came in response to a special and urgent invitation from the President of the United States, who said to them: "I have asked you to come together to share with the Government your experience, your judgment, and your insight regarding the things which should be done and how best to do them."

The things to be done concern the tragic plight of several million human beings who, in such varied places as Greece, India, Morocco, Jordan, Hong Kong, and elsewhere, are holding on—not so much to life but—to existence midst all the hardship, hunger, loneliness, and heartbreak of being refugees. Among the millions of their number are the very young, the very aged, and those whose faces are older than their years. I wish that you and I knew, at least, some of their names. I wish that we knew them as persons, as friends, instead of simply numbers and statistics.

But, even statistically, anyone who is not completely calloused to human suffering will be humbled by the tragedy and enormity of their number. I am undistinguished but was among the delegates present at this White House conference concerned with the refugee. The Assistant Secretary of State, John W. Hanes, said that "according to the most reliable estimates"—and surely it is an absolutely minimal estimate—"there are presently about 2,350,000 unassimilated refugees who may be considered to need some form of international assistance."

Can we succeed in personalizing, humanizing such statistics? Mathematics was never my best subject but I have enreavored to work out what it would mean if each of these 2,350,000 persons were to take 2 minutes each, to tell us their names and to say what desolate camp or refugee center they are existing in. How long would you and I need to remain where we are if each of this number of refugees spoke to us for just 2 minutes? The answer is that we would remain here for more than 9 years listening to their story.

Even so, these figures do not include the 12 million East Germans who have found refuge in free Germany and who still are arriving at the incredible rate of 2,000 per week. It also does not include the 15 million persons in Pakistan and India who, though faced with hunger and homelessness, are nonetheless not technically regarded as refugees because they happen to be citizens of the country in which they are struggling to maintain their desperate existence.

You may be tempted, on hearing of such additional numbers of persons in circumstances of need, to respond: "The problem is so vast and depressing as to be unmanageable." Clearly, the problem of the refugee is a worldwide affliction for which there is no total or final cure. Nor will there ever be a total cure so long as tyranny and selfishness and pride is manifest in the policies of national governments. There is, however, much that can be done by persons like you and me and by government which will effectivly bring help and hope to millions of persons who are so desperately in need of both.

One of the things we can do is to become acquainted with some of the basic facts about the problems and needs of the refugee. Such facts may prevent us from being ignorant of the reality of human suffering and at the same time enable us to think more clearly and to act more intelligently in relieving their suffering.

Let us listen, then—not for 9 years but for 5 minutes—to some facts concerning the hungry, homeless persons who do have names. Persons who, if they could speak to us, might well begin by reminding us of our common humanity, saying in a paraphrase of the words which Shapespeare put in the speech of Shylock the Jew:

"I am a refugee. But does not a refugee have eyes? Does he not have senses, affections, passions, a name as dear to God as yours? Am I not fed with the same food, hurt with the same loneliness, warmed and cooled by the same winter and summer as you, who live comfortably, eat well, and sleep warmly? If you prick us, do we not bleed, if you tickle us, do we not laugh? If we do not have food to eat, do we not die? I am a refugee."

There are nearly 1 million Palestine-Arab refugees. They have been living since the Palestine war in 1948 in the Arab land bordering Israel, but the Arab countries have refused to accept responsibility for them as permanent residents and have continued to insist on their right to return to Israel. There is little likelihood that Israel, which in recent years has taken in a million refugees, will admit thousands of hostile Arabs. The United Nations maintains a relief and education program of some $30 million annually—an average of $30 assistance per person per year—but it has had to curtail part of its program for lack of funds.

In Hong Kong there are a million homeless persons. One of every three persons there is a refugee. Having fled from Red China some 700,000 persons live in abject poverty, forming squatter communities of hillside shacks patched together from old pieces of tin, plaited bamboo, and bits of wood. Tens of thousands sleep on top of buildings or in doorways or set up housekeeping beneath stairways. Tuberculosis and dysentery are commonplace in these surroundings and one-third of the children die of some form of tuberculosis. Much of the help that reaches the refugees comes from the United States, which sends $5 million annually in food alone from surplus stocks. Hopes for a solution to the problem lie mainly in expanding the economy, since there is no possibility of mass immigration either to Taiwan or southeast Asian countries. A total of $100 million would be necessary to cover the elementary needs of the poor, but it is recognized that there is little chance of obtaining this amount. The United Nations is involved in a special appeal on behalf of these refugees.

During the last few years 180,000 Algerians have fled their strife-torn homes and sought refuge in Morocco and Tunisia. Eighty-five percent of these were women and children. They have been living in desperate need. Most live in caves or gourbis, the native hut made of mud and cow dung with straw roofs. The refugees receive international aid from the Office of the United Nations High Commissioner and the International Red Cross, as well as direct assistance from other governments that is channeled through Tunisian authorities. A gift of 7,000 tons of U.S. wheat helped keep the refugees alive during the last 3 months. This has now been consumed and many of the refugees get less than 1,600 calories daily. There are no schools for refugee children, except those improvised by adult refugees.

There are 100,000 escapees from behind the Iron Curtain still in Europe. Some 35,000 of this group are in one of the 120 European refugee camps. The remainder, although living outside camps, in many cases live under conditions as bad or worse than those of the in-camp refugees. Of the 35,000 living in camps, 18,000 have spent at least 10 years there. Virtually all are refugees from Communist countries, but some older ones were among those taken from their homes in the days of Hitler's mass deportations. Dr. Lindt, the Swiss who serves as High Commissioner for the United Nations, regards the camp refugees as a top priority group for help. He is seeking an additional $3,500,000 for his clear-the-camps program. If available, funds would go for housing and to train the refugees for new jobs. Small business loans also would be granted to help them make a new start. Additional medical help and institutional care would be given to the aged and infirm.

The latest dramatic refugee-producing development is the brutal Chinese Communist subjugation of Tibet. The flight of the Dalai Lama and the savage fighting has resulted in the exile of at least 12,000 refugees into the border areas of northern India. American voluntary agencies have offered and are pro-

viding valuable assistance to those refugees, and the Indian authorities have been assured of American sympathy and readiness to provide further help as required.

These are some of the basic facts concerning only some of the more than 3 million of our fellow human beings. But for the grace of God, and geography, their circumstance might be yours or mine. Such facts are a solemn documentation of the words spoken by the late Justice Robert Jackson while presiding at the Nuremberg trials. He said: "It is common to speak of our time as standing at the apex of civilization. The reality is that in the long perspective of history the present century will not hold an admirable position. No half century has ever witnessed such slaughter on such a scale, such cruelties, such wholesale deportations, and annihilations of minorities. These are the overshadowing facts by which generations to come will remember these decades."

There is, however, more than indictment in Justice Jackson's words. There is a momentous challenge to you and me, to all of the free world whether we be humanitarians, Jews, or Christians. It is the challenge to prove that Justice Jackson's statement is not altogether accurate. For by our intelligent concern and compassionate action may we not yet write into the history of this century such deeds that shall justify our being remembered as those who responded to cruelty with compassion, to hunger with the glad giving of bread, to loneliness with companionship prompted by love? At least for myself, as a professing Christian, I cannot escape the clear word of my Lord: "Inasmuch as you minister unto the least of my brothers you do so unto me."

What then, positively, may we do? Our action must involve both governmental and citizen programs. Already the United Nations has begun to implement a resolution approved last December by 31 non-Communist governments who, in observing a World Refugee Year which will begin June 1, will promote study of, and provide additional opportunities for, assisting the refugee. President Eisenhower has issued a proclamation designating the year beginning July 1, 1959, for observance of the World Refugee Year in the United States.

In Congress, Representative WALTER introduced legislation last week (H.J. Res. 397) which may well be the basis of providing a national example to other governments for a more fair and equitable distribution of those refugees whose need and desire is to emigrate. Our State Department has announced a five-point program including a modest $4 million increase above its current expenditures in refugee assistance and a substantial increase of between $10 and $20 million in the distribution of food to refugees under the surplus agricultural commodity program. Some of us may regard such proposals as being insufficiently bold and imaginative, but it does represent an increase over current programs.

The opportunity for us as citizens to participate in refugee assistance is splendidly available in the establishment and activity of the United States Committee for Refugees, whose chairman is our distinguished and dynamic Christian neghbor, the Very Reverend Francis B. Sayre, dean of the Washington Cathedral.

I am hopeful that you may be so personally concerned and determined that we will, both as citizens and through our Government, resourcefully meet this challenge, that you will come up with what Victor Hugo is reported to have described as "the most powerful influence in the world, an idea whose time has come." Until I hear from you let me briefly suggest two or three ideas of my own:

1. I propose that every church and synagogue in our land incorporate into its budget during the World Refugee Year a generous amount of money which will enable the United States Committee for Refugees to use such moneys where it may effect the maximum benefit.

2. I propose that each church and synagogue, wherever possible, make arrangements through the World Refugee Year Office, United Nations, New York, or again through the United States Committee for Refugees (11 West 42d Street, New York), to sponsor some refugee or a personal project in his behalf, providing a loan for example, enabling a person whose name we know to learn a trade; or to allow a mother in Hong Kong whose name we would know, and that of her child, to receive adequate medical attention to arrest tubercular affliction.

3. I propose that we as citizens increasingly give our support to every endeavor of the United States Committee for Refugees, within Congress, and the White House, which would allow the words inscribed on the base of the Statute of Liberty in New York harbor to be more than mere words:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest tossed, to me.
I lift my lamp beside the golden door."

I also hope that you will say to me after this sermon and that you will mean it as deeply 6 months from now: "I want to be among those in our church who are working and planning with reference to our church's participation in the World Refugee Year program."

Let me say one more thing and I am through. We have been concerned with the question, "Do refugees have names?" Well of course they do, and as a matter of fact the name of one of them is prominently displayed just now from billboard and movie marquees across our land: Anne Frank. I urge you to see this film which tells the true and poignant story of a remarkably sensitive and intelligent young girl of 13 and of the diary she faithfully kept for 2 years while having fled from Germany, hid out with her family in Amsterdam during the Nazi occupation of Holland. The Gestapo discovered their hiding place; however, and Anne Frank was sent to a concentration camp, Bergen-Belsen, where 7 months later, at the age of 15, she died. Among a pile of old books, magazines, and newspapers which were left lying on the floor of the Amsterdam secret annex was Anne's diary. I want to read you now a single paragraph of this remarkable girl's diary, written after 2 years of hiding from the Nazis and 8 months before she was to die. Under the entry of July 15, 1942, she writes:

"It's really a wonder that I haven't dropped all my ideals, because they seem so absurd and impossible to carry out. Yet I keep them, because in spite of everything I still believe that people are really good at heart. I simply can't build up my hopes on a foundation consisting of confusion, misery, and death. I see the world gradually being turned into a wilderness, I hear the ever-approaching thunder, which will destroy us too, I can feel the sufferings of millions, and yet, if I look up into the heavens, I think that it will all come right, that this cruelty too will end, and that peace and tranquillity will return again.

"In the meantime, I must uphold my ideals, for perhaps the time will come when I shall be able to carry them out.

"Yours,

"ANNE."

Let us pray. Our Heavenly Father, grant that Thy kingdom may come on earth as it is in heaven, by reason of our love of Thee and of one another. Amen.

Conversion of Saline and Brackish Waters to Fresh Water

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. ASPINALL. Mr. Speaker, on Monday, May 25, the Honorable Fred A. Seaton, Secretary of the Interior, addressed the Sixth National Watershed Congress. This meeting was one of the most enjoyable events that I have attended during this session of Congress. Secretary Seaton's address on the subject of conversion of saline and brackish waters to fresh water was one of the most interesting and constructive talks that it has been my privilege to hear on this particular subject. It is replete with up-to-date information which should be valuable to every Member of Congress. It is my pleasure to have it inserted in the CONGRESSIONAL RECORD where its values may be preserved and those interested may have access to it:

As participants in this Sixth National Watershed Congress, you and I join in our dedication to the continuing cause of water conservation.

We know that the availability of water—just plain, ordinary water—is rapidly becoming a major concern to America and the world. In fact, as early as 1975–80, it may be our number one domestic problem.

The facts indicate the accuracy of such a conclusion.

American industries, farms, and homes are today calling for an ever-rising tide of water.

Our population is growing by one person every 11 seconds, by 330 every hour, by 8,000 every day, by a quarter of a million every month. We now number 175 million. By 1980, just 21 years away, there will be nearly 275 million of us. By the year 2000 (and I remind you that however remote that date may sound, it is only 41 years away), we may well double our present population and number 350 million souls.

Presently, we use about 240 billion gallons of water a day. In 20 years our needs will demand at least 500 or 600 billion gallons—nearly two or three times as much—if we have it available.

This is nothing to panic about, but it is a matter of real concern—one which leaves us no choice other than to continue our current conservation progress and to plan wisely and imaginatively for the years ahead.

Many areas will continue to get from conventional sources all the water they need in the foreseeable future. Fresh water we haven't even begun to touch in our conservation programs now flows in wasteful abundance into the sea. Surprisingly enough, even after a century of conservation, we are using only about one-third of the water that courses to the ocean from the 17 Western States, and only about one-eighth of the supply in the East.

Thankfully, we are making progress gradually but steadily in capturing and using a bigger and bigger percentage of this flow. In addition to efforts of individual farmers—and they are doing more for themselves than even before—all branches of Government, are sharing in the task. For instance, in fiscal 1959, the Federal Government is investing in land and water conservation and development $1,714 million; in fiscal 1960, the ad-

ministration proposes an overall program of $1,917 million.

One day, though, and sooner than many people think, we shall have to follow a new trail for our water supply, at least for certain areas. That trail leads both to huge known supplies of brackish water inland and also to the inexhaustible oceans and seas of the world.

Getting the salts out of sea water, to be sure, is nothing new. Sailors have done that for centuries. Today the crews of the atomic submarines *Nautilus*, *Skate*, and *Seawolf* drink water converted by heat from their atomic reactors. In fact, like Julius Caesar and the ancient Phoenicians, people generally know how to turn sea water into fresh: just distill it. The basic science is as old as recorded history. But what we're still searching for is the answer to the question: how do you do this on a large scale at a cost cheap enough to substitute for water from conventional sources?

Presently operated salt water conversion plants do the job all right, but their costs are high. Sheer necessity, not competitive advantage, has caused them to be built, particularly in recent years.

On the arid island of Aruba in the Caribbean, for example, people are drinking and the oil industry is using 3½ million gallons of converted sea water a day. The cost is about $1.75 per thousand gallons, compared to the District of Columbia's minimum rate of 26 cents per thousand.

The people on the Island of St. Thomas in the Virgin Islands would also like to be using converted water (though the price may differ). And they will be, once their conversion plant, authorized last September, is built. No wonder they're interested. Because their population has outstripped their water supply, their alternative is to go all the way to Puerto Rico and haul potable water by barge, at a cost of nearly $5 per thousand gallons. The Virgin Islands Government reports that in fiscal year 1958 it spent on this operation nearly $177,000.

Consider another example: Coalinga, a small community in California.

For years its people had to haul in their drinking water at a cost of $7 per 1,000 gallons; when they got tired of that expense, they cut the bill to $1.45 per thousand gallons, and their town made U.S. history by becoming the first to get its drinking water supply from converted brackish well water.

Further south in California, people aren't that desperate yet, though they are indeed hard-pressed.

Years ago, Los Angeles and southern California had to dig and tunnel the Colorado River Aqueduct 250 miles across deserts and through mountains to drain fresh water out of the Colorado River. That undertaking, once criticized as a gigantic waste, has long since proved its feasibility. Even so it will be inadequate to the needs in 10 years or sooner.

So today the people of southern California are looking toward another answer to their problem, a $1½ billion project which would bring them water from the Feather River—more than 500 miles away—water far more expensive than that now obtained from the Colorado.

In California, as in many other places east and inbetween, new supplies of natural fresh water will surely become more expensive in the years ahead and the supply available will be less than needed. Our hope is that just as surely the cost of converting saline water to fresh will come down. In one community after another, as I foresee the future, these cost curves will one day cross, and then converted sea water will be the less expensive of the two; in some localities it will be the only reliable source.

Of course, for some towns there is just one curve, one price, and one choice: Pay the bill, suffer stagnation of growth, or move out. Their water supplies are running out and no more is in sight.

The goal of the Office of Saline Water of the Department of the Interior is to help forestall any such disasters by developing processes to make tremendous quantities of converted water available and bring the conversion cost curve down. In that work, we enjoy full cooperation with private enterprise, colleges, universities, and the scientists of more than 16 nations of the world.

The saline water conversion program was authorized by Congress in 1952—just 7 years ago. In that span of time, the curve of comparative cost has gone down faster and further than in all previous human history.

Consider where we were as recently as the late thirties: Then it cost between $4 and $5 to convert 1,000 gallons of sea water to fresh. Meanwhile equipment, fuel, and labor costs have gone up, and between 1939 and 1952 inflation shrunk the dollar into a 50-cent piece. In spite of all that, the cost of saline water conversion has been cut by more than half. In the most effective existing sea-water conversion plants, it is now about $1.75 per thousand gallons.

The Government's saline-water investigation began with laboratory research. Next it included small pilot plants. Now it is about to move on to the building of large demonstration plants.

This year, 1959, the program stands in the wings of a new and larger stage; where, for the first time, we are quite hopeful of breaking the dollar-per-thousand gallons barrier.

For that, we have farseeing members of both major political parties and dedicated scientists to thank, as well as such organizations as yours.

Last September 2, President Eisenhower approved Public Law 85-883. The bill was sponsored by Senators CLINTON ANDERSON, LYNDON JOHNSON, FRANCIS CASE, THOMAS KUCHEL, and ALEXANDER WILEY. The companion bill in the House was sponsored by Congressman HOLIFIELD, and similar bills were introduced by Representatives WILSON, ENGLE, ROOSEVELT, KING, TEAGUE of California, and RHODES of Arizona.

This new law authorizes the Department of the Interior to construct and operate five saline water conversion demonstration plants.

Three will be designed to produce fresh water out of water from the sea. One plant is to be located on the east coast, one on the west, and one on the gulf. Two are to be designed to turn out more than a million gallons of potable water a day.

In addition, there will be two plants for the treatment of inland brackish water, one located in the Southwest and one in the northern Great Plains. One is to have a capacity of 250,000 gallons per day or more.

One the advice of three scientific consultants to the Department—Dr. Ralph Morgan of Purdue University, Dudley F. Phelps, a New York industrial engineer, and Capt. Ivan Monk of the U.S. Navy—I have selected a new process for the first million-gallon-per-day demonstration plant. It is known as long-tube vertical multiple-effect distillation, developed jointly by the Office of Saline Water and the late W. L. Badger of Ann Arbor, Mich. Pilot plant tests of this process indicate a major breakthrough in the control of salt scale, a breakthrough which obviates the need for using acid or high cost alloys to control scale, thus substantially cutting costs.

Potable water can be produced in this new plant, we believe, for less than $1 per thousand gallons—less, in other words, than the current price of fresh water in Key West, Fla. Moreover, as the size of the plant increases, we can expect the price per gallon to come down perhaps to the point where a 15-20 million gallon-per-day plant using this process may eventually convert sea water into a thousand gallons of fresh for less than 60 cents. Right across the Potomac from here, people in Alexandria are paying more than that now.

Please understand we cannot guarantee all the cost figures I am presenting to you. As a matter of fact, we hope to meet or better them, but if we were absolutely certain all factors would work out as projected, there would be little or no point in building the plants for both experimental and demonstration purposes.

In the second million-gallon-per-day demonstration plant, another process is to be used, that of multistage flash distillation.

For this plant, we are asking the Atomic Energy Commission to supply a low-temperature, low-pressure atomic reactor as the heat source. This flash distillation process also lends itself to large-scale conversion, and with atomic heat we can reasonably expect to open a new field for the peaceful application of atomic energy.

The types of plant selected, the next question is: Where should we build them?

Last week a special board made up of consultants to the Department met to tackle that problem. Its members were Sheppard T. Powell, of Baltimore, an expert in industrial water problems; Lewis S. Finch, of Indianapolis, president of the American Water Works Association; and Dr. Wilburn C. Schroeder, professor of chemical engineering at the University of Maryland.

On the basis of their recommendations, I can say to you tonight that the first plant, using the long-tube-vertical process, will be located on the gulf and that the second plant, using flash distillation, will be on the west coast.

These areas were selected both because of their more critical need for water and their intense public interest in the saline water conversion program.

Selecting from 31 gulf coast and 18 west coast applications, I shall soon announce the exact location of these two plants.

That choice will not be an easy one. Motivated by an urgent, and in some cases by a desperate need for more water, over 150 cities in all have asked to be considered as a site for a sea or brackish water plant.

Where are these cities? Confined to a few hot and arid States in the South and Southwest? Not at all. Applications have poured in from every part of the coastal perimeter of the United States. Of the 21 States on gulf or ocean only two—Delaware and Alabama—had no applicants.

And that fact should not arouse wonder. In 1957, you may recall, over 1,000 communities, the hometowns of one-seventh of our entire population, endured water shortages to some degree—shortages which varied from a lack of water for lawns or gardens to an actual absence of water to drink.

That is a major reason we are moving the program ahead of the schedule the Congress originally set forth.

Under the capable leadership of former Congressman A. L. Miller as Director of the Office of Saline Water, the second process for the demonstration plant program was announced almost 3 weeks ahead of schedule. The third process will be ready for announcement almost 3 months ahead of the established congressional deadline.

Looking to the future we hold the great hope that a key fact of human history is about to change: The fact that up to now nearly all the people of the world have necessarily depended for life entirely on fresh water upon and beneath the land.

Bearing in mind that an acre-foot of water amounts to 325,851 gallons, we are a long way from the day when converted sea water can profitably be used for irrigation, in competition with conventional sources—if they exist—but that is not to say it can never be done.

Once we can economically tap the oceans for fresh water, not only for human and industrial use, as now we know we can—but also for agriculture—wastelands can become gardens.

Think what that achievement would mean in sections of California and Arizona where the rainfall every year averages only 10–12 inches and the population has increased in 20 years by 55 percent; in western Mexico and lower California; in the famine-cursed "drought quadrangle" of northeastern Brazil; in vast unpopulated expanses of Africa; in Saudi Arabia, practically a sea-ringed desert; in West Pakistan; in the Negev area of Israel, an arrow-shaped desert pointing into the salty waters of the Gulf of Aqaba; or in Australia, an island continent large as the United States with no more fresh water than in the flow of our Columbia River.

From where we now stand, we can with justification gaze toward a new horizon where these lands flourish, some of them for the first time since the days of Babylon and Carthage, some for the first time in all recorded history. For the future of life on this planet, the implications in saline and brackish water conversion stagger the imagination.

Bringing blessings to Americans and to millions of people around the globe, the arrival of one or more genuinely low-cost processes can well turn out to be one of the most important scientific achievements of our time.

In this year 1959 the river of research is broadening and deepening beyond all precedent as it begins its final flow toward an estuary of triumph.

Sunday: A Magic Pause

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. ROBERTS. Mr. Speaker, the editor of the Selma Times-Journal in Selma, Ala., recently wrote an eloquent and thoughtful article which I think every American can read with his own particular nostalgic reflections. Under leave to extend my remarks, I ask unanimous consent for this fine editorial to be included in the RECORD.

There being no objection, the editorial was ordered to be printed as follows:

SUNDAY: A MAGIC PAUSE

In a world of clamor and turmoil, of frenzied pace and breathless confusion, men of good will everywhere may be thankful for the quality of Sunday.

Millions of Americans these days travel the length and breadth of their own land. Millions, too, see Europe, and increasing numbers see Asia, South America, and Africa. These lucky ones know for themselves what the rest of their countrymen can readily imagine: Sunday is everywhere the same.

It's more, much more, than just a time of rest and worship.

It's a moment of peace amid the tumult.

It's a welcome space, in an age when men find fewer and fewer spaces in their crowded days.

On Sundays, men recover some of the dignity they cast to the winds in the weeklong competitive struggle.

They have time to think, a rarer and rarer experience for many nowadays. They can take stock, reflect, see themselves and their lives in some sort of perspective.

The full riches of family living pour in upon them. Sunday is a day of companionship, of long walks and talks, of smoothing the raw edges gouged in one's feeling in the battles of the working day.

Sunday is a magic pause when life renews itself a little. You can feel it in the air on a farm road in Iowa, on a boulevard in Chicago, a park in Paris, on a winding coastal highway in Portugal, anywhere at all.

Sunday is just different. If it should ever cease to be, then man should take alarm. For he may be in danger of losing the crowning spirit that makes him what he is.

John Foster Dulles

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. LOSER. Mr. Speaker, under the unanimous consent rule to extend my remarks in the RECORD, I incorporate a fine editorial which appeared in the Nashville, Tenn., Banner of May 25, 1959, eulogizing the late Secretary of State, Mr. John Foster Dulles. "Giant of Statesmanship" is the title. It follows:

JOHN FUSTER DULLES: GIANT OF STATESMANSHIP

In the death of John Foster Dulles, America has lost more than a patriot of shining courage and dauntless faith. He also was a giant of statesmanship; a pathfinder, whose perseverance in the battle for peace with justice was for all humanity.

He died in the service of his country. The Nation he loved is one today in recognizing that—with tributes even from those who beset his task with the carping criticism of political derivation. For in the final analysis there can be no denial of the stature of the man, and the quality of deeds wrought of indomitable purpose.

Dulles met head on the challenge of free world leadership that increasingly has passed into America's hands. His tenure at the State Department helm coincided with the assumption of that full weight of responsibility. He was in that capacity a distinguished member of the administration team that faced the realities and junked the debilitating policies of appeasement and surrender. He became a symbol of tireless devotion to what he believed to be the best interests of his country and the non-Communist world.

A target of professional politicians during his early days in office, by the time he stepped aside—the victim of cancer—his severest critics had melted away, and Democrats and Republicans alike hailed him, for his indefatigable efforts had left a deep imprint on the history of the 20th century.

In the case of John Foster Dulles, the office found the man. A lifetime of training and preparation was his—and with it the wisdom that fortified the spirit he exemplified. Not blindness, nor wishful thinking, nor the penchant for playing by ear the diplomatic score—but patient and courageous and skilled address to the pattern of free world purpose. He yielded neither to the vain delusion of easy victory nor to national and international hysteria.

President Eisenhower's estimate of him is shared by the constituency he served even above and beyond the call of duty. Said the Chief Executive, he knew of no man "who has equaled his wisdom and his knowledge in the whole complicated business" of international affairs.

He waged skillfully the battle for peace, not just for our time or his generation—but to span with courage an era of chaos, and build on a foundation of principle and strength for security, an enduring better world which was his dream.

There are no indispensable men, and John Foster Dulles knew it; but there are indispensable principles—and he personified them. More than that, he worked to instill them in the fabric of international affairs.

His example, and the foundation he laid, are his Nation's legacy from a great life. Whatever emerges in tests still to come, of free world solidarity—resisting and ultimately defeating the rapacious enemy bent on freedom's conquest—will be in great measure due to the tireless and gifted labors of John Foster Dulles.

He has passed that mantle to others, with a prayer for their successful execution of an unfinished task.

His like will not soon be seen again.

Results of Poll Taken in the New Sixth Congressional District of Washington State

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. TOLLEFSON. Mr. Speaker, I recently mailed a questionnaire to about 52,000 residents of my congressional district. It contained 12 questions dealing with issues pending before this Congress. To date there has been a better than average response to such questionnaires. Although more returns are to be expected, a sufficient number have now been received to determine the general views of the people of my area. The results of the poll expressed in terms of percentages are as follows:

1. Do you support the President in his efforts to achieve a balanced budget? Yes, 91 percent; no, 9 percent.

2. If the budget for fiscal 1960 is not balanced, would you favor increasing taxes to eliminate the deficit? Yes, 36 percent; no, 64 percent.

3. Do you favor continuance of our mutual security (foreign aid) program? If yes, at present cost (40 percent); at reduced cost (55 percent); at increased cost (5 percent). Yes, 81 percent; no, 19 percent.

4. Do you approve of our firm stand with respect to Berlin? Yes, 96 percent; no, 4 percent.

5. Should Red China be admitted to the United Nations? Yes, 21 percent; no, 79 percent.

6. Should the United States engage in trade with Red China? Yes, 31 percent; no, 69 percent.

7. Would you favor increasing the highway gasoline tax by 1½ cents to put the Federal highway building program on a self-supporting basis? Yes, 56 percent; no, 44 percent.

8. Should the social security law be broadened to include medical services, to be financed by increased contributions by individuals and employers? Yes, 49.6 percent; no, 50.4 percent.

9. Do you favor Federal aid for local school construction? Yes, 42 percent; no, 58 percent.

10. Should the Federal Government continue its program of financial assistance for local airport construction? Yes, 33 percent; no, 67 percent.

11. Would you favor a law calling for a secret ballot in the election or removal of union officials, and in other vital union matters? Yes, 93 percent; no, 7 percent.

12. Do you believe that the Government should continue its farm price support program? Yes, 18 percent; no, 82 percent.

Drive Carefully This Weekend

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. ROBERTS. Mr. Speaker, the Memorial Day weekend which we face will claim the lives and health of many of our citizens who will be involved in highway traffic accidents.

As chairman of the Health and Safety Subcommittee, which has jurisdiction over legislative attempts to curb the terrible toll of life and property on our highways, I have become painfully aware of the high rate of accidents.

Let me urge my colleagues to do all that they can to promote traffic safety and to make a special effort to encourage safe driving this coming weekend.

There appeared in the Selma Times-Journal, of Selma, Ala., this week, an editorial on this subject which brings home the point I am attempting to make.

Under leave to extend my remarks, I wish to insert at this point the editorial:

USE INTELLIGENCE BEHIND WHEEL

Only a few days away is the first of the year's big holiday weekends, Memorial Day. With more care on the road than ever, we can expect plenty of trouble unless we exercise extreme care.

We don't have the National Safety Council's traffic fatality estimates yet, but we know they won't be small, even though the holiday itself falls on a Saturday.

As we prepare for our spring excursions on the highways, we might take note of the safety bulletin put out by the Family Economics Bureau of Northwestern National Life Insurance Co.

It makes the point that most motorists have the needed intelligence to drive properly and safely, but generally they don't use more than half that capability when they're behind the wheel.

The half of their mind not attending to driving is taken up with such things as talking, listening to the radio, daydreaming, gazing at people and the like along the way, thinking about family, home, office, and so on.

Put a woman in the driver's seat and the situation is the same. The only difference is in what she's thinking about or attending to.

There are, of course, many, many reasons for automobile accidents. But far from the least of them is the blunt fact, never harped on enough, that drivers for the most part just don't pay strict attention to the business of driving.

In all too many cases, the car is seen, consciously or otherwise, as a kind of floating extension of your living room, your office, your backyard.

Watch the driver in front of you for 5 minutes. Count the times he turns his head and looks away from the road, the times he takes his hands off the wheel to gesture, relax as if he were at home on a couch, etc.

You'll be amazed at how incidental the actual driving operation seems to many on the roads. The danger is compounded when we realize how many who stare straight ahead and keep their hands on the wheel still are giving just half their minds to the driving job.

In the end, only one thing can be said to them: The death that can come in one awful second of distraction is not incidental.

Let's Give Home Rule to Washington

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article in the First Column, by Leo A. Lerner, appearing in the Chicago North Side newspaper:

LET'S GIVE HOME RULE TO WASHINGTON

Now children, gather close and daddy will tell you a story.

The State of Alaska contains about 100,000 people. Its 40,000 voters have elected two U.S. Senators and one Congressman to serve in the Congress of the United States.

The State of Hawaii has about 500,000 inhabitants. Its little more than 100,000 voters (fewer than the number eligible to vote in any of the Chicago congressional districts) will soon elect two U.S. Senators and one Congressman (maybe two) to serve at Washington in the U.S. Congress.

The State of Nevada has about 250,000 people, including faro dealers. These citizens, including about 75,000 voters, have elected two U.S. Senators and one Congressman to the Congress of the United States.

The State of Arizona, a very fast growing American State, has less than a million people in it, but elects two U.S. Senators, three Congressmen, and every village in it, including Indian pueblos, has its own government.

Hold still a minute, I'll soon be through with the statistics. The State of Wyoming contains about 300,000 people, and it, too, elect two U.S. Senators and a Congressman.

Now we will take a jet plane to the District of Columbia, where Washington, our Nation's Capital, is situated. A million people live in Washington. These people are Americans just like all the rest of us. They eat, sleep, dream, make love (when they get a chance), and eat banana splits in Woolworth's.

But there's one thing the people who live in the District of Columbia can't do. They can't vote.

And that's just one thing they can't do. The other is that they have nothing to say about governing their own city.

Washington, D.C., contains more people than three States like Wyoming. Wyoming has two U.S. Senators and one Congressman. But the people of Washington, D.C., have no representation at all.

Oh, some Washingtonians, those with a permanent address elsewhere, vote in their hometowns, by mail or by making a special trip, but those who live in Washington have no home rule in their hometown and no voice in the American Federal Government.

Washingtonians have no aldermen, no mayor, no Senators, and no Congressmen. They are in the center of democracy, but as far as deciding their own destiny is concerned they might as well be living in the penal colony in French Guiana.

All that fuss about Alaska and Hawaii sounded hypocritical to me when I thought of the voteless, voiceless people in the District of Columbia.

My friend Herblock, the cartoonist who lives in Washington, once drew a cartoon showing Nikita Khrushchev, saying, "I'll give the West a good deal—go tell them I'll guarantee West Berlin as much democracy as they allow in the District of Columbia."

That hurts, mostly because it is so true.

A committee of Congress runs Washington, which means that Congressmen from far-off places like Nome or Howland Island (total population four) control the destiny of a million people who can't vote.

It's nutty, but it's stranger than fiction.

What fiction writer in the 20th century would have such a fantastic imagination as to dream up this libel against the United States of America?

I am for making the District of Columbia the 51st State. The Americans who live there should be able to vote and run their own municipal government.

If it weren't for a third baseman named Harmon Killebrew, Washingtonians could hardly hold up their heads.

Handicapped Make Good Workers

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I would like to insert into the RECORD an article by Mr. John R. Adney, Miles, Iowa, which appeared in the Davenport Democrat on April 15, 1959. Mr. Adney has devoted much time, effort, and substance to the problems of the physically handicapped.

The efforts which have been made by the State and Federal Governments to retrain people who are, or who become, physically handicapped must be continued. Their productivity should not be lost to the Nation and they deserve the right to lead independent lives.

The article follows:

HANDICAPPED MAKE GOOD WORKERS

All of us are convinced that every individual is entitled to an opportunity equal to his abilities. The so-called disabled person is far more like than unlike the average individual.

His need to be recognized and treated as such, both in society and business, lies at the root of fuller acceptance and opportunity for the handicapped.

The economic and humanitarian need for offering proper employment to physically impaired workers is too obvious to be doubted. As good American citizens they are entitled to a fair chance to make their own way.

Judging from individual output records for similar jobs the production rate of handicapped workers is slightly higher than of unimpaired workers. For minor injuries, the safety record of handicapped workers is substantially the same as for unimpaired workers.

The handicapped have the same wide range of skills, abilities, and interests as the nonhandicapped. The absentee records of

physically impaired workers and others are substantially the same.

The physically handicapped worker can be insured without penalty. There is no provision in workmens' compensation insurance policies or rates that penalize an employer for hiring handicapped workers.

Employers who are interested in effective programs for utilization of handicapped labor can obtain valuable assistance by using the services of the State employment service and the State division of vocational rehabilitation.

In His Courage and Faith, Mr. Dulles Never Wavered

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. LOSER. Mr. Speaker, I present to my colleagues a splendid editorial which appeared in the Nashville Tennessean of May 25, 1959, eulogizing our late Secretary of State, Mr. John Foster Dulles.

It beautifully describes his life as "a shining symbol of courage and faith in the ideal of liberty for all and dignity for the individual man." It follows:

IN HIS COURAGE AND FAITH, MR. DULLES NEVER WAVERED

For the Nation and the world something important is missing as Mr. John Foster Dulles passes on, the victim of an insidious enemy which he never feared but could not master.

His life is a shining symbol of courage and faith in the ideal of liberty for all and dignity for the individual man.

As Secretary of State for 6 years, Mr. Dulles stood in the forefront of an army of free people engaged in battle with aggressive forces of destruction. He fought without ceasing, and with a strong heart, regardless of the stress and strain.

And in the end, wounded unto death, this spirit still prevailed though he yielded the responsibility to other, and younger hands.

He would have been the last, we think, to claim that he always found the perfect answers to a multitude of problems. Some of his approaches and solutions were open to justifiable criticism. But appreciation was not lacking for his devotion to basic principles and his refusal to be diverted from the course.

There was inspiration in his belief that right ultimately would prevail over wrong, provided it made no unworthy compromises.

Few if any secretaries of state have been wholly popular, and such wide favor has been all the harder to attain in the cold war period. Mr. Dulles was no exception to the rule.

In an appraisal of Mr. Dulles' record, there is no call to pass over points of past criticism. Appreciation of his objectives need not blur the disagreements resulting from tactics which were at times questionable, or the occasional evidences of recklessness.

With a rare agility of mind he could create a phrase or think up a slogan for an occasion. As an outstanding example, there was the philosophy of brinksmanship for the advertising of which he had a direct responsibility. This helped no situation at home or abroad, and sight may have been lost of the fact that it almost involved the country in Indo-China when the cause was already lost.

The doctrine of "massive retaliation," as Mr. Dulles voiced it, was far from an adequate defense policy, and the call for liberation proved to be meaningless save for its partisan implications. This can also be said of the unleashing of Nationalist China which is leashed now more than ever since Mr. Dulles has disavowed Chiang Kai-shek's ambitions on the mainland.

The U.S. policy on Quemoy is still a mystery, although it appeared to have deterred aggression when proclaimed. And though the State Department was firm in opposing British-French intervention at Suez, Mr. Dulles played a part in precipitating this crisis by the blunt manner of withdrawing of help from the Aswan Dam. More than anything else, this served to create ill feeling among our allies.

"Bold initiative" was another phrase often voiced, but the Dulles policy toward communism finally boiled down to "containment"—that of his predecessor Mr. Dean Acheson. Although there were setbacks for Western interests in Indo-China and Iraq, adherence to the status quo was generally successful until the issue of Germany came to a head this year.

It was only then, not long before his illness became acute, that Mr. Dulles began to show signs of the flexibility that had been lacking—though he did not retreat on the fundamental need of defending his country's rights and responsibilities. He had come to the point of negotiation in an effort to ease tensions, although not convinced that the summit meeting would be fruitful.

Officially, he was not the author of foreign policy, for it was his duty to carry out the wishes of the President. But to a remarkable degree, that had been his role.

To the very end he held to the view that because communism was evil its dissolution was only a matter of time. Perhaps he was right in that, but there is no current indication that the crackup is near.

There was no stronger advocate of the need for close cooperation with our allies in the efforts to end the cold war.

Though Mr. Dulles did not have close ties with the Congress, he was effective in dealing with it. In his frequent meetings with the press he seemed to find pleasure, and because of his vast store of knowledge in foreign affairs he usually dominated such sessions.

The saying is that Mr. Dulles, at an age when most boys were playing marbles, decided to grow up to be Secretary of State. His grandfather was Secretary of State to Benjamin Harrison and his uncle, Robert Lansing, held that office under Woodrow Wilson. He learned much, and he learned it early in life; and he put his knowledge to good use in a nonpartisan manner until named to the Eisenhower Cabinet. His career as a diplomat went back intermittently 52 years to the Hague Peace Conference of 1907.

More than any of his predecessors, he was a one-man State Department, and that is one explanation for his endless travels as a trouble shooter. This did not serve to build a sound organization and confronted such a team man as Mr. Christian Herter with difficulties when he took over on the eve of important decisions.

Above all else, however, Mr. Dulles was the champion of a great cause and we can be sure he never faltered in his conviction that it would triumph.

He was above compromising with principle, and this is one of the finest lessons to be learned from his career. His name will command the free world's admiration and there is little doubt it will be held in long, if not fond remembrance by those elements he so resolutely opposed.

The Delaware Antituberculosis Society Releases Study on Cancer and Tobacco

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. McDOWELL. Mr. Speaker, a recent medical report on a relationship between ordinary lung damage and damage from lung cancer has received little public attention.

The study was made by Dr. Walter Finke, and was first published in the New York State Journal of Medicine, December 1, 1958.

When released by the Delaware Antituberculosis Society recently in Delaware the study was given wide circulation, and was extensively reported in the Journal-Every Evening, Wilmington, Del., May 18, 1959.

I include the article from the Journal-Every Evening for the information of my colleagues:

MAN ABOUT TOWN

A recent medical report on a relationship found between ordinary lung damage—such as caused by TB—and malignant damage from lung cancer has received astonishingly little public attention despite some implications that might ease the minds of cigarette smokers.

Most people who get lung cancer are cigarette smokers, but the tantilizing question of why most cigarette smokers don't get lung cancer remains.

How is a person to know whether he can safely smoke three packs a day and live to be 100, or whether he is one whose lungs are being damaged with every puff and being laid open to a malignant growth?

Until now, there have been only hints. English scientists have found correlations between lung cancer and work in certain industries plus smoking.

However, the National Tuberculosis Association has reprinted an article by Dr. Walter Finke, first published in the New York State Journal of Medicine, December 1, 1958, that points to chronic respiratory illness as a preliminary condition for the development of lung cancer.

The study was released here by the Delaware Anti-Tuberculosis Society.

"Severe lung insults" (such as a daily barrage of tar and nicotine) merely throw the cancer switch on lungs which have been laid open to the disease by an earlier long history of TB or chronic smoker's cough or any number of preexisting respiratory sicknesses, it explains.

One long shot in the dark to try to explain the current pandemic of lung cancer has traced the history of a number of victims back to the influenza epidemic of 1918–20.

Dr. Finke pointed out that lung cancer rose sharply after this epidemic and the current tremendous increase in lung cancer is largely confined to older persons who were exposed to the virus of the 1918–20 worldwide epidemic.

From the smoker's point of view, the study indicates, if he has had a serious lung illness in the past, or has a chronic dry cough, or if he's 40 or older, maybe he should switch to chewing gum.

The problem of switching is dealt with by a recent study released by the Delaware Cancer Society which shows that there are

no observable difference of intelligence or social and economic status between smokers and nonsmokers.

It is based on a study by a psychiatrist and a psychologist at the University of Oregon Medical School.

They say smokers have a higher anxiety level, report more psychosomatic symptoms, drink more coffee and liquor, and seek more excitement.

The two investigators say moderation is probably the sensible solution since it's not easy for a smoking-type man to stop smoking.

They recommend that antiexcessive smoking education should begin in high school and continue in college—"this is when people start to smoke."

Pornographic Material in the Mails

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mrs. KEE. Mr. Speaker, several days ago the Department of Justice announced that three men had been indicted in Detroit for violation of a law Congress passed to step up the campaign against persons who distribute obscene material through the mails.

These indictments, Mr. Speaker, will be good news for parents, schoolteachers, and others who are seriously worried over the increasing amount of pornographic material which is being placed in the hands of our young people.

The law which the 85th Congress passed, in response to strong demands by the public, enables the Government to prosecute a person charged with violation of this law at the point where the material was distributed. Previously, the Government was required to bring the indictment at the point of mailing.

This provision of the law was a handicap to law-enforcement officials. The new weapon which Congress voted should go a long way in helping to eradicate this national evil.

All of us want to keep this highly unsuitable material out of the hands of our children. It is difficult to believe that men would stoop to practice this despicable deed. Yet, it is reported to be a highly lucrative business and I assume some persons felt the high return warranted the risk involved.

Perhaps this new weapon in the hands of Federal law-enforcement officials will bring about a real crackdown. It is encouraging that the Department of Justice has moved so rapidly under the new law.

Mr. Speaker, I want to congratulate the Federal officials who obtained this first indictment under the new law. I know they will do everything they possibly can to eradicate this loathsome racket.

And especially, Mr. Speaker, I want to commend my gracious and wonderfully capable colleague, the Honorable KATHRYN GRANAHAN, of Philadelphia, for the magnificent work she is doing as chairman of a subcommittee of the House Post Office and Civil Service Committee in bringing this whole matter not only to the attention of Members of the Congress but to the American people. Mrs. GRANAHAN is giving unselfishly of her time and talents toward this serious problem, and she is to be congratulated for her outstanding service to the parents and youth of America.

The USIA and the Non-Russian Nations in the U.S.S.R.

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. BENTLEY. Mr. Speaker, we hear much nowadays of the need to understand the Russians. This is certainly to the good since such attained understanding can contribute much toward a realistic policy toward Russia and its nationals. However, to understand the Soviet Union means much more than just getting to know the Russians. It is estimated by many scholars on the subject that over half of the population in this empire is non-Russian. Thus, for friendly relations with the peoples in the U.S.S.R. and a realistic policy toward the Soviet Union, it appears even more important for us to understand the Baltic countries, White Ruthenia, Ukraine, the Caucasian nations, and the Moslem nations in this empire.

This valuable perspective is provided in a recent testimony given by Dr. Lev E. Dobriansky, of Georgetown University. Appearing before the House Committee on Appropriations, Dr. Dobriansky, who is also the national chairman of the Ukrainian Congress Committee of America, testified in support of additional USIA funds to direct and bolster our VOA broadcasts to the non-Russian nations in the U.S.S.R. The general observations made in this testimony might well be pondered by every American interested in a realistic policy toward the U.S.S.R., one with maximum economy and productive results. Under unanimous consent, I include this testimony in the RECORD:

TESTIMONY ON USIA FUND REQUESTS BY DR. LEV E. DOBRIANSKY, PROFESSOR AT GEORGETOWN UNIVERSITY, AND CHAIRMAN, UKRAINIAN CONGRESS COMMITTEE OF AMERICA, BEFORE COMMITTEE ON APPROPRIATIONS, HOUSE OF REPRESENTATIVES, FRIDAY, APRIL 17, 1959, WASHINGTON, D.C.

Mr. Chairman and members, I am grateful for this opportunity to testify in support of the request made by the U.S. Information Agency for funds to establish new transmitters for Voice of America broadcasts to the non-Russian nations within the Soviet Union. Although many shortcomings and defects continue to exist in the policy and operations of USIA, the requested funds should be appropriated specifically in order (1) to redress several recent and blunderous changes in the Voice of America concerning our broadcasts to these vital and strategic areas in the U.S.S.R. and (2) to even expand these broadcasts because of the internal satellite and captive status of these non-Russian nations.

The reasons which we offer to justify this position are as follows:

(1) Last year some officials in the USIA concocted the bright idea of having the Lithuanians, Latvians, Estonians, Ukrainians, Georgians, Armenians, Turkestani, and the Azerbaijani listen to our broadcasts either in the language of their captor, namely, Russian, or in English. When strong opposition to this plan of alienating these truly natural allies developed both in the Congress and among private groups, the argument for curtailing broadcasts in the languages of these different peoples was shifted to the pretext of transmitter shortages and lack of appropriations. Hearings on this affair were held by the Subcommittee on State Department Organization and Foreign Operations and my own testimony appears in its "Review of U.S. Information Agency Operations" (Committee on Foreign Affairs, 1959, pp. 102–161). Nevertheless, on the given pretext the Agency drastically reduced the Baltic and Ukrainian language broadcasts and eliminated entirely the Moslemic Uzbek program to Central Asia. It appears now that the reestablishment and further improvement of these broadcasts are predicated on additional appropriations. If, indeed, such appropriations are necessary, then they should be made with the two aims cited above.

(2) The dimension of activity suggested by the concept of the non-Russian nations in the U.S.S.R. is still little appreciated or even recognized by our Government or people. The incontrovertible facts that (a) over half the population in the U.S.S.R. is non-Russian, (b) almost half of the armed forces in the U.S.S.R. is non-Russian, (c) the so-called Soviet economy is an empire economy thriving on rich captive resources, and (d) the history of every non-Russian nation in this substrate empire is, to present date, one of a struggle for national independence and freedom—these basic and determining facts continue to largely escape the understanding and imaginative thinking of our policymakers. We are told, for instance, to understand better the 100 million Russians but we virtually ignore the even greater need for understanding the 110 million non-Russians whose aspirations and histories are by far more affinite to our own traditions and whose unreliability for Moscow has been attested to by countless Russian overseers. To sustain and extend these aspirations in this peripheral area closest to the very heart of the empire logically would seem to be the highest priority target of our psychological efforts. Instead, our broadcasts to these non-Russian nations are grossly inadequate in scope and depth for the achievement of this logical end. For example, at present there are no broadcasts to the 10 million Byelorussians or the 30 million Moslems in the U.S.S.R. As a background to these observations, may I submit for the record this article on "Lands and Nations in the U.S.S.R."

(3) Our failure to capture the dominant spirit of these non-Russian nations accounts in the greatest measure for the extreme irony that, in Asia and Africa today, Moscow, rather than we, is viewed as the main proponent of national independence, anticolonialism, and anti-imperialism. The one power that itself possesses a vastly extended empire, consisting of these internal satellites within the U.S.S.R. and also the external satellites in Europe and Asia, has by deception seized the role for which we, by tradition and spirituality, are best and honorably fitted. This situation is not only ironical but incredible and humiliating. While in our simplicity we continue to fight the ghosts of international communism, Soviet communism, and Marxian ideology, behind these smokescreens the Muscovites capably apply the borderlands

policy of the past tyrants of Muscovy to surpass the imperialist and colonial successes of previous Czars. While people in this country, like the Overstreets who profess to tell us "What We Must Know About Communism," speak of a "strange new force," the "strangest and most enigmatic in all history," Russian scholars themselves, like Berdyaev and others who experience this force, long ago taught that Russian communism is the third form of Russian imperialism, the dominant preceding forms being the Third Rome ideology and Pan-Slavism. Actually, what is truly enigmatic is not Russia but our trained incapacity to comprehend its imperialism and colonialism within the legalistic subterfuge known as the Soviet Union.

In short, our further reverses in the unending cold war—and there are many in the offing—will not be the result of any missile gap, space lag, fictitious overall economic competition from Moscow, or domestic inflation, all of which are of subsidiary significance to the cold war context. Instead, they will be the direct result of a protracted misconception of the real nature of the enemy, his traditional modes of conspiracy and diplomatic and political duplicity, and his centuries-long messianism. They will also be the indirect result of our fantastic neglect of the non-Russian nations in the U.S.S.R., most of whom are the first victims of Red Russian totalitarian imperialism and upon the subjugation of whom the extensions of Moscow's empire are made possible. The present state of USIA's operations regarding the basic area of the U.S.S.R. in the main reflect this neglect. With your permission to submit this background material into the record,[1] I cannot stress too strongly your responsibility to bring about appropriate changes in this paramount respect. Our prudent and imaginative activity in this new dimension—the non-Russian nations in the U.S.S.R.—stands to out-value at far lesser cost our missiles, our nuclear bombs, and other hardware as concerns the insecurity of Muscovy in its traditional strides for world domination.

Budget Busters

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial entitled "Budget Busters," from the Rockford, Ill., Morning Star of May 24, 1959:

BUDGET BUSTERS

Democratic spenders in Congress are pushing ahead in their determined drive to upset the administration's balanced budget and to open wide the floodgates of inflation. The House brushed aside economy pleas in passing a $2.1 billion budget-busting omnibus bill, which goes far beyond administration recommendations.

The catchall House bill, which now goes to Senate-House conference, compares with a Senate-passed program of $2.7 billion and the administration proposal, totaling $1.6 billion.

Under the House bill, construction of 35,000 units of public housing a year for 4 years, or a total of 140,000 new housing units, would be authorized. The bill the Senate passed calls for 45,000 additional public housing units a year for 4 years. The administration asked for no new public housing, contending there is no need for further low-rent public housing.

The House bill includes a 3-year, $1.5 billion program of urban renewal and slum clearance, $400 million for college housing units, $100 million for housing for the elderly, and lower down payments on home mortgages of the Federal Housing Administration. The Senate bill calls for an outlay of $2.1 billion over a 6-year period for slum-clearance projects and $300 million for college housing loans.

The administration proposed a 6-year program of urban renewal totaling $1.3 billion. It also asked for $200 million in fiscal 1959 for college-dormitory construction loans.

The conservative coalition of Republicans and southern Democrats succeeded in writing into the House bill a requirement that none of the funds the bill authorized could be committed for any project unless Congress appropriated the money later in separate legislation. This would close the backdoor to the Treasury which has been used to bypass congressional control of the purse strings.

Republicans are confident that President Eisenhower will veto the Democratic housing legislation. The President called on Congress last January to terminate the public-housing program. He also regards the Democratic provisions for slum clearance as excessive.

The housing legislation passed by Congress would mean more Government debt, more inflation, and more socialism. Housing starts, without a Federal program, are expected to set new records this year. There is no justification for Federal pump priming.

A Stitch in Time

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Evening Herald-Express, May 6, 1959:

A STITCH IN TIME

Congressman FRANCIS E. WALTER, Pennsylvania Democrat, and chairman of the House Committee on Un-American Activities, apparently believes in the theory:

Don't let's just talk about it—let's do something about it.

So he has introduced a bill in the House which would make it a crime for an officer of a labor organization to interfere with foreign shipments of defense materiel in time of war or during a national emergency proclaimed by the President.

This legislation, if passed, should take care of the case of Harry Bridges, president of the International Longshoremen's and Warehousemen's Union, which was expelled from the CIO in 1950 as being Communist-dominated.

Bridges, long a thorn of controversy in the United States, made so bold in testimony recently before the Committee on Un-American Activities as to state that he would advocate a longshoremen's strike to halt shipments of arms to Chiang Kai-shek and Nationalist China in the event that war should break out between that free nation and Communist China.

Bridges did not state that he would withhold such action if the President of the United States, the Congress, or the people of this country wished it otherwise, and if the United States being an ally of Nationalist China intended to send arms to Nationalist China as a mutual national defense policy.

In fact, he intimated otherwise; that he would advocate the longshoremen's strike regardless of any U.S. decision.

In an editorial at that time, the Herald-Express asked this question concerning Bridges' declaration:

"Would the President and other U.S. defense chiefs be forced to stand aside and allow this defiant action to threaten the Nation's security?"

Chairman WALTER of the committee has answered this important question for Americans in a positive and outright manner. If other patriotic Americans in the House and Senate of Congress will support his bill, we should have a strong safeguard against Bridges and any others of his ilk.

Here is what Chairman WALTER had to say about the matter:

"The testimony of Harry Bridges is a warning and a challenge which the Government of the United States must accept before it is too late.

"It is not enough for us to wince at his threats. We must have an effective weapon to be employed the very moment he and those like him seek to stifle our efforts to protect this Nation."

If WALTER's bill is passed, we hope that Congress makes the penalty fit the crime and that punishment will not be a misdemeanor slap on the wrist but a felony with the heaviest possible sentence involved.

The lives of millions of Americans could be involved.

Christianity or Communism?

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. DERWINSKI. Mr. Speaker, in view of the continuing struggle that the nations of the free world are engaged in with the atheistic, materialistic philosophy of the Communist bloc, I feel that the editor of the Lansing Journal, Lansing, Ill., on May 21, 1959, tells most clearly the issues involved in the struggle between godless communism and our own Christian heritage:

CHRISTIANITY OR COMMUNISM?

There are more than four times as many Christian missionaries from the United States in Asia and Africa today—24,284 from Protestant churches and 6,124 from Catholic—than ever before, despite the fact that the wave of anti-Westernism that followed World War II practically wiped out foreign missions.

"U.S. missionaries were tortured, killed, driven out of Communist China," writes Stanley High in the June Reader's Digest. "In other parts of Asia * * * missions were attacked, missionaries widely discredited.

"But, today, the foreign-missions enterprise, stimulated by a growing spiritual ferment in the hearts and minds of the people of many countries, is reaching more people than ever before * * * in more countries than ever: 117."

Mr. High notes in his article that most of the religions of the East are escapist in nature and that these people presently find themselves "between two worlds: the old one gone or going, the new one not yet come." The result, he describes as a spiritual vacuum in which the asceticism of their fathers, a brotherhood of emptiness is no help in meeting the disturbing realities of life.

This void, the author points out, must be filled by godless communism, by withdrawal into a world of meditation or by the progressive idealism of Christianity. This, he says, is the challenge and the opportunity that faces the missionary today.

Mr. High cites, as his authority, Dr. E. Stanley Jones who began his career as a Methodist missionary in Lucknow, India, 45 years ago, and who "has probably spoken face to face with more non-Christians in more countries than any other person in the world." It was Dr. Jones who was first able to interest high-caste Hindu and Moslem intellectuals in attending a Bible class, and who was active in the pioneering missionary work of establishing school and hospitals and the dangerous beginnings of social reforms. Today, at 75, Dr. Jones continues his travels across Asia, speaking day after day, winning more converts than ever before—even Communists.

To all who have helped through the years to support foreign missions, the Digest report comes, not only as good news, but as convincing evidence that Christianity is on the march and that their continued aid now will mean even more than in the past.

We have it on the authority of Dr. Jones that "in Asia and Africa (which are the prime targets of the Kremlin) a new spiritual era is beginning."

The Last Journey

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. DULSKI. Mr. Speaker, in the passing of John Foster Dulles, America has lost a great statesman and the free world has lost a champion dedicated to the preservation of world peace. He will be missed by all of us.

I wish to include the following editorial which appeared in the Buffalo Evening News, Buffalo, N.Y., on May 25, 1959:

THE LAST JOURNEY

John Foster Dulles, who traveled to the far parts of the earth in tireless quest of harmony among men and nations, has taken the last journey. Death came to the former Secretary of State Sunday.

The departure of this devoted American was not made in the privacy we prefer to associate with death. Ravaged by mankind's most dread destroyer, cancer, the world watched in uncomfortable helplessness as his life ebbed away for many weeks. It was something that couldn't be helped. For Mr. Dulles was, in the best sense, an international citizen as well as a truly great citizen of his own country.

When he was first stricken more than 2 years ago, the news was received with dismay in all friendly lands and those who recognized his stature on the world scene were appalled. There was rejoicing when he received a reprieve that was to be extended for all too brief a time. The sorrow at his passing was the more acute because of it.

Like all men touched by greatness, Mr. Dulles had his critics, many of them, at home and abroad. They were vociferous, insistent, and sometimes abusive in degrees dependent upon their depth of disagreement with the policies of which he was coauthor and custodian. However, when the gravity of his illness became apparent, this captious chorus died down. The impending loss of the services he supplied in full measure for 6 years was too stunning to be contemplated in an atmosphere of petty faultfinding. At their most critical, his detractors were never known to question his rocklike integrity or put aside the realization that he was one of the firmest anchors of policy in the Western World.

Even though there was time to be prepared and resiged to a great loss, the actual death of John Foster Dulles is a numbing shock. His successor, a fine and competent man, sits in his chair at Geneva to cope with the foes he fought so ably for so long. Posterity alone can assess the contribution of this dedicated man to the cause of tranquility in a disordered world, but the sincerity of his mourners is very deep and real in our own time.

New Research Laboratory Marks AVCO Progress

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. FULTON. Mr. Speaker, on May 14, the distinguished majority leader, Congressman JOHN MCCORMACK, of Massachusetts, spoke in tribute of the AVCO Corp. upon the establishment of its new laboratories in Wilmington, Mass. As a member of the Committee on Science and Astronautics I would like to join with him in congratulating AVCO for its foresight in creating great new facilities for vigorously pursuing its mission in this the space age.

AVCO has made major contributions to space technology that have substantially strengthened our country's military capabilities. As well, AVCO's research and development have enhanced the comprehensive space exploration programs presently being undertaken by the National Aeronautics and Space Administration.

AVCO's laboratories have been given a major responsibility for the research theory on the problem of reentry of space vehicles, rockets, and missiles into the earth's atmosphere. Under the guidance of Dr. Arthur Kantrowitz, an understanding of the related chemical and physical factors involved made possible the design and development of the successful nose cones for the Atlas, Titan, and Minuteman rockets.

The AVCO Research and Advanced Development Division now has the responsibility for the design development and production of the nose cones for the "second generation" Titan and "third generation" Minuteman ICBM's. The logical outgrowth of basic research and understanding of hypersonics and the newly developed materials to withstand reentry conditions has led to a preeminent capability in the many new areas which are opening in space technology. AVCO has been working diligently for 3 years on recovery systems for satellites, and in particular, to achieving early reliable and simple techniques for the recovery of manned satellites.

This new $16 million advanced laboratory and research center, financed by the corporation, is practical evidence of AVCO's faith in the future growth of space technology and of its foresight as a major contributor to the growing body of scientific knowledge so vital to our U.S. ballistic missile capability and to maintaining our U.S. leadership of the free world in the exploration of space.

Congratulations and a hearty pat on the back to AVCO for a job well done and for success in the future.

Wheat Marketing

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Santa Monica (Calif.) Outlook for May 15, 1959:

THE LOOKOUT

(By Louise Randall Piersen)

Read this and weep.

Four years ago, Evetts Haley, Jr., a college graduate just turned 20, bought a cattle ranch in Oklahoma.

He planted some wheat in his bottom land which made good feed for his cattle, and when he had more than he needed he would sell a load for cash.

When Haley had acquired a wife, was about to become a father, and there was a disastrous drought, he took a load into Muskogee to sell it but was denied a marketing quota card.

A Government survey of his farm had revealed he had planted wheat in excess of his allotted quota, had been arbitrarily assessed a fine of $506.11, and couldn't sell his wheat until it was paid.

So Haley trucked the wheat back, fed it to his cattle, but was told he would have to pay the fine, anyway.

As he didn't have the $506.11, he sold his cattle, locked the wheat up in his granary, and moved to Texas, where he took a job to support his little family.

But the Government proceeded to sue Haley for the $506.11, and the case went to trial in Judge T. Whitfield Davidson's Federal court at Dallas on September 8, 1958.

In a ringing indictment of highhanded Government agencies which persecute a man for doing something he has a right to do under the Constitution, Judge Whitfield found for Haley.

"It is not a question of marketing," said Judge Whitfield. "It is a question of whether production is unlawful and in violation of the Constitution.

"There are some 18 things that the Constitution says that Congress may or may not do. * * * There is nothing that says that

Congress shall have the power to regulate production in agriculture."

Judge Whitfield's decision was widely hailed as a blow in behalf of liberty and justice except by the Agriculture Department bureaucrats, who took the case to the Supreme Court without notifying Haley or his attorneys of the impending action.

Haley was not given a hearing, and his lawyers had no chance to make arguments in his behalf.

On February 24, 1959, the Supreme Court (which had gally bypassed the appellate court) ruled curtly, "The judgment is reversed. (*Wickard* v. *Filburn*, 317 U.S. 111.)"

But this man Filburn had received subsidies under AAA, and the Court had ruled that the Government can and must control those whom it subsidizes, while Haley had never asked for or received one red cent.

"I will never willingly pay the current penalty," says Haley, who is appealing for a rehearing. But what earthly chance has he got?

Sons of the American Revolution Support H.R. 3

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. HARRISON. Mr. Speaker, the distinguished senior Senator from Virginia, the Honorable HARRY F. BYRD, recently delivered a significant address at Warrenton, Va., from which the National Society of the Sons of the American Revolution drew in composing its resolution memorializing the Congress to enact into law H.R. 3, authored by the Honorable HOWARD F. SMITH, dean of the Virginia delegation in this House.

Under leave to extend my remarks in the Appendix, Mr. Speaker, I include the text of the resolution, adopted at the 69th Annual Congress of the National Society of the Sons of the American Revolution, held at Pittsburgh, Pa., May 17–20, 1959:

Whereas compatriot Senator HARRY F. BYRD of Virginia made an outstanding speech at Warrenton, Va., on May 1, 1959, excerpts from which follow:

"Fundamentally, our form of government rests upon the sovereignty of the States which form the Union. And for 6 years since Warren was appointed Chief Justice, the Warren Court has struck directly at the roots of our democracy including a clear line of decisions destructive of States' rights and concentrating power in the Federal Government.

"Since 1953 the Warren Court has handed down a number of decisions which would:

"1. Limit the powers of the legislative branch of the Federal Government to investigate;

"2. Open confidential files of the FBI and interfere with its administrative responsibilities;

"3. Disregard the clear intent of the laws, especially for evicting subversives from public positions;

"4. Destroy the effectiveness of local police protection;

"5. Strike down the rights of individuals;

"6. Destroy the sovereignty of States guaranteed by the Constitution; and

"7. Preempt and nullify perfectly good and constitutional State laws.

"All of this does violence to American fundamentals.

"Our Constitution establishes three branches of government—legislative, executive, and judicial, but we find the Warren Court assuming the authority of all three.

"Under our system the Central Government has no authority except that granted to it by the States, but we find the Warren Court destroying the rights of States, and preempting State laws."

Therefore, be it resolved, That the National Congress of the Sons of the American Revolution condemns the acts and conduct of the Supreme Court of the United States in respect to the above and foregoing matters and memorializes the Congress of the United States to enact into law the pending bill by Representative SMITH, Democrat of Virginia, declaring that no act of the Congress supersedes a State law unless the Congress specifically declares its intention of doing so or unless the laws are clearly incompatible, and further memorializes the Congress to adopt further adequate laws to preserve and protect States' rights.

The Danger of Inflation

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. DERWINSKI. Mr. Speaker, in the concentration of world problems in the role that our Nation has taken as a leader of the free world, we often forget that every action of our Government, whether international or domestic, directly affects all of our citizens.

Recently, due to the public interest shown by the newspapers of the country, the average citizen has become aware of the problems of inflation as caused by excessive Government spending.

As Members of Congress, we often speak of grassroots thinking, and I, therefore, submit for the RECORD an editorial of May 21 in the Harvey Tribune, Harvey, Ill., as being typical of community newspaper and editorial policy by calling its readers, attention to the real danger of inflation:

THE DANGER OF INFLATION

Students of economics are always concerned with the problem caused by rapid inflation. The reader may sometimes wonder what to believe, and how to analyze the present trend in our country, because of the conflicting statements concerning the strength of the U.S. economy, and the danger to our economy from inflation.

It is true that we have enjoyed a steady period of inflation since the Revolutionary War, in the 18th century, and that there is no reason to think that this trend will be reversed. Inflation during most of these years has developed at a slow pace, or as a result of a series of ups and downs, with the general trend always upward.

The inflationary cycle which followed World War II was a very rapid period of inflation, and was checked only briefly in 1948–49, and another similar check was halted by the outbreak of the Korean conflict. This was only checked in 1958, by what has been known as the 1958 recession.

Many economic experts believe this was a good thing for the economy, although the country is an expanding one, with a population increase of more than two million each year, and, obviously, the economy must also expand if the living standard is to continue to rise.

There are many indications that the administration is seriously concerned with the threat of continuing inflation. In fact, President Eisenhower's warning to both the steel industry and labor, that another steep rise in the price of steel could not be tolerated, is an indication of the seriousness with which the administration views the inflationary threat.

One need only look back a few decades, or less, and study the difficulties caused in France by runaway inflation which was also so extreme in Germany that the currency had to be repudiated after World War II, as money became almost valueless.

And while the U.S. dollar is not becoming almost valueless, it is true that for the first time in decades gold has begun to flow out of the United States and our trade balance is now lost for the first time in many years. In other words, we are buying more abroad than we are selling, and this is the first time this has happened in many years. Many believe this is because the price of our products is so high that foreign nations cannot buy many of them.

The effect on national defense is serious, since the cost of national defense accounts for more than 50 percent of the total national budget of more than $70 billion, and as inflation increases the cost of defense hardware increases. The Government is again having trouble selling its bonds, because people realize that even $3 invested today may be worth no more than $4 10 years from now. They believe this because $3 invested in 1950 is today worth $6, while the Government will only pay $4 on this money—if it were an A.U. bond investment—in 1960.

One can, therefore, realize the seriousness of the threat of inflation, and understand the grave attitude in the White House concerning another sharp rise in the price of steel. Such a rise would inevitably bring about price increases in appliances, automobiles, and practically all of the goods which require considerable amounts of steel in their manufacture.

For these reasons, we believe the great majority of Americans support President Eisenhower in his effort to hold the line at this time. Simply appealing to the patriotic sentiments of all citizens, we believe that the best interests of our country will be served by restraint, and prevention of any new sharp inflationary spiral.

New York State Distressed Labor Markets Increased in Number

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. MULTER. Mr. Speaker, in the CONGRESSIONAL RECORD of May 20, 1959, at pages A4228 to A4231, I inserted a report emphasizing the need for passage of the area redevelopment bill.

I commend to the attention of our colleagues the following supplement to that report, bringing the report up to date. The supplement was also published by the Area Employment Expansion Committee of New York City:

NEW YORK STATE DISTRESSED LABOR MARKETS INCREASED IN NUMBER

Continued high level of unemployment in Buffalo resulted in its being classified as a chronically distressed area. A total of 13 labor markets in New York State are now classified as distressed and would be eligible for assistance under the area redevelopment bill. They contain a civilian work force of over 1 million people and had an average unemployment rate of 11.5 percent in March 1959 (table I). The distressed areas include about one-eighth of New York State's civilian work force.

Rising national employment has lowered unemployment rates but has not resulted in any New York State distressed labor market area from graduating from this category. The Buffalo labor market was added to this list with receipt of the March unemployment figure of 11.5 percent. This labor market has had more than a 9 percent level of unemployment since February 1958. Relief from high level unemployment is not likely to occur in the forthcoming months because of the local downward movement of automobile and aviation production, shrinkage in steel employment due to automation and the closing of a number of apparel and other soft goods plants. A large scale program of economic redevelopment is necessary in this labor market.

The other major distressed labor market is Utica-Rome.

The smaller distressed labor markets include Amsterdam, Auburn, Batavia, Elmira, Glens Falls-Hudson Falls, Gloversville, Kingston, Newburgh-Middletown-Bacon, Oneida, Plattsburgh, and Watertown.

TABLE I.—*New York State labor force and unemployment in labor markets, March 1959*

Labor market area	Labor force (civilian) total	Unemployment total	Unemployment as percent of the labor force	Number in excess of 6 percent
A. State, total	(1)	(1)	(1)	(1)
B. Distressed areas [2]	1,030,950	118,180	11.5	56,323
Major	665,800	76,000	11.4	36,052
Buffalo	527,600	60,500	11.5	28,844
Utica-Rome	138,200	15,500	11.2	7,208
Smaller	365,150	42,180	11.6	20,271
Amsterdam [3]	23,000	3,100	13.5	1,720
Auburn	25,900	3,200	12.2	1,646

Early Princetonian

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, one of the great men in American public life, Sigmund Spaeth, was given a warmhearted reception by leaders in all walks of life on the occasion of his 50th year in music.

Mrs. Eleanor Roosevelt recalled his White House appearances, and spoke of the late President's interest in Dr. Spaeth.

Mayor Robert F. Wagner spoke of his years of dedicated activity in bringing music to the average person and lifting from this great art the veil of academic technicalities, and demonstrating that anyone can learn to appreciate and enjoy good music.

David Lawrence, editor of U.S. News & World Report, recalls that Dr. Spaeth was an outstanding member of the faculty of Princeton University, where he was an instructor in German at the time Woodrow Wilson was president of the university. Sigmund Spaeth wrote the program notes and reviews of concerts for the Daily Princetonian at that time, and was concertmaster of the university orchestra as well as a violin soloist. He sang in the glee club and the chapel choir and served as president of the local choral society.

I am pleased to call attention to the great work of a distinguished American who is remembered with special pleasure by many who knew him during his years at Princeton University as a force for good in the community. May his tribe increase.

I include here some of the moving tributes to Dr. Spaeth which appeared in the Music Journal, April-May 1959 issue:

A RECOLLECTION

(By Eleanor Roosevelt)

Dr. Spaeth appeared twice at the White House during my husband's term of office—once at a luncheon which I gave for the ladies of the diplomatic service, with Vandy Cape and Beatrice Harrison on the same program. I can remember still how much pleasure he gave to all of us, and I think Amelia Earhart was with us on that occasion. Later he gave us an evening concert after a dinner in honor of the Grand Duchess of Luxembourg. My husband enjoyed Dr. Spaeth tremendously and I have always had a great admiration for him and a warm recollection of his personality.

NEW YORK APPRECIATES A PRACTICAL MUSIC LOVER

(By Robert F. Wagner, mayor of the city of New York)

Music is the truly international language—and I know of no individual who has done more since the turn of the century to bring it to the hearts and homes of Americans than Sigmund Spaeth. On this, the 50th anniversary in music of Dr. Spaeth, I know I express the feelings of every resident of our great city in conveying my tribute to Sigmund Spaeth and in expressing anew my admiration and appreciation for his years of dedicated activity. He has served all of us remarkably well.

I recall with particular delight the "Tune Detective" programs in the earlier days of radio, in which I was continually amazed and amused to learn how melody, the lifeblood of music, quickly works its way into our favor and how some of our most popular and beloved tunes can be traced to earlier, more serious works.

One would require far more space than these pages afford to cite the unique and lasting contributions of Sigmund Spaeth to the growth of American culture in the field of music. (I am not forgetting that he at one time broadcast tennis and foot-

ball for WNYC.) They vary from writing and lecturing to judging the finals in New York City's annual barbershop quartet competition these many years, with occasional MC duties also in Central Park. We have a city anthem—"Our New York"—and the words and music are by Sigmund Spaeth. Our distinguished city stations, WNYC and WNYC–FM, have this year presented their 20th annual American music festival; for two decades Dr. Spaeth has been a constant source of encouragement and help to these hundreds of concerts.

For 9 fruitful years he was president of the National Association for American Composers and Conductors. It was the original Municipal Art Committee which laid the groundwork for our great City Center of Music and Drama; again Dr. Spaeth was in the vanguard, propounding valuable ideas as a committee member. Currently he is giving important aid as a member of a committee I have established for a George M. Cohan memorial, as well as that of this year's Handel Festival.

Strictly as an amateur, whose pursuits with the violin never led him to the virtuoso stage, I shall always be grateful to Sigmund Spaeth for bringing music to the level of the average person, for lifting from music the veil of academic technicalities, and demonstrating anyone can learn to appreciate and enjoy good music. From everyone who has ever sung or whistled or got pleasure from a tune, congratulations are in order to Sigmund Spaeth on his golden anniversary in music.

EARLY PRINCETONIAN

(By David Lawrence)

(David Lawrence is a widely read commentator on current events and politics, both in his popular syndicated column and in the significant magazine U.S. News & World Report, of which he is editor and Washington correspondent. Among his well known books is "The True Story of Woodrow Wilson" and he has also written many articles for the leading magazines.)

Sigmund Spaeth was an outstanding member of the Princeton faculty, which he joined in 1906 as an instructor in German. At the time, Woodrow Wilson was president of the university, and while Sigmund had an older brother, Duncan, who was an outstanding teacher of English, "Sig," as we called him, made his own mark in many ways.

Sig Spaeth, of course, had a unique way of teaching German. He really made it interesting. His classes included many men who were not only active in college days, but who later became prominent in public life.

Sig Spaeth was, even in our college days, known for his interest in music. He wrote the program notes and reviews of concerts for the Daily Princetonian, and was concertmaster of the university orchestra as well as a violin soloist. He will be remembered for his singing in the glee club and the chapel choir and serving as president of the local choral society.

All in all, I would say that Sig Spaeth was an inspiraton to all of us in student days at Princeton, and we of the alumni are gratified that he has made such a success in his chosen field.

FOR THE NATIONAL FEDERATION OF MUSIC CLUBS

(By Helen Havener)

(Helen Havener has for years been a mainstay of the National Federation of Music Clubs as executive secretary, handling all public relations, as well as the details of conventions, etc., managing the Music Clubs Magazine and supervising the organization's national headquarters in New York City. She has been of inestimable service to all the officers mentioned in this article.)

There is probably no member of the National Federation of Music Clubs who has given longer or more devoted service to the organization than Dr. Sigmund Spaeth, editor of the Music Journal, who is being saluted in this month's issue for his 50 years of dedication to the cause of music.

Dr. Spaeth's connection with the world's largest musical organization dates back to the Tri-Cities Convention in 1921, for which the clubs of Davenport, Iowa, and Rock Island and Moline, Ill., were cohosts. At that time Dr. Spaeth was serving as educational director for the American Piano Co., promoting the electric piano, known as the Ampico, with Rachmaninoff, Godowsky, Levitzki, and other artists giving live performances for comparison with their record rolls.

With the flair for the unusual and picturesque which is one of his outstanding characteristics he staged a spectacular novelty at this convention by inviting everyone to an open-air breakfast at 7 a.m. at which there was a concert demonstration featuring the Ampico, with the late Henry Souvaine, prominently identified during the last years of his life with the Metropolitan Opera broadcasts, as the chief performer. There was some grumbling in advance of the breakfast when bellboys knocked on all the hotel doors at an early hour, but nobody really minded, after being regaled with music and food on a pleasant hilltop, and the occasion is regarded as one memorable in federation history.

Although Dr. Spaeth did not begin service as a federation chairman until the late 1930's, he was a frequent and always welcome visitor at conventions. He was a guest at a federation function in the home of Mrs. Frank A. Seiberling (then national president), in Akron, Ohio, after the 1921 convention, and in 1923, at the Asheville, N.C., biennial, he played the important role of Apollo in the Carl Venth opera, "The Sun God," also bringing two professional singers to supplement the cast: James Stanley, baritone, and Ray Vir Den, tenor (later the husband of Frances Alda and president of the Dutch Treat Club). From time to time Dr. Spaeth dropped in at other conventions, if he chanced to be passing through, and in 1941, at the Los Angeles biennial, his featured speech made headlines all over the country.

Sigmund Spaeth was active in the federation under several presidents, including Mrs. Julia Fuqua Ober, the late Mrs. Anne Macomber Gannett, Mrs. Royden James Keith, Mrs. Ada Holding Miller and her current national president, Mrs. Ronald A. Dougan. His successive chairmanships have included radio and television, motion pictures, and later audio-visual education, when study of these three media was grouped together under that title. He also served as consultant for two prior national presidents, the late Ruth Haller Ottoway, afterward Mrs. Nikolai Sokoloff, and her successor, Mrs. John Alexander Jardine, when audio-visual projects were under discussion.

In his various chairmanships, Dr. Spaeth instituted campaign which resulted in general improvement in standards in the fields with which he was associated, and at one time he actually prevented the dropping of good music altogether from the air. He was instrumental also in securing the federation's cooperation in support of such films as "A Song To Remember," "The Great Caruso," Rhapsody in Blue," and "Interrupted Melody," resulting in their commercial as well as artistic success.

For many years his stimulating reviews of films and records, radio and television programs have been one of the most popular departments in the federation's official publication, Music Clubs magazine. Through the years these contributions have been of tremendous value, always preserving the highest standards, written in clear and practical style, and encouraging thousands to support the best in the various fields of communication. In recent years, since Mrs. Naomi Reynolds took over the chairmanship of audio-visual education, with Dr. Spaeth serving as eastern representative (since the federation's bylaws preclude serving more than 4 years in one chairmanship), he has restricted his reviews to records and films, previewed in New York.

At the Miami biennial in 1955 Dr. Spaeth was active throughout the entire convention, contributing a variety of services and receiving a presidential citation from the retiring president, Mrs. Miller, to whom he in turn awarded the Henry Hadley Medal of the National Association for American Composers and Conductors, over which he presided for 9 years. The Miami convention also had the honor of a special issue of Music Journal, edited by Dr. Spaeth as a guest, and it was this that led to his permanent editorship of that highly successful magazine.

Those who attended the New York convention still have vivid memories of the celebrity luncheon at which Dr. Spaeth served as master of ceremonies. His own impromptu piano accompaniments for Fritzi Scheff, Charles Kullman, and Frederick Jagel were unexpected features of the program, and he also introduced Margaret Harshaw, Frank La Forge, Abram Chasins, and other distinguished artists.

In San Diego this year Sigmund Spaeth appears as a luncheon speaker April 21 and on the motion picture panel conducted by Naomi Reynolds April 24, with a probable surprise contribution to the men's Mexican dinner on the 23d. (Even without his actual presence, the spirit of Sigmund Spaeth was felt at the Columbus convention when our current national biennial program chairman, Eleanor Pascoe, who is also chairman of the past presidents assembly, put on a hilarious production of his famous "Jack and Jill" parodies at the past presidents assembly tea.)

It is gratifying to reflect that so many of the Spaeth 50 years with music have been shared with the National Federation of Music Clubs in so many different capacities. We shall all be reading his new book of the same title with avid interest, for Sigmund Spaeth has truly been one of us through the years. May his stimulating enthusiasm long continue to exert its influence throughout the world of music.

HE MADE THE MOVIES, TOO

(By Eric Johnston)

(Eric Johnston has been president of the Motion Picture Association of America since 1945 and also heads the companion organizations, the Association of Motion Picture Producers and the Motion Picture Export Association of America. For 4 years he served as president of the U.S. Chamber of Commerce. Three Presidents, F. D. Roosevelt, Truman, and Eisenhower, have appointed him as an administrator and Ambassador with diplomatic responsibilities, and he still actively represents the United States abroad.)

Every generation has its musical favorites and its favorite music. Today the popular people of music appear to be the Elvis Presleys, the Tommy Sands, all the lanky and twitching young men singing in strident voices and repeating and repeating the same chords on their electric guitars.

As I look back, as sometimes I must, I know that my generation also had its musical favorites and favorite music. Thinking back to my budding days, my memory fashions a pattern in which I find Dr. Sigmund Spaeth and radio and Saturday movie matinees with a best girl and again Dr. Spaeth and again.

In my generation in music, Dr. Spaeth was everywhere, seemingly all at the same time. He was the Tune Detective, the musician, the one-man band, the educator and the elucidator. He was even in the movies on Saturday afternoon.

In my generation, the song that ran through our minds, the song that we sang around the piano at the fraternity house on a weekend night, was "Frankie and Johnny." That song, in a way, inspired us—and Dr. Spaeth is associated with it too.

The records tell us that this man, who got his doctorate the hard way, earning it at Princeton, where he wrote his dissertation on "Milton's Knowledge of Music" (John Milton, that is), actually did play the piano in a place in St. Louis called the Mansion House, where it was said that Frankie slew her lover. Let me try to unravel this.

The Mansion House was a lowdown dive, but I want to add hastily that this association of Dr. Spaeth took place in a motion picture and not in real life.

In this film version of the "Frankie and Johnny" ballad, Dr. Spaeth enacted the piano player, besides selecting and arranging other songs of the period. But he was also a dramatic actor in this film, along with Helen Morgan as Frankie and Chester Morris as Johnny.

Dr. Spaeth had the climactic line of this classic, although it was the only bit of dialog they trusted him with. The line was: "Frankie just shot Johnny."

But we don't need the records, at least I don't, to recall Dr. Spaeth as the tune detective. He was famous in that character on radio for some years and in the movie shorts after the movies got to talking in 1927.

I doubt if anyone of my vintage can forget his analysis of "Yes, We Have No Bananas," a song we also sang down at the fraternity house. Dr. Spaeth proved to our everlasting amazement that "Yes, We Have No" actually was lifted from the opening phrase of Handel's "Hallelujah Chorus."

And if that wasn't enough to make us sit up and notice really great music, he performed the same FBI job on another of our favorites, "I'm Always Chasing Rainbows." This one, he said—and proved it—came from Chopin's "Fantasie Impromptu."

I have welcomed this opportunity to talk about Dr. Spaeth on this year that marks his golden anniversary and love affair with the world's music. It is surely one of the happiest marriages of our time.

There is no doubt that this greatly talented man has perhaps done more than any other to bring the American people and great music together in our generation. All the best to him in the years ahead.

On and Off the Records

(By George R. Marek)

(George R. Marek is vice president and general manager of RCA Victor Records. Before joining that organization in 1950 he was vice president of J. D. Tarcher & Co., advertising agency. Mr. Marek has written extensively on music and has, since 1940, been music editor of Good Housekeeping magazine. His books include "The Good Housekeeping Guide to Musical Enjoyment," "Front Seat at the Opera," "Puccini," and "A World Treasury of Grand Opera." He appears frequently on the Saturday broadcasts of the "Metropolitan Opera Quiz.")

The relations between Sigmund Spaeth and the record industry have been very close through a large part of his 50 years with music. He has been particularly helpful in writing the liners (editorial comments) on the outside of disk covers, making his materials entertaining as well as educational and thus adding to the popularity of the recordings concerned.

In the RCA Victor catalog Dr. Spaeth contributed the comments for the first album made by Margaret Truman, including some important information on the backgrounds of the colonial songs recorded by her. His liner on the 25th anniversary record of Arthur Fiedler was a sincere and well-phrased tribute to that popular and highly successful orchestral conductor. There are Spaeth notes also on the covers of several of the famous Treasury series, for which his personal recollections of the artists of the past proved most valuable. In his lighter moments, Dr. Spaeth wrote authoritatively on an album of barbershop quartets and the spectacular band music of Morton Gould, as well as the Kostelanetz operatic records.

His activities have been significant also in promoting records of all kinds. "Sigmund Spaeth's Record Library" was the title of a series of broadcasts over station WQXR which served as a stimulus to wider and more intelligent listening to records in American homes. His ABC network program, "At Home With Music," made constant use of good records, and this series was quite properly nominated for a Peabody award.

It is not generally known that some years ago a highly popular record library known as Music You Enjoy resulted from the combined efforts of Dr. Spaeth, Howard Barlow and the Columbia Symphony Orchestra. These records were sold mostly through newspapers, as a stimulus to circulation, and the New York Journal-American alone is said to have disposed of more than half a million sets in a short time. (Some of the records were later made available also in a reduced size for children, under the title of "Little Masters.")

Recently Dr. Spaeth has been active in presenting a "Basic Library of the World's Greatest Music," for sale in supermarkets, making possible the work of a national committee for the musical arts, headed by Alec Templeton, with Quaintance Eaton as executive secretary, for which Dr. Spaeth has been the regular speaker at organizational chapter meetings.

The RCA Victor laboratory was used not long ago for recording a special set of interviews by Sigmund Spaeth with outstanding artists of the internationally known community concerts, each interview being followed by one or more selections from the repertoire of the singer or instrumentalist concerned. These records have been heard on local radio stations in connection with community concert campaigns and are available for this purpose through the New York office of the organization.

There is at least historic interest in the miniature records made by Simon & Schuster for the first edition of Sigmund Spaeth's "Barber Shop Ballads, in which he himself sang baritone with three other experts in that highly individual type of harmony. Unfortunately this was before the days of unbreakable records, and most of the dics came back in fragments, making a whole set today a collectors item. Less known are some of the recordings and transcriptions made by Dr. Spaeth for the promotion of various motion pictures, including the famous "A Song to Remember" (Chopin's film biography, with piano-playing by José Iturbi), "Ive Always Loved You" (for which Artur Rubinstein did the off-screen performances) and "Scheherazade," in which the late Walter Damrosch joined Dr. Spaeth in a recorded discussion.

Finally we have had several years of authoritative reviewing of records by Sigmund Spaeth, at one time in Theater Arts magazine, later in his own Music Journal and his syndicated column, Music for Everybody, and, perhaps most significantly, in the Music Clubs magazine, which goes to the 600,000 members of the National Federation of Music Clubs, long served by Dr. Spaeth as chairman of Audio-Visual Education.

For a man who has never considered himself a recording artist in any sense, much less a scientific expert in discography, this all adds up to considerable and consistently commendable achievement in a field today universally recognized for its contriubtions to the advancement of music in America.

This Was a Musical Family

(By Albert Charles Norton)

(The author of this personal history is a well known writer of hymns and gospel songs, in his youth a pupil of Dr. J. Duncan Spaeth in Philadelphia, where he also knew the other members of the family. He has been a contributor to Music Journal in the past, discussing unusual personalities in the musical field.)

November 22, 1902 was a great day for boys of the Central High School in Philadelphia. For it was the day of Dedication. Literally, the whole city turned out. The speaker for the ocasion was the President of the United States: Theodore Roosevelt. And the cheerleader was Dr. Duncan Spaeth, popular chairman of athletics, coach of the school crew, and the inspiring professor of english philology and literature. In that audience were many prominent alumni of the school, member of the Spaeth family, and an old graduate, Sep Winner, composer of "Listen to the Mocking Bird" and "Whispering Hope."

It was with no little satisfaction that we followed Dr. Duncan Spaeth through the years—as professor of English literature at Princeton during the era of Woodrow Wilson and later. His creation of wining crews and his adult community forums have been lasting contributions to the fame of Princeton.

Among those enthusiastic graduate students at Princeton (and also on the faculty) was Dr. Duncan's younger half-brother Sigmund Spaeth, in whose honor this story is written. For, in keeping with the family tradition and a big brother's inspiration, Sigmund was headed for a career in music and to become himself a master in his field. To gain a closer understanding and to express a genuine appreciation of these men we must literally take a Rhine journey and in the land of the Nibelungs find the sources from whence came this distinguished family.

It was at Esslingen on the banks of the Neckar, amid the Swabian hills, that the Spaeth father Adolph was born. Surrounded by medieval castles, churches, quaint shops, and an industrious peasantry, the young man grew in stature and spirit. A lover of music and of his church, he studied for the ministry, first at Blaubeuren and then at Tübingen, with Friedrich Silcher, composer of the famous "Lorelei" tune, as his music teacher. The years pass, and we follow him abroad—to Scotland, where we find him as tutor in the family of the Duke of Argyle, with a developing romance and marriage to Maria Duncan. Next we find him in Philadelphia, a leader in a growing German-American community centered about St. Johannis Church. Son J. Duncan is at the organ, and later, seventh son Sigmund is in the choir. From Reverend Adolph's pen come eloquent addresses, scholarly books and many German hymns, still sung in the Lutheran Church. His second son, Henry Douglas, also entered the Lutheran ministry and held pastorates in Williamsport, Pa., and Liberty, N.Y. Ernest Spaeth, with the family spirit of adventure, went West to ranch in Wyoming and to become a State sheep commissioner. Maria Elisabeth, still living in Philadelphia, became a kindergarten teacher and gave to Sigmund his first musical instruction through nursery rhymes. Carola, Sigmund's own sister, became an accomplished musician and artist, sharing with her brother many happy hours of study and performance. Nor must we forget son Reynold who went to Bangkok as head of the Rockefeller Hospital but still found time to sing and to whistle tunes of America and of the East. The mother of the three younger

Spaeths was born Harriett Reynolds Krauth, daughter of Rev. Charles Porterfield Krauth, vice provost of the University of Pennsylvania, herself an author and musician, editor of the Lutheran "Church Book With Music."

With such a family background, Sigmund Spaeth came on the scene to pioneer in promoting the universal language of music. In this year 1959 his significance in music is equaled by few. His travels, his studies with the masters at home and abroad, his encyclopedic knowledge are familiar to every reader of his books and to every listener to his broadcasts. Every student and teacher is familiar with the famous "Tune Detective" and opera commentator. His popular lectures with piano illustrations have brought music into the heart of every city. His sense of humor as well as of human psychology have been expressed in all his writings, and to many today music is no longer a labor over interminable and boring exercises—but just plain fun. Comedy, pathos, drama, laughter, and the depths of emotion have entered the lives of his readers. We "boys of the old school" are most happy to join the host of friends and extend our personal felicitations to Dr. Sigmund Spaeth on this golden anniversary.

The St. Lawrence Seaway and Harbor Development

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 5, 1959

Mr. BAUMHART. Mr. Speaker, the editorial reprinted below, relative to harbor development and the seaway, appeared in the Sandusky Register, Sandusky, Ohio, on May 23, 1959. Recommended improvements to the Lorain and Sandusky Harbors in my congressional district have been approved by the Corps of Engineers, the Bureau of the Budget, and are incorporated in the rivers and harbors bill presently under consideration by the House Public Works Committee. If the full value of the seaway is to be felt in the near future, planning programs should be instituted and funds allocated without delay:

SEAWAY HOPE DEFERRED

Only one American inland port, that of Detroit, can handle big ships plying the St. Lawrence Seaway fully loaded, which need a controlling depth of 25½ feet. Harbors at Buffalo, Chicago, Duluth-Superior, Cleveland, Toledo, Erie, and Milwaukee vary between 20 and 24 feet and must, therefore, restrict themselves to handling partially filled big seaway ships or smaller craft with less draft. Sandusky Bay's depth is 22 feet.

A U.S. engineer's survey recommends the expenditure of $63,662,300 in Federal funds to bring the St. Lawrence and Great Lakes ports on the American side up to full seaway capability. This would be in addition to deepening Great Lakes connecting channels to 27 feet, the seaway controlling depth, to carry traffic from Toledo to Duluth. The channel work would cost $146,500,000. The total Federal cost would exceed $210 million.

This finding defers the great hopes held out for the seaway for at least another decade. The channel deepening is proceeding slowly. The Army Engineers asked for $29 million this year, but the administration trimmed it to $23 million. The harbor work is still in the survey stage. There has been time since the passage of the seaway bill to do the necessary channeling and harbor improvement work. The delay will cost the country dear in postponing the full advantages the seaway has to bring.

Unification of Military Procurement and Supply

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. CURTIS of Missouri. Mr. Speaker, on May 12, 1959, I called to the attention of the Members of the House the contents of a letter which I addressed to the Chairman, Council of Economic Advisers, Hon. Raymond J. Saulnier, regarding the need for forceful action toward unification of military procurement and supply not only for the sake of defense itself but to relieve the economy of the inflationary pressures which are now being exerted upon it.

On May 22 I again wrote to Mr. Saulnier on "How do we get hold of this problem?" and I wish to have it inserted in the RECORD for the information of my colleagues:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 22, 1959.

Hon. RAYMOND J. SAULNIER,
Council of Economic Advisers,
Washington, D.C.

DEAR DR. SAULNIER: Reference is made to your letter of May 5, 1959, in response to mine of April 8, 1959.

I am in complete agreement with the implication of your question, "How do we get hold of this problem." In other words, this matter has been studied and restudied and what is needed now is a program of positive action.

As I stated in my previous letter, the McCormack-Curtis amendment to the Department of Defense Reorganization Act, 1958, gives the Secretary of Defense broad authority "for the carrying out of any supply or service activity common to more than one military department by a single agency or such other organizational entities as he deems appropriate."

It has been estimated that the supply and service activities or support activities take the major portion of the annual budget and besides this, we have the enormous inventories and facilities of the various military services all over the world.

When the Department of Defense Reorganization Act, Public Law 85-599, was before the House of Representatives on June 12, 1958, Congressman MCCORMACK listed a number of supply and service activities which fall within the scope of the amendment. Some months ago, I wrote to the Secretary of Defense and asked that he list all the activities which would fall within the scope of the amendment and to advise with respect to each just what action had been taken or was contemplated. I understand that Senators DOUGLAS, LAUSCHE, and perhaps others have written similar letters but have had no response to date.

It is my firm conviction that a topside action committee should be constituted to operate at the Presidential level to set up time schedules for the fulfillment of a number of programs which have been on dead center for a long time. I would include the following as a start:

1. Schedule the transfer of common-use administrative or commercial-type supply and services to GSA as contemplated by the GSA Act which is now 10 years old. This will involve the transfer of facilities and personnel with the activities.

2. Evaluate the present single manager plans for (a) subsistence and clothing, (b) petroleum products, (c) medical supply and if basically successful, streamline them and extend the plans to other classes of items. Also determine if they should be combined into a system of general military supply depots.

3. Consolidate and streamline surplus property disposal including the donable program.

4. Make provision for a property inventory control system which will permit a review of existing common items in all the military inventories before additional orders are placed.

5. Institute a genuine action program to develop to the maximum standardization of supply items, form procedures, systems, reporting, accounting, etc. (For example there should be a discontinuance of special service insignia on blankets and other items of common supply which prevent excesses from being transferred to other agencies. Recently, the Marine Corps declared 260,000 blankets excess but as they bore special insignia, the other services did not want them.)

6. Make a speedy determination as to when stock funds should and should not be used.

In order to get a running start on the overall program, I recommend that the Hoover task force committee be utilized as an advisory committee to assist a special action task force. The Hoover task force members, as you know, have spent long periods of time studying these matters, are wholly objective in their views and were carefully chosen in the first place because of their competence in the respective fields.

The importance of these matters in their economic impact on the country is related to there being in effective existence a streamlined, efficient, and economical supply system. Little or no use has apparently been made of the Defense Reorganization Act of 1958 which was designed to provide all necessary legislative authority. Real action thus is an executive responsibility.

Since the Department of Defense is making such unsatisfactory progress under its own volition, I suggest the appropriateness of the Bureau of the Budget, in its capacity as the management arm for the President, being directed to establish such internal organization in the Bureau as is necessary to really take hold of this matter and accomplish the results—and benefits—which have so clearly been blueprinted as attainable.

Sincerely,

THOMAS B. CURTIS.

Forgotten Veterans

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the forgotten old Veterans of World War I, who saved the world for democ-

racy 41 years ago, need economic aid of an age pension under H.R. 1181 for an American standard of living; and

Whereas all prior war veteran groups have been granted an age pension without regimentation and without being required to file an unlimited number of annual and other reports with the Veterans' Administration, and without other un-American limitations: Therefore be it

Resolved by the Missouri Department, Veterans of World War I, United States of America, Inc., at its regular annual convention, held in El Dorado Springs, Mo., May 16 and 17, 1959, That the President and the Congress of the United States of America are hereby requested and urged to promptly pass H.R. 1181 for the relief of the forgotten old Veterans of World War I.

ROY F. HAMPEL,
Commander, Missouri Department, Veterans of World War I, U.S.A., Inc.
FRANK J. NESSELHAUF,
Adjutant, Missouri Department, Veterans of World War I, U.S.A., Inc.

Harry Bridges Outrage

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Los Angeles Evening Herald Express:

HARRY BRIDGES OUTRAGE

Harry Bridges testified before the House Committee on Un-American Activities, took the fifth on the question of whether he is or was a Communist, and allowed that he would advocate a longshoremen's strike to prevent American arms from reaching Formosa in the event of war between Nationalist and Communist China.

He made a slight modification: The union membership, he said, would have to decide whether arms would be taken to an American ally.

This is one of the most outrageous statements to come from a source noted for outrageous statements.

Locally, the American Legion's California District 23 in an angry resolution correctly described Bridges' stand in these words:

"Totally disloyal, un-American and treacherous."

It is a sign of decadence that our laws permit the alien Bridges to remain in this country.

Suppose Communist China should launch an all-out attack on Formosa and Nationalist China, as it has threatened on numerous occasions.

Suppose the United States rushes to the defense of its ally.

And suppose Harry Bridges should succeed in calling a longshoremen's strike which would keep U.S. arms from reaching Nationalist China for its defense.

Would the President and other U.S. defense chiefs be forced to stand aside and allow this defiant action to threaten this Nation's security?

Or would Bridges be deported and thrown out of this country for good, so that he no longer could menace the Americanism for which the people stand?

Many of the members of Bridges' big union are disgusted with his latest declaration against the national defense of this country, and with the longshoremen's union caucus in Seattle which urged U.S. recognition of Red China.

This is indicated by dissension in Los Angeles-Long Beach Harbor longshoremen's circles, which was capped by the resignation of one of the union's leaders.

We have the utmost confidence in the loyalty of the members of this powerful union to the United States of America. We feel that the vast majority of them are upright, honest, and loyal citzens the same as other millions of Americans.

And we think this is a dastardly act by Bridges, to even insinuate that he could force them to be disloyal in the event of an attack by Communist China against our ally, Nationalist China.

Silver Jubilee of Archbishop Francis P. Keough of the Archdiocese of Baltimore

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. FALLON. Mr. Speaker, citizens of all denominations—Protestants, Jews, and Catholics—have just united in a magnificent tribute upon the occasion of the silver jubilee of Archbishop Francis P. Keogh, of the Archdiocese of Baltimore. The observance of his 25th year in the episcopacy of the Catholic Church represented a tribute to his laudable activities, benefiting persons of various creeds, in alleviating their sufferings, privations, and need for custodial care.

Members of the hierarchy from different States of the Union assembled in Baltimore on May 21, the primal see of the Catholic Church in America. The most heartwarming acclaim of the archbishop was manifested by both clergy and laity, who rejoiced in the completion of his 25 years as a bishop and additional years as an ordained priest.

Bishop Lawrence J. Shehan, of the diocese of Bridgeport, Conn., delivered the sermon at the pontificial mass, reviewing in a masterful manner the history of the episcopate of the Catholic Church. At the luncheon, following the ceremonies, Bishop Jerome D. Sebastian, auxiliary bishop of Baltimore, delivered a glowing account of the archbishop's administration in Baltimore, and tendered gifts to the jubilarian.

The secular press, as well as the diocesan publications, were as one in felicitating the Baltimore prelate, who, by reason of his charities, has become known as the archbishop of the poor. In the Baltimore News Post, a most interesting article was written, giving the measure of the man. Its composer is Gerard E. Sherry, the well-known and highly respected editor of the Catholic Review, and the article deserves the widest reading by peoples of all religions.

Under previous consent I submit excerpts from this article to be printed in the Appendix of the RECORD:

TRIBUTE TO ARCHBISHOP FRANCIS P. KEOUGH
(By Gerard E. Sherry)

I suppose there are very few laymen and women who can claim to have as their boss an archbishop, both in the very spiritual sense of ecclesiastical discipline and in the very material sense of earning one's daily bread. Such is my lot, and I wouldn't swap it for most of what the secular newspaper field has to offer.

Little known, perhaps, is the fact that almost all of the Catholic weekly newspapers in this country are owned and operated by the dioceses in which they are published. Furthermore, the publisher of the paper is nearly always the bishop. This is the case in Baltimore, and we have no more dedicated person to the apostolate of the Catholic press than Archbishop Francis P. Keough. Today he celebrates the 25th anniversary of his elevation to the fullness of the priesthood as a bishop.

* * * * *

I remember my very first meeting with Archbishop Keough some 3½ years ago, when he hired me as managing editor of the Review. There were no pious platitudes uttered but only a forthright statement of his aims in relation to the editorial running of the Catholic Review. There was a stated policy. There was the understanding that one would keep within the bounds of this policy.

He said then that this did not mean the stiflings of editorial expression nor the exclusion of the art of controversy. Naturally, however, any controversy would have to be conducted in good taste and in a charitable manner.

* * * * *

The archbishop's philosophy is that each one may hold and defend his own opinion. But such an opinion must be presented with due restraint. He has often advised me that no one should be condemned simply because he disagrees with the opinion of another, much less must his loyalty be challenged.

* * * * *

Archbishop Keough is concerned not merely with the spiritual life of the faithful of the archdiocese of Baltimore, but also with their material pursuit of peace and happiness. Hence, his concern for the poor, the sick, and the aged.

This concern for the dignity of the human being flows not only from the nature of his office as spiritual head of the archdiocese, but also from an innate sympathy and understanding of the problems of men.

To have an interview with him is quite an experience, as many will attest. Busier than most executives of big corporations (and having under his spiritual and material care properties and finances greater than most executives) he nevertheless is the perfect listener and wise counselor. The door is open to all—too many perhaps—but his patience and graciousness are a pride to behold.

* * * * *

The archbishop has outstanding qualities; an ability to portray all the dignity of his office without affectation or condescension; an ability to be great without advertising the fact.

At the many arduous ceremonials he must perform in the course of his duties he still has time to offer kind words of encouragement to his assistants, the altar boys and sacristans. And as he goes down from the altar into the congregation he wears a friendly smile and offers a friendly greeting to all.

A man with a remarkable memory, the Archbishop has often surprised lay men and women whom he has not seen for several years by not only greeting them, but also addressing them by their first name. He is a man of the people and keeps close to them.

Inconvenienced by ill health, he nevertheless seldom refuses a request from a pastor or a religious order to officiate at the dedica-

tion of an institution or school—and there are plenty of such monuments to his tenacity and administrative skills here in Maryland.

Finally, he's my boss. No man could wish for a better one. His many personal kindnesses and courtesies have helped when help was needed. He has been stern at times; but then wise admonition is always good for the soul. It's good for an editor, too. And who else but the publisher should give it.

Statehood Makes Hawaii New Distribution and Sales Center of the Pacific

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. BURNS of Hawaii. Mr. Speaker, the Honorable H. Tucker Gratz, of Honolulu, T.H., a constituent for whom I have a high regard and deep affection, has written an article for the Server in response to queries as to the effect of Hawaii statehood on sales and distribution activities by U.S. organizations in the Pacific.

Mr. Gratz is president of Better Brands, Ltd., an organization having offices in Japan, Korea, Taiwan, Okinawa, Hong Kong, Philippines, Guam, Vietnam, and the Trust Territory. He travels the Pacific region several times each year and has intimate knowledge of the people and markets.

The article, which appeared in the May 11 edition of the Server, is commended to the attention of the Members of Congress who will, I am sure, find it of great interest:

STATEHOOD MAKES HAWAII NEW DISTRIBUTION, SALES CENTER OF PACIFIC, DECLARES GRATZ

The friendly hand of the United States reached out 2,400 miles toward 1¼ billion individuals in the far western Pacific, when Hawaiian statehood legislation was passed by Congress. A great percentage of these billion people are hungry for American products—and it is the largest untapped market for U.S. merchandise in the world.

Not all peoples of the vast Asian area are free. The Communists hold some half-billion in serfdom. But, there are tens of millions of free human beings in this vast region, and they are experiencing a steadily increasing standard of living. In areas such as Australia standards already compare favorably with many parts of America.

REAL OPPORTUNITY

The success of U.S. products in the Pacific can be judged by our own organization. We have active sales and distribution outlets in Japan, Korea, Taiwan, Hong Kong, Philippines, Guam, Vietnam, and the trust territory. Year after year we have seen the volume increase on lines of first-quality products. This is not a dumping area for seconds, but it provides a real opportunity for merchandise of the standard we enjoy.

Granting statehood for Hawaii is the first positive U.S. action toward recognition of the vast Pacific. And, these islands are destined to be the business, communication, educational, and cultural center for American interests in the South, and Far East regions of this great ocean.

This function comes naturally to Hawaii. Nowhere else have peoples fused so happily. Hawaii has two daily newspapers published in Japanese. One daily is printed in Chinese characters. At least two papers are in dialects of the Philippines. Additional publications appear in Korean, and other eastern languages. Of the island's permanent population, 32 percent are of Japanese extraction; 30 percent are Caucasian; 17 percent Hawaiian, or part Hawaiian; 11 percent Filipino; 6 percent Chinese, and 4 percent from other regions. Yet, all have one common tongue and culture—American.

Many interesting stories can be told about Hawaii and her people. A few days ago I interviewed girls for a new position. All racial groups are welcomed. First to arrive was an attractive second or third generation Japanese girl. I asked if she spoke Japanese. She smiled prettily and said, "Not a word." The next young lady was Caucasian, the daughter of a retired Army officer. Almost automatically I asked, "Do you speak other languages?" She replied, "Yes, I speak and write Japanese fluently."

With Hawaii's strategic location, and intimate understanding of her neighbors in the vast Pacific rim from Australia to Japan, the islands can't help but be the American headquarters center for this half of the world. It is impractical to think of businessmen with regular contacts in the east trying to operate even from the west coast of the mainland. In Hawaii they are 2,400 miles nearer their job. And experienced and trained veterans of Far East business are available for counsel. As an example, we in Better Brands receive 11 or 12 inquiries each month for information and help on matters regarding sales and merchandising in the Pacific area.

Hawaiian commercial and professional firms have long been doing business in the new American frontier. Hawaiian Dredging & Construction Co. is an excellent example. They have major contracts now in progress in the Suez Canal, Kuwait, Japan, and other areas, yet they find Hawaii offers the most practical operation center. Their established bases undoubtedly can be of assistance to other American operations.

As another example, a Hawaiian public relations firm has affiliated offices in Australia, New Zealand, Fiji, Philippines, Hong Kong, Taiwan, and Japan.

HAWAII OFFERS KNOW-HOW

It is safe to say that Hawaii offers mainland business interests a wealth of experience and know-how that can cut years from trial-and-error approaches to the Pacific market.

Hawaii, as an island chain, is a sizable market within itself. Some 635,000 persons, including military personnel, live within the soon-to-be 50th State. The booming tourist industry brought an additional 183,500 persons last year. These people left $82 million in the islands during a period when the United States generally was in a business slump. With the start of commercial jet air service this year, travel is expected to skyrocket.

Per capita income of the people of Hawaii is higher than that of the State of Texas.

No business organization, however large, can afford to overlook an area in which the Armed Forces spend $327 million, and servicemen and their families spend another $300 million, each year for goods and services.

But Hawaii is more than a new State market, it is a new American frontier for trade, commerce, and communications covering millions of people in the Pacific rim.

Statehood for Hawaii marks another highly interesting development. It points clearly to the continued westward movement of the center of civilization and culture around the globe. This gradual rotation can be fairly accurately traced for some 2,000 years. Starting in the Middle East, or probably at an earlier date in India or China, it moved westward to Greece, Rome, middle Europe, England, and the east coast of the United States. Within the last decades we have witnessed movement to the west coast. California already threatens to become our most highly populated State.

Hawaii is the new U.S. sales and distribution center of the Pacific, as this movement continues westward. It is the beginning of the merger of cultures that will make the Pacific a land of great opportunity. People, land area, natural resources.

UHF-VHF Dilemma

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. BOLAND. Mr. Speaker, I am deeply disturbed over a report in Broadcasters magazine that the Federal Communications Commission plans to allocate another VHF television channel in the Hartford area.

I have written to Chairman John C. Doerfer, of the Federal Communications Commission, and told him that this will not only complicate the existing and utterly confusing VHF-UHF pattern, but it will absolutely drive two UHF television stations in my congressional district at Springfield, Mass., right out of business. They are channels 40 and 22.

Mr. Speaker, channel 3 in Hartford is a CBS affiliate and it provides more than fringe VHF service to western Massachusetts, as the Federal Communications Commission would imply. As a matter of fact, it is so effective in blanketing my area that UHF channel 40 is about ready to lose its CBS affiliation.

Channel 8 VHF, which is affiliated with ABC, is also providing good coverage to the same area because of its increase in power output. The reports that another VHF channel will go into the Hartford area, naturally will lead me to believe that NBC wants a western New England outlet. If so, UHF channel 22 at Springfield might just as well fold up.

Mr. Speaker, the loss of these UHF channels will deprive the people of access to local programing, discussion of community problems, the stimulus for fund raising drives and desirable entertainment by local civic and fraternal organizations.

Jack Gould, of the New York Times, who is undoubtedly the country's most perceptive television critic and is well respected throughout the industry, devoted his column to the UHF-VHF dilemma in the Sunday Times of May 17. I submit this article with my remarks for the RECORD, and commend it to my colleagues for study:

NEED FOR SPACE—FCC REPORT ILLUSTRATES COMPLEXITY OF ALLOCATING TELEVISION CHANNELS

(By Jack Gould)

The continuing problem of how to find enough room on the air for more television stations has led to a new report by the Federal Communications Commission.

The root of the space problem is that nothing like a truly national TV service has been either established or, indeed, is in prospect. While there are 551 TV stations, including 42 educational outlets in operation, there are still a great many populated areas receiving service from only 2 stations. Unless this lack can be remedied, competition between networks is bound to be lopsided and the prospects for adequate educational or independent local or community TV rather remote.

What has necessitated the reexamination of TV's future is the failure of ultra-high-frequency television. It had been hoped that UHF, operating on channels 14 through 83, would bloom and prove a happy and workable supplement to very-high-frequency television, operating on the familiar channels of 2 through 13. Had UHF prospered, there would have been enough room on the air for every type of conceivable TV service.

OBJECTIVE

It is the disappointing experience with UHF that underlies the latest FCC report, a document that on the whole affords an eminently realistic analysis of the complexity of the situation with respect to allocating channels. Included in the report is a series of proposed remedies, at least one of which is highly controversial, but none of the suggested solutions holds promise of practical relief for many years to come.

The immediate objective of the FCC is to squeeze in a few more stations into the present band spanning channels 2 through 13; this will afford expanded service in a handful of large communities. But in adopting this course of technical expediency, which is probably unavoidable, the FCC undoubtedly is compounding the difficulty that it seeks to resolve.

The nub of the whole problem confronting both the FCC and Congress is a familiar one in TV: which comes first, the chicken or the egg? Or, to speak in electronic jargon, do you first have stations in order to sell sets, or do you first sell sets in order to have an audience for new stations?

In its report the FCC reaffirms that channels 2 through 13 cannot contain all the outlets for which, as a matter of farsighted policy, the Government at least should plan. This means that there must be a second band of channels of some sort. Because the FCC raises a glimmer of hope that the band might have the technical advantages of channels 2 through 13—something UHF never had—there has been a measure of idealistic rejoicing in some quarters.

PROSPECTS

But optimism scarcely seems warranted.

So long as channels 2 through 13 remain in use it is illusory to hope to activate a second group of supplementary channels. Every year that passes, with the sale of additional receivers capable of picking up only channels 2 through 13, dependence on the existing band is intensified. And while Congress and the FCC debate and ponder, this process is going right along.

To make a second band possible, the FCC has made one recommendation that has stirred up a formidable row. This is a proposal that manufacturers of television sets, as a condition of their distribution of receivers in interstate commerce, be required by law to include in their product the necessary tuners capable of receiving whatever channels may be authorized in a second band.

The attractive thought behind this suggestion is that with the normal replacement of sets over a decade there will be established a ready-made audience capable of receiving stations in the second band. If the proposal could be sure of accomplishing its purpose, public interest would clearly warrant its adoption. But there does not appear to be much chance that such would be the case.

PROBLEM

The cost of a TV set would have to be increased substantially were the receiver to include the circuitry needed to pick up the second band; this added fee, of course, would be passed along to the consumer. But until such sets were sold in very substantial volume, which in itself would take many years, what broadcaster would open a station when he knew that for a long time his audience would be too small to allow successful operation? And if there aré no second-band stations in his area, is the consumer going to be eager to pay for extra equipment that could prove to be useless?

Assuming the extra charge for a second-band receiver were $25 and 4 million sets were sold in a year, the gamble of the public would run to $100 million annually, or in a decade, $1 billion. Without some ironclad assurance that the public is investing in a certainty, not a theoretical possibility, that seems quite an imposition.

Under such circumstances there can only be the gravest misgivings over the plans of the FCC—and a substantial body of Congress—to approach the future TV in terms of two bands, one band that everybody can pick up on their present receiving equipment and one band that they cannot. It was such an unrealistic two-band policy that killed UHF.

If television is to have a democratic foundation, then all stations must be placed on equal footing. This means the adoption of one new band on which all stations will function as of a given date. This will enable new broadcasters to make plans for taking to the air in the secure knowledge that they will be seen; it would require set manufacturers to make the transition out of self-interest, not through Government edict. It will assure the public that any extra set charge will be valid and justified.

SOLUTION

The only way in which this goal can be reached is by moving all of television to the ultra-high-frequency band. When frequency modulation radio was moved up in the spectrum simultaneous service on the old and new FM bands was permitted for a specified period to minimize the hardships of the transition.

Today's large TV operators and the networks are far fom enthusiastic over UHF because it will mean a reduction in the area that their signals cover. Admittedly, UHF does pose many very formidable technical challenges, but, for want of economic incentive to open the band, there has not been intensified research in the area.

Both the Senate and House Committees on Interstate and Foreign Commerce plan long hearings on how to split up the spectrum to best advantage. Indeed, the politicians seem to be preempting more and more of the highly complex engineering problems which the FCC was established to resolve.

But the interest of the committees is understandable. Such are the fantastic stakes in the present pattern of TV that realistically it may be impossible to break out of the status quo. The FCC report, the prevailing congressional atmosphere, and the lack of public concern do not bode encouragingly for the bold approach that is needed if television broadcsating is not to continue indefinitely in substantially its present form.

Protection Versus Free Trade

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. MACK of Washington. Mr. Speaker, the tide of anxiety over competition from foreign sources is rapidly rising in this country. More and more questions are being asked about our foreign trade policy of the past 25 years and its effect in exposing our industries to low-wage foreign competition.

It has been pointed out that our position is not a surprising one since it is a natural result of our domestic economic policies, as affected by war and defense policies, on the one hand, and our foreign economic policies, on the other.

At home we pursued a highly expansive economic policy and this was abetted by war and postwar defense outlays. The two combined to bring about high prices and high costs. On the foreign front we followed an opposite policy, that is, one of free trade. The two could not avoid colliding sooner or later. The day of collision was hurried greatly by our foreign assistance program under which we helped build up foreign technology and helped vastly at mechanization of foreign production.

Since the Marshall plan was first instituted we have exported machinery to the extent of $30 billion. Also we have guided thousands of foreign productivity teams through our plants and mills. They have not gone away, we may be sure, without notes and ideas.

We may as well face the fact that we have opened the door through which our technological and industrial leadership is escaping. Dozens of our own industries are also using this exit to join those they cannot lick.

Mr. Speaker, under leave to extend my remarks in the RECORD I offer a letter to the editor of the Journal of Commerce devoted in great part to this subject. It is directed to the question of pricing ourselves out of world markets. The letter, by O. R. Strackbein, follows:

ECONOMIC CHICKENS COMING HOME?

EDITOR, JOURNAL OF COMMERCE:

On May 5 you ran a three-column front page news item devoted to an address by Assistant Secretary of Commerce Henry Kearns in which he explained our foreign trade slump and went far toward denying that we are pricing ourselves out of foreign markets.

In one of his irresponsible flights of rhetoric the Assistant Secretary charged that those who believe in protectionism are seizing upon our trade problems in an effort to destroy our world trade (if he was correctly quoted).

PROBLEM SERIOUS

The problem is a serious one without the addition of mud-slinging by officials who rather odiously place themselves in the po-

sition of favoring the interests of one group of taxpayers at the expense of another.

Our uncomfortable international competitive position is not so much one of pricing ourselves out of our accustomed markets. At bottom the change is the natural result of our domestic and foreign economic policies of the past 25 years.

The reductions of our tariffs were intended to do, if they meant anything, what they have done, i.e. expose us to more and more foreign competition. Otherwise, they would have been meaningless. We are only beginning to feel the consequences that many of us long foresaw. The delay was caused through concealment of underlying movements by extraordinary war and postwar developments.

EXPANSION ABROAD

Tariff reductions, however, are not the total explanation. Probably just as effective and actually cumulative, because of similar competitive effects, has been the installation abroad of many billions of dollars worth of modern machinery and equipment in the past 6 or 7 years.

Rather rapidly in some areas and swiftly in particular industries we are losing our technological lead. With the lower wages continuing to prevail abroad we are losing our immunity to import competition as productivity rises there. It needed no increasing wages here to produce our discomfiture.

CAPITAL LOOKS ABROAD

High wages here are therefore not the only nor the supreme culprit. After all, we have farm price supports, social security, restricted immigration, and other interferences with the free market that makes for an artificial economy.

High wages in combination with these other factors do cause pressure for mechanization and the latter makes for unemployment unless absorption takes place. More and more of our capital looks abroad for expansion because the outlook seems better there, particularly as a means of competing abroad and as a base for exports to third countries.

The result could be chronic unemployment here because the expansion necessary for absorption of the unemployed will be dampened.

In time our economy will be beached as the tide flows out, in response to 25 years of national policy that did not know how to turn when the writing was on the wall. We have been following economic policies at home that are diametrically opposed to our foreign economic policy. When the chickens come home we are surprised, troubled, and helpless.

After all, we do have the know-how, don't we? Or do some others now have it too?

O. R. STRACKBEIN,
Chairman, the Nationwide Committee on Export-Import Policy.

Lung Cancer in Japan

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to point out that charges have been made by some that smoking causes lung cancer, but as yet scientific evidence has not substantiated these charges. As search for the truth continues, I include with my remarks the following United Press dispatch dated March 28, 1959, from Osaka, Japan:

OSAKA, JAPAN.—Prof. Toru Miyaji of Osaka University's Medical School says most lung-cancer deaths in Japan appear to be due to factory-polluted air rather than cigarettes.

Miyaji determined by the study of 38,145 autopsies performed in major Japanese hospitals in the past 10 years that the national incidence of lung cancer averages about 2.6 percent.

In industrial areas, the number of lung cancer cases reported ranged up to almost twice the average—5 percent in Osaka-Kobe, 4.4 percent in Morioka, and 4.2 percent in Yawata-Kokura.

In areas where the air is relatively clear, however, the lung-cancer rate was as little as half the national average—1.6 percent in Kanagawa, for example, and only 1.3 percent in the ancient Japanese capital of Kyoto.

Housing for the Aged

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, the housing needs of elderly persons are becoming increasingly serious as the number of such individuals grows steadily each year.

Congress has recognized this problem in authorizing aged housing projects as part of the public housing program. Last week the House passed S. 57, the Housing Act of 1959, authorizing a new program to stimulate the construction of decent housing for the aged at reasonable cost.

The Reading Housing Authority deserves commendation for proceeding with its plans to build a 102-unit housing project for the aged, the first such project in the Middle Atlantic region of the Public Housing Administration.

Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Reading Times of May 26, 1959, commenting on this subject:

NEW HOUSING FOR THE AGED PREOCCUPIES MANY AREAS

The Reading Housing Authority is processing, for Federal approval, a housing project for the aged. It will have 102 units and, after the Authority made an extensive survey, will be located next to Glenside Homes, the Authority's original project.

Similar projects are being processed or built in many cities throughout the country so we may assume that the day is rapidly passing when very many old people, leaving their jobs because of superannuation, perforce will move in with the family of a son or a daughter or seek shelter in a public or private home for the aged. Social-security benefits plus retirement allowances from former employers, are enabling men and women with modest savings to take advantage of these opportunities for a more satisfying mode of living than was available to old people in the past.

The new housing accommodations vary substantially, from area to area, and range from small, easy-to-keep cottages and apartments in so-called retirement villages to low-rate residential hotels in downtown sections of the larger cities. For old persons who can no longer live independently or who prefer to reside with others there are modern institutions.

The increasing proportion of old people in the population has been a prime factor in spurring interest in housing for the elderly. There are now 15 million men and women in the country aged 65 or older and the number is expected to reach 25 million by 1980. The group is already big enough to command political attention.

Congress amended the National Housing Act 3 years ago to encourage provision of more rental accommodations for elderly persons and to ease sale terms on houses suitable for persons of advanced years. Now private real estate developers, in some sections of the country, are finding there is money to be made in meeting the housing needs of the elderly.

Persons in the upper age groups have been migrating in considerable numbers to the South and Southwest but New England and the Midwest still have the largest proportions of older people. The common assumption that most retired persons want to spend their time sitting in the sun is being rapidly dissipated. People are stopping work now at an age when many of them still want to lead active lives. The facts seem to be that they are more contented if they stay where their principal interests lie and where their friends live.

A unique development in the institutional care of the aged is Presbyterian Village near Detroit. It is situated on a 32-acre tract, has apartments and cottages and a nursing home. Regular rates are $70 to $90 a month for apartments and $150 for room and board in the communal dwelling. Guests who cannot afford to pay the regular rates apply for public assistance and Presbyterian churches in the district contribute additional funds needed.

When and as the proposed units being planned by the Reading Housing Authority are built, it will be of substantial interest to see how they are accepted by the older people and whether they will create a demand for additional units. In any event the authority is to be commended for its farsightedness in going ahead with the project. We only hope there is no slip between Reading and Washington and that work can be started on the project as early as may be.

Establishment of the New York-New Jersey Transportation Agency

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum from the New York Chamber of Commerce:

NEW YORK, N.Y., *May 19, 1959.*

Members of Congress from New York and New Jersey:

It is a matter of the utmost importance that Congress give early approval to the legislation recently enacted by New York and New Jersey, which would establish the New York-New Jersey Transportation Agency. We urge that you use your good offices to insure prompt congressional action.

Establishment of this agency by our two States is an important step toward the ulti-

mate solution of the vexing commuter transportation difficulties. It is vitally important that the transportation agency receive congressional blessing, in order that it may proceed without delay to devise a master plan for the most efficient long-range use of rail commutation facilities in the metropolitan area.

Since 1951 our chamber has urged action by New York and New Jersey to resolve the growing rail commutation problem. We proposed the establishment of the Metropolitan Rapid Transit Commission, and cooperated in its basic studies. We vigorously supported the proposal to establish a bistate commuter transportation agency, which is now authorized.

It is imperative that the essential rail commuter facilities in the New York metropolitan area be retained and, if possible, improved. A breakdown of any major part of our commuting network would be a major catastrophe.

We respectfully urge the earliest possible congressional approval of the creation of the bistate transportation agency.

Sincerely yours,

LESTER A. CRONE,
Chairman, Committee on Industry, Trade, and Transportation.

Poison in Your Water—No. 85

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the San Francisco Examiner of February 24, 1958, entitled "Ills Laid to Belvedere Sewage Dumping":

ILLS LAID TO BELVEDERE SEWAGE DUMPING
(By George Wells)

A group of Marin County citizens charged yesterday that the dumping of raw sewage in Belvedere Cove had caused a serious outbreak of amoebic dysentery.

Attorney Delger Trowbridge, representing three residents who claim to speak for more than 100 persons, said he had medical testimony to back up the statement.

The charge was made as Trowbridge prepared to file tomorrow a suit for a restraining order that would prevent the city of Belvedere from dumping sewage into the cove.

He said three occupants of one home would each ask for $20,000 damages because "their enjoyment of the cove had been limited and their health endangered."

The attorney's announcement came as Marin County Health Officer Caroline Albrecht said she was going to ask the district attorney's office to obtain an injunction prohibiting Belvedere from dumping raw sewage into the bay.

She said the city should be given a reasonable amount of time to construct a sewage treatment plant.

Belvedere is the only city in the bay area that is dumping raw sewage into the bay, according to William Desmond, Marin's director of sanitation.

This, he said, is in direct violation of State regulations prohibiting the pollution of water.

Belvedere City Manager Britton Rey admitted that the town's sewage is pumped into Raccoon Straits because, he said, the residents of the city's 1,800 homes are not numerous enough to justify construction of a sewage plant.

About one-half of the city's sewage goes into Belvedere Cove during storm periods when the lines to the straits back up, it was said.

Rey said a citizens' committee was currently at work on a master plan for a sewage treatment plant.

The International Claims Settlement Act H.R. 6827

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. LINDSAY. Mr. Speaker, on Thursday, April 30, 1959, I introduced H.R. 6827. This bill would amend the International Claims Settlement Act to eliminate an inequity which has appeared in the operation of the International Claims Settlement program in regard to claims respecting property in Bulgaria, Hungary, or Rumania.

It appears that operation of the present law may provide substantial windfalls to certain claimants, while at the same time providing virtually no compensation to others. A number of large business enterprises which suffered losses recompensible under the act deducted those losses during war years, when their effective tax bracket may have been, because of excess profits taxes, higher than 90 percent. Thus, the effective loss suffered in several cases was only a small fraction of the value of property destroyed or seized.

To permit those companies now to submit claims for the full value of the property destroyed or seized would enable some to make a profit—an opportunity not available to individuals whose loss during war years could not be offset against wartime profits.

For instance, if a corporation suffered a loss in 1942 of $100,000 and deducted it against profits which were taxed at the rate of 90 percent, the actual loss of the corporation was $10,000. If it were now to claim a loss of $100,000. Under the International Claims Settlement Act, and if the Commission ultimately paid 50 cents on the dollar on all claims, the corporation would receive $50,000 in compensation for its claim. Thus, the corporation would make a profit of $40,000 on the transaction, before taxes.

My bill would reduce any claim submitted to the Commission by the amount of the tax benefit obtained from a deduction of the underlying loss. The practical effect of this would be to make available for distribution on other claims—and thus to the aggrieved noncommercial individual claimants—a greater sum.

And since payment of these claims may be taxable to the claimant, the bill would also provide an exemption from income tax to the recipient on all claims which had been thus reduced, in order to prevent a double burden.

Mr. Speaker, I realize that the point is a somewhat refined one. There is no doubt, however, that a serious injustice will be done to a number of individuals unless prompt action is taken by the Congress to remedy the situation. Since this part of the work of the Commission must terminate by law during August of 1959, it is most important that this measure be promptly considered, and, I hope, promptly passed. A similar bill was introduced in the 85th Congress by Senator HUMPHREY. That bill, S. 979, passed the other body, but failed to receive committee consideration here before the session ended.

Auto Imports: It's a One-Way Street

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. DORN of South Carolina. Mr. Speaker, during debate on reciprocal trade last year I warned my colleagues from Michigan about the automobile industry moving overseas and foreign cars coming into America displacing our working people. I might add, Mr. Speaker, that this trend not only hurts the automobile worker but the automobile dealer, the mechanic, the garageman, the gasoline stations, parts dealers, and our States through declining revenue.

Again, let me warn my friends from all over this country that your business and your job is in jeopardy. The one-worlders, do-gooders, and dreamers think you are expendable. The following news story indicates this serious trend:

[From the Anderson (S.C.) Daily Mail, May 14, 1959]

FOREIGN CARS GAIN SALES
(By Sam Dawson)

LONDON.—England, like many continental European countries, ranks its autos as the fastest growing dollar earner.

English car makers are increasing output and say this year's overseas orders are so good that production is their chief problem. Like optimism oozes from automen in Germany, France, and Italy.

It's a one-way street.

U.S. auto exports have been falling and its auto imports rising sometimes doubling from year to year. These European cars still constitute a minor share of the U.S. domestic market. But Detroit isn't happy about losing its overseas sales.

It has offset this to some extent by putting plants on this side of the Atlantic. These cater to the European taste in cars. They get the advantages of lower production costs in most cases. And they escape the heavy duty and sometimes import curbs which American-made cars face. In some cases these American overseas plants ship their cars to America.

But the non-American-made models have been cleaning up. British Motor Corp. officials predict they'll send 100,000 cars to North America this year, or twice last year's

figure. Standard Motor's overseas sales so far are 50 percent ahead of last year. Rootes autos says its U.S. sales are running 74 percent ahead of 1958.

But the British are running into stiffer competition on the Continent and their exports there are down.

The Common Market's shrinking trade barriers has put car makers there into keener competition with each other, also. When the tariffs were cut the first year, Fiat of Italy quickly cut its prices to compensate for any advantage the incoming German cars would gain.

French Simca, partly owned by Chrysler, expects its American partner to push sales in the United States this year.

All anxiously eye Detroit's upcoming debut of smaller American cars but insist that shouldn't bite into their own American market, which they call a special one. That, of course, remains to be seen.

Domestic markets in England, France, Italy, and Germany are expected to grow this year because installment buying is beginning to catch on after the pattern long common in America.

The Crisis in Agriculture: Wheat

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. McGOVERN. Mr. Speaker, there is no domestic problem confronting the American people that is so serious as the mounting crisis in agriculture.

The 86th Congress will have failed a crucial test of its responsibility if we adjourn without constructive action to meet this crisis in our largest and most essential industry.

The farm problem is a national problem affecting every home in America—the farmer squeezed between low farm prices and rising costs, the taxpayer plagued by costly and ineffective existing programs, the worker and businessman who depend upon farm purchasing power to absorb their products, and the consumer who depends upon a healthy agricultural establishment for his daily bread.

The House Committee on Agriculture has reported legislation designed to meet one of the most urgent aspects of the farm problem—the pileup of wheat surpluses.

This legislation calls upon wheat farmers to cut back their wheat acreage by 25 percent, in return for which they would be offered 90 percent of parity price supports on their new smaller production.

For the 2-year period covered by the bill—1960–61—it would reduce wheat production by 480 million bushels and would lower costs of the wheat program by $528 million.

I respectfully submit that this is a bill clearly superior to the wheat legislation recently passed by the other body.

It is my hope that the positive step toward a solution of the farm problem offered in the House wheat bill, H.R. 7246, will win quick approval by the Committee on Rules and the membership of the House.

The major provisions of the bill, as summarized in the excellent committee report, are as follows:

First. Each farm acreage allotment of wheat, under the 55 million national allotment, would be reduced 25 percent in 1960 and 1961. This land in the 25 percent reduction would not be eligible for the soil bank or for planting to any crop subject to price support under the Agricultural Act of 1949.

Second. Producers who grow no crops on land and do not graze the land in the 25 percent reduction would be eligible to receive payments in kind—wheat—equivalent to one-third of the average annual production of the retired acres during the preceeding 3 years.

Third. The support price would be at 90 percent of parity in 1960 and 1961.

Fourth. All growers, cooperators and noncooperators, would be eligible for price support at 50 percent of parity, if marketing quotas are disapproved by more than one-third of the growers voting in referendums.

Fifth. The 15-acre exemption would be reduced to the smaller of 12 acres, or the highest planted acreage in 1957, 1958, or 1959, and the 200-bushel exemption would be repealed.

Sixth. The 30-acre ceiling on the wheat-for-feed exemption would be removed, and there would be no limit on production for on-the-farm use.

Seventh. For the 2 years this program is in effect it would increase the present penalty for overplanting from 45 percent of parity to 65 percent, and the penalty computations would be based on double the normal yield or the actual yield, whichever is lower.

Eighth. If marketing quotas are disapproved, the Commodity Credit Corporation could not release wheat from its holdings at less than 75 percent of parity, plus 5 percent, plus carrying charges.

Ninth. Voting eligibility for marketing quota referendums would be based on the previous year's planting record rather than on the announced intention of planting for the coming year.
